I do not think the Republicans have changed their policies. I do not believe in the sincerity of their present show of concern to the farmer. I do not think Secretary Benson has changed. In fact, he has given us fair warning that he has not changed. On January 4, he said, and I quote: "In 1956, the administration will continue along the sound lines of the past 3 years, and we will intensify our many-sided attacks on farm problems." If you ask me, that is fair warning. Those many-sided attacks have about ruined the farmer.

In practically everything he says, the Secretary of Agriculture does his best to blame me and my administration for the distress of the farm population.

Well, ladies and gentlemen, I am going to cite chapter and verse on the mess he has gotten our agriculture into. He didn't inherit it. He and Ike made it themselves.

Secretary Benson keeps saying that farm distress is due to the "repeated urging" of his predecessors, that means Charlie Brannan and me, "for all-out production." Now there were 3 occasions on which the Secretary's predecessors urged full production, and 3 good reasons for it. The first was the fighting and winning of World War II, and food and fiber were necessary for that. The second was to prevent a collapse of civilization in famine and anarchy after the war was over, and food and fiber were necessary for that. The third was to win the Korean conflict, and to put this country in a strong defensive position if the Communists started another world war, and food and fiber were necessary for that.

The farmers responded wonderfully to their country's call for supplies. They did what their Government asked them to do, and they deserve the thanks of their Government. Instead of which, this Republican administration tells them they have been living in a dream world, and they had better wake up.

This Republican administration might at least apply to the farmer the same consideration they give to other defense contractors when the emergency is over. They might at least try to save them from financial ruin for having fulfilled their commitments to the Government. I don't believe they told General Motors or General Electric or International Harvester that they had been living in a dream world and had better come out of it.

Oh, no, my friends, the present mess in agriculture is not the fault of Democratic farm policies. The mess in agriculture is clearly attributable to the Eisenhower administration. The blame lies nowhere else. They have been following a deliberate policy of driving farm prices down. That does not reduce farm production. That was made abundantly clear from 1921 to 1932, but now the Republicans seem determined to prove it all over again. They keep right on lowering prices and production keeps right on increasing and surpluses get bigger and bigger. But brother Benson keeps right on saying the way to get rid of surpluses is to lower prices still further.

In the 3 years of the Eisenhower administration—

Farm prices have gone down.

Prices to consumers have stayed up.

Farm income has slumped by $4 billion.

Production of farm products has increased.

Government stocks on hand have piled up.

And the price-support system has cost more in these 3 years than it did during the entire 20 Democratic years before that.

And Mr. Benson now says that they are going right ahead along the same sound lines. I'd say the same sad lines for the farmer.

Now comes a special farm message to the Congress. This message claims the administration has done a lot of wonderful things for the farmer—the most wonderful, of course, being the lowering of support prices.

Then the message makes several recommendations. Every one that is any good was copied from the Democrats.

However, the main point about this farm message is that it is too little and too late—even if they meant what it says. The Eisenhower administration is clinging stubbornly to its devotion to low support prices. There is nothing in this message that will stop the decline in farm income this year or next. It recommends only parts of a farm program and leaves out the heart.

It's like giving the farmers a nice, new, shiny General Motors automobile, with all the chrome and slick paint on the outside—but no engine to make it run.

There are many things this administration really could do to help the farmer if they wanted to do them.

First of all, they could sit down and consult with some real farmers. All their advisory committees have been loaded with bankers and processors and farm-extension specialists. Most of their top officers in the Department of Agriculture have been men from big business. They have been doing away with the system of farmers' committees in the counties, and turning over the administration of the farm programs to their office help. So, my first suggestion is that the Eisenhower administration give the farmers a voice in the management of their own affairs.

The second thing they might do is to tackle the job of getting rid of the excess carryovers. They moan and groan about the costs of storage, and the $7 billion tied up in stocks—but all for the purpose of discrediting the price-support system.

All over the world there are millions of empty stomachs and poorly clothed bodies. Our surplus food and fiber could be channeled to the poor and hungy of the world, where they would not only save lives and restore hope but also help to build the free world's defenses against communism.

That is what could be done, but I don't think this Republican administration will really do it. They are always talking about the idea that balancing the budget and reducing taxes come before everything else. But they've never done either, except to give the rich a tax break. I believe they would rather make demagogic speeches on false economy than use our food stocks to block communism.

The third thing they might do is to use some of these so-called surpluses to improve the diet of some of our underprivileged people here at home. There are still many people in our own country who don't get enough of the right kind of food.

In fact, if we used our farm production as we should to meet the needs of people at home and abroad, we would not have any problem of surpluses. We ought to be thankful and grateful to American agriculture for the abundance it can produce, and we ought to use that abundance for the benefit and welfare of mankind.

The fourth thing the Eisenhower administration might do—and do promptly—is to restore price supports to 90 percent of parity.

Ninety-percent supports are not the whole answer and never were, but they sure would help. They would do much to stabilize the situation while the other necessary measures are put into effect.

There are some other things the Republicans might do—if they would—to straighten out the mess they have made in American agriculture. They might try a system of production payments, such as Charlie Brannan recommended in 1949, and they might really get behind a good solid conservation acreage program, such as Senator HUMPHREY has proposed.

Yes; the Eisenhower administration might do all these things. But I'm afraid they won't. The farmers of America, if they are going to share fairly in the American dream of a good and abundant life, will have to look to the party of the people—the Democratic Party.

The Democratic Party believes that the farmer is entitled to a fair share of the national income—not only for his own sake but also in the interest of prosperity for the whole Nation.

The Democratic Party believes that the family farm is worth preserving as a valuable and cherished element of our free society.

We believe that the 22 million Americans who live on farms are human beings, with human problems and aspirations, and are entitled to participate fully in advances in our standards of living.

The Democratic Party beileves that the ability of American agriculture to produce a great variety of food and fiber in abundance is not a curse but a wonderful blessing, and a source of great national strength.

And, finally, we believe men of courage and good will, working together, can devise and administer programs under which American agriculture will make its full contribution to our national well-being and, at the same time, provide a good life for those who live close to the soil.

This is our faith—our Democratic faith.

It is the faith of Orville Freeman and HUBERT HUMPHREY. It is the faith of Democratic leaders throughout the land. It is, I believe, the faith of every man who is regarded as a potential Democratic nominee for the Presidency.

God willing, it is the faith which shall prevail in the Halls of Government in Washington when you have returned this Government to the party of the people where it belongs.

International Labor Organization (ILO)—Communists Are Using It as a Sounding Board Against the United States—I

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks I am including a speech by Mr. W. L. McGrath, United States employer delegate to the International Labor Organization meeting in Geneva, Switzerland, November 18, 1955.

Mr. Speaker, in our desire to prevent the further spread of communism and its propaganda we must be ever alert to its evil program. At the 1954 conference of ILO Russia, which had been absent from the meetings of the organization, returned with three countries, itself, Ukraine, and Byelorussia. In addition thereto it was reinforced by five satellite countries, Bulgaria, Hungary, Poland, Albania, and Czechoslovakia. This immediately raised the question of eligibility of Communist so-called employer and worker delegations. It must be clear to everybody that there is no free employer groups in Communist dominated countries, nor are there free worker delegations.

Mr. Speaker, the address by Mr. McGrath follows and in addition thereto I will include in another extension, No. II, which will follow this, a report by Mr. McGrath at the Geneva meeting of the governing body on November 9, 1955.

The information contained in these two insertions will put the Congress on notice of the true situation that exists in ILO. It demands vigilant attention in order to prevent the continuance of a diabolical situation.

Immediately prior to the 1954 International Labor Conference a bloc of three Communist countries, exercising their right as members of the United Nations, chose to join the ILO. The exercise of this right could not in any way be challenged.

Because of the complete inability of these 3 nations to send legitimate employer and worker delegates to the ILO, since there are no free employers or free workers in those countries, it was obvious that instead of the usual 2 government, 1 employer, and 1 worker delegates, these nations instead would have 4 government voting delegates.

Coupled with the fact that 5 other nations which had been members of the ILO for a number of years and which are now under Communist domination, this meant that there would be a bloc of 8 Communist-controlled countries in the ILO—8 countries with a total voting strength of 32 votes, all of which would be government votes, when they are only entitled to 16 government votes—2 per country.

Now the views of the free employers of the world were made perfectly clear at the 1954 Conference. We believed then and we believe today that all so-called employer representatives from these totalitarian countries should be disqualified from sitting in any of the councils of the ILO.

We therefore challenged the credentials of these men who would come into what had been a free employer group of the ILO. We challenged these credentials on the very fundamental ground that violence would be done to the constitution of this organization if it forced Communist government agents into the employer group. As all in this room know, the 1954 conference refused to sustain our challenge which was put forth as vigorously and as sincerely and as persuasively as possible.

What has happened since then?

At its first session following that conference, in November 1954, this governing body at Rome, decided that at its March 1955 session, it would consider a resolution providing for the appointment of a governing body committee, the terms of reference of which would be to make proposals for such amendments to the ILO constitution as would insure that worker and employer representatives could only be appointed after nomination by organizations of workers and employers which the free and independent of their governments.

At its next session in March 1955 the governing body did not adopt such a resolution. Instead, it decided to request the Director General to arrange for the preparation of a report covering the membership of the ILO regarding the extent of the freedom of employers' and workers' organizations from government domination or control. It also decided that this report would be prepared by a committee of independent persons, and, because of the extreme gravity of the situation, it was understood that every effort would be made to submit the report to the governing body by the end of October 1955.

At the same time, the governing body decided that it would consider immediately in the light of the results of the report, whether any and if so what steps might be taken as a matter of urgency to deal with the situation disclosed therein.

Following the March 1955, session of the governing body, the 38th International Labor Conference was held in Geneva in June 1955. At this Conference, despite the universal opposition of the free employers, so-called employer representatives from Iron Curtain countries were seated as deputy members on four Conference tripartite working committees. This decision was reached in total disregard of the autonomy of the employer group who, through established procedures of the organization, had elected their representatives to serve on these committees. That decision breached these traditional and accepted procedures. Neither the constitution of the ILO nor the standing orders required the Conference to vote these Communist representatives seats on the Conference committees as deputy members.

Following this decision, I withdrew from participation on the four working committees in question. I did this because I felt that positive action was imperative in order to emphasize the need for maintaining a stand on principle on behalf of preserving not only the tripartite structure of the ILO but its very existence as well.

We are now at the first session of the governing body following that Conference. The sixth item on our agenda is the report of the committee on the extent of the freedom of employers' and workers' organizations. The report of this committee is not before us for consideration notwithstanding the urgency with which the entire matter was viewed by the governing body in March 1955.

If the Organization sincerely wished to face this issue and resolve the problem we have had for over 18 months, it would hasten to bring the matter formally before the earliest possible session of the International Labor Conference, and take remedial steps to correct the situation.

Even though the report of the committee on freedom is not before us, this governing body session could place the matter before the 1956 Conference. In my opinion, such action would not prejudge the contents of that report in any way, because on such an important issue as this—which the governing body itself has found to be urgent—only the Conference can take remedial measures. Therefore, there is no valid reason why, even though we do not have the report, the Conference should not be presented with this issue at its 1956 session.

Apparently, however, no further urgency is attached to this problem. There is no inclination to take this course of action which has the merit of bringing about prompt Conference consideration, but more importantly, telling the world the ILO governing body recognizes it as a problem, and is willing to do something about it

We are soon to face the 1956 Conference. What will happen then? For one thing, we can look forward to the grim fact that Communist so-called employers will again be seated on the working committees of the Conference. That course has already been charted, and the precedent established. The deterioration of the ILO's tripartite structure—begun at the 1954 Conference—will be further advanced because the organization will have refused to take steps to purge itself of a threat to its very existence.

My deep concern over this matter has been repeatedly expressed, not only in the governing body and Conference, but in the United States as well. I have prepared detailed reports on each Conference and governing body session I have attended, and in these reports I have endeavored to focus attention upon the serious matters of principle that are involved.

Rather than compromise in the slightest with my position—demonstrated by my withdrawal from the committees of the 1955 Conference—I find that in view of all the above circumstances, there is no further constructive purpose to be gained by the continued participation of United States employers in the ILO.

Accordingly, it is my intention to recommend not only to the employers of my country that they refrain from sending delegations to the ILO until such time as the situation created by participation of Communist so-called employers in the ILO is cleared up, but also that the United States Government do likewise.

International Labor Organization (ILO)—Communists Are Using It as a Sounding Board Against the United States—II

EXTENSION OF REMARKS
OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, the governing body of the ILO may well be likened to a board of directors. It meets three times each year to conduct the business of the organization and is no doubt the most important and most influential organ of the ILO. The governing body is tripartite, consisting of 20 government representatives, 10 employer representatives, and 10 worker representatives.

Mr. Speaker, the report of Mr. H. L. McGrath, United States employer delegate to ILO, referred to follows:

GENEVA MEETING OF THE GOVERNING BODY NOVEMBER 9 TO 18, 1955—REPORT OF UNITED STATES DELEGATE W. L. MCGRATH FOR EMPLOYER GROUPS

In my brief address to the governing body of the International Labor Organization at the close of its November 1955 session in Geneva, Switzerland, I made the following statement:

"It is my intention to recommend not only to the employers of my country that they refrain from sending delegations to the ILO until such time as the situation created by participation of Communist so-called employers in the ILO is cleared up, but also that the United States Government do likewise."

Upon my return to the United States, I formally recommended to the National Association of Manufacturers and the United States Chamber of Commerce that under present circumstances they not only refrain from nominating employer delegations to annual ILO conferences, but also cease to

participate in ILO industrial committee meetings or other ILO meetings for which they nominate United States employer representatives.

I likewise addressed a letter to the President of the United States, urging that our country forthwith withdraw from any participation in the International Labor Organization and withhold from it any financial support whatever, unless and until the Communist issue within the ILO can be clarified and resolved.

THE COMMUNIST ISSUE IN THE ILO

What is the Communist issue? It is simply this:

In the ILO, the employer delegation from each country is supposed to represent free associations of employers, and the worker delegation is supposed to represent free associations of workers by contrast to the government delegation, which represents government. But are there free associations of employers of workers in Communist countries? You know the answer as well as I do.

Therefore when, at the 1954 Conference, Russia, which had long been absent from the ILO, came back as 3 countries, the Soviet Union, the Ukraine, and Byelorussia—reinforced by 5 satellites, namely, Bulgaria, Hungary, Poland, Albania, and Czechoslovakia—the question of the eligibility of Communist so-called employer and worker delegations became paramount.

It was obvious that Communist employer and worker delegations represented, in fact, neither employers nor workers, but were simply agents of the Communist Party, echoing and reinforcing the government delegations from the Russian and satellite countries.

This completely violated the original concept of the ILO constitution, which assumes that each country will send to ILO conferences workers and employers, respectively, who are free to speak independently of their governments on behalf of their constituents.

The employer delegations of the free countries in the world therefore challenged the right of the so-called employer delegations from Communist countries to participate in the Conference. A block of worker delegates representing free trade unions likewise challenged the eligibility of so-called worker delegations from Communist countries. I said to the Conference on that issue:

"What will remain of the tripartite nature of this body, if we admit a solid block of votes, none of which represent free workers or employers, and all of which are under the direct dictation of the Kremlin?

"I charge that the purpose of the attempted reentry of Russia into the ILO is that of disrupting this organization and using it as a springboard for Communist propaganda.

"Unless steps are taken to preserve the tripartite structure of this organization, it is my intention to recommend to my government and to the employers of the United States that they refrain from sending future employer delegations to this Conference."

My position was thus clearly stated at the 1954 conference.

The Conference voted, however, by a substantial majority, that Communist so-called employer and worker delegations should be accredited.

This, however, by no means settled the issue; for basic principles remained unchanged.

Realizing that something would have to be done to attempt to quiet continuing employer objections, the governing body, at its November 1954 meeting, voted that there should be placed on the agenda, for consideration at its March 1955 meeting, a resolution to the effect that the governing body should establish a tripartite committee "to examine article 3, section 5, of the constitution, which provides for the appointment of worker and employer representatives, and make proposals for such amendments as would insure that worker and employer representatives could only be appointed after nomination by organizations of workers and employers which are free and independent of their governments." It was presumed that this might lead to the amending of the ILO constitution in such a way as to disqualify Communist so-called employer and worker delegations.

But at the March 1955 meeting of the governing body, when the issue came up for actual determination, the courage to face it squarely was lacking. The governing body abandoned completely any suggestion of amending the ILO constitution, and instead passed a watered-down resolution to request the Director General to arrange for the preparation of a report covering the membership of the ILO regarding the extent of the freedom of employers' and workers' organizations from government domination or control, the report to be prepared by a committee of independent persons specially appointed for that purpose by the Director General.

It was at that stage that I personally became very doubtful, indeed, as to whether the ILO would ever have the courage to purge itself of the Communists elements which it had admitted contrary to the original principles of its constitution. I voted, however, for the above proposal in the hope that it might possibly lead to constructive action.

It was with this background that we went into the annual ILO Conference in June 1955.

At this conference representatives of the free employers, still firm in their insistence that Communist so-called employer delegations could not possibly represent free associations of free employers, naturally did not elect any Communist employer representatives as employer members of Conference committees. The Communist employers who had put their names up for election thereupon appealed to the entire Conference for placement upon the committees to which they had failed to be elected. The Conference as a whole voted that they should be seated on these committees.

Everyone at the ILO knew what these Communist so-called employer representatives were. They were simply agents of the Communist Party. Putting these men in the ILO employer groups which were supposed to represent viewpoints of employers as contrasted to workers or governments was as ridiculous as if the National Association of Manufacturers or the United States Chamber of Commerce were asked to put Communist agents on their boards of directors. Nevertheless, such was the action taken by the 1955 ILO conference.

The United States employer delegation thereupon withdrew from participation in the four committees upon which Communist so-called employers were seated; continuing to participate, however, in the other committees and in the plenary session of the conference.

There was considerable talk at the 1955 conference to the effect that since the Director General had in fact appointed a committee to study "the extent of the freedom of employers' and workers' organizations from government domination and control" (as directed by the governing body at its March meeting) and this committee was supposed to submit its report to the governing body at its November 1955 meeting, no attempt to resolve the Communist issue should be made at the Conference itself. The obvious way out of a difficult situation was to "put it off until November."

But upon my arrival at the November 1955 meeting of the governing body, I found the report of this committee was not ready. We were told that it was in the process of completion, and would probably be drafted in final form by about the end of January 1956.

This news was, as near as I could judge, what the majority of the ILO governing body wanted. They had no desire to come to grips with this issue. Governments especially welcomed anything that would enable them to postpone and delay.

The crucial point as to timing was this: The November 1955 meeting of the governing body was the last possible time at which, under the ILO constitution, the matter could be put on the agenda of the 1956 conference.

Failure to take action by the governing body at that meeting would therefore make it impossible for the matter to come up as a formal agenda item before the entire Conference until June of 1957.

By that time Communist employer, and worker, delegations from Communist countries would have been accredited for 4 consecutive years—and in the face of that accepted fact, it would be well nigh impossible to unseat them.

Recognizing this situation, I pressed, at the November 1955 governing body meeting, for immediate definitive action.

I pointed out that if the committee report was complete by February it could be discussed by the governing body at its March 1956 meeting and governments would have plenty of time to study it before June. Therefore, I insisted, there was no reason why, if the governing body wanted it done, it could not be put on the formal agenda for discussion at the 1956 Conference.

Toward this purpose I prepared a draft resolution to the effect that the committee report should be reviewed at the 1956 Conference and in light of its disclosures steps should be taken to amend the constitution in such a way as to preserve the tripartite structure of the ILO. To me this was an entirely reasonable and procedurally possible approach. It was an approach which, if accepted, would have enabled me to believe that the ILO wished to face and solve the problem. But, as matters developed, it was impossible to gain any concerted support for any such resolution.

A compromise was then suggested, to the effect that the governing body might put the committee report on the agenda of the 1956 Conference in such a way that the Conference would not actually have to deal with it at all, but could merely refer it to a committee for further discussion, but even as to this proposal no agreement could be reached.

If this proposal, which was far more indirect than mine, had proved to be generally accepted, I would have been glad to go along in hope that it would lead to some definitive action. But since even this was unacceptable, I felt that I had arrived at the end of the road. I became convinced that the ILO had no sincere intention of resolving the Communist issue. The attitude of the governing body majority was to stick their heads in the sand and let matters take their course.

I therefore reviewed the entire issue in a brief address to the governing body, concluding with the statement quoted at the beginning of this report.

If we are simply to accept the present situation in the ILO, the end result is, to my mind, inevitable. The Communists, with 8 nations to our 1, and 32 votes to our 4, will remain firmly entrenched and will progressively dominate the ILO. It will become merely an international forum for the dissemination of Communist propaganda, financed to at least 25 percent by the taxpayers of the United States. In fact, at its next session, our Congress will be asked to raise the ceiling for the United States contribution to the ILO from $1,750,000 a year to $3 million a year.

At annual ILO conferences Communist orators, outnumbering ours in the ratio of 32 to 4, will tell the representatives of 69 nations about the decadence of the free-enterprise system, the superiority of the Communist system, the exploitation of the

workingman by the American capitalists, and our greed and desire for war. These speeches will be reprinted by the ILO and circulated all over the world. One cannot imagine a better ready-made vehicle for the promotion of Communist indoctrination. Do we want to continue to finance this Communist operation?

The future of the ILO, unless strenuous corrective measures are taken, has been well foretold by the history of the World Federation of Trade Unions.

According to Sir Alfred Roberts, United Kingdom's worker delegate to the ILO, following World War II, when the World Federation of Trade Unions resumed sessions, there was an agreement with the Communist unions, who were members, that political issues would be outlawed so that mutual progress could be made on behalf of the welfare of labor.

But the ink was no more dry on the agreement than the Communists set out to use the WFTU as a springboard. They blocked and obfuscated any accomplishments, while they made the most of any opportunity for political propaganda.

Within 18 months they had completely destroyed the usefulness of the WFTU. The free trade unions of the world were thereupon compelled to pull out, which they did, and form their own organization—the International Confederation of Free Trade Unions.

There is a time that calls for action. In my opinion that time is now.

If the ILO does not have the courage to stand by the initial principles of its constitution, and is simply going to temporize and "beat around the bush" and "let things ride" and allow time to pass until it becomes internationally recognized as a Communist-dominated organization, I think the time to get out of it is today.

On the other hand, it is barely possible that sufficiently forceful action might yet spur the ILO into an effort to prevent that organization from being taken over and destroyed by the Communists. The strongest action that can possibly be taken is financial action. The withdrawal of United States support and participation "until such time as the situation created by the participation of Communist so-called employers in the ILO is cleared up" might effect the desired result.

It is on the above basis that I recommend the course of action which I have outlined in this report.

Views of Senator McCarthy on the Natural Gas Bill

EXTENSION OF REMARKS
OF
HON. JOSEPH R. McCARTHY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, January 20, 1956

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement I have prepared concerning my views on the natural-gas bill.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR MCCARTHY

Let me state why I am supporting the Harris bill which prohibits Federal control of the production of natural gas.

The primary purpose of the Harris bill is to promote our free enterprise system which has helped make America strong and free. The bill is designed—not to protect monopolies, or to gouge the public, as some people claim: But to serve the public interest. That is the point I want to emphasize. Let me first deal with several arguments of those who oppose the bill.

The opponents of the Harris bill claim that the gas-producing industry is a monopoly. This is not true. There are over 8,000 producers of natural gas, not one of whom supplies over 5 percent of the market. As a matter of fact, of the 452 manufacturing industries in the United States, all but 70 of them are more concentrated than the natural-gas industry. Beyond this, natural-gas producers must compete for the fuel market with the producers of coal and oil. The transportation and distribution phases of the industry are, in most bases, monopolies; they are and should be regulated by government. The production phase is highly competitive and thus is regulated by the free market.

Opponents of the Harris bill claim, nonetheless, that the cost of gas to the consumer is too high. These are the facts:

(1) Between 1938 and 1953 the average price of all types of gas to the home user increased only 7 percent—while the general cost of living increased 90 percent, and the costs of competing fuels, coal and oil, doubled. Moreover, the price of straight natural gas actually decreased by 7 percent.

(2) It is true that in the past 2 years consumer gas bills have gone up more rapidly than in the past. It is important to remember, however, that the field price of gas (which opponents of the Harris bill want to regulate) is only a very small part of the customer's gas bill. To illustrate this point: The cost of gas to the average Wisconsin family is $74.62 a year; but if the gas producer should give away his product, if gas were free, this average family would save only $4.96 a year. (The major portion of the consumer's gas bill goes to those who transport and distribute the gas.) We should therefore remember that the Harris bill deals with only a fragment of the problem of the rising cost of gas. Now, how does the Harris bill deal with this fragment?

The field price of gas, along with the other components of the customer's costs, has risen in the past few years. The principal reason for this recent increase is that more people are changing over to gas from other fuels, coupled with the fact that the increase in the supply of gas has not kept pace with the increase in the demand for it. Since 1945, the consumption of gas has doubled, while available gas reserves have increased by only one-third. When demand outstrips supply, prices will rise; it is the law of supply and demand. Now: Since we cannot decrease the demand for gas, the only way to check the price rise is to try to increase the supply of gas. This is what the Harris bill aims to do. One of the main reasons that supply is falling behind demand is the existence of Federal controls.

What opponents of the Harris bill either do not understand, or wish to conceal, is that Federal regulation has the effect of decreasing the supply of gas and thus of increasing the price to the consumer. The gas business is a highly risky venture: The producer, to survive, must get as high a price as the free market will allow for the gas he does find—in order to offset the tremendous losses he suffers when, as happens 7 times out of 8, he drills a dry hole. Federal regulation will discourage the investment of risk capital that is needed for new gas discoveries. We already have evidence of this. In the past 2 years, since Federal controls have been in effect, additions to gas reserves have drastically decreased. Moreover, many producers in Texas, Oklahoma, and Louisiana—instead of submitting to Federal regulation which gives them less than a fair price on sales in interstate commerce—have begun to divert their gas to local utilities and to nonfuel uses, such as the manufacture of carbon black.

If Federal controls are kept on, the present trend is bound to continue: Less and less gas will be added to present reserves, and more and more of the gas that is available will be diverted for local use in the gas-producing States. This means that the Wisconsin gas consumer will have to pay higher and higher prices for gas, and it may mean, in the not too distant future, that the gas supplied to Wisconsin and other States located at great distances from the producing areas will be cut off altogether.

The Harris bill seeks to prevent this from happening. It proceeds on the theory that the consumer's best protection against high prices is the free market. Let me add that in the event a single gas producer corners some section of the market and tries to hike his price above the market level, the Harris bill provides adequate protection. It prevents any producer from selling gas in interstate commerce at higher than the reasonable market price.

Finally, let me express my fear that Federal regulation of this competitive industry is a step toward socializing our entire economy. If gas production is subjected to Federal regulation, there is no logical reason not to regulate coal and oil production. And if all fuel production is regulated, why stop there? Why not impose Federal controls on the production of cheese and milk? To prevent socialization of our country, I believe Americans must stand together and oppose the attempts of the planners and the socialists to pick off competitive industries, one by one.

Bernard DeVoto

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Friday, January 20, 1956

Mr. MURRAY. Mr. President, last November this country lost a great conservationist and historian with the death of Bernard DeVoto. He was perhaps the most articulate spokesman among those who treasure and have long fought to preserve our natural resources.

I ask unanimous consent to have printed in the Appendix of the RECORD an article by the distinguished junior Senator from Oregon [Mr. NEUBERGER], which appeared in the January 1956 Progressive under the title "Defender of the Wilderness," and article entitled "Death of a Fighter," written by John B. Oakes and published in the New York Times, and an editorial entitled "A Man Who Knew the West," from the Glasgow (Mont.) Courier, all of which pay tribute to Mr. DeVoto and his work.

There being no objection, the article and editorials were ordered to be printed in the RECORD, as follows:

[From the Progressive of January 1956]

DEFENDER OF THE WILDERNESS

(By Hon. RICHARD L. NEUBERGER, of Oregon)

Bernard DeVoto once told me that, above and beyond everything else, he would like to have been with Lewis and Clark on that first of all treks across our continent. This privilege having been denied him, he did the

next best thing. He became the principal defender of the realm Lewis and Clark explored. Let some greedy looter touch so much as one pine grove or a single foaming waterfall, and DeVoto was off to the rescue—armed with a portable typewriter that shot dum-dum bullets.

He voted and he paid his taxes in Massachusetts, on the edge of the Harvard yard. He frequented the magazine offices, publishing houses, and broadcasting studios of Manhattan Island. He was an intellectual and a sophisticate, and he never made any bones about it. Yet, when he died suddenly this past November, the deepest sorrow must have been in the far-off mountain ranges and lonely canyons of the West. This might have astonished him, for once he wrote:

"I have nothing to do with the West. I broke the story of the attempted land-grab in 1946 and, because at that time I happened to be the only slick-paper journalist who was a qualified conservationist, the spotlight has been on me ever since. * * * I do go West a lot. I love the country. I have a lot of friends out there."

Thus did he play down his role as protector of the wilderness. But others knew that role for what it actually was. After DeVoto's death, at the early age of 58, the former Chief of the United States Forest Service, a lean man named Lyle F. Watts, said to me, "He was our best friend, because he wasn't afraid of anybody or anything, and because he could command an audience. Our natural resources are a whole lot less safe today, now that he is dead, than they were last night, when Benny DeVoto was alive."

DeVoto had a profound faith in the average person's love of this land and its bounty. He visited my wife and me in February of 1954, a few weeks before I filed for United States Senator. Over broiled Chinook salmon from the Columbia River at lunch, we wondered if a Democrat could get elected in the State of Oregon, where it hadn't been done since 1914. My adversary was to be the incumbent Senator, who had sponsored the surrender of the oil tidelands, the relinquishment of public grazing and timberlands, and the yielding up of Hells Canyon.

After DeVoto had bidden goodby to us and walked down the steep steps in front of our old frame house, he abruptly turned on the sidewalk and puffed back up the cement steps. I came halfway to meet him. Breathing deeply from the exertion, he faced me in the bright sunlight. A faint smile creased his face, with its broad mouth and wide, flattened nose. He could not have been described by his own mother as a handsome man, yet a kind of aura lighted his eyes as he spoke.

"Be of good cheer, my friend," he said. "The American people have never yet voted to abandon their natural resources when the issue was understood by them—and they never will. Everything's going to be all right. I'm just about sure of that."

Throughout the hard, bruising Oregon campaign which followed, a stream of small checks came steadily from Cambridge. They were the result of dinner parties "for NEUBERGER," given by DeVoto and his personable wife, Avis. Often the signatures on the checks were of celebrated teachers, writers, and scientists. Some of them I knew to be Republicans. When I later asked Mrs. DeVoto about this political heresy on the part of her guests, she replied, "Oh, certainly, but when Benny told them of the grand fight you were making for conservation out in Oregon, they couldn't resist. He just melted them away, and they reached for their checkbooks."

He was that sort of man. To him, halfway measures were worse than none when the American outdoors seemed in peril. He was the first person to sniff danger when a presumably innocent bill was introduced by Senator Guy Cordon and Representative HARRIS ELLSWORTH, both of Oregon, allowing lumber companies to be reimbursed with public timber of their own selection rather than in money, when the Government took over any of their land for reservoirs, highways, or military encampments. The bill might have slipped through Congress almost without notice, had not DeVoto led off with a bristling "Easy Chair" in Harper's, warning that the legislation could give the country's biggest lumber operators a foothold in the national forests from which they might never be wrested.

II

Another writer would have let the matter go at that. But with DeVoto, who was born in Ogden, Utah, this was merely the beginning. He wrote innumerable letters about the Cordon-Ellsworth bill. He goaded groups like the Wildlife Management Institute and the National Wildlife Federation. He summoned the Wilderness Society and the Sierra Club to battle. He set up headquarters at his own expense in the Hay-Adams House, where he conferred with people like Representative LEE METCALF, of Montana, and Senator HERBERT LEHMAN, of New York. He irritated his editors at Harper's by hammering away on the issue of natural resources, when they thought the interests of magazine circulation dictated more diversified contents in the Easy Chair.

Yet, althought the Cordon-Ellsworth bill for timber exchanges had the full backing of the Republican administration, it was voted down decisively, 226 to 161, by a Republican House of Representatives. Many Members of the House told me that a man who never participated directly in this roll-call deserved nearly full credit for the outcome. "Without DeVoto," said Representative METCALF, "the bill probably would be part of our Federal statutes right now."

Wesley A. D'Ewart, then a Republican Congressman from Montana, tried harder than anyone else to bring about passage of the timber-exchange legislation. He also was the author of a grazing bill which would have given 18,000 privileged livestock operators greater control over upland meadows in the national forests than would have been vested in 33 million Americans who enjoy using this domain for fishing, camping, hiking, and hunting. When Secretary of the Interior McKay recently appointed D'Ewart as his assistant in charge of public lands administration, DeVoto heard the fire bells clanging. He was embroiled in the battle against D'Ewart's confirmation by the Senate at the time that death claimed him. This cause, and many others, will suffer for want of his pugent phrasemaking and his boundless energy.

I have thought frequently that Benny DeVoto loved the West because he knew so much about it. Riding with him one afternoon on the Great Northern's gleaming Empire Builder, I listened to a recital of each place along the line where some mountain man had snared a beaver or hidden in the bullrushes to save his scalp. When DeVoto felt that Oregon had not properly marked historic points on the campfire trail of Lewis and Clark, the "easy chair" which ensued helped to shame our State into some corrective measures.

Perhaps DeVoto's most controversial essay appeared in Harper's in 1947, entitled "The West Against Itself." Its theme was that the major demands for exploiting the timber, minerals, water, and scenery of the West always had come from westerners, who, in turn, were under heavy political and economic pressure from absentee landlords. This exploitation contrasted with orderly development. The doctrine was hotly challenged, particularly by leading figures in the Republican Party, who kept promising a new and brighter era in Western progress if only a "dyed-in-the-wool" westerner could become Secretary of the Interior.

In January of 1953, President Eisenhower appointed as Secretary of the Interior a native of Oregon and that State's former governor, Douglas McKay. This dyed-in-the-wool Westerner indorsed the bills to give preferential priviliges in the national forests to big lumber operators. He approved the relinquishment of the tidelands oil deposits. He indorsed commercial invasion of the national park system. He led the crusade to abandon Hells Canyon to the Idaho Power Co., which is incorporated 3,000 miles away in Maine. He suggested turning over the John Day power site on the Columbia River to Pacific Power & Light, another Maine-incorporated company. He fired the career biologist heading the Fish and Wildlife Service and replaced him with a political appointee.

Westerners, looking at the wreckage of the resource program in their region, remembered DeVoto's reminder of Theodore Roosevelt, of Oyster Bay, N. Y., and of Gifford Pinchot of Connecticut and Pennsylvania, who had teamed up originally to set aside the national forests for all the people. Westerners remembered how DeVoto had told them of Franklin D. Roosevelt of Hyde Park, N. Y., who had built Grand Coulee and Bonneville Dams, and of Harold Ickes of Chicago and Oscar L. Chapman, born in Virginia, who had administered these dams in the public interest. They thought of the Westerner who was taking Hells Canyon away from them, and they wished they had heeded the warnings voiced by DeVoto.

There was a place above all others that held DeVoto's heart. On the lofty divide above the Lochsa Fork of the Clearwater River in Idaho, wavers a thin and overgrown trail. Lewis and Clark tottered along that trail when they were near starvation. Tears of excitement and high adventure filled Benny's eyes on the day he trod the trail himself. This, to him, was all that Valhalla could ever be—the wilderness, the solitudes of lodgepole pine and alpine fir, the tossing meadows of bear grass, that path where the first white men had come so long ago.

III

It was an experience he never forgot. It lived with him until his death. One memorable evening, in the spring of 1955, he recalled it to me as we ate prime ribs in the paneled dining room of the Carlton in Washington. I know that this sumptuous atmosphere faded for DeVoto, and that he was back again on the trail with Meriwether Lewis and William Clark, whose marvelous exploits of exploration are the substance of his greatest book, The Course of Empire.

DeVoto wrote: "Whenever I go back to the Bitterroots, I realize afresh that they are my country—Traveler's Rest to Lolo Pass, to Crooked Fork, to the Lochsa, and on down the works of the Clearwater.

"* * * To everyone his own desire in mountains, mountain meadows, and mountain streams, but for me the best of the West is the Lochsa country. * * * If working journalists are rewarded on the far shore, I will sometime get a long summer within a few miles of the Powell Ranger Station."

I prefer to think that courage and persistence and integrity are qualities of character which never die. The next time that I go down the Lochsa and over the Lolo Trail with his friend Bud Moore, the district forest ranger, perhaps we shall see DeVoto in faded breeches and green flannel shirt and his old logger's boots. And we shall hear him, too, in the lilting roar of the Lochsa, as it surges

through the timbered fastnesses which he thought so important to save for the next generation of Americans.

[From the New York Times]

DEATH OF A FIGHTER

The cause of conservation in the United States has lost one of its most articulate, militant, and influential spokesmen with the death of Bernard DeVoto. Noted as a historian, as an editor, and as a critic, Mr. DeVoto was a fearless fighter for the things he believed in, and one of the things he believed most passionately was the preservation of America's natural resources, including its majestic scenery.

From his famous "Easy Chair" which for 20 years he occupied in Harper's magazine, he fought many a major conservation battle. As a westerner and an expert on American land policies, he was particularly well qualified to expose the efforts of some stockmen to push through a grazing bill that would have given them vested rights in national forest land. He fought the proposed invasion of Dinousaur National Monument tooth and nail; and one likes to believe that before he died he knew that that project had been defeated.

Among the last verbal bouts which he enjoyed was one with the State of Maine. He had written an article describing part of United States Route 1 running through Maine as "an uninterrupted eyesore of drive-ins, diners, souvenir stands, purulent amusement parks, cheap-jack restaurants," and he summarized that part of coastal Maine he had seen as "a jerry-built, neon-lighted, overpopulated slum." Mr. DeVoto's vivid words could apply equally well to many other sections of U. S. 1, in Connecticut and New Jersey, for example. They could apply to dozens—probably hundreds—of roads in many parts of the United States, including some that formerly were among the most beautiful.

[From the Glasgow (Mont.) Courier]

A MAN WHO KNEW THE WEST

The recent death of Bernard DeVoto, author and historical authority, brought to the end of his life a man who probably knew as much about our section of the West as any person in the world.

Mr. DeVoto had won a Pulitzer prize for his great book, Across the Wide Missouri. It is a definitive volume on the western fur trade. He had done other notable jobs on the West, such as his editing of the Lewis and Clark journals and his book, Course of Empire.

If one is curious about the mountain men, trappers, and Indians who were roaming this country, right where we live, early in the last century, he will get an explicit portrayal of their lives, down to minute details, in Across the Wide Missouri.

Mr. DeVoto visited here several times. We recall one occasion when he came with two Montanans who had gained prominence as writers—A. B. Guthrie and the late Joseph Kinsey Howard. Their respect for him gave evidence of his spiritual mentorship of their efforts to tell the story of our country.

So we Montanans are indebted to Mr. DeVoto in several ways. He was the kind of writer who sometimes injected himself actively into current controversies and never left anyone in doubt where he stood. Above all that, he did much to chronicle the real, unvarnished annals of a generation that bloomed and died and left its mark on the intermountain West.

Tariffs or Socialism

EXTENSION OF REMARKS

OF

HON. GEORGE W. MALONE

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Thursday, January 19, 1956

Mr. MALONE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Tariffs or Socialism," delivered by Edgar M. Queeny, chairman of the board of the Monsanto Chemical Co., before the chamber of commerce at Little Rock, Ark.

Mr. Queeny is a well-recognized authority on the manufacture and marketing of chemical products both here and abroad.

I am informed by the Public Printer that the estimated cost of printing this address is $320. I ask that it be printed in the Appendix of the RECORD, notwithstanding the cost.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TARIFFS OR SOCIALISM

(By Edgar M. Queeny, chairman of the board, Monsanto Chemical Co.)

Although my association with Arkansas industry is recent, I am no stranger here. I have been coming down to watch the rice-fed mallards of your Grand Prairie pitch into my decoys for over 20 years. And, for the past 17, I have been a part-time resident here. I own a substantial rice and cattle farm in Prairie County where, upon my retirement, I look forward to living not 2 or 3 months a year, but to becoming a year-around resident. At that time I shall vote Democratic probably—just as many of my friends, who have moved from Little Rock to St. Louis to occupy prominent places in that community, vote Republican there. In my case, the transfer of party allegiances will be much easier than I believe it was for them, or than it would have been for me a few years ago. Now my political ideology is much closer to that of most southern Democrats than to that of certain elements of the Republican Party.

I have seen great changes in Arkansas during these 17 years. When I bought my farm, rice was about 75 cents a bushel; the State's average yield of long-grain rice, less than 50 bushels an acre. Today's price exceeds $2 and, aided by last year's favorable growing season, the boys on my farm raised 77,500 bushels of dry, long-grain rice on 815 acres—a little over 95 bushels an acre.

Then my tractors were small, spiked-wheel jobs. We used many mules. Now we use large, rubber-tired diesel tractors and no mules. To the best of my knowledge, not a ton of fertilizer was used on Prairie County rice before 1940; farmers believed it did not benefit rice. This year we used on my farm, over a ton of concentrated fertilizer for every 3 acres, and it paid off. Then we harvested, when the weather permitted, with binders; men followed, stacking the bundles, nine to a shock. When the heads had dried, threshing machines—some steam-driven—moved from field to field, marking their path with large straw stacks which were burned later. Now powerful combines each cut and thresh some 20 acres daily. We fertilize by airplane, we spray herbicides and defoliants by airplane, we often seed by airplane.

Then harvest hands earned a dollar a day; now, up to $10 a day. But their productivity has gone up, too. Recently, the Agriculture Department stated that in 1955 one man raised as much corn as 3¼ men raised in the later 1930's. A well-managed Arkansas rice farm will show at least as great an increase in productivity.

As consumption of rice and other farm products has not kept pace with this increased productivity, great surpluses have accumulated. People not needed on farms have moved to towns and cities, finding employment in manufacture. Arkansas, which is predominantly agricultural, has lost since 1940, 184,000 in population—almost 10 percent. Prairie County's population dropped more than 16 percent, while that of the Nation has increased 23 percent. It seems probable that this trend will continue unless industry which can provide new employment is attracted to Arkansas. We have the Arkansas Industrial Development Commission but, in my opinion, its prospects of success are being dimmed by policies common to recent and present national administrations.

Tonight it would be very pleasant for me to stay within the usual banalities of a brief, after-dinner address. However, I have not made an address such as this for 15 years, so you must pay the penalty of listening to many accumulated words; and these words will concern a subject which prudence advises me to avoid in Little Rock. I know many of you hold traditional democratic views on free trade.

Yet, you are interested in attracting manufacture to Arkansas, so let me begin by stating a manufacturer's pro-tariff case. The increases in wages, pensions and associated costs which we have negotiated during 1955 in Monsanto plants is almost equal to the hourly wages we pay in our Japanese plants—about 15 cents an hour. Because American industry provides its workers with more automatic devices, Americans are more productive than Japanese, but not in an 18-to-1 ratio. Experience in our own plants indicates that in our type of work 2 Japanese are as productive as 1 American; but Japanese productivity would be just as high if the cost of many automatic devices could be justified there.

Monsanto's hourly rates in its United States plants are more than four times the rates it pays in its British plants, and five times those paid by its German competitors; and, in many cases, the productivity of British and German labor is as great as American. In some instances, German productivity is even higher than ours, particularly in the construction industry. German bricklayers lay 1,200 bricks a day; in St. Louis the fixed maximum output is 500.

American factories cost more to build than European. An American chemical plant costs twice as much as its German counterpart; our laboratories, at least three times as much. With the exception of Britain, if one includes their dividend tax, American corporate-income taxes are higher than those of any other industrial nation. Hence, to yield the same rate of return on capital, net profits in the United States must be more than twice as much as, for instance, in Germany.

Except for some industries favored by cheap, indigenous raw materials such as natural gas, or by the fortuitous circumstance of our large, presently prosperous population which permits some companies to tool production lines for million-unit outputs,

all the factors I recited require much higher selling prices for American products to yield reasonable profits.

Many people assume erroneously that production genius is an American monopoly; that, by the use of esoteric formulas we conjure secret automations, and that in consequence American costs remain competitive, despite higher labor rates. If so, why does this genius stop short of shipbuilding, farming, and overseas airlines?

In order to compete, our shipping industry is heavily subsidized. More than one-half the cost of the superliner *United States* was paid by our Government, which also subsidizes about one-half the cost of its operation.

The American wage cost of operating a C–2 cargo vessel in 1954 was $24,000 a month; the British wage cost, $4,500. Our Government paid American operators the difference—$19,500 a month for each ship.

American oil and shipping companies which operate overseas without subsidy now build their ships in Britain, Germany, or Japan and operate them with foreign crews under Panamanian or other foreign flags.

Our overseas airlines are subsidized also. Even though foreign airlines, as a rule, purchase American equipment, and so have the same capital investment, the operating subsidy to American overseas airlines for the fiscal year 1955 was $18,632,000. Without this subsidy they could not compete. Furthermore, neither foreign airlines nor ships are permitted to compete in our domestic market. Foreign airlines cannot carry passengers or freight between our cities nor can foreign ships carry coastwise cargo.

As I have related, American farmers have achieved outstanding improvements in productivity; but to make a return on their labor-saving equipment, pay their helpers adequately, and maintain an American standard of living for themselves, they require higher selling prices than foreign farmers using cheap labor instead of machines—and through Government intervention in production and the free flow of trade, they do receive higher prices.

It is difficult to compare prices of farm products accurately because of varying national varieties and standards. However, in Winnipeg, No. 2 wheat sells for about $1.69, against about $2.15 in Kansas City. Burma exports medium-grade rice for about $5.25 a hundredweight; in New Orleans, Blue Bonnet rice is about $10.50 a hundredweight. Cotton is about 33 cents in Little Rock; Liverpool quotes May–June futures at 27 cents.

To maintain these differentials, our Federal Government supports domestic prices, subsidizes exports, and restricts each farmer to a reduced acreage which he may plant and which he may not exceed without heavy penalty. Incidentally, because of these price differentials, one-half of our agricultural exports are subsidized or otherwise aided by some Government program.[1]

Furthermore, imports of such farm commodities are limited by quotas. Imports of cotton and cotton wastes are limited to approximately 136 million pounds annually; short-staple cotton and cotton waste are allocated meticulously by quota among 32 nations. Some of these quotas border on the ridiculous—Haiti, for instance, is permitted to ship us 237 pounds annually; Iraq, 195 pounds. In the case of wheat, 10 nations may ship us but 100 bushels, and 18 nations less than 10 pounds of wheat products annually. To such extremes will bureaucracy go to provide all nations with a fair share of our market as required by the General Agreement on Tariffs and Trade, a subject to which I shall return.

In the past, the costs of our manufacturing industries were equalized with foreign costs by tariffs so that selling prices in our market of foreign and domestic products were comparable. But progressive reductions made during the past 20 years, under successive trade agreement acts, have made many rates inadequate and, as a result of the adoption of the Randall Commission recommendations, more unjustified reductions are in prospect.

Facts do not support the program for further reductions. Our tariffs average but 5.4 percent. Of 43 of the world's principal nations, only 7 have lower average rates.

For the 18 months ending last June, excluding military shipments, we had a favorable balance of trade and services of less than $3 billion, most of which resulted from heavy machinery and supply shipments to Canada, Venezuela, and the Near East, where American companies are developing oil, iron, and other deposits, and shipments under economic-aid programs. Nor does this trade balance reflect substantial outgoes for imported plutonium and uranium ore. However, even without these factors, the balance was more than offset by private remittances and grants. Commenting on last year's third-quarter trade figures, the internationally minded New York Times said that once again there was no dollar gap.[2]

In fact, since January 1954, we had an unfavorable balance of trade with Western Europe and its dependencies, and with Great Britain and its colonies. These are the nations which ship to us most of the industrial products upon which duties are payable. The excess of imports from them would have been much greater had their industrial capacities not been required to supply heavy home demands created by the current European boom. Europe is buying American coal, as her mines can't furnish boom requirements. She is buying steel, chemicals, and other products she can make more cheaply herself. Britain and Germany, Europe's leading producers of coal and steel, are about to become net importers of both. Our exports of these products will stop when Europe's capacities are increased or if her boom pales; then the flow will reverse.

I should like to emphasize very strongly that current tariff rates have not been tested during normal times, when the world's industrial capacity to produce exceeds its capacity to consume. I am confident, for reasons I will give later, that many of those advocating further decreases in tariffs know this.

Swelled by grants and our military expenditures abroad, the gold and dollar balances of foreign countries stand at an all-time high of almost $26 billion.[3] Their holdings of gold and earmarked gold are up more than 7 billion since 1948. In the same period our gold holdings are down over 2½ billion.

Proponents say that tariff reductions are necessary to keep our allies prosperous. Yet Europe is enjoying record prosperity. There is no real unemployment in either Britain or Germany. Western Germany, even after absorbing almost 10 million refugees, is importing Italians to augment her labor force.

When one digs out facts, lyrical phrases and other promiscuously worded propaganda such as "Trade, not aid" and closing the dollar gap, aimed at opening American markets wide to foreign dumping, appear in their true, mischievous character.

Who is behind it all? This has long puzzled me. I have sought to rationalize their motives. Tonight I shall present a case which I hope will convince you that adequate protective tariffs are not an impediment to normal foreign trade and that in our free society they are the only alternative to a supranational socialism.

In proceeding to develop this rationalization, I divide the proponents of tariff reduction into three groups:

Group I are importers and exporters who think that they would benefit.

Group II are well-meaning but uninformed individuals and groups who have been taken in by State Department and allied propaganda.

Some of this group have a nostalgic yearning for the return of the 19th century world, when relatively free trade was in effect. It was a world without passports, income taxes, social-security schemes or trade unions. Socialism and communism were little more than words. After Waterloo it was a century of relative peace.

Then when one nation imported more than it exported, the excess imports were paid for in gold. When too much gold left the nation, money became scarce, interest rates rose, hard times followed, imports dropped, unemployment induced lower wages and emigration to colonies or the United States, which had no restrictions on immigration. When that nation's costs had been reduced, others bought from it, it recaptured its gold and all was in equilibrium again—this is a thumbnail sketch of the classic world of free trade.

Now even though more than half a century of war and change precludes a return to such a world, some people idealize it. Mr. Clarence B. Randall seems to be one of them.

Mr. Randall is a lawyer. He is chairman of Chicago's Inland Steel Co., which, by reason of its inland location, happens to be sheltered from foreign competition by freight rates alone. Mr. Randall is a vocal and effective crusader—a zealot—in the causes in which he believes. And he believes in free trade.

He made this abundantly clear in his book Freedom's Faith, published in October 1953. But in this book he also made it abundantly clear that he would not allow facts to interfere with the conformity of his heart and mind to his economic creed. For instance, on page 132 he states that, although we have been pressing foreign countries to remove their import licensing quotas and other trade barriers, "our own tariff barriers have not only not been materially reduced, but on the contrary, have in some instances actually been increased.

The facts are that in 1933, before the passage of the first Trade Agreements Act, average tariff rates on dutiable goods were 53.6 percent. In 1954, such tariffs averaged 12.2 percent—a reduction of almost 77 percent.

On the same page he proceeds, "Hanging over each European manufacturer who might be willing to try to sell to us even in spite of our tariffs is the threat that if he is too successful he will have to climb a still higher wall which we will thereupon erect. It is like a pole vault, where the bar is raised after each jump."

This is a nice similie. But what are the facts? The facts are that for more than 20 years prior to the date Mr. Randall wrote, the only tariffs on manufactured goods which had been raised by administrative action were those on fur felt hats and hatters' fur, if the latter can be included in the category of manufacturers.

Now anyone with such a startling genius for ignoring fact was a natural ally of a group in Government which has, I believe, other motives for reducing tariffs. This is group III. While review copies of his book were in circulation, Mr. Randall was appointed chairman of a commission to recommend a foreign economic policy to the President and Congress.

Its work is described in a joint statement of general dissent filed as part of the Commission's report to the President, from which I now quote: "Less than 4 months had been fully used when the report was frozen. * * * No comprehensive study of facts, conditions, and problems was made. The only witnesses allowed to appear at public hearings * * * were representatives mainly of recognized

Footnotes at end of speech.

Footnotes at end of speech.

pressure groups whose views were known in advance. Witnesses in the United States were allowed 2 days for appearance; those appearing at private hearings in Europe, whose primary interest was to obtain help for foreign countries, were allowed 4 days. * * * There is no evidence in the report of serious consideration of the exhaustive studies prepared and submitted by domestic industries. Spokesmen for industries vitally affected were not permitted to testify."

Yet within these 4 months—which included a trip to Europe—Mr. Randall conjured not only a pattern for further reductions of American tariffs, but made proposals in fields of foreign economic and military aid, for reduction in the taxation on American investments abroad, for policies to be followed by the Export-Import Bank, for eliminating our agricultural price supports, for changes in our merchant marine policy, for amendments to the Buy American Act, and for handling one of the world's most baffling problems—currency convertibility.

A thorough job on any of these subjects would be a monumental accomplishment within 4 months; a thorough job on all within 4 months an impossibility. Hence, it is difficult to escape the conclusion that the dissenting statement—"that there was no comprehensive study of facts"—must be correct. Yet Mr. Randall's recommendations for further tariff cuts were sent to Congress as "must" legislation—and most of them squeaked by last spring.

Mr. Randall's Commission also recommended renegotiations of the mammoth General Agreement on Tariffs and Trade, commonly known as GATT, to eliminate certain compulsory features which had attraced severe criticism in Congress. The State Department disregarded this recommendation. Instead, it is trying to set up a new international agency, the Organization for Trade Cooperation, to police GATT and perpetuate its compulsory features. Undeterred by this departure from his Commission's recommendation, Mr. Randall is now busy drumming up support for the new organization.

A bill to approve our membership in this organization, which is called the Organization for Trade Cooperation, is now before Congress. Styled H. R. 5550, it has the administration's blessing. While it submits the charter of the Organization for Trade Cooperation to Congress, it does not submit any of the complicated and far-reaching text of GATT itself. Perhaps one reason for separating the two was to obtain congressional approval for the seemingly innocent organization without having to submit this text. Nevertheless, if Congress approves the Organization for Trade Cooperation, it will, at least by implication, also approve GATT and we will be saddled with the whole package.

What are the history and purposes of this organization?

There exists in Washington, London, and many foreign countries, a hard core of zealous and effective individuals who would like all aspects of the economic life of society to be brought under collective control. This applies to production and distribution alike. Some favor all production being owned by the State—none remaining in private hands. The more moderate would settle for what I shall call welfare capitalism wherein commerce remains in private hands but with salaries and profits regulated and prerogatives of shareholders under State control. They desire equality of economic, social, and political status for all; they desire such a society to be global; they believe this can be achieved only by a supranational world government. They are my group III. Some eminent individuals and groups also advocate world government, believing it will attain permanent peace. I do not include them in group III.

The American members of group III, such as Americans for Democratic Action, do not call themselves Socialists. They are, however, the political counterparts of the British Fabians who are more candid. Fabians call themselves Socialists. They sired Britain's Labor Party which, during its postwar tenure, gave effect to part of the Fabian program—it socialized medicine, nationalized coal, steel, railroad and other transport industries and, so long as it remained in power, it continued rationing and state trading in basic commodities.

No acrimony attends my use of the word "socialism." Brilliant minds formed and form Fabian policy. You will recognize such world figures as George Bernard Shaw, H. G. Wells, John Maynard Keynes, Bertrand Russell, Clement Attlee—all apostles of Fabianism; all made many converts.

Group III distinguishes between economic freedom, which they oppose, and political freedom, which they support. They condemn equally what is left of laissez-faire capitalism in the United States and the police-state violence of Russia. They applaud equally political freedom in the United States—and planning, compulsions and economic sanctions in Russia.

The emphasis of British group III is national, as Britain has neither a written constitution nor a bill of rights. Its people are protected against absolute government only by tradition.

However, America's group III has a "one world" psychosis due in part to altruism—an American characteristic—but, of greater weight, I believe, is the facility with which they can subvert our constitutional rights if we enter into world government. Group III formed the core of the New Deal and Fair Deal. They were master-architects of United Nations. They were and remain most influential in our State Department. Their purposes are more easily accomplished in times of strife. Hence, to them depressions and wars, hot or cold, are not unmixed misfortunes.

In 1952 the Fabians published a series of essays—Clement Attlee, recent head of the Labor Party and King George VI's Prime Minister, wrote an adulatory introduction in which he said, "I commend new Fabian essays to all our comrades not only in this country but overseas."

In the leading essay written by the volume's editor, R. H. S. Crossman, a member of Parliament, I found these words relating to the current cold war: "If freedom is to survive it is essential that neither the United States of America nor the Soviet Union should win. * * * We are opposed to Russian expansion but also to an American victory. Our object is to keep the cold war cold, and in particular, so to restrain armament so that it remains at a level which both sides can sustain over a period of years * * * we must realize that cold war brings possibilities of good as well as evil. Under its stress, both Communists and anti-Communists are overcoming antiquated forms of national sovereignty and developing new institutions of international planning and technological changes."

Elsewhere in the volume one finds many comments on the desirability of the United States increasing its expenditures for economic aid to the less developed nations, and praise for the social advances reaped during, and as a result of, the big hot war when Russia was an ally, and when some Communists were in our Government and the British Government and worked closely with group III in furthering their common economic ideology.

Under the leadership of Alger Hiss they helped to draft at Dumbarton Oaks, and later at San Francisco, the United Nations Charter—and it may not be inappropriate here to quote a December 12, 1952, U. S. News & World Report estimate that as many as one-half of the 1,350 administrative executives of the U. N. were either Communists or persons who willingly did Communist bidding. Hence, when Ambassador Lodge and Russia's Ambassador Sobolev make faces at each other, as many of the U. N. staff applaud Sobolev as Lodge.

The heart of group III's work is contained in the euphonious language of four of the U. N.'s Charter articles:

Article 55 states that the U. N. shall promote:

(a) Higher standards of living, full employment, and conditions of economic and social progress and development.

(b) Solutions of international economic, social, health, and related problems.

Article 56 states: All members pledge themselves to take joint and separate action in cooperation with the organization for the achievement of the purposes set forth in article 55

Article 60 vests responsibility for carrying out these aticles in the Economic and Social Council.[4]

In 1946 our State Department made proposals to this Economic and Social Council for an International Trade Organization. GATT, financed and partly staffed by the U. N., was the ultimate outcome. GATT's "obectives" include "raising standards of living, ensuring full employment * * * developing the full use of the resources of the world and expanding the production and exchange of goods, and promoting the progressive development of the economies of all member nations." GATT's official Basic Instruments and Selected Documents fill 800 pages. Of particular importance to this analysis are:

A. (Art XI, sec. 2.) GATT would under certain conditions consider what share of a country's market of a given product belongs to other countries.

A. (Art. XIII, sec. 2.) Which outside countries are entitled to supply that share of a country's market and in what proportions.

C. (Art. XVI, sec. 3.) What is a country's fair share of the world export market in a particular product.

D. (Art. XX, sec. 1 (j).) What is a country's fair share of raw materials or other products in short supply.[5]

Although Congress has never approved GATT—the State Department accepted GATT on behalf of the United States provisionally in 1947, and ever since has operated through it.

I shall not belabor you by tracing all the involved maneuvering preceding the present Organization for Trade Cooperation and GATT; nor shall I analyze all the jargon of language contained in their documents, articles, and rules. Any such attempt would only prolong this address and confuse its essentials. Thirty-four other nations have accepted GATT provisionally—almost all being recipients of our economic aid. Naturally, our State Department's influence over them is not diminished by holding the strings of Uncle Sam's multibillion-dollar grab bag; and, by the way, this seems a cogent reason for the Department to insist that such aid be continued year after year.

Another reason might be rooted in Stalin's involved dialectic: "That is why it is essential that the triumphant proletariat of the advanced countries should render aid, real and prolonged aid, to the * * * backward nationalities in their cultural and economic development. * * * Unless such aid is forthcoming it will be impossible to bring * * * the various nations and peoples within a single world economic system that is so essential for the final triumph of socialism."[6] Later Stalin said: "Unless this slo-

Footnotes at end of speech.

gan is put into effect, the amalgamation and collaboration of nations within a single world system of economy which constitutes the material basis for the victory of socialism will be impossible." [7]

And Earl Browder, one of America's leading Communists, wrote:: "There is nothing more necessary in the postwar development of foreign trade than precisely the intervention of the government as organizer, director, and financier of the whole process * * * the large-scale entry of the government into the sphere of foreign trade is only another part of the development of state capitalism. It is another step in the capitulation of the bourgeoisie before the invasion of the principle of Socialist planning." [8]

In conformity, Henry Julian Wadleigh, who confessed his Communist affiliations at the Hiss trials was transferred from the Department of Agriculture to the State Department at his own request, pursuant to instructions from the Communist Party.[9] Wadleigh became an official in the Trade Agreements Section. Harry Dexter White, identified by Elizabeth Bentley and Whittaker Chambers as a Communist agent, represented the Treasury Department on the Interdepartmental Committee on Trade Agreements.

You may ask, "Why this concentration on the Trade Agreements Act?" It was the first step in wresting control of our foreign trade away from Congress. This was necessary before Stalin's "single world system of Socialist economy" could be established. The administration of trade agreements was not in the Commerce Department, where logic would place it, but in the State Department, where the cell and its group III allies could carry out its purposes.

Hiss and Wadleigh are out of Government. White is dead. But the Economic Affairs Section of the State Department, which makes trade agreements and conceives foreign economic projects, lives on. The State Department's current register, which provides brief biographies of all principal staff officers, lists under "Economic Affairs" 56 names, exclusive of the Deputy Undersecretary. Of the 56, 53 served in the State Department prior to the Eisenhower administration. Of the remaining 3, 2 served in other Government agencies prior to the Eisenhower administration.

I trust I have made it clear that, although some of these people served under Hiss and with Wadleigh, I am not charging any with communism. But I do want to suggest, emphatically, that what they have done and what they now advocate will lead to a supranational Socialistic Government which could eventually control not only American foreign trade, but which could dictate, through subservient American authorities, our domestic intrastate and interstate commerce as well

Group III is far too intelligent not to know that the present level of tariffs is not seriously limiting imports of most manufactured products, and if Congress approves the Organization for Trade Cooperation which, by indirection, approves GATT, our tariffs in fact will be frozen at or below this level. They foresee that, at the first break in world prosperity, a flood of cheap imports will cause great unemployment in this country.

In which case an appeal to GATT for relief will be necessary. This occasion would set in motion forces which could result and, in my opinion it is the desire of group III that it should result, in gigantic global economic planning that would dwarf our current farm and wartime controls into insignificance. It could bring into effect GATT's latent power to allocate markets as illustrated by articles XI, XIII, XVI. GATT would then be in a position to determine what share of our market in every affected product belonged to other countries—what share of this share such countries were entitled to supply, and what the proportions of each would be.

Is this too fantastic? Article XX, section 1, of GATT authorizes measures for the distribution of materials in short supply. In conformance with its spirit, during the Korean war, our State Department proposed to President Truman a world authority to allocate among nations, materials whose supply was inadequate for civilian and military requirements. President Truman instructed the State Department to organize what became the International Materials Conference. It operated as a supranational cartel, dictating prices and allocating the world's output of metals and other materials to various nations.[10] Our Defense Production Administration, Office of Price Stabilization and National Production Authority enforced its decrees, dividing among American companies what the international conference allocated to the United States. As a result, American war industries were short of sulfur, copper, nickel, and other commodities. Our stockpiling program was thwarted; while other nations, some of whom sent token troops but no significant amounts of material to Korea, received for civilian consumption what the conference determined was their fair share.

After complaints from American industry and the Munitions Board, the Senate held hearings; then prohibited use by the State Department of any of its fiscal 1953 funds for the International Materials Conference. The administration ignored Congress and the Comptroller General ruled that other money could be used to finance the International Materials Conference.[11]

Secretary of State John Foster Dulles, while testifying before Congress for Randall's tariff recommendations, said he had often been tempted by the import-quota scheme, but he added "that is to establish pretty much of a Government regulated cartel system, telling people how much they can produce, how much they can sell, where they can sell it and the like. It tends toward the socialization of an industry."

Yet, by requesting approval of the Organization for Trade Cooperation, his aides are clearing the path to this socialization.

If what I am saying to you reaches the ears of these people, you may hear pious denials, pointing out that GATT has a general rule against both export and import quotas. GATT has such a rule. GATT has rules against a multitude of other practices too—but GATT can amend and make exceptions to its rules. GATT's rule against quotas is stated in 66 words; however, 3,500 words are used to describe exceptions already granted to this rule. It may be merely a matter of semantics. GATT frowns on the bad word "quota", but smiles on the good word "share."

Already we can see shadows of the gathering clouds of supranational socialism. Last spring while Congress was considering Randall's tariff recommendations, many domestic oil producers requested protection against rising imports of cheap foreign oil. Congress heeded the State Department's demur. Imports continued to increase. Congress protested. Then, according to newspapers, our Government requested importing companies to reduce their imports 7 percent during the last quarter of 1954. Administrator Arthur S. Flemming stated he was "justified in seeking voluntary action by the industry before launching the Government down a road of regulations which it had never traveled before." [12] It does not require a soothsayer to divine that he had compulsory company-by-company quotas in mind.

At the same hearings, cotton textile manufacturers and fabricators protested further tariff cuts on their products, presenting convincing evidence that if such tariffs were reduced the United States would be flooded with cotton goods, especially Japanese. In the Japanese Trade Treaty, concluded subsequent to these hearings, the State Department cut such tariffs, some as much as 50 percent. American manufacturers knew what would happen; the State Department knew what would happen. It did happen. Japanese cotton goods are pouring into our market. For instance, importations of Japanese cotton blouses and shirts jumped from about 1 million dozen in 1954 to an estimated 3 million dozen in 1955, although the treaty was not signed until June 8. If imports would continue at the same rate in 1956 as in 1955, it is estimated that approximately 10,000 American workers in the blouse and shirt industry would be displaced.[13]

Sixty Senators went into action. Congress had not yet authorized participation in the Organization for Trade Cooperation and GATT. Hence, Dulles wrote Senator MARGARET CHASE SMITH that he had "personally advised representatives of the Japanese Government that they should exercise restraint in their exports." [14] Japan's Ministry of International Trade and Industry suspended exports until it fixed export quotas for all cotton goods, then allocated these quotas, or fair shares, for 1956 among individual Japanese firms.[15]

The American Cotton Manufacturers Institute has just petitioned the Secretary of Agriculture to find a condition requiring emergency treatment as required by section 22 of the Agricultural Adjustment Act, and, by its authority, establish import quotas for each major group of cotton goods, not only for Japan, but for Britain, France, Germany, and other nations who also threaten our market under the reduced tariffs. Such a step would also be in conformity with the exceptions granted under GATT, article XI, and hence, by a premeditated act of the State Department, tariffs, the historic regulators of international trade, have been voided for this important industry. Quotas take their place. Dulles said "Socialization would result."

And let me repeat Browder's exhortation: "The large-scale entry of the Government into the sphere of foreign trade is only another part of the development of state capitalism. It is another step in the capitulation of the bourgeoisie before the invasion of the principle of Socialist planning."

What would have happened in these cases if Congress had already accepted the Organization for Trade Cooperation and the State Department had, by executive agreements, bound our tariff reductions for 3 years, as is its announced intention? Congressmen and Senators would be helpless to go to the aid of their constituents. Such executive agreements would be the supreme law of the land.[16] Our Government could no longer negotiate with any other one Government because other nations would be involved. Control of our foreign trade would have passed to a supranational agency where we would have 1 vote in 35—the same as Communist Czechoslovakia, or Luxembourg, a nation whose whole population is considerably less than that of Memphis, Tenn.

Now, need I remind you that, after suffering from interference by one external absolutism in the conduct of its early trade, our Nation gained its independence by force. Those who had suffered wrote into our Constitution inhibitions upon the power of our Government to oppress its own people—who in consequence, have enjoyed almost 2 centuries of liberty and unmatched material progress.

Now one of the good things that might come to Clement Attlee's Fabians and his

Footnotes at end of speech.

Footnotes at end of speech.

Footnotes at end of speech.

"comrades across the seas" out of this cold war, is the acceptance by Congress of the Organization for Trade Cooperation. Almost daily, each one of you and Americans everywhere are subject to the propaganda of group I, II or III, or all of them. So is Congress. Unfortunately, our Constitution contains one anomalous loophole, article VI, which makes treaties the supreme law of the land. Through this article our Government may grant to an international body, powers over its own people which are denied to itself. Our courts are then bound to enforce the edicts of such a body.

There is now danger that under the guise of containing communism and attaining our national cherished hope for an end to all wars, hot and cold, Congress may be high-pressured to grant such powers over our trade to an international absolutism, which is responsible directly to no peoples anywhere, but to 35 governments—some socialistic, some communistic, some military despotisms.

The United Nations has drafted a Covenant on Human Rights which would destroy the freedom of the press and freedom of speech provided by our Bill of Rights. This Covenant on Human Rights provides that these freedoms be subject to law—our Bill of Rights states that Congress shall make no laws that abridge them. The United Nations has also drafted a Genocide convention which under certain vague conditions would deprive us Americans of the protection of our own courts.

Surrender of our liberty to trade as authorized by H. R. 5550 might well be followed by surrender of other liberties into a tyrannic grip from which we could emancipate ourselves later only by force, or threat of force, if by then we are strong enough to do so.

And here, south of the Mason-Dixon line, a hint may not be inappropriate—neither does the United Nations Charter contain a provision for peaceful secession.

Classics of American Democracy—XI

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1956

Mr. O'HARA of Illinois. Mr. Speaker, I am extending my remarks to include letters from representative leaders in veteran organizations on the proposal to translate the classics of American democracy into many languages and make them easily available at reasonable prices to the peoples of the world, as follows:

MY DEAR CONGRESSMAN O'HARA: In response to your letter of December 12, I am impressed with your general plan as outlined in part 1 of the communication, but with reference to it have these opinions:

The works which treat of the subject and which are suggested for instance in part 2 do not as a class constitute lively reading and in large measure should, I think, be the subject of digesting in the manner used by, for example, the Reader's Digest in their treatment of current books from month to month. I assume that the pace in other nations is not comparable to the existing pace of life in America but it seems that a message to the American people must be written in such form that he who runs may read, and as I would expect that the result of your enabling legislation would be to direct many Americans to source material I think the republications should not be so lengthy as to defeat the purpose before the individual who has been intrigued is well-launched in any one volume. Just how Emerson can be modernized into ready readability is, for instance, one of the problems. Frankly I have found him difficult to read. Selected Federalist papers should find a present-day audience but the reprint of the papers in their entirety is again offering to one who becomes interested more than can be readily absorbed.

Might I direct your attention and the attention of those who will be considering the subject to the preface to the Virginia debates on the adoption of the Constitution. My volume is a second edition published as I recollect about 1807. In it there is the preface without the author being named. To me, it is one of the classics of our language as explaining the underlying spirit which prevailed and the sincerity and seriousness of purpose which actuated those who were concerned with the adoption of our Constitution.

It refers to the division which marked the delegates as to whether or not the Constitution should be adopted with or without previous amendment in order to include those amendments which subsequently became the Bill of Rights as the first 10 amendments. To me, it is a piece of inspired writing, explaining the purposes of free men to launch a government to preserve their freedom. May I suggest that you call the Library of Congress and read it. It will take but a few minutes and I feel has a distinct place in our approach to our fellowmen in other countries, who may be considering the ways of democratic government in representative form.

Personally I would also suggest the careful consideration of Carl Van Doren's The Great Rehearsal. I am one of those who believe there will be no peace in the world until there is within strict limitations some degree of world law. His book, of course, throws into comparison the adoption of the American Constitution with the need for the institution of some form of limited world government, and it might be that those who make the final determination might feel that this falls within the realm of present international controversies. But to my way of thinking, it goes to the very crux of that which we are endeavoring to present as the American plan and the American governmental structure, and ipso facto, the American political way of life.

I feel you are to be commended upon your endeavor.

Very truly yours,
STEPHEN F. CHADWICK,
Past National Commander,
American Legion.

DEAR MR. O'HARA: Referring to your letter of December 12, I certainly feel that dissemination of the type of works described would be of considerable benefit, assuming that they are not already available in other countries of the world.

I am familiar with most, but not all, of the publications listed and in my opinion, based on those that I know, they would be good selections.

With best wishes of the season.

Sincerely yours,
LYNN U. STAMBAUGH,
First Vice President, Export-Import Bank; Past National Commander, American Legion.

DEAR CONGRESSMAN O'HARA: Pardon this belated acknowledgment of the receipt of your letter of December 12 enclosing plan for publication of Democratic classics and suggested authors and works soliciting my comments thereon.

Ideas cannot be killed with bullets. We in the United States, who have enjoyed the beneficence of a Christian civilization built around the dignity of man, as the son of and created in the image of God, endowed by his Creator with fundamental freedom and liberty, with the right and power to govern vested in him, believe that the world would be better and peace more likely to be attained, if other peoples enjoyed a like opportunity.

A program calculated to attain that objective is commendable and praiseworthy. Such can be accomplished only through bringing to others information, understanding, and appreciation of our so-called American ideal. That cannot be accomplished through force or coercion, in any form or manner, but only by demonstrating and convincing to others that our idea and plan is better for them. For that purpose the plan to publish what you refer to as the Democratic classics is a good one.

However, at the moment, I confess that I am not sufficiently conversant with the list of suggested authors and works to express an opinion as to their use for the purpose intended. Of course, I know of them in a general way. My reading is too far removed to be able to express, currently, a definite appraisal, or to suggest other authors and their works. I would like to get time to examine the works listed and make such an appraisal but, under my present pressure, I just don't know when I can get at it.

However, I will try and write you further.

With commendation for your interest in this practical approach, I am,

Very sincerely,

HARRY W. COLMERY,
Past National Commander, American Legion.

DEAR CONGRESSMAN O'HARA: In response to your letter of December 12, 1955, I am happy to endorse your plan for publication of democratic classics as well as the suggested authors and works enumerated.

Wishing you much success in this fine project, I am

Sincerely yours,

A. J. THOMAS, Jr.,
Department Commander of Florida, the American Legion.

DEAR MR. CONGRESSMAN: Thank you for your communication, and I wish to commend you for your approach to what I consider to be a very worthwhile project. In my reply, I must emphasize that I am expressing my personal reaction, and that under no consideration can my ideas be accepted as representing American Legion policy.

I don't believe anybody can find fault with the Bryce and de Tocqueville books, which were written in the 19th century, after visits by the authors to this country. However, I feel there is one definite "no good" book on the list, and that is the Thoreau work, comment on which will be made as I refer to the works in chronological order.

Taking the books in the order in which they appear on the list, I wish to offer the following comment:

1. The two Bryce books, Modern Democracies, being Bryce's matured opinions. This must have been published sometime around World War I, some 30 years after the first book. They are excellent volumes.

2. Burke's Reflections represent a highly conservative view of the French Revolution and should be supplemented by another view, which can be secured in Jefferson's writings. I believe Burke was totally opposed to the Revolution, even to the destruction of the Bastille. Jefferson, on the other hand (and he was closer to it than Burke) believed that if Marie Antoinette could have been removed to a convent that the King would have accepted changes in the governmental structure, and that the terror would not have materialized.

3. Dewey's the Public and Its Problems. I am not familiar with this book. John Dewey is always thought of as the apostle of state socialism, and perhaps The Road to Serfdom or one of the books of Russell Kirk should be offered as an offset.

4 and 5. Emerson's Essays, and Hamilton and Madison's The Federalist Papers. These classics should certainly be included.

6. I haven't seen Judge Hand's book The Spirit of Liberty, and suggest that Clarence Manion be asked about it. Hand was praised so extravagantly by Elmer Davis that perhaps the book should be looked into.

7–13. Von Humboldt, Jefferson, Kant, Lincoln, Locke, Mazzini, Mills. All of these look good. Thomas Jefferson and John Adams had read deeply in Locke, and many of the ideas in the Declaration of Independence stemmed from Locke. I haven't seen Kant's Perpetual Peace, but as I remember Kant's other writings, it is probably rather heavy stuff, and it may be that William Penn's plan for perpetual peace should be put on the list also. If Mills' Liberty is used (and it should almost head the list), the editors should in a foreword call attention to the marvelous tribute to the United States of America he offers in the final 1,000 words of this book.

14. Rousseau's The Social Contract is credited with having been one of the causes of the French Revolution, and should be included in the list.

17. Thoreau's Walden is a batch of back-to-nature essays, but in some editions the Civil Disobedience is included, and definitely this essay, which glorifies philosophic anarchy, should not be included. The right of the citizen to refuse to obey laws with which he personally disagrees is put forward, and that, of course, would lead to some sort of nihilism. The people of the United States, through Congress, give maximum protection to those who, because of religious convictions, refuse to do what the rest of us conceive to be a duty to the State, but Thoreau's stand is against all goverment.

18–19. The De Tocqueville and Wilson books are excellent.

Sometime in the late 19th century, a man named John R. Dos Passos, probably a relative of the Dos Passos of our generation, wrote a book on communistic associations in the United States. (You could easily get a copy of this book from the Library of Congress, and I believe you would want to add it to the list after you had looked it over.) Without exception, the experiments all failed, and yet all of them started out with bright hopes, and in most cases the groups were small, and composed of persons of like racial and economic background and of a single religious preference, though in a few cases the atheism of the Marxists was substituted for religion. But from Jamestown and Plymouth, through Brook Farm, the Owenite experiment, the Oneida Community, Amana, and other adventures in community ownership they all failed. This book[1] would show to Europeans and Asians that even under ideal circumstances communism in its various manifestations has been a complete failure.

I should like to suggest a couple of additions to the list which you submitted to me. More than 50 years ago, Booker T. Washington, the great Negro educator, wrote his autobiography, Up From Slavery. It is a truly great story of accomplishment, and can be matched with stories of accomplishment by many who came to these shores from abroad and made their contribution to this great Nation.

About 5 years ago, a book telling the story of the Continental Congress from 1774 to 1789, was published under the title The Reluctant Rebels. It was written by Lynn Montross and published by Harper's, and though it is a magnificently moving story of the birth of a nation, I believe it was not by any means a best seller. The Congress of the United States would honor itself if it were to recommend to the United States Information Agency this story of how the "Congressmen" of the United Colonies brought into being the United States of America and took the steps which led to the Constitution, which is the basis of all our liberties.

Sincerely yours,

JAMES F. O'NEIL, *Publisher.*

---

[1] I don't see this listed in the account of Dos Passos' career in his sketch in the Dictionary of American Biography, and it may be my memory is playing tricks with me. It is likely that this is a magazine article, possibly in two parts, and I would guess that it appeared in either the North American Review, or Harper's Monthly magazine, as it was then known, to differentiate it from Harper's Weekly.

DEAR SIR: We heartily approve of your plan for publication of democratic classics. In our opinion the program is most worthwhile.

We have no additions or deletions from the suggested. We are satisfied to leave selection to you and your committee.

Thanks for calling this program to our attention.

Cordially yours,

CURTIS M. JEWELL,
Commander, Department of Ohio, VFW.

DEAR CONGRESSMAN O'HARA: I read with interest your letter of December 21, 1955, and the enclosure, and believe that the work as proposed in your enabling legislation will be good both for us and for the world.

I recently returned from participation in the VFW pilgrimage to Europe and from my short period of observation, I came to the conclusion that we, with our present program, are not reaching the little man in the European streets and farms. I have often wondered why communism moved in so easily when we released or withdrew any part of our support. Proper education of the United States and its basic philosophy might be a partial answer to prevention of this problem.

I think that your suggestion is a good one and will be helpful. I would appreciate receipt of about one-half dozen copies of the enclosure so that I may circulate them through my council of administration for suggestions and informational purposes.

History tells us that the leaders in the American Revolution and the founders of our present form of government were widely and deeply read in some of the books that you cite. An impression gained by them of such lasting merit must be of value if it can be given to another, who is in need.

Thanking you for bringing your request to my attention, I remain

Sincerely yours,

FRANK G. HAHN,
New Jersey Department Commander, Veterans of Foreign Wars.

DEAR CONGRESSMAN O'HARA: Since receiving the copies of the letters and enclosures relating to your enabling legislation for publication of the democratic political philosophy, I have distributed the same among my officers and legislative committee.

My legislative chairman intends to discuss the subject of obtaining additional works with two of the English professors at Princeton University. If we have further suggestions for you, we will forward them on.

I am preparing a letter to each of the Members of Congress and the Senate from New Jersey requesting their support of your proposed legislation. We have also advised our membership of your work and keep them informed. Our State council of administration, on Sunday, January 15, 1956, approved of your proposal by unanimous vote.

Trusting that the above is of help to you and expressing my personal appreciation for your work, I remain

Sincerely yours,

FRANK G. HAHN.

Classics of American Democracy—XII

EXTENSION OF REMARKS
OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1956

Mr. O'HARA of Illinois. Mr. Speaker, I am extending my remarks to include

letters from representative leaders in the field of advertising and public relations on the proposal to make the Classics of American Democracy easily available in inexpensive translations to the peoples of the world, as follows:

MY DEAR MR. O'HARA: I have your letter with regard to USIA and in reply I would like to say that I think your plan is constructive and necessary.

I am sorry I cannot answer part 2 because I don't feel that I am really qualified to do so.

Sincerely yours,

STUART PEABODY,
Assistant Vice President, the Borden Co.

DEAR MR. O'HARA: This is in reply to your letter of December 12 concerning your proposed legislation to dirct the USIA to publish for nominal prices, in the principal languages of the world, a small library of basic statements of democratic political philosophy.

To have available to most of the people of the world basic classics of American democracy seems to me to be a laudatory objective. I must admit, however, that I am not familiar with all of the works listed in Enclosure, part 2, and, therefore, do not feel qualified to express an opinion as to their merits in meeting the purposes of the plan. Some of the books and essays I have read many, many years ago, and, thus, of necessity, would be relying on hazy memory for any recommendations concerning same.

Consquently, unless I have the opportunity to refamiliarize myself with same, I would not wish to make any specific recommendations. I do appreciate your bringing this matter to my attention, and I remain,

Sincerely yours,

HAROLD E. FELLOWS,
President and Chairman of the Board, National Association of Radio and Television Broadcasters.

MY DEAR MR. O'HARA: This is a somewhat tardy acknowledgment of your letter of December 12. I have been out of town a good part of that time—hence the delay.

First of all, let me say that I think the plan to make available through the USIA a series of books along the lines you mentioned, and at a low price, is an excellent one.

Friends of mine who have recently made extensive foreign tours state that this is one important area in which the Russians run rings around us. I am delighted that steps are being taken to correct this situation.

While I realize that the selection of such a list will be a matter of long and heated debate, I can't help feeling that it would be advantageous if it contained the work of some American writer more recent than Woodrow Wilson. One possible candidate might be Russell Davenport's The Dignity of Man.

Here's hoping that this project can be pushed through to a speedy conclusion.

Sincerely,

HAROLD S. BARNES,
Director, Bureau of Advertising of the American Newspaper Publishers Association, Inc.

DEAR MR. O'HARA: I have your letter of December 12 concerning a plan to come before the next session of Congress, directing the United States Information Agency to publish for nominal prices, in the principal languages of the world, a small library of basic democratic political philosophy.

I do not feel that I am expert enough to aid in the selection of individual books. It seems to me those listed in your attachment are a very worthy group.

I do want to go on record as saying, however, that I am completely in favor of this plan for presenting to the world a truer picture of our fundamental democratic ideals and culture.

I have long been a director of the advertising council in which we have worked very hard for certain domestic issues in the realm of better understanding by the public of our Government's needs.

One of the things that is coming up before Ted Repplier and our whole industry group is a program for tapping some of our public relations brains for directing and helping in the great work of the United States Information Agency.

I can unqualifiedly recommend the passage of this legislation and do hope that you will be instrumental in carrying the ball to aid its speedy completion.

Sincerely,

WILLIAM R. BAKER, Jr.,
Chairman of the Board, Benton & Bowles, Inc., New York.

DEAR MR. O'HARA: In view of the fact that I feel that Dr. Arnold Lowe is more fully conversant with serious literature and particularly that of democratic philosophy, than anyone else in these parts, I showed him your letter outlining your proposed bill. He has kindly sent me a copy of his communication to you.

Let me say that both my wife and I have given much thought and considerable study to this need and heartily second your proposals.

Our feeling is that the library you propose will be excellent from the most important standpoint, that of informing thought leaders everywhere. However, we feel that some supplementary texts dealing more specifically with the current scene and the achievements of the practice of democratic philosophy would be helpful and particularly effective with a somewhat broader segment of the peoples. In this area I have four short texts to suggest:

1. The Good Citizen, a booklet describing the political institutions of this country and the responsibility of the citizen in implementing the functions of our governments, published by the American Heritage Foundation, 11 West 42d Street, New York, N. Y.

2. The Authentic Revolution, a speech by Erwin Canham, editor of the Christian Science Monitor, Boston, Mass., published in 1950, and receiving the Freedom Foundation's principal award for that year.

3. February 1951 issue of Fortune magazine (Time, Inc., Time, Life Building, Rockefeller Plaza, New York City) containing several articles under the broad heading, "The Continuing Revolution."

4. Atlantic Monthly, either June or July 1951 issue, the proposed reprint to consist of an article by Barbara Ward entitled "The Silent Revolution."

Thanks and congratulations for your sponsorship of this vital task.

Sincerely yours,

SAMUEL C. GALE,
Vice President and Director, General Mills, Inc.

DEAR CONGRESSMAN O'HARA: Answering your letter of December 12, received December 23, regarding the proposal to publish inexpensive translations of "classical statements of democratic theory" for distribution in countries throughout the world:

I would certainly support the intent of this plan, to spread familiarity with democratic ideas.

It does seem to me that it raises certain questions, though.

There is the basic question whether such books, even if available at very low cost, would manage to get read. One wonders how many of our own citizens have read most of the books on the proposed list, despite the fact that they are readily available in public libraries and in fairly inexpensive editions.

There is the question, raised in your enclosure, of what books to include. Could a representative and comprehensive list omit Adam Smith, for instance or Jeremy Bentham? Yet if the list of individual books becomes too long, the project becomes unfeasible.

There is some question, is there not, whether overseas readers will always associate the books with our United States way of life? The Communists are adept in their own uses of the word "democracy."

Perhaps these questions could be answered by taking a lesson from the successful experience of United States publishers and, instead of publishing a series of books, collecting the best extracts from pertinent authors into a democratic anthology.

This would mean the best pages from each writer, without the dull and tedious pages that might otherwise discourage reading. It would permit a wide range of authors. It could be clearly published under United States auspices. It could draw on all the techniques of popularization and appeal which have been so highly developed by Life, Reader's Digest and others. And it might well hold down the cost, involving the printing of 1 book instead of 15 or 20.

I am sorry at the need for anthologies and digests. But the approach may be well worth considering in this case.

I have an additional question whether the program needs to be conducted outside the auspices of the United States Information Agency.

And I must emphasize that this letter represents my personal views, not in any sense the views of our association.

I hope this may be helpful.

Sincerely,

FREDERIC R. GAMBLE,
President, American Association of Advertising Agencies.

DEAR MR. O'HARA: This will reply to your letter of December 12. The delay, for which I apologize, was caused by a year-end business trip.

I should like to commend you for furthering the plan to make available a list of 15 or 20 books for overseas consumption. Your list looks very sensible to me, and only because of its completeness and accuracy I would suggest adding the History of America, by Charles and Mary Beard.

Thank you for consulting me on this project.

Sincerely yours,

E. G. GERBIC,
Vice President, Johnson & Johnson.

DEAR SIR: This is in reply to your letter of December 12 asking for comment on the plan to publish in inexpensive editions abroad a small library of basic statements of democratic political philosophy. As to part 1 of your enclosure, please let me say that I am a most enthusiastic supporter of the idea and feel that it should by all means be done—done soon, and done on a large scale.

As to part 2, I imagine that everyone will have his own individual list of 20 books that best exemplify the spirit of the democratic philosophy, and particularly of the sort of democratic community we have evolved here in the United States. My own comments about the particular list contained in part 2 of your enclosure are as follows:

1. If Bryce's American Commonwealth is to be included, as by all means it should, I should recommend that the American rather than the English edition be taken. The early English editions, as you know, contained a number of extremely frank comments on the American Presidency, with corollary reactions as to why great men could never be elected to the office—all of which were tactfully omitted for American publication. I think they might equally well be omitted, for obvious reasons, in any contemporary European edition.

2. I am inclined to wonder as to the necessity of putting out special editions of such

writers as Kant and Rousseau for European consumption. I should imagine that these authors were already in sufficiently wide distribution abroad.

3. I should be inclined to omit Thoreau simply on grounds of the general confusion and obscurity of his writings, though I realize that this is a purely personal reaction.

4. I should by all means include the writings of Tom Paine and Walt Whitman.

With every good wish for the success of your undertaking, I am,

Very sincerely yours,

GEORGE P. LUDLAM,
Vice President, the Advertising Council, Inc.

DEAR MR. O'HARA: Mr. H. J. Morgens, executive vice president of our company, has asked me to reply to your letter of the 12th, in view of his heavy traveling schedule at the present time.

I have discussed it with some people here whose judgment we value, relative to books, and have the following comment to make concerning the list of books which was attached to your letter.

We would recommend, particularly, the following in the order listed:

1. The Federalist Papers, by Hamilton and Madison.

2. The American Commonwealth, by Bryce.

3. Democracy in America, by de Tocqueville.

We do not think Perpetual Peace, by Kant; the Duties of Man, by Mazzini; and the Social Contract, by Rousseau, should be included in the list because the authors are considered to be in the category of persons who have contributed to the European political philosophy rather than the American.

It would seem to us that it would be best to approach this whole plan slowly with a few books to see how it takes on and to learn possibly something about better techniques of the distribution of books, before jumping in with a large list of books and no thoroughly tested plan for distributing them.

Yours very truly,

WM. G. WERNER,
Director, Public and Legal Services, the Procter & Gamble Co.; Director, National Better Business Bureau.

DEAR SIR: Thank you very much for sending me the clipping from the Chicago Daily News dated June 6 concerning "the battle of the books."

I agree completely that we spend far too little to circulate American books abroad, and I agree that additional circulation for American classics would be most desirable. In addition, I think we must also make available more of the books favorable to democracy which will be widely read.

It seems to me that the idea war must be treated in the same fashion as a hot war and that we make a serious error when we allow ourselves to be badly outgunned. This is certainly the case with the overseas book program.

Sincerely,

THEODORE S. REPPLIER,
President, The Advertising Council, Inc.

MY DEAR CONGRESSMAN O'HARA: I thought you would be interested in the letter I received from George Gallup, one of the members of our committee.

I am also enclosing copy of the letter I wrote Mr. Gallup, in answer to his.

Sincerely yours,

EDWARD L. BERNAYS,
Chairman, National Committee for an Adequate Overseas United States Information Program.

AMERICAN INSTITUTE
OF PUBLIC OPINION,
Princeton, N. J., December 29, 1955.

Mr. EDWARD L. BERNAYS,
Chairman, National Committee for an Adequate Overseas United States Information Program, New York, N. Y.

DEAR EDWARD: I have looked over the suggested book list which Mr. O'HARA wants to send abroad. I think Mr. O'HARA's suggestion is commendable, but I find it exceedingly difficult to find any one book which expresses the basic philosophy of American democracy.

I would think the best expression of American democracy of today is to be found in our current magazines such as Reader's Digest, Ladies' Home Journal, etc. I suppose it would be difficult to translate articles from these magazines and to give this material wide distribution. But I think that the audience would be far greater.

I can't believe that more than a few dozen persons in any one nation would be interested in the classics of American democracy—much as I wish the contrary were true.

Sincerely,

GEORGE
George Gallup.

JANUARY 3, 1956.

Dr. GEORGE GALLUP,
Director, American Institute of Public Opinion, Princeton, N. J.

DEAR GEORGE: I am passing on your letter to Mr. O'HARA.

I don't know whether I quite agree with you as to your last paragraph. It would seem to me that in most countries there are intellectuals who play a dominant role in keynoting the thinking and attitudes of their constituencies. Their unfamiliarity with American thinking and American tradition may be a great deterrent to the people of their country getting a true picture of our country's real ideology.

It would seem to me that making translations of books that reflect the American spirit available to them might be extremely useful to our cause.

Sincerely,

EDWARD L. BERNAYS,
Chairman, National Committee for an Adequate Overseas United States Information Program.

Classics of American Democracy—XIII

EXTENSION OF REMARKS
OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1956

Mr. O'HARA of Illinois. Mr. Speaker, following are letters from representative leaders in the Sons of the Revolution:

DEAR CONGRESSMAN O'HARA: I read with interest your circular letter of December 12 and approve thoroughly your plan, supported by Congressman FEIGHAN, of Ohio, for the printing and publishing by the United States Information Agency of translations of the classic books on democratic free government.

I have read the list attached to your letter and while it is very good, I think there are some books which should be added and I hope to write you again shortly suggesting some of the additions.

With best wishes for a happy New Year, I am

Sincerely yours,

EDWIN O. LEWIS,
President Judge, Court of Common Pleas No. 2, Philadelphia, and Honorary General President, Sons of the Revolution.

DEAR SIR: I thank you for your letter of December 12 addressed to me as the State president of the Sons of the Revolution.

Regarding the enclosure to your letter, it would appear that a plan for the publication of the democratic principles to be distributed and sold in all foreign languages would be good. However before giving any such endeavor my endorsement, I would like to see just what such a publication might say and outline.

Of course, anything that we do to present to the other peoples of the world a true picture of our great country, would be helpful.

Yours very truly,

MARMADUKE CORBYN, Sr.
Oklahoma State President, Sons of Revolution.

DEAR MR. O'HARA: Replying to your query of December 12.

In my opinion your plan for publication of democratic classics is definitely in order.

I might suggest, as a matter of more general appeal, you also tie in to the title the following: "The Principles of Government of the Independent Republic of the United States of America."

Sincerely yours,

H. G. BADGEROW,
Vice President, W. A. Alexander & Co., Chicago, and Active Member, Sons of Reovlution.

DEAR MR. O'HARA: The project outlined in your letter of December 12 has my hearty support and I shall be glad to cooperate in every way possible.

There is one addition I would like to recommend to the list of books suggested. The Epic of America by James Truslow Adams gives an excellent summary of the American form of government and the progress our country has made.

Is there any way in which a book designed especially for children could be included and distributed? It seems important to me that youngsters of impressionable age should be included in this program. Perhaps you know a source from which such a book could be secured.

I hope very much that the next session of Congress will act favorably upon your suggestion.

With best wishes for the New Year.

Yours very truly,

R. E. HUTCHISON,
35 East Wacker Drive, Chicago, Ill., Board of Managers, Sons of Revolution, in Illinois.

DEAR MR. O'HARA: Answering yours of December 12, I am happy to reply that Kansas City chapter advises me to say that it is much in favor of the legislative project of providing a library of basic statements of true democratic political philosophy.

The list of authors and works in enclosure No. 2 is comprehensive. At present I do not wish to make any suggestions until a little more study.

Wishing you and associates early success in activating the good idea.

Sincerely,

EARL B. MUSSER,
Secretary-Treasurer, Sons of the Revolution (1776) in Missouri.

MY DEAR SIR: It is very heartening to get your letter. It would be a fine thing for the

welfare of our country if doses of patriotism could be fed to our own. I have been hoping that some inspired columnist would write a series of articles which would be published in every paper, daily and weekly, in dynamic style which would catch the thought of every citizen.

Bryce: The American Commonwealth, Modern Democracies. His Lectures at Yale—probably they are included in the edition of Modern Democracies.

Hamilton and Madison: The Federalist Papers.

De Tocquesville: Democracy in America.

And the good things in all the others you have mentioned. Of course you know there is now being published a magazine of American history. A nation which has no honor for its traditions is on unstable foundations which may crumble under at any moment.

Thanks for honoring me.

Very truly yours,

MADISON MARINE.

Board of Managers, Sons of the Revolution in California.

MY DEAR MR. O'HARA: Your letter of December 12 makes a most interesting proposal and I find myself entirely in favor of presenting American books, telling of our way of life, in such fashion as to gain wide reading overseas by making them cost little. But merely to bring about inexpensive books is not in itself sufficient; there would have to be a well-thoughout-out and well-executed program of publicizing them. All this adds up, of course, to subsidy.

We are perhaps at a disadvantage in any war of books with the Communists. They have a definite propaganda, an ism, a body of systematized dogma, deliberately drawn up as such. We have nothing of the sort. Americanism is not a true ism at all; not something dreamed up to crusade about. It is a feeling, a spirit, not a dogma. And that makes it harder to talk about in precise terms.

Your suggested list of books certainly includes classics of American thought—the Federalist Papers, for instance. I've never read them. I've read at them and found the going rough. I'm quite sure very few people have read such material as the list consists of—and still fewer with pleasure. In brief, it does not seem an attractive list. I would include, rather, such books as Truslow Adams' Epic of America or Gerald Johnson's This American People, or the History of the United States by the Beards.

I mention these as representations of a class of books rather than as specific suggestions for inclusion. Such a selection would have to be carefully made by persons much more expert and knowledgeable in the literature than I am or ever hope to be.

Sincerely yours,

EDWARD M. PASSANO,

State President, Sons of the Revolution in Maryland.

Classics of American Democracy—XIV

EXTENSION OF REMARKS

OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1956

Mr. O'HARA of Illinois. Mr. Speaker, letters from four outstanding university professors in the field of political science follow:

DEAR MR. O'HARA: Thank you for your letter of December 12 and the enclosures. The plan proposed is excellent, even though there is not the same degree of agreement on what constitutes a good statement of democratic political philosophy as there is on what are the major classics of Marxist and Stalinist doctrine.

There are only a few observations as to detail which I could make. In the first place, it might be well to avoid even the appearance of wanting to compete with native publications in foreign countries. Thus, for example, there is now an excellent Italian translation of the Federalist papers, published in Pisa by the firm of Nistri-Lischi, with an introduction by Professor Ambrosini and comments by Drs. Negri and D'Addio. A book of its size may not be so easy to produce cheapy, but for such practical matters a solution might be found.

Second, in general complete editions of the works in question are preferable to selections; thus, I would certainly hate to see any edition of the Federalist papers not containing Nos. 5–8. These are often overlooked in excerpts, but have implications of considerable importance in judging the present political scene.

At the same time, it might be well to make use of existing American editions, such as the Modern Library editions of the Federalist papers, and the recent Knopf editions of De Tocqueville's Democracy in America. There may be technical difficulties in the way of making these editions available at prices lower than those now current in this country. I am wondering, however, whether it would not be a good thing indeed to have such American classics as the Federalist papers available at a price so low—let us say 25 cents—that college students in certain courses could afford to buy them in addition to their regular textbooks, and that they would also appeal to high-school classes.

To mention a few possible additions to the list given in your memorandum: Helen Byrne Lippmann made, at the beginning of the war, an edition of Benjamin Constant's On Conquest and Usurpation (Reynal & Hitchcock, New York, 1941) which I have always felt is excellent, although its significance is not always realized. Anyone interested in the state of public opinion behind the Iron Curtain should, however, be acquainted with this book, even if it does not constitute a complete translation of Constant's work. The second book which I intended to mention is Prof. Charles E. Merriam's New Democracy and New Despotism, which I hope is not too recent to be considered for inclusion in your list.

One further point: It is well and good to have general statements of democratic doctrine, but if they all suffer from the current stress on liberty to the exclusion of authority they will only add to the supply of wishful thinking with which the proponents of democracy are adequately provided. The best antidote would be Water Bagehot's English Constitution, now nearly 100 years old but still the best statement of the relation between freedom and authority as related to the practical problems of democratic constitutionalism. It would be difficult to mention something of similar importance for American constitutional government. Woodrow Wilson's Congressional Government would, for a number of reasons, not fit into this collection any too well, but at the same time I am wondering whether something should not be done to get this book back into print, if not in connection with this particular project, then at least in connection with the Woodrow Wilson centennial celebration. (The book would, incidentally, require a substantial introduction dealing with the recent controversy surrounding its major tenets.)

Finally, something could be said for having a brief one-volume edition of shorter classics of democratic thought, beginning with Pericles' Funderal Speech in the translation given by Sir Alfred Zimmern, or perhaps even with the remarks on forms of government in Heigel's History. Jefferson's and Lincoln's first inaugural addresses should find a space in such a collection, as should a number of other statements of similar brevity.

In the case of one of the books mentioned I have misgivings. John Stuart Mill's Considerations on Representative Government is superlative in some respects, but it gets enmeshed in dismal and destructive fallacies when demanding a representation of minorities in the sense that the founders of the American Republic would have considered in fundamental contradiction to their basic views. Walter Bagehot has criticized Mill unmercifully, but he expresses himself in a terminology which the modern reader would not easily understand. Prof. C. J. Friedrich has, however, restated Bagehot's views rather lucidly (in his introduction to my Democracy or Anarchy? A Study of Proportional Representation, Notre Dame, 1941. That volume has been out of print since the end of the war, but I am enclosing a reference to a briefer one published in 1951, even though it now also is on the verge of going out of print.) If Mill is made available, this should certainly not be done without explicit reference to a simultaneous publication of Bagehot's volume which, incidentally, has not always been well translated; the only German translation known to me is sad.

It would be a pleasure indeed to learn that the project is progressing well and that we may see a beginning with its implementation in a not too distant future.

Sincerely yours,

FERDINAND A. HERMENS,

Professor of Political Science, University of Notre Dame.

DEAR MR. O'HARA: You have my wholehearted support in your Plan for Publication of Democratic Classics in translation for distribution abroad by the United States Information Agency. It only seems incredible to me that this was not done long ago.

To many peoples, who are trying to develop free institutions of their own as they emerge from colonial circumstances, the great documents that we used, others that we wrote, and still others that were written about our experience by discerning visitors, can be a positive help. Such aid need not compete with other forms of technical assistance, and nothing else can take its place.

In the second place, this program can do much to correct a false idea of the United States that has unfortunately been spreading abroad, partly with the help of our enemies but also because of our own silence about matters of universal concern. Americans, it is said, are interested only in wealth and gadgets, not in the things of the spirit. Our slick-paper pictures of autos and electrical kitchens, if not supplemented by evidence of our other interests, helps to support this allegation. Our active sponsorship of democratic classics written by thinkers of all nations as well as by Americans can correct the picture as nothing else can. Original thinking about democratic institutions is one of our chief contributions to civilization, and why should we keep our light under a bushel?

I have taken the liberty to write a letter about this program to Congressman MICHAEL J. KIRWAN, of Ohio, an old friend of my father.

All good wishes for your success.

Yours sincerely,

WARNER A. WICK,

Associate Professor of Philosophy, The University of Chicago.

DEAR CONGRESSMAN O'HARA: I have delayed answering your letter of December 12 relating to the publication in cheap editions of a small library of basic statements of democratic political philosophy until I could consult with some of my colleagues. We are all agreed that it is of very real importance

to put in the hands of peoples of other countries books of this sort. Those of us who have lived abroad have seen the cheap editions of Communist books which are so widely distributed and for which the democracies seem to have no counterpart.

We have discussed the suggested list which you enclosed and, as I am sure you anticipated, have some suggestions to make with respect to it. A substantial proportion of the volumes are either very old or are not written by Americans. It is our feeling that for this purpose it is desirable to have more American writers or books about American democracy than it is to have somewhat outmoded statements by 18th century writers. Thus, we would omit the following:

Burke: Reflections on the Revolution in France.

Von Humboldt: The Sphere and Duties of Government.

Kant: Perpetual Peace.

Mazzini: The Duties of Man.

Mill: Representative Government.

We would even omit Rousseau's The Social Contract although, of course, at one time it had tremendous revolutionary power. We doubt if it would have such power in the present world.

Bryce's two volumes on Modern Democracies are not nearly as useful from the point of view of helping people understand American democratic government as The American Commonwealth. We would omit Modern Democracies but would certainly agree to include The American Commonwealth. Woodrow Wilson's The New Freedom is highly dated at the present time and we doubt if it would be of particular interest abroad. In addition to the volumes which you have listed we should like to suggest a few others as follows:

Becker, Carl: Declaration of Independence.

MacIver: The Web of Government.

MacIver: The Ramparts We Guard.

Mason: Free Government in the Making.

Gabriel: The Course of American Democratic Thought.

Hofstadter: The American Political Tradition.

Croly: The Promise of American Life.

Hallowell, J.: The Moral Foundation of Democracy.

Lindsay: The Modern Democratic State.

These are more modern works and tend to represent more recent developments in democratic political theory. For this reason we feel that they would be more eagerly sought by students abroad.

Sincerely,

RODNEY L. MOTT,
Director, Division of Social Sciences, Colgate University.

DEAR REPRESENTATIVE O'HARA: I most enthusiastically support your plan for publishing the great classics of democracy in the principal languages of the world and in cheap editions. In many parts of the world, the subsidized publications of the Communists are virtually the only ones available to impoverished local populations. Unlike ourselves, the Communists have never undervalued the power of ideas in the struggle for the human mind.

Your initial list is an excellent one and contains on it almost every important item that occurs to me. It does have one possible deficiency, particularly for audiences who are bursting through the limitations of their previous colonial existence and see their new experiments with democracy as revolutionary rather than as conservative or traditional steps; this deficiency is the rather conservative quality of most of the writing on the list—a natural outcome of the fact that, for the most part, Americans have been and continue to be essentially a conservative people. Only Jefferson and Rousseau can be regarded as representative of what one might call radical democracy. I would therefore suggest that you might want to add some work of Tom Paine to the list—possibly, The Age of Reason. Although they serve a different purpose, probably Wilson's Congressional Government and his Constitutional Government of the United States should also be on the list.

If I can be of any further assistance to you in connection with this splendid project, do not hesitate to let me know.

Sincerely yours,

ROBERT A. DAHL,
Eugene Meyer Professor of Politcial Science, Yale University.

Study by Party Leaders of Democratic Vote

EXTENSION OF REMARKS
OF
HON. EARLE C. CLEMENTS
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Friday, January 20, 1956

Mr. CLEMENTS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Democratic Vote Gains Exceeded First Reports," published in the Democratic Digest for January 1956.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SPECIAL STUDY BY PARTY LEADERS SHOW DEMOCRATIC GAINS EXCEEDED FIRST REPORTS

As the local elections of November 8, 1955, approached there were many questions in the minds of political observers:

Would the Democrats be able to continue the virtually unbroken string of victories they had built up ever since the Eisenhower landslide of 1952?

Would the Republican propaganda on "peace and prosperity" take hold with the voters and bring a leveling off of Democratic fortunes?

Had the Democrats overestimated the extent of dissatisfaction among the farmers? Would this dissatisfaction be reflected in the farm trading centers as well?

What would be the effect of the President's illness on the impact of an out-and-out "support Eisenhower" appeal to the voters?

Although the press has already reported on the Democratic victories throughout the country in the November 8 elections, the results of a special questionnaire sent to Democratic Party leaders by the editors of the Democratic Digest contain significant answers to all of these questions that go beyond published press reports.

Pennsylvania is a good example. There the eyes of the Nation and, naturally, the main attention of the press were focused on the mayoralty race in Philadelphia, where President Eisenhower's personal endorsement of the Republican candidate gave the race some national significance. But, dramatic as the Philadelphia landslide was, it did not tell the full story of the Democratic trend in Pennsylvania.

The Digest reports from Democratic leaders revealed the following:

Democrats won 5 mayoralties formerly held by Republicans in Pennsylvania cities with a total population of 443,000, whereas the Republicans only captured 2 formerly Democratic mayoralties in towns with a total population of merely 25,000.

Democrats gained control of 14 county commissions, more than doubling their former holdings, and lost none to the GOP.

What is even more significant than these raw figures is the fact that many of the Democratic gains, not only in Pennsylvania, but in most other States as well, were in rock-ribbed Republican areas which the Democrats have not been able to crack for decades. Examples:

Bucks County, Pa. (the home of former GOP boss Joe Grundy) went Democratic for the first time in 53 years.

Beaver County went Democratic for the first time in 100 years.

Indiana County went Democratic for the first time since 1883.

Even where Democrats failed to win offices, they made substantial inroads into what used to be an overwhelming Republican vote. For example, the Snyder County chairman reports that "we cut the Republican majority down from 4 to 1 to less than 2 to 1." And in counties where the registration is still heavily Republican, GOP voters were crossing party lines to support Democratic candidates. In Forest County, Pa., for example, where the registration is Republican by a margin of 750, the Democratic candidate for associate judge lost by only 62 votes.

The Pennsylvania story is repeated identically in Indiana, where press and national attention centered mainly on the dramatic Democratic sweep of the mayoralty races. There was, to be sure, national significance in the fact that the 73 mayoralties which the Democrats now control as a result of the November 8 elections far surpasses the previous record of 56, achieved in 1930, at the height of President Roosevelt's popularity. It is also significant that in the local elections preceding the presidential races of 1948 and 1952, as Indiana went, so went the Nation.

But Democratic gains in Indiana went far beyond the mayoralties. Reports from party leaders indicate that Democrats won control of at least 27 city councils, and replaced at least 52 Republican city councilmen with Democrats, while only losing 1 council post to the GOP.

The Fulton County chairman reports that "Rochester elected five city councilmen for the first time in history," and in White County, the chairman reports that this was the "first time in history that Monticello City elected the entire Democratic ticket," and this was the "first time a Democrat was ever reelected mayor." And in Whitley County, it was reported that "Columbia City voted more like it did back in the thirties."

The pattern seen in these reports from Pennsylvania and Indiana was repeated wherever special elections were held on November 8. Some highlights:

Reports from Ohio (which the press portrayed as a dark spot in the Democratic picture because of the decisive defeat of an unemployment benefit increase supported by organized labor) showed the Democrats picking up at least 5 mayoralties and 28 city council offices from the Republicans while losing none to them.

The reports also described dramatic changes in traditionally Republican areas. "Columbiana County, which has been a Republican stronghold for years, now has the Democrats in control of almost every city and village in the county," reports County Chairman Don Gosney.

In a Delaware County race, in an area that normally votes 3 to 1 Republican, a Democrat managed to be reelected by 193 votes. County chairmen in Marion and Ross Counties report that the usual GOP majorities of 1,000 to 2,500 have been reduced to only a few hundred votes.

The New Jersey results have been portrayed as slightly disappointing for the Democrats, in view of the hopes of substantial Democratic increases in the State legislature. While these hopes were not fully realized, the special reports from New Jersey leaders nevertheless show dramatic Democratic gains. Examples:

Essex County elected its first Democratic State senator since 1911; and in the vote for the State Assembly, the Democrats polled 40,000 more votes than they had in 1951, while the Republican vote only increased by 5,000.

In Monmouth County, the Democratic vote picked up by 6,000 over previous elections, the Republican vote by only 1,000.

Democratic gains were not confined to any region. They ranged from New York (where Democrats gained eight upstate mayoralities from Republicans, including the major cities of Troy, Schenectady, Ithaca, and Auburn), and Connecticut (Democrats won back Waterbury after 8 years of Republican rule and retained New Haven by 20,000 votes, having won it by only 4,000 in 1953) to California (a victory in traditionally Republican Santa Barbara gave the Democrats the largest number of State senators since 1938), and Arkansas (where an 8-year grip on the city of Little Rock was broken).

The special reports from Democratic leaders did more than show the extent of the Democratic trend. They also helped to answer some important questions. For example, what is the true extent of farm discontent, and what effect does it have at the polls?

Reports from county leaders show that the farm issue was important, not only among farmers, but in the towns where farmers trade. For example, from Sullivan, Ind. (which went Democratic for the first time in 8 years), comes the report, "We think that the farm issue was an important part as our town is an agricultural trading center."

The elections also contained important clues to help answer another important question: What effect has the President's illness had on the impact of a support-Eisenhower appeal?

Philadelphia contains the most dramatic answer to that question, for the President was more personally committed there than anywhere else. Prior to his departure for Denver, he had made a special point of inviting the Republican candidate for mayor to the White House in order to give his personal endorsement. Subsequently, the Republican National Committee sent both personnel and funds into Philadelphia, and GOP newspaper advertisements played the "support-Ike" theme. The results: Democrat Richardson Dilworth's 132,000-vote margin was even greater than the lead the Democrats piled up 4 years ago, and wards that had voted Republican since 1932 turned in Democratic majorities.

Other indications of the ineffectiveness of the Eisenhower appeal:

Full-page pictures of the President carrying the slogan, "Don't Let Ike Down," appearing in the Newark, N. J., papers, did not dissuade voters from electing the first Democratic State senator since 1911.

In Adams County, Pa., in which the Eisenhower Gettysburg farm is situated, Democrats elected a majority of county commissioners and a district attorney, in addition to reelecting Judge W. C. Sheeley to an unprecedented third term.

The Democratic victories of November 8 were really a continuation of the trend toward the Democrats that established itself in the first elections after the Eisenhower landslide of 1952, when the Democrats won 7 out of 8 special elections to Congress. Since that time, the following has taken place:

Democratic candidates for Congress in 1954 polled the highest percentage of the off-year vote since 1934.

Democrats won more governorships from the Republicans, have lost none to the GOP.

Democrats made sweeping gains in local elections in the spring of 1955.

In June 1955, Hanover, N. H., elected a Democrat to the State legislature for the first time since 1904.

In October 1955, little-noticed elections in Connecticut, gave a preview of what was to come a month later, when 4 towns went Democratic for the first time in 50, 40, 35, and 30 years, respectively.

What does this Democratic trend mean for 1956? Most observers agreed with the New York Times, which commented, "What cannot be denied is that the Republicans have been put on the defensive by the election results."

But Mayor David Lawrence, of Pittsburgh, had perhaps the wisest comment:

"Anyone can argue, of course, over what constitutes a trend. In the final analysis, you do not pay off on trends; you have to go out and win the big one."

New Feud Over Indian Cases

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Friday, January 20, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "New Feud Over Indian Cases," published in the Devil's Lake Journal, of Devil's Lake, N. Dak., on December 26, 1955.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NEW FEUD OVER INDIAN CASES

Welfare agencies of the State and the Federal Governments are feuding again over who should be responsible for the medical care of Indians on the Turtle Mountain Indian Reservation in Rolette County.

Carlyle D. Onsrud, director of the North Dakota Public Welfare Board, in a telegram to Glen L. Emmons, the United States Indian Commissioner, said that Indians are being refused care at the reservation hospital, so must turn to the county or State for assistance.

The Bureau of Indian Affairs, in typical fashion, has ruled that it will not be responsible for the care of Indians not enrolled on the reservation although living in the area.

The Federal Government, which has the moral and legal responsibility for the care of the Indians, now would try to foist off its duties on to the State and local governments.

County welfare agencies, for instance, can scarcely afford the additional financial load of medical care for Indians. Rolette County, in particular, has never cared for Indians in the Turtle Mountain community before, whether or not they were technically enrolled on the reservation.

As Onsrud wired Emmons: "We regret the idea that a lightening of the Federal load should be done * * * in a negative fashion through technicalities in the Federal manual rather than through an affirmative process collaborated in by all parties concerned."

Lack of clarification on the subject has created friction between Federal and other agencies, who are wondering about Federal policies, as are the Indians who are caught in the crossfire of jurisdiction.

It's not anything new as far as the Bureau of Indian Affairs, which has often tried to bully local agencies, who have less resources to handle administration of the Indian program if the Federal Government would provide for reimbursement.

With limitations on their taxing power, counties are only able to provide for a certain amount of assistance. Inasmuch as the Indians are the wards of the Federal Government, under original treaties made with them by Uncle Sam, the Bureau of Indian Affairs has a prior responsibility for their case.

What happens at Belcourt or on the Turtle Mountain Reservation has a bearing on the whole State, which may be handed the Indian problem as a gift from Uncle Sam and the Bureau of Indian Affairs, unless protests are made.

Few people question but that the reservation system has drawbacks, but the answer lies not in transferring expenses to the State and local governments, but rather in reimbursing their agencies for their contributions to Indian welfare.

While the Bureau of Indian Affairs insists on bickering, the Indian is left out in the cold, not knowing which way to turn for the assistance, medical and otherwise, which he needs.

North Dakotans must awake to the facts or they may have the entire Indian problem dumped in their laps, courtesy of the Bureau of Indian Affairs.

Alleged Roadblock in Congress

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Friday, January 20, 1956

Mr. LEHMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Roadblock Story," which was published in the January 1956 issue of the Democratic Digest.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE ROADBLOCK STORY
DEMOCRATS SAY GO

Expanding housing program: The Democratic Senate in 1955 passed (over the opposition of 78 percent of GOP Senators) an expanded housing program providing 135,000 public housing units a year (compared with only 35,000 proposed by the Eisenhower administration) but the opposition of the Eisenhower administration and 79 percent of House Republicans forced Congress to settle on 45,000 units next year.

Expanded world trade: The Democratic 84th Congress did what the GOP 83d was unable to do: it passed (over the opposition of 64 percent of House Republicans) the 3-year trade program recommended by President Eisenhower. In 1954, 84 percent of Senate Democrats voted for the Eisenhower program, with 100 percent of the Senate GOP opposed.

One dollar minimum wage: The Democratic 84th Congress passed the $1 minimum wage needed to keep workingmen's income abreast of increased cost of living, over the opposition of the Eisenhower administration and congressional Republicans, who held out for only 90 cents.

New public power starts: The Democratic 84th Congress provided funds for 107 public works projects not recommended by the Eisenhower administration—including sev-

eral new starts on major public power projects—but the administration has hinted it would ignore Congress and refuse to spend the funds.

Tax cuts for all: 99 percent of House Democrats and 66 percent of Senate Democrats supported a move to provide a $20 tax cut for every taxpayer in an effort to correct the lopsided GOP tax bill of 1954, which gave only 9 percent of its tax cuts to the 80 percent of American families earning less than $5,000.

DEMOCRATS SAY STOP

Dixon-Yates deal: Democrats fought and finally forced the administration to drop this deal, engineered by a utility spokesman within the Government, which would cost the taxpayers needless $90 to $140 million in higher power rates, netting tremendous profits to the Dixon-Yates utility syndicates.

Antilabor law: Senate Democrats unanimously opposed a Republican effort to enact a group of "toughening" amendments to the Taft-Hartley law which were opposed by every major labor organization, and which had been rammed through a Republican-controlled Senate committee without any consideration of democratic proposals.

Defense cuts: Democrats in Congress opposed administration cuts in the Air Force, the Army and the Marines, but were unable to prevent the GOP 83d Congress from approving a $5 billion cut in the Air Force which set back United States air development by 2 years and allowed Russia to gain superiority in many aircraft types.

Bankers' highway bill: 70 percent of Senate Democrats and 97 percent of House Democrats opposed the Eisenhower administration's banker's highway bill which would involve paying to bankers and other money lenders at least $2.7 billion in unnecessary interest payments that Democrats felt should be devoted to highway-building.

Tax cuts for the rich: 96 percent of House Democrats and 77 percent of Senate Democrats tried to prevent the GOP 83d Congress from passing special tax cuts for corporation shareholders which were 20 times as much as the tax cuts proposed for working mothers and 100 times the cuts proposed for families with foster children.

Conditions in Asia and Germany

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Friday, January 20, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two editorials from the Steuben News of January 1956. One of the editorials is entitled "The U. N. Package Deal," and the second "The Saar Reaffirms," together with a letter mailed to me transmitting the editorials.

There being no objection, the letter and editorials were ordered to be printed in the RECORD, as follows:

STEUBEN SOCIETY OF AMERICA,
New York, N. Y., December 22, 1955.

DEAR MR. SENATOR: Enclosed herewith please find tear-sheet from the January 1956 issue of the Steuben News.

As a member of the Foreign Relations Committee of the Senate, we thought you might be interested in the two editorials, "The U. N. Package Deal" and "The Saar Reaffirms."

We shall be most happy to have your reaction.

Sincerely yours,

J. H. MEYER,
Editor in Chief, the Steuben News.

THE U. N. PACKAGE DEAL

Notwithstanding the hue and cry from the housetops in Washington, New York, and elsewhere, it is a pretty well-established fact that the United States has suffered a severe defeat in the council chambers of the United Nations.

We wanted Japan to be admitted to the so-called world organization, but we were not realistic enough to pay a price—the admission of Outer Mongolia—to achieve our aim. On the matter of population and industrial might alone, the two countries compare like a whale to a minnow. Every one knows that it was actually Nationalist China which rejected the admission of Outer Mongolia. But it stands to reason that energetic pressure and blunt talk on the part of the United States delegates could have forced the Formosa government to come around to the thinking of a realistic United States of America—and, we are sure, to the judgment of all the other delegations of the western bloc.

This time, it was a question of Japan against Outer Mongolia. The next time, surely, it will be a question of Japan against the Peiping regime. Our policymakers in Washington and on the East River should have learned by now that the price goes higher and higher; and Great Britain and some others with large commercial interests in the East will not move a finger if attempts should be made to replace the Formosa delegates with Peiping delegates. Moreover, the Japanese who are badly in need of export markets and most eager to come to an understanding with both Soviet Russia and Communist China, are realistic enough to recognize who is in a position to gain admittance for them—and who is not. This plain fact is apt to play a most important part in the current peace-treaty negotiations between the two countries.

Let us probe a little deeper and find out what else this package deal implies which brought another 16 nations into the United Nations.

As far as the United States is concerned, we have factually recognized the status quo in the east-west division of Europe through the admission of such satellite countries as Albania, Bulgaria, Hungary, and Rumania, notwithstanding our declared policy of "liberating" Iron Curtain countries. It is true that we did not vote for admission, but by abstaining, we did not vote against it, either—and acquiescence is often the unpardonable sin.

Let us also keep in mind that certain U. N. provisions setting up qualifications for membership (however tongue-in-cheek they may have been) have been utterly ignored. The issue was not even debated; overnight, the U. N. has become a body to which all nations can be admitted now, be they peace-loving or not. Sooner or later, Red China is sure to enter the halls of the U. N. under the same banner. There seem to be sufficient votes even now.

Let us sum up:

1. It was Soviet Russia taking the initiative on the compromise deal and it is Soviet Russia taking—and getting—the credit for it.

2. The moral standing of the United States behind the Iron Curtain has taken a thorough beating. To those down-trodden peoples in the East, we must be just big talkers and little doers with our talk of liberation.

3. The people and the government of Japan, in their bitter disappointment and being very rational beings, will undoubtedly reevaluate their policies and endeavor more than ever to achieve a working agreement with both Soviet Russia and Red China.

And in the face of all these developments, our own John Foster Dulles who has vacillated between "massive retaliation" and the "Geneva spirit," has just returned from another NATO conference with the optimistic declaration that the member nations are more firmly united than ever before.

Yes, Mr. Dulles, as long as they get more financial help, for military purposes and otherwise, from the United States. They must have seen too what we have read in the papers; that the United States Government is inclined—to put it mildly—to raise foreign aid by several billion dollars, which, we trust, the American people through their elected representatives will utterly reject.

THE SAAR REAFFIRMS

Once again, the people of the Saar have reaffirmed their allegiance.

The election of December 18, 1955, for representatives to the Saar Parliament constitutes a clear-cut victory for the return to the German fatherland, about which no one in Paris, Washington, or Bonn can quibble.

Even the party of Johannes Hoffmann, the former Premier, has seen the handwriting on the wall, and there should be enough votes in the new paliament to make the necessary constitutional change.

Let us ever be aware that such a return is only in accordance wtih the freely expressed will of the people of the Saar and no more than an act of justice. And we hope that certain papers in this city of New York will no longer write of a union. There is no union. There is only a reunion.

Through military power and an act of political expediency, of which Washington is just as guilty as the other victorious nations, the Saar was separated from Germany as pure and simple war booty.

It wishes to go back to Germany and no conditions whatsoever should be put into the way of a speedy reunion. We trust both Paris and Washington will realize that. We also trust, the Bonn Cabinet will recognize the people's will and not pay a price—any price—to France for the return of German soil.

If, for the sake of harmony, certain economic adjustments for the benefit of the French Republic are to be made, the time for such adjustments is after the reintegration of the Saar into the German body politic.

Unless that is done, the overheated nationalism, upon which our newspapers put so much stress, may well break forth again—and the blame for any such outbursts would have to be put squarely on the shoulders of those elements who, in 1945, were responsible for the rape of the German Saar—in violation of that much-abused document, the Atlantic Charter.

Retirement of Roy L. Cochran From Bureau of the Budget

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Friday, January 20, 1956

Mr. CURTIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by John Jarrell in the Omaha World-Herald of January 15, 1956, paying a well deserved tribute to Roy L. Cochran, an outstanding Nebraskan who served three terms as governor of my State. Mr. Cochran, an engineer by profession, will complete more than 10 years

service in the Bureau of the Budget upon his retirement next January 31. He has served all levels of government with great distinction, and is acknowledged as a national authority on development of water resources.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COCHRAN WILL ENJOY RETIREMENT—FORMER GOVERNOR WILL COME BACK TO NEBRASKA

(By John Jarrell)

On Tuesday, January 31, a tall, straight, white-haired man will step briskly from Washington's Shoreham Hotel, disregard the line of taxicabs at the curb, and begin walking toward the downtown section of the Capital.

Nothing short of a blizzard will prevent Robert Leroy Cochran, the 23d Governor of Nebraska, from making that 3-mile walk.

It will be, however, Mr. Cochran's final walk between his home and his office in the sprawling Bureau of the Budget that lies just west of the White House.

On January 28, Mr. Cochran reaches his 70th birthday. That makes retirement mandatory on the last day of that month.

But Mr. Cochran sees no reason to make it any different than any other day, so he will go afoot to work, as usual. Last year, there were only 2 days when he considered the weather too bad to walk.

He looks back on 44 years of public service, on three continents, with no regrets.

"I've had interesting work and, for the most part, satisfying work," he said. "It has been diversified. There has been enough foreign service thrown in to make for contrast."

No, he said, if he had it to do over again, he wouldn't make any major changes.

BROUGHT UP IN SODDY

Roy Cochran is a Nebraskan all the way through, by birth, inheritance, tradition, and choice. Born at Avoca, in Cass County, he was taken at the age of 6 by his father and stepmother, together with his older brother and sister, to a farm near Brady, in Lincoln County. He still owns the farm.

There he lived in a sod house with dirt floor. He attended a one-room school, and later he rode horseback every day to Brady for eighth grade and high-school studies. He was the first graduate of the high school to attend the University of Nebraska.

In January 1912, Mr. Cochran went to work for the State engineer's office. He stayed there 20 years, the last 12 as State engineer, except for a break in World War I when he served as an artillery captain in France.

As a Democrat, he was elected Governor in 1934, 1936, and 1938.

In 1940, he aspired to the Senate, defeated the incumbent Democratic Senator, Edward R. Burke, in the primary, but was himself defeated in the general election by the late Hugh Butler.

After he left the Governor's mansion, he went into the service again, as a colonel, and was commanding officer at Fort Leonard Wood, Mo. Then he did a hitch with the War Housing Administration, and was transferred to UNRRA, attached to the Mediterranean Theater and serving in North Africa and Italy.

IN BUDGET 10 YEARS

In October 1945 the late Harold Smith, then Director of the Budget, was casting about for an engineer to specialize in civil-works matters. It was he who brought Mr. Cochran into the Federal Government.

First he was assistant chief of the civil-works section. In recent years he has been special assistant in the field of water resources.

There was a 7-month break in 1947. That was when his old friend, Dwight Griswold, another former Nebraska governor, asked him to go to Greece with him, as Deputy Greek Aid Administrator.

That, in brief, is the 44-year public career of Roy Cochran.

"NO RUNNING FOR GOVERNOR"

In Washington there is a saying, "They never go back to Pocatello." That refers to the number of men who come to the Capital, in Government or in Congress, and never return home, even when retirement, the voters or a change in administration render them jobless.

Not so Mr. Cochran. He retires January 31. By February 2, at the latest, he and Aileen, his wife, will be en route to Nebraska.

Their future plans? Not definite. They will spend some of their time in Nebraska, some in California, some traveling. Perhaps even a cruise.

The Cochrans have a son in Lincoln, Robert Leroy Cochran, Jr., and a daughter in Oxnard, Calif., Mrs. Lee Grimes. They have four grandchildren, too—Robert Lee Grimes, 9; Douglas Grimes, 7; Diane Grimes, 4; and Robert Leroy Cochran 3d, 3.

As the last consistenly successful Democrat in Nebraska politics, Roy Cochran has received a good many suggestions that he reenter politics, perhaps as a candidate for governor this year.

He says he will not.

"I don't believe anyone who reaches 3 score years and 10," he declared, "should undertake a job harder than the one he has been performing. And that applies particularly to elective office."

ENJOYS ENGINEERING WORK

Around the Budget Bureau, and through the various departments of Government and Congress as well, Mr. Cochran has achieved quite a reputation for the close scrutiny he gives civil works projects that cross his desk.

Before he will give them a favorable recommendation, he insists that economic feasibility be shown. In the case of power and irrigation projects, he demands financial feasibility be guaranteed.

"These giant projects in the Pacific Northwest, in the Missouri Valley, in New England, all over the country, run into billions and billions of dollars," he said. "It seems to me important that we point out just what will be the costs to the Federal Government, and whether financial feasibility is present."

Mr. Cochran admits he gets gratification from the fact that he began his career in public life as an engineer, at the practicing level, and that he is ending his career as an engineer, at the analytical level.

ON THE ECONOMICAL SIDE

He believes he stepped out of character when he ran for the United States Senate.

That is because State politics, during his 6 years as governor, were in direct contrast to national politics, in the spending area.

Mr. Cochran, a Democrat, was an economy governor, ran a taut administration, moneywise, holding down taxes and keeping spending low. The national Democratic administration, at the same time, under President Roosevelt, was setting new spending records and running deeper into debt.

It was "not too pleasant an experience," he says, to be running for national office on a national ticket with which he was in fundamental disagreement on fiscal matters.

His 6 years as governor were very satisfying.

He looks back with particular satisfaction on the economy and road-building phases of his administration, with roads built on a pay-as-you-go basis.

"I was Governor and no longer State engineer," he recalled. "But I had been State engineer for a dozen years, and a good many road delegations still called on me."

Twice he was chairman of the Governors Conference and president of the Council of State Governors.

Last time the Cochran name appeared on a ballot, he won handily. That was for a post on the board of governors of the Nebraska Society of Washington. He served 2 years as president of the society.

READING AND TRAVEL

Mr. Cochran is looking forward to visiting the old family farm near Brady, and another near Scottsbluff which he purchased before World War I.

Edwin Hoagland has rented the 200-acre Brady farm from him for 25 years, and J. A. Anderson rents the 160-acre Scottsbluff farm, and has for 32 years. He has never had a written contract with either man.

The former Governor does not expect to be bored when he has no office to visit every day.

"I expect to catch up on some reading I haven't had time to do," he said. "And we like television. And we like to play bridge and canasta. And we love to travel."

He and Mrs. Cochran had been what he termed "indifferent" bridge players. About 3 years ago they began taking lessons.

"Now," he said, "we play with more interest to ourselves and perhaps, create less disaffection among those we play with."

He and Mrs. Cochran share driving chores, an hour at a time, when crossing the country.

She also shares his enthusiasm for walking. In Washington, they take long walks each weekend in Rock Creek Park.

Roy Cochran leaves public life for retirement with no regrets, no recriminations. He served in Washington under 2 Democratic Presidents and 1 Republican, without trace of partisanship, but in the interests of what he considered good economy and good government.

"I'm glad I've been in public office," he said, "and I'm glad I don't feel that just because I have been, I must continue to be. I'm glad I don't have it in my blood to the extent that I've observed it in others."

He sounds like a man who is going to enjoy retirement.

Farm Conditions in North Dakota

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, January 20, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter written to me by Anton Novak, Sr., of Williston, N. Dak.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

WILLISTON, N. DAK., *December 28, 1956.*

Hon. WILLIAM LANGER,

Washington, D. C.

DEAR SENATOR: I just want to tell you that I butchered a 4-year-old fat cow. I mean a fat cow that dressed 808 pounds with head, tongue, feet, and liver off and I received $1.54 for the hide and had a pair of shoes half-soled, no heels fixed, just half-soled, and paid $2.52 to get them fixed. It just does not add up. I wonder what's going to happen. Just keep up the good work you are doing and the fight you put on. We are watching you. I would like to have a copy of Ike's preelection speech that he made at Sioux Falls, S. Dak., or Kasson, Minn., and that Benson are sure a joke.

Yours truly,

ANTON NOVAK, Sr.

Ridgway Had His Day in Court

EXTENSION OF REMARKS
OF
HON. ERRETT P. SCRIVNER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. SCRIVNER. Mr. Speaker, General Ridgway's first article in the Saturday Evening Post is merely raking over deal coals, or as some of our oldtimers used to say, "threshing old straw."

The general, for whom I have great respect, and have so stated publicly, made known his objection to cuts in the Army strength to his superiors, both military and civilian. They did not concur in his views. He made his views known to committees of Congress, both House and Senate. They did not concur.

During the debate in the House of Representatives on the fiscal 1955 and 1956 military budget, his words were repeated time after time. Amendments were offered to restore the cuts. These were voted down.

The 1955 military budget presented by the Appropriations Military Subcommittee, with Representative WIGGLESWORTH, Republican, Massachusetts, as chairman, after these open debates, was passed unanimously 378 to 0. The 1956 budget, with Representative MAHON, Democrat, Texas, presiding, passed 382 to 0.

Mr. VINSON, of Georgia, chairman of the Armed Services Committee, after hearing General Ridgway, said, on the floor of the House, that he approved the action of the President in recommending these reductions.

Never at any time before the House Military Appropriations Subcommittee, of which I am a member, did General Ridgway express surprise or shock at President Eisenhower's 1955 message. He did express his disagreement, to both the sums and strength authorized for the Army.

Of course, as he said, as Army Chief of Staff, he never took the cost or our economic situation into consideration, but President Eisenhower had to; Secretary Wilson had to; our committee had to; and Congress had to. There is just so much money available each year. We must not destroy ourselves by the consuming fires of inflation. That would tickle Russia pink if Russia were not already Red. Our economy, as well as our defense, mut be kept sound.

Worthy of your reading, or re-reading is the editorial appearing in the Washington Star of January 18, 1956, which follows:

A SOLDIER GOES ASTRAY

No one who has even a casual acquaintance with General Ridgway would think of questioning his sincerity of purpose. Moreover, he is a fine soldier—a dedicated officer to whom the security of his country comes first, last, and always. It is too bad that he did not stick to his field in the first of a series of articles he has written for the Saturday Evening Post.

General Ridgway is competent to speak on the subject of national security. His opinions in this area are not necessarily conclusive, but they are entitled to great respect. We had better listen when, speaking as a professional military man, he says that our current defense policies are endangering the safety of our country. It is also necessary, however, to keep in mind the limitations under which General Ridgway testifies. He concedes this himself in these words:

"As Chief of Staff of the Army and as a member of the Joint Chiefs of Staff, it was my duty and obligation to advise the Department of Defense, the National Security Council, and the President on military matters. This advice should be based on my honest, fearless, objective estimate of what the Army needed to serve the national interest, and it should have no reference to the impact my recommendations might have on the national economy, on domestic politics, nor on administration policy at any particular time."

This is a correct statement, and it would have been better if General Ridgway, in his magazine piece, had confined himself to military advice. For that is the field in which he is competent and in which his responsibility lies. But a President cannot ignore, as General Ridgway could, the impact of military recommendations on the national economy, politics, and policy. A President has to look at the whole picture and form his judgments accordingly.

In writing for the Saturday Evening Post, General Ridgway has not stuck to the single-minded duty which he laid upon himself as Army Chief of Staff. Unfortunately, he has strayed into the realm of politics. And the effect is to impugn, by implication, the good faith and the integrity of the President.

The release of advance copies of the article led to a Senate debate. Democratic Senator SYMINGTON said that the Ridgway article in effect "says that the security of the Nation is being thrown into the market place, to be traded for political advantage." Other Democrats, without mentioning that General Ridgway had also been severely critical of the Truman administration, chimed in. In all fairness, however, it must be said that the inferences drawn up by the Democratic Senators were justified by the things General Ridgway wrote.

Thus, a statement by a distinguished soldier, which might have contributed to intelligent debate of a vitally important question, feeds the fires of political controversy, at a very low level. And it will be a self-defeating thing. For the effect of all this is to accuse President Eisenhower and Defense Secretary Wilson, not of being mistaken in their judgment, but of selling the country short for the sake of votes. We do not believe this, and the people will not believe it.

Attitude and Procedures of the Bureau of Federal Credit Unions—Correction

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Friday, January 20, 1956

Mr. LANGER. Mr. President, some time before the Congress adjourned last year, I put into the RECORD an article dealing with the Department of Health, Education, and Welfare, particulary relating to credit unions. I find I was misinformed, and I think I owe it to the Senate to ask unanimous consent to have printed an article correcting the statement made at that time, together with a letter written to me on the subject, dated August 15, 1955.

There being no objection, the letter and article were ordered to be printed in the RECORD, as follows:

DEPARTMENT OF
HEALTH, EDUCATION, AND WELFARE,
SOCIAL SECURITY ADMINISTRATION,
BUREAU OF FEDERAL CREDIT UNIONS,
Washington, D. C., August 15, 1955.

Hon. WILLIAM LANGER.
United States Senate,
Washington, D. C.

DEAR SENATOR LANGER: The CONGRESSIONAL RECORD Appendix of July 25, 1955, contains an extension of your remarks Attitude and Procedures of the Bureau of Federal Credit Unions comprised of a letter you received from the North Dakota Credit Union League dated July 21, 1955, as well as an article published in the Flint Weekly Review of July 14, 1955.

Inasmuch as the Flint Weekly Review article made reference to "wholly false accusations made against the Ford Rouge Federal Credit Union," I thought you would be interested in the attached photostatic copy of the Detroit Free Press article of July 28, 1955, which indicates the action of the Federal grand jury on July 27 with respect to that case.

Sincerely yours,

J. DEANE GANNON,
Director.

[From the Detroit Free Press of July 28, 1955]

SIX FORD CREDIT-UNION AIDES INDICTED—MISUSE OF FUNDS ALLEGED—ACTION SEQUEL TO $53,000 SHORTAGE

Six men were indicted Wednesday on charges of misuse of funds of the Ford Rouge Employees Federal Credit Union.

Four other persons were named as coconspirators but not defendants.

Six indictments were returned by a grand jury before Federal Judge Arthur A. Koscinski.

Ronald L. Greenberg and Willis Ward, assistant United States district attorneys who presented the Government's case to the grand jury, said the defendants will be arraigned Tuesday.

Each count carries a maximum penalty of 5 years' imprisonment and $5,000 fine.

Robert Vezzosi, Dearborn councilman and former treasurer of the credit union, was named a defendant in five indictments. He is charged with a total of six counts.

Other defendants and their addresses and identifications as given by the Government:

Arthur M. Bowman, of 1966 W. Boston, the organization's attorney.

Guisino Caprara, of 6552 Thiesen, Dearborn, former supervisor of cashiers.

Charles H. Thompson, of 2014 Highland, former chief cashier.

Franklin Lohmes, of 22431 Beech, Dearborn, present credit manager.

Giulo DeSantis, of 3305 Edsel, Deadborn, part owner of Canton Bar, 39651 Michigan, Canton township.

Named as coconspirators were Vezzosi's mother, Theresa, of 6050 Appoline, Dearborn; Clifford Steele, of 3616 Moore, Inkster; R. Reid Crum, of 24061 Calvin, Dearborn, identified as a partner with Vezzosi in the Research Electronics Co. in Plymouth, and Leroy Folks, of 518 Frazier, River Rouge.

The credit union whose members belong to Ford local 600, UAW (CIO), was rocked by a scandal last March when a $53,000 shortage was reportedly uncovered.

The organization was closed briefly by the Federal Bureau of Credit Unions and a new staff of officers was chosen.

Vezzosi and Thompson were indicted last March, Vezzosi on a charge of misrepresenting the financial condition of the credit union and Thompson on a charge of embezzling $53,000.

Edmour Bertrand, former owner of the Crystal Bar, Lawton and Grand River, was indicted then on charge of aiding Thompson

in the embezzlement. Bertrand was not named in Wednesday's indictments.

The indictments contained these various charges:

The Vezzosi obtained a $30,000 loan so Caprara could purchase the Canton Bar, although he had no security, and that Mrs. Vezzosi and DeSantis were partners with Caprara in the bar.

That Vezzosi and DeSantis participated in a check-kiting scheme for paying off the loan.

That Vezzosi obtained a $7,300 loan from the credit union for Crum to cover liabilities of the Research Electronics Co.

That Lohmes and Thompson, aided by Vezzosi, obtained credit-union loans of $450 and $400, respectively, to cover teller shortages.

That these loans were repaid from money obtained by Lohmes and Thompson by padding expense accounts.

That Bowman, although ineligible for loan, had Steele, a Ford worker, borrow $10,800 for him. Steele allegedly got $500 for his role.

That Bowman arranged a $37,379 loan so Folks could buy a roller rink and that Bowman was paid $2,000 by Folks.

That Bowman kept $5,282 of the loan to Folks and used the money to cover his purchase of a convalescent home at 1876 East Grand boulevard.

General Ridgway's Battle

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. SIKES. Mr. Speaker, under permission granted me to extend my remarks, I request that the attached editorial entitled "General Ridgway's Battle," which was carried in the January 19, 1956, issue of the Washington Post, be inserted in the CONGRESSIONAL RECORD:

GENERAL RIDGWAY'S BATTLE

Gen. Matthew B. Ridgway has raised two sobering issues of national policy in his pointed article in the Saturday Evening Post. The first concerns procedures for handling military recommendations to the administration. Is it proper that an Army Chief of Staff be muzzled and his views misrepresented in an effort to give the appearance of unanimity? The second concerns the reductions in Army manpower in relation to a balanced defense. Are we relying so heavily on nuclear weapons that we would be forced to drop the first bomb for want of other means to fight a limited war?

It is no secret that General Ridgway was in disfavor with some administration officials before his retirement last summer. The General was outspoken and blunt in his opposition to cuts which he thought impaired the Army's capability to fulfill American commitments. President Eisenhower once termed his views "parochial"; and there may have been good reason for others to disagree with him. Nevertheless, it is a shock to read General Ridgway's emphatic contradiction of the statement in Mr. Eisenhower's 1954 state of the Union message that the new military program had been "unanimously recommended by the Joint Chiefs of Staff." General Ridgway makes it clear that he did not agree. He regarded his function as that of giving military advice uninfluenced by budgetary considerations or "the advantage to be gained in the field of domestic politics by a drastic reduction in military expenditures"; and he regarded the 1956 budget as a directed verdict. Evidently the President was misinformed about General Ridgway's views, and the finger points to Defense Secretary Wilson.

There is an equally strong indictment of Mr. Wilson in the use of the "confidential" label to bottle up General Ridgway's final report. This report, which was critical of the inadequate military capacity to cope with limited wars, went to Secretary Wilson as an unclassified document. Yet it was returned with the request that it be classified confidential, and it was pigeonholed until someone leaked the contents. This amounted to a prime abuse of the military classification system to suppress information that was merely embarrassing and had no direct relation to security. It is precisely this sort of thing that justifies the continuing protests against the Pentagon stranglehold on information.

On the substantive issue of whether budgetary cuts have injured the defense posture, it is difficult to have an objective judgment. Although an Army commander's devotion to the national interest may be unquestioned, he still may think in one-service terms and not have a sound overall appraisal. Because there is not enough money to satisfy all services compromises must be made. This newspaper, nevertheless, is inclined to agree with General Ridgway that the emphasis on saving money through an all-atomic strategy could lead to a situation in which the country would be able to deter so-called brush fires only at the risk of general war. It is significant that General Ridgway is the man who bucked the other members of the Joint Chiefs of Staff, and who ultimately was upheld by the President, in opposing the kind of atomic countermeasure on Quemoy and Matsu that Secretary Dulles has skipped over so blithely.

The question of disagreements among members of the Joint Chiefs of Staff, and of economic considerations in the military budget, is one the Nation has faced many times before. Ultimately the decision has to be made by civilians on the most balanced advice. Once the decision is made, it is the job of military officials to go along loyally or request reassignment; the country cannot tolerate the kind of end runs of the sort conducted in the past in efforts to change policy. But none of these considerations is warrant for misrepresentation of views. Surely Congress is entitled to know, on demand, the honest feelings of a military chief who disagrees. Perhaps the major fault lies in the insistence on buttressing decisions with "unanimity" whether or not it actually exists.

Whose Farm Prices?

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. CANFIELD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the New York Times of January 19, 1956:

WHOSE FARM PRICES?

In his speech at St. Paul former President Truman declared that Secretary Benson didn't "inherit" the farm problem, but that Mr. Benson and the President "made it themselves."

It is true that wholesale farm prices have declined in this country from about 99 at the end of 1952 to 84 at the end of November 1955, or about 15 points. But this is by no means the whole story. For those who are interested in the whole record it may be noted that farm prices declined 18 points in the last 21 months of Mr. Truman's own administration.

As for Mr. Truman's proposal that we return to 90 percent of parity price supports, it may be worth observing that, of the total decline of 33 points in farm prices since early 1951, 27 points were accounted for in the era of high, rigid price supports.

Passamaquoddy Tidal-Power Project

SPEECH
OF
HON. THOMAS P. O'NEILL, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

The House in Committee of the Whole House on the State of the Union had under consideration Senate Joint Resolution 12, to request the Secretary of State to arrange for the International Joint Commission, United States and Canada, to conduct a survey of the proposed Passamaquoddy tidal-power project, and for other purposes.

Mr. O'NEILL. Mr. Chairman, the platitudes of the recent state of the Union message this year would remind one of the days of the New Deal. I am more than happy that the administration is going along with Passamaquoddy because of the fact this was originally a New Deal measure. This was considered during the great depression and was the first real public project in the Nation.

As we look back over 25 years, the reason it was not completed was due to the fact it was laughed at, it was ridiculed, it was condemned, not only by the Republicans of Maine but by the Republicans of the entire Nation. I am happy to see here a united Republican front asking for Passamaquoddy. I am happy that they are assisting in cooperating with Governor Muskie who has been down here recently, who has seen the Speaker and the majority leader, who has used his prestige and influence on the members of the Rules Committee to get a quick hearing on this measure so that it may be promptly considered by the House.

I am glad that we from the northeast part of the United States are working in harmony now, all in favor of this bill. There is no question in my mind but what it is going to be of great benefit to New England as a whole. We need more power, we need cheap power. We are all aware of the economic situation that now exists in New England. So I ask the Members of this House to go along with the united efforts of all the Members from New England. Again I say that the cooperation showing what good can be done by Governor Muskie coming down here working and cooperating with the Republican Members from Maine has been of inestimable benefit. I am therefore certain this joint resolution will be passed promptly.

Appendix

Resolution Passed by the National Legislative Assembly of the Republic of Panama Conveying Best Wishes for the Fullest Success of the 1956 Session of the 84th Congress

EXTENSION OF REMARKS
OF
HON. SAM RAYBURN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1956

Mr. RAYBURN. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to have printed a resolution passed by the National Legislative Assembly of the Republic of Panama conveying cordial greetings to the Congress and the people of the United States and to the leaders of the Republican and Democratic Parties of this Nation.

This is a most generous gesture on the part of the Republic of Panama, which is a proud and a friendly nation. The people of Panama have been friendly to, and have stood by, the United States in peace and in war. I know that every Member of the House of Representatives will appreciate this further evidence of the friendship and the faith the people of Panama have in the Congress of the United States and the people who compose it.

Let me say for myself that I deeply appreciate this significant gesture made to us by the people of this great nation.

The resolution follows:

To the Congress of the United States of America:

As members of the National Legislative Assembly of the Republic of Panama, it gives us great pleasure to convey on behalf of the people and the Government of Panama, cordial greetings to the Congress and the people of the United States and to the great leaders of the Republican and Democratic parties of this Nation. But this pleasure is greater when we realize the fact that our visit to this historical capital may contribute to the closest understanding and effective unity of ideals between our two countries.

There is a long established tradition of cooperation among the legislative bodies of the Americas to preserve the principles of Western Christianity and the most vital interests of their peoples. Let us remember that when the Virginia Legislature convened on May 1769, several resolutions defending the fundamental human rights of the inhabitants of the American Colonies were adopted and, with the votes of Washington and Jefferson, another resolution was passed ordering to send a copy of these resolutions to every legislative body on the Continent. This democratic lesson has been learned and will always be remembered.

We feel that the close ties of friendship between our two countries grow stronger day by day. The joint statement of President Franklin D. Roosevelt of the United States and President Harmodio Arias, of Panama, issued in the fall of 1933, was an eloquent demonstration of these feelings. Then and there the lines of a policy of cooperation were established and it was recognized that Panama, as a sovereign power, is entitled to the commercial advantages inherent to her strategic geographical position.

These basic principles found expression in the General Treaty of Friendship and Cooperation of 1936, in which the 2 countries reaffirmed their willingness to cooperate for the purpose of insuring the full and perpetual enjoyment of the benefits of all kinds which the canal should afford the 2 nations that made possible its construction. However, there still was much to be done by men of good will in both countries.

Thus, 20 years later President José Antonio Remón of Panama met in the fall of 1953 with President Dwight Eisenhower, an outstanding leader of mankind. At the White House the two presidents considered some aspects of the relations existing between their countries. As a result of the presidential conference, they reiterated, in a joint statement, the basic principles set forth by our governments in 1933 and 1936. They agreed further that such basic principles should have as a consequence the adoption of measures tending to make them more effective, such as enabling the commerce and industry of Panama to take advantage of the market offered by the Canal Zone and by the ships transiting the canal.

President Eisenhower and the Panama president equally agreed that the principle of equality of opportunity and treatment must have full effect in regard to the citizens of Panama and the United States employed in the Canal Zone. They recognized also the advisability of giving due consideration, in the cases of lands granted in the past for canal purposes which are no longer needed for such purposes in order that arrangements may be agreed upon for the return of those lands to the Republic of Panama.

Upon the basis of the principle of sovereign equality of the States, negotiations to reach a new treaty between the United States and Panama were started in Washington, as a good example to mankind that here in the Americas the United States and her sister Republics constitute a brotherhood of nations, large and small, but by no means a satellite system of the sort that has developed elsewhere in the world.

These considerations led the representatives of the United States and the Republic of Panama to sign on January 25, 1955, a Treaty of Mutual Understanding and Cooperation and a Memorandum of Understandings Reached, whose exchange of ratifications took place on August 23, 1955.

In those instruments several important obligations were mutually undertaken. It was agreed, among other provisions, that the United States would request the United States Congress to enact legislation providing for all United States and Panamanian employees in the Canal Zone, equality of opportunity and treatment, the establishment of a single basic wage scale and the uniform application of the Civil Service Retirement Act; and that the United States would request the United States Congress to authorize the construction of a bridge across the canal at Balboa, and the return to Panama of certain lands not required for canal purposes.

Within the inter-American system Panama has gaind a relevant place in history. It was in the Panamanian Isthmus of Darien, in the city of Santa Maria la Antigua, the oldest settlement on this continent, where in 1510 the first municipal legislative body of this hemisphere was elected by popular vote. The Royal Audience of Panama in 1535 extended its jurisdiction from Cape Gracia a Dios to Cape Horn. More than a century ago Panama became the repository of the ideals of the great liberator Simón Bolívar. He chose the capital of the isthmus as the site of the Congress of 1826, which was the cradle of Pan Americanism.

Bolivar tried to find a common meeting ground for the Americas at the Isthmus of Panama; and it has been said that the Canal which united the waters of two oceans by cleaving the lands of the continent has become a means of fulfilling that hope. Indeed, it is very significant that the first meeting of consultation of American foreign ministers was held in Panama City in 1939, where practical effect was given to the doctrine of the common defense of this hemisphere.

The American Continent is united by strong ties of political and ideological solidarity. Within this admirable union Panama and the United States are partners par excellence, due to the unique nature of their relationship. The effective understanding and cooperation between such special partners is particularly important as it reflects upon the entire framework of continental solidarity.

This ideological association has been loyally maintained in theory and practice. During the last war we contributed with Panamanian vessels to the victory of the United Nations. We have opposed from the outset every áttempt to spread to this hemisphere the harmful effects of the Communist doctrine and will cooperate in every way possible to defeat the plans for world domination of the Communist fanatics.

Panama is perhaps one of the few merchant marine powers which in 1951 prohibited her vessels to carry on trade with the aggressor countries of Communist China and North Korea. We have done so because we sincerely believe in the good neighborliness and partnership among the American Republics; because we do believe in the outstanding record of championship of liberty for everybody attained by the United States, and in the principles of international decency, of international law and of Western Christian civilization which are the groundwork of the inter-American system.

One of the great leaders of your country has expressed in fine words that we have been able to achieve in this hemisphere a unity of nations heretofore unknown, by holding fast to the doctrine that the rights of all nations, great and small, must be respected and that the problems of any nation in our group may be laid before the others in the certainty that there will be a friendly hearing and sympathetic help toward a constructive result with justice ever in mind.

We are happy on this occasion to pay personal tribute to the Senate of the United States which ratified the Eisenhower-Remon Treaty. But we are even more happy because of the fact that the legislation to implement said treaty, which is to be submitted to the United States Congress, will merit the consideration of this august body.

In this connection we wish to express our deep confidence and the confidence of the Panamanian people in the high sprit of statesmanship and Americanism of the ladies and gentlemen in both Houses of Congress. The adoption of this legislation not only will be particularly welcomed to the people of Panama and of the Americas, but also will serve as an excellent instrument to strengthen the inter-American system of continental solidarity.

It is a great honor for us to present to you, at this moment, a resolution of the Panama Legislative Assembly, conveying its best wishes for the fullest success of the 1956 session of the 84th Congress of the United States of America.

MAX HEURTEMATTE,
President of the Legislative Assembly of Panama.
INOCENCIO GALINDO,
Assemblyman.
JORGE E. ILLUECA,
Assemblyman.

WASHINGTON, *January 18, 1956.*

An Emergency United States School Program

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. SCOTT. Mr. Speaker, under leave to extend my remarks, I am including the following editorial from the Philadelphia Inquirer of January 13, 1956, on the President's school aid program:

AN EMERGENCY UNITED STATES SCHOOL PROGRAM

President Eisenhower's request for congressional action on a 5-year, $2 billion Federal school program points up two vital aspects of the crisis in the Nation's educational system.

One is that shortage of educational facilities for our children—due to a wartime lag in construction combined with a soaring birth rate—poses a national problem demanding prompt action if we are not to pay a heavy price tomorrow for failing to educate our children today.

The other is that providing proper schooling for our children is and should remain a local responsibility—but many communities, to their shame, have avoided it.

Because any failure to give our children proper educational opportunities can weaken the Nation, the President proposes that the Federal Government take unprecedented action to alleviate the shortage of public school classrooms which has denied schooling to some, and subjected millions of children to overcrowding.

Major part of the program is a proposal that the Federal Government provide a total of $1,250,000,000 over the next 5 years to aid in the construction of new public schools and additional classrooms. "Aid" is the key word, for Mr. Eisenhower insists that any sums granted by the Federal Government be matched by the States.

To complement this system of grants, the Federal Government also would purchase—up to a total of $750 million—local school construction bonds where the local district cannot sell them in private markets at reasonable rates.

Need would be the basis for the grants. In a way this would penalize communities which have acted on their own to build their own schools. But the President suggests a formula for denying aid to States or communities which have the resources to build schools, but have simply failed to use them.

There is no question that this program or any like it, if passed by Congress, would put the Federal Government into the business of helping to pay for public schools which, up to now, has been a local responsibility. But the President feels that the need calls for drastic temporary measures, and statistics on the lack of classrooms back him up.

There is ample evidence, however, that Mr. Eisenhower has not shifted his ground on the imperative need for local communities to handle their own problems, in this and many other fields.

The requirement for matching contributions by the States is one provision he recommends to insure local action. Another is his request that any legislation contain safeguards against the danger that Federal aid will diminish local control of education.

Most important is the time limit. Mr. Eisenhower emphasizes that current and replacement needs for public school classrooms in general are being met. The 5-year program is to catch up with the war and postwar backlog of needs. After that is done, the Federal Government would step out of the school picture.

We hope that is the way it works out. For essential though it may be at this time, the Federal aid-to-schools plans demonstrate once more the way the Federal Government moves in when local communities fail to meet their own problems. And once the Federal Government has started to handle local problems—and to pay the bills—it is far too easy for the local communities to let down.

If this program goes through, it may give hard-pressed communities a chance to catch up on their job of schooling their children. It should spur local efforts to get more, better-trained and better-paid teachers—surely as important as school buildings.

Above all, if it is to be successful, it ought to strengthen the willingness of people in every State and local community to meet their own school responsibilities once the emergency is over.

To Run or Not To Run

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1956

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of January 20, 1956:

TO RUN OR NOT TO RUN

If one political fact emerges clearly from the President's press conference, it is that Mr. Eisenhower has not yet finally decided whether he will run for re-election. All other conclusions which may be drawn are guesswork.

It ought to be said, however, that Mr. Eisenhower discussed his future with unprecedented candor. Certainly no other President ever dealt with the intimate question of his own physical well-being in such a detached, forthright and objective fashion.

He began by reading a telegram in which he acknowledged the entry of his name in the New Hampshire primary. He said that he had no objection, but that he wanted to make it clear that this implied no final decision on the second-term question. "I hope," he added, "that all who vote in the Republican primaries in 1956 will carefully weigh all the possibilities and personalities that may be involved." In this, he seems to be urging Republicans not to vote for him in any primary in the belief that he necessarily would be the candidate in November. Then came this paragraph:

"It would be idle to pretend that my health can be wholly restored to the excellent state in which the doctors believed it to be in mid-September. At the same time, my doctors report to me that the progress I am making toward a reasonable level of strength is normal and satisfactory. My future life must be carefully regulated to avoid excessive fatigue. My reasons for obedience to the medical authorities are not solely personal; I must obey them out of respect for the responsibilities I carry."

It is hard to see how the President could have spoken more candidly. For, by plain implication, he is saying to those who will vote in the primaries that he may not run. He is also saying that if he does decide to run, and is elected, he will embark on a second term in less than complete health, and that his activities would have to be carefully regulated to avoid excessive fatigue.

A President who will say this in advance of the first primary can be trusted when he goes on to give assurance that his final decision will be based, not on some personal or partisan motive, but on what he believes to be best for the country.

Management Study Lauds Efficiency of Catholic Church

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. ANFUSO. Mr. Speaker, I am privileged to insert into the RECORD an article appearing in today's issue of the New York Times regarding the report of the American Institute of Management giving the Roman Catholic Church the highest administrative efficiency rating of all nonprofit organizations. Similar articles are being published also in other newspapers about this report.

In our struggle against the spread of communism, and in all our aid programs, we should take advantage of the facilities offered to us by such a benevolent organization which has successfully penetrated the Iron Curtain and continues to keep aloft the hopes of all men aspiring to live in freedom and dignity.

No other organization within the area of our knowledge or experience does so much with so little—

The report says about the Catholic Church.

Mr. Speaker, I commend this article to the attention of all my colleagues. It is published in the New York Times, January 23, 1956, and reads as follows:

CATHOLIC CHURCH HELD EFFICIENT—STUDY GIVES IT HIGH RATING FOR EXCELLENT PRACTICES IN MANAGING AFFAIRS—FINDINGS WORLDWIDE—AMERICAN INSTITUTE THAT MADE SURVEY CITES COOPERATION OF VATICAN OFFICIALS

(By George Dugan)

The Roman Catholic Church got an A yesterday for administrative efficiency.

Its numerical grade was 88, but since 75 is considered excellent and the Standard Oil Company of New Jersey was at the top of the class with ninety-plus, the church's mark was well up in the cum laude category.

This rating was awarded by the American Institute of Management in what is believed to be the first management audit ever made of the church.

At a press preview of the audit, Jackson Martindell, institute president, said that no other nonprofit organization had been rated so high.

He said the purpose of the institute was to improve management practices all over the world by methods of comparative appraisal. A nonprofit body, it has a membership of 15,000 persons, including 5,000 presidents of large corporations.

Mr. Martindell said his purpose in conducting the church survey was to create a document that might become a landmark in religious sociology. The 26-page printed brochure will be expanded into a book to be published next fall by Harper & Bros.

NO DOGMA INVOLVED

He emphasized that the audit had nothing to do with dogma.

Mr. Martindell said Vatican officials were astounded when they heard of the project, but the church has not refused a single request. He added that the Vatican library was opened to his researchers for 2 months last summer.

Mr. Martindell volunteered the information that he was not a Catholic and had no intention of being one. He said that his interest in religious organizations began in 1940. Later, after a personal audience with Pope Pius XII, he asserted that he felt it was his duty to know more about Catholicism.

Last year, the Institute made a study of the American Baptist Convention but did not release any ratings to the general public.

Two Jesuit priests attended the press preview. One of them, the Reverend Joseph T. Clark, of Canisius College, Buffalo, N. Y., hailed the audit as simply tremendous and said that while the Catholic Church was "divinely founded and guided, it operates through human beings."

The Reverend Robert A. Graham, an associate editor of the Jesuit weekly magazine America, will pay tribute editorially in the January issue to the "obviously fairminded approach of the institute's report."

"Some things are said that are not complimentary to the church or flattering to its leaders." Father Graham's editorial will declare. "On the other hand, sincere praise is given grudgingly where it seems to be deserved. Bigots will find ample material on which to sharpen their knives. But the effort, time, and money (reportedly $100,000) employed to dig out the material on which the evaluation is based should be sufficient of a guarantee of a generally solid work."

DETAILS OF EVALUATION

The following management evaluation table, which appeared on the front page of the institute's study, was compiled on a point basis:

	Optimum	Minimum for excellence	Rating
Social function	1,000	750	1,000
Organization structure	800	600	700
Growth of facilities	500	375	375
Membership analysis	1,300	975	1,100
Development program	800	600	650
Fiscal policies	800	600	700
Trustee analysis	800	600	525
Operating efficiency	700	525	650
Administrative evaluation	1,200	900	1,100
Effectiveness of leadership	2,100	1,575	2,000
Total	10,000	7,500	8,800

The categories of social function and organizational structure refer to the contributions of the church to society over the years and its administrative setup from the Pope down to bishop. Membership analysis was audited on the basis of the church's evangelistic activities. Development program refers to promotional activities and trustee analysis to the transmission of leadership from generation to generation. Administrative evaluation assayed the effectiveness of management at the top levels.

Mr. Martindell indicated that some of the institute's findings were "sure to be highly controversial." One probably is the audit's assertion that Archbishop Giovanni Battista Montini of Milan is being "groomed" to succeed Pius XIII as Pope.

The study paid tribute to Pope Pius X (1903–1914) for "providing the modern corporate structure and procedures that now characterize the church's activities."

"The present corporate structure has been carefully formulated," it declared, "and from the point of view of the American Institute of Management has but two apparent major weaknesses."

The report listed these as "too little provision for staff research work" and "too much line and staff responsibility vested in the Pope himself."

CRITICISMS ARE LISTED

The report made these additional criticisms:

"While the number of facilities of the church has grown prodigiously over the world in the last 50 years, several problems have aggravated the situation from an operating point of view. Many institutions of the church are housed in buildings given to it and ill-suited to the purpose.

"Many others are so old and antiquated as to be scarcely functional and yet they must be utilized. The financial planning of the church has never set up depreciation reserves for new constructions, perhaps in the belief that a way will be found.

"Both in architecture and furnishings there has been a noticeable lagging in artistic taste (true of all religious bodies) since the time of the great Catholic masters of former centuries. The Holy See has not exported either managerial efficiency or artistic appreciation to the provinces in sufficient quantities."

The audit went on to add that "in the sum total of its financial affairs from the bishop down, the church performs amazingly well."

"No other organization within the area of our knowledge or experience does so much with so little," the document declared.

A listing of 32 suggestions, entitled "What Managements Can Learn From a Study of the Catholic Church," included these points:

The benefit of long executive training and slow promotion.

The advantage of haste in some directions and delay in others.

The need to utilize the knowledge and power of elderly men in staff capacities.

The long-term benefit of avoiding nepotism in the hierarchy of any management.

The benefit of promotion from the ranks.

The importance of being slow to praise, and slower still to condemn.

An Equitable Excise Tax Program

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1956

Mr. MASON. Mr. Speaker, the testimony given during the hearings on the administrative difficulties, techniques, and inequities of our present hodge-podge system of Federal excise taxes—whether the testimony was given by representatives of the Treasury who have the responsibility of administration, or whether the testimony was given by the taxpayers who are affected by the taxes—was to the effect that our entire excise tax system constitutes an indiscriminate mess of taxes, levied without rhyme or reason, in a hit-and-miss fashion; that it is full of inequities between the producers and distributors of the various commodities taxed; that every time the Ways and Means Committee tries to remove one of these inequities, two more inequities are created; and that our present excise tax system generates one continual headache for both taxpayers and Treasury officials.

The only conclusion, therefore, that one can reach as a result of the testimony given in these hearings is that the permanent solution of the problem of Federal excise taxes, and the only fair and equitable solution, is to repeal all Federal excise taxes now on the tax books, except those on liquor and tobacco, and substitute for the repealed excise taxes a flat 5 percent manufacturers' excise tax upon all end products, to be collected at the source.

Mr. Speaker, the repeal of all present excise taxes—except the taxes upon liquor and tobacco—would reduce the tax take of the Treasury by about $5 billion, and the substitution of a flat 5 percent manufacturers' excise tax upon all end products would bring in about $5 billion to the Treasury, insuring neither a loss nor a gain to the Treasury by this very desirable substitution.

The advantages of this proposed change in the Federal excise tax field are as follows:

First. It would get rid of the present hodge-podge, hit-and-miss, inequitable system of excise taxes—taxes levied without rhyme or reason—and lower all present 10 percent excise taxes down to 5 percent.

Second. The manufacturers' excise tax is the cheapest and easiest of all taxes to administer and collect.

Third. It would leave the retail tax field to the States, most of which now derive the bulk of their State revenue from retail taxes.

Fourth. It would tend to equalize the total tax burden upon all our people, without hurting any one producer or consumer.

Mr. Speaker, pertinent questions in connection with our Federal excise taxes are:

First. What proportion of our overall Federal revenue collections should come from excise taxes?

Second. What constitutes a well-balanced, equitable Federal tax system, one that spreads the tax load equitably over all segments of our national economy?

England gets about one-half of her total government revenue from excise taxes. Canada gets about one-third of her total revenue from excise taxes. The United States gets only one-seventh of her total revenue from excise taxes. We depend more upon income taxes and less upon excise taxes than any of the other major nations of the world.

A well-balanced, equitable Federal tax system should collect about one-third of its needed revenue from personal income taxes, one-third from corporation taxes, and one-third from excise taxes—levied at the manufacturers' level.

Mr. Speaker, the imposition of a flat manufacturers excise tax, in lieu of the present hodge-podge of excise taxes, would constitute a long step forward toward the establishment of a well-balanced, equitable, and efficient Federal tax system. It would be a sensible and permanent method of collecting needed revenue for the government, and it would remove most of the inequities that exist in our present mess of Federal excise taxes—an objective greatly to be desired and for which we should strive.

Congressman Halleck's Salute to Ike

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1956

Mr. MINSHALL. Mr. Speaker, on January 20, 1956, the third anniversary of the inauguration of our beloved President, Dwight D. Eisenhower, Republicans all across our great Nation joined together in 53 gala salute-to-Eisenhower dinners to pay homage to this most distinguished American.

One of the foremost of these salute-to-Eisenhower gatherings was in Cleveland, Ohio, where the number of Republicans who desired to honor our famous President was so tremendous that the dinner was served in two separate auditoriums. On hand as the featured speaker of the occasion was our extremely able colleague the gentleman from Indiana the Honorable CHARLES A. HALLECK.

Congressman HALLECK's remarks in Cleveland during this third anniversary celebration are inspiring not only to all Republicans but to each and every American citizen, and for this reason I wish to include his brilliant comments and thoughts on the conduct of our Nation's Government:

Mr. Chairman, distinguished guests, my honorable colleagues in the Congress, and fellow Republicans, it is always a pleasure to come to Cleveland.

I have enjoyed your hospitality on many occasions in the past, and I hope you will be kind enough to invite me back in the future.

I am particularly happy to appear in the State so ably represented in the Senate by JOHN BRICKER and GEORGE BENDER and in the House by your splendid 17-man delegation: GORDON SCHERER, BILL HESS, PAUL SCHENCK, BILL MCCULLOCH, CLIFF CLEVENGER, CLARENCE BROWN, JACK BETTS, TOM JENKINS, OLLIE BOLTON, JOHN VORYS, DAVE BAUMHART, BILL AYRES, JOHN HENDERSON, FRANK BOW, HARRY MCGREGOR, FRANCES BOLTON, and BILL MINSHALL.

You know, a list of names like that is music to my old Republican ears. It's going to be even longer next year.

From time to time I have come here on fund-raising missions. (For the party, that is—not for me personally.)

I have always found folks around here most generous and loyal in their support of republicanism.

These two wonderful dinners here tonight certainly underscore that support.

Well do I remember the lean years, when many of us wondered whether we would ever again be able to elect a Republican President and a Republican Congress, and give the country guidance under sound Republican leadership.

It sometimes seemed that we would never overcome the illusion of free money out of Washington and the Federal paternalism of the double dealers—new and fair.

I know about those long, difficult years, because I was fighting the battle in the House of Representatives and carrying the story, as best I could, up and down the land.

Let me say "thanks" for the help and encouragement you have given in the past.

And let me say, also, that your time and money were not wasted.

Republicans did triumph.

We did win.

And tonight we meet here in tribute to our Republican President—one of the truly great leaders of American history—in war and in peace—Dwight D. Eisenhower.

Few men, indeed, have been accorded the honor of serving their Nation in both military and civilian positions of highest trust and responsibility.

Dwight D. Eisenhower has met the challenge of both assignments with magnificent success.

We called on him to help us win a war. Under his banner victory was ours.

Now we have called on him to help us win the peace. Under his wise and courageous leadership, we are moving toward that goal.

I scarcely knew Dwight Eisenhower before his election to the Presidency.

It has been my rare privilege since the late days of 1952 to meet with him, to work with him and, I might add, to enjoy some moments of relaxation with him—although for a President of the United States, such moments are all too rare.

As a result of this association, I can say with all the conviction at my command that here is a man completely dedicated to serving all the people of America.

Dwight D. Eisenhower is devoid of any desire for personal glory.

His sole ambition is to do a good job for his country.

But Dwight Eisenhower needs no accolade from me.

The trust and confidence he inspires was reflected in the overwhelming public endorsement he received in 1952.

Today public trust in Dwight Eisenhower is running stronger than ever.

His place is assured in the hearts of his countrymen as one of the most beloved and admired Presidents in history.

For us it is a matter of pride and gratification that he bears the label of our party and is one of us.

Our principles are his principles.

His triumphs are our triumphs.

We share a common pride and satisfaction in the record of Republican stewardship, of unparalleled achievement for America.

No administration has ever done more to keep faith with its pledges to the people.

We promised to strive for peace.

The Korean war—is that grinding, stalemated, treadmill war so soon forgotten?—was ended as one of the first orders of business for the new administration.

There have been no new wars.

And let me say here and now I'd rather have an administration that saves us from the abyss of war than one that pushes us over the precipice.

So would every right-thinking American.

We promised to strive for solid prosperity.

The Nation today is enjoying the greatest economic abundance ever known to mankind anywhere.

More Americans have jobs today, are making better wages, producing more and better products, buying more and investing more than ever before in the country's history.

Back of those two broad accomplishments are a host of actions that have made America—for all of us—a better place in which to live.

And back of the actions we have taken are the principles for which we, as Republicans, stand.

Our accomplishments speak for the wisdom of Republican policies and principles.

I could not let an opportunity of this nature pass without paying deserved tribute to Senator Robert A. Taft, who played a vital role in the championing of the principles and policies under which we operate today as a political party.

I had the privilege of working with Bob Taft on a special assignment in 1950 to draft a statement of Republican principles and objectives.

He was the chairman of a three-man committee in the Senate and I was chairman of a similar group in the House.

You know, that's about all Republicans had back in those days—principles and objectives—and a never-say-die spirit.

Out of that statement, adopted by Republicans in the Congress and endorsed by the Republican National Committee, grew the Republican platform of 1952.

No one knows better than I of Bob Taft's devotion to the cause of Republicanism.

I say to you here tonight: He, too, would have been proud of the record his party has made in the last 3 years.

He would have been in the forefront of these dinners, speaking somewhere over this broad land in a sincere testimonial to the leadership of Dwight Eisenhower.

Back in 1950, 2 years before the 1952 platform was drafted, Republicans made this pledge:

"We dedicate our efforts to win lasting peace * * *," and "to build a country in which every citizen may make the most of his skill, his initiative, and his enterprise. * * *"

In 1952 we were given the chance to make good.

We have come a long way—farther than a lot of folks thought possible in so short a time.

In foreign affairs, citizens were confused by bumbling, fumbling diplomacy, by inconsistency and indecision.

They were alarmed by disclosures of one-man deals involving the lives and fortuntes of millions and millions of free people.

We took a firm stand against secret commitments. We pledged no more Yaltas or Potsdams.

There haven't been any—and there won't be any as long as a Republican President remains in the White House.

No President has gone further than President Eisenhower to bring Congress into his confidence in the conduct of foreign relations.

The Formosa resolution is exhibit A of that policy.

We expressed our conviction, in 1950, that a strong national defense must be maintained at all cost as long as the threat of Communist aggression remains.

Republican leadership today is giving America more defense for every dollar.

Equally important, we are balancing the needs of the military with the needs of our domestic economy, thereby holding fast to another cardinal principle set down in 1950 that:

"A strong American economy is a vital factor for our security."

Believing what we said, your Republican administration and a Republican Congress

brought into play policies that would get the job done.

You know, friends, this has been quite an experience for me.

I spent nearly 20 years of my career in the Congress on the outside looking in, as far as the administration of government was concerned.

When I first went to Washington, I was the only Republican from Indiana. It was convenient. I could hold my Republican caucus in a phone booth.

I've often said I felt like the banty rooster who was turned look in the barnyard with a herd of Percherons.

The little rooster looked up at the horses and said, "Look here, fellows, let's have an understanding: I won't step on your toes if you don't step on mine."

In any event, folks, it was rough going and, as I say, we began to wonder whether the time would ever come when Republicans would be called upon to take over the reigns of government.

But the day of reckoning did come.

The people of America were sick of war and threats of more wars.

They were alarmed at the accelerating march toward socialism.

They were chafing under controls and regimentation.

Taxpayers were angered by the increasing waste of hard-earned dollars taken from them in ever higher amounts.

Citizens were worried about a spiraling inflation which drained their savings, shrunk the value of annuities and pensions, and cut deeply into living standards.

Our people were rightfully indignant at the growing disclosures of scandal and corruption in high places.

They were startled by disclosures that Communists and their sympathizers were holding positions of trust within the Government itself.

In short, the people of this country were finally wised up, fed up, and burned up at the mess and they called on the Republican Party to clean it up.

Believe me, the job has not been easy.

No one expected it would be.

For instance, we knew Uncle Sam had been taken on a spending spree and that this finances were in bad shape. But we hadn't suspected how bad.

The national debt was a well-advertised fact.

But we discovered the old boy had been put in hock for another $81 billion worth of merchandise and services for which no provision to pay had been made.

This $81 billion represented obligations of the Federal Government—I O U's, promises to pay, or c. o. d. orders—whatever you want to call them.

And consider this: Here were $81 billion worth of bills run up by an administration which had been promising the American people a tax cut.

How irresponsible can you get?

I hardly need mention that for a new administration, one pledged, among other things, to bring the Federal budget into balance at the earliest possible moment, this was something of a shocker. And that's an understatement.

And I hardly need mention, but I'm certainly going to, that tonight, we can list another major accomplishment to the credit of the Eisenhower administration.

We have reached the goal of a balanced budget.

We have halted deficit spending.

We have restored fiscal integrity to the national scene.

And let me pause right here to give due credit to another great citizen of Ohio, an outstanding American, George Humphrey, who has done a distinguished job as Secretary of the Treasury.

For my money, and, I might add, for every taxpayer's money, we've never had a better one.

And that reminds me of another important fact about this Eisenhower-Republican team.

We've got a lot of high-caliber citizens serving America now.

President Eisenhower's genius for finding the right people for the right job has played handsome dividends for the country.

No longer, may I say, is it a condition precedent to service in Washington that you must first have been a failure at everything else you ever tried.

Back in 1950, Republicans spoke out against a planned economy, price and wage controls, socialized medicine, Brannan plans and other radical schemes being put forward in a flood.

One of the first major actions by Republican leadership was to throw controls out the window.

Remember the anguished howls from the opposition?

Remember the dire predictions of what was going to happen to commodity prices, to rents, to the cost of living in general, how everything was going to skyrocket?

It didn't happen, did it?

What did happen was that American enterprise, freed of artificial restrictions and bureaucratic regimentation, rolled up its sleeves and went to work in a new atmosphere of freedom.

Labor and management, working under a fair and impartial administration of the Taft-Hartley law, have moved steadily forward—and with a minimum of time lost from strikes.

You don't hear much about the Taft-Hartley Act being a slave labor law any more, do you?

It never was.

Even labor leaders themselves know that unions have made unprecedented gains in membership.

And their members know that they have made steady progress toward higher wages and more take-home pay.

Their standard of living was never higher.

Can anyone believe this is all an accident?

Any reasonable person knows otherwise.

This better life for all Americans has come about because of sound, far-sighted Republican leadership in government.

It has come about because Republican policies have stimulated the economy.

We have halted inflation.

America today has a dependable dollar.

We promised the American people we would materially reduce Federal spending.

We have cut spending—with a vengeance. Starting with a $14 billion chop in the spending proposals of President Truman, we have continued an unrelenting drive against waste and extravagance in the Federal household.

We had to, because we had also promised a tax cut.

Thanks to Republican thrift and the determination of the Eisenhower administration and a Republican Congress to make good on a pledge, we gave the American people the biggest tax cut in the history of any nation—nearly $7½ billion.

Who benefited the most?

Two out of every three dollars of that tax cut stayed in the pockets of individuals.

Your Republican Congress completed a monumental revision of our Federal tax laws.

By this action, we encouraged wider ownership of business enterprises.

We stimulated plant expansion and the creation of more jobs.

We provided increased deductions for medical expenses.

We corrected inequities, bringing tax relief to working mothers and improving the status for citizens in retirement.

We encouraged soil conservation through more favorable treatment for farmers engaged in these activities.

Let me say something here about the farm situation.

I am amazed at the audacity of Democrat spokesmen who attempt to lay the blame for our farm problems on Republicans. These people are trying to cast themselves as heroes on the basis of their own past mistakes—which is a good trick if they can get away with it—but I don't think they can.

Even the most casual observer of the economic scene a few years back was aware of the growing crisis in agriculture—a crisis spawned by mounting surpluses.

It was a simple case of war-inspired production engulfing an economy based on peacetime needs.

We have tackled the difficulty with courage, refusing to be stampeded into ill-considered, trick panaceas that can do no more than offer an illusion of relief while speeding the day of an even worse reckoning.

No problem we have faced is more complex or more delicate.

Let no American farmer be deluded by promises that there is an easy answer.

Our goal is to restore the farmer's prosperity in the market place through a program which will assure him his fair share of the national income.

We propose to accomplish that purpose without resort to political witchcraft and without demanding that the farmer forfeit his traditional independence.

We will have no part of any scheme to make our farm families the wards of Government, or to threaten the farmer himself with jail if he doesn't comply with Federal edict.

We will reach our goal as we have reached others, mindful that a strong agricultural economy is basic to the welfare of our country.

There were other things good for America we pledged to pursue in that Republican statement of 1950.

We recognized the social responsibility of government.

The record of the past 3 years in this respect is on the books.

Under the Eisenhower-Republican administration, we have established the Department of Health, Education, and Welfare, giving it Cabinet status.

We have broadened and improved the social security program.

Unemployment insurance coverage has been extended to millions of additional workers.

The minimum wage has been increased.

A program of hospital construction for the chronically ill is now in operation.

And we have done these things under traditional American concepts, without anything smacking of socialization.

We said something, too, in that 1950 statement, about loyalty.

The Republican 83d Congress was quick to give the administration new legal weapons in its fight against subversives.

Our internal security program has been completely overhauled, and security risks are under notice that operation "open-up" has replaced "cover-up" as a Federal policy.

We have rooted the risks out of Government wherever they can be found.

And we aren't hiring any new ones.

I could go on and on, with specific examples of Republican accomplishments for a better America.

But I want to speak just briefly, now, about the broad picture.

We have taken a few old-fashioned virtues out of the mothballs and restored them as principles of Government.

They are as good as new.

I speak simply of such virtues as thrift, diligence, self-reliance—yes, the old "do it yourself" spirit, if you please.

What's wrong with that? It made our country great, didn't it?

I speak of initiative, freedom, dignity and integrity.

Republicans, under the leadership of Dwight D. Eisenhower, have brought them all back to the national scene—and we're building a better country than the world has ever known, on those foundations.

And now I want to offer a personal observation on a subject which is currently holding the attention of the whole world.

I wouldn't care to hazard a guess on how many people have asked me for an opinion on the matter—even since arriving in Cleveland this morning.

The question is this: Is President Eisenhower going to run again?

I have said before and will say again that he's going to run.

He's the best man in the country for the job.

Oh, of course, folks on the other side say all Republicans are hoping the President will run again because the party needs him.

Well, we wouldn't expect them to admit it, but they know, deep down, that another 4 years with Dwight D. Eisenhower in the White House would be the best thing that could happen to the country and to the cause of world peace.

The President is alert and active. He is full of bounce and sparkle.

Let me say this: President Eisenhower will make his ultimate decision with one thought in mind: "What is best for America?"

I only hope that his deep humility will not lead him to underestimate the vital importance of his leadership.

We have come far in 3 years toward putting America back on the track.

We have restored that priceless ingredient to the national scene—public confidence in Government.

Evidence of that confidence is everywhere—in consumer spending, private investment and in the vast plans for expansion of business and industry.

We are moving forward with giant strides.

How important is a Republic victory in 1956?

The alternative is a return to what we had, the loss of what we have gained.

We can't let that happen.

The ground we have covered in 3 short years is but the promise of what the future can hold for our beloved country under wise and understanding leadership—Republican leadership of the kind we have enjoyed under Dwight D. Eisenhower.

We must not fail.

Ridgway Reneges

EXTENSION OF REMARKS

OF

HON. ERRETT P. SCRIVNER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1956

Mr. SCRIVNER. Mr. Speaker, one would be surprised at my surprise at General Ridgway's recently expressed surprise at President Eisenhower's budget message for 1955, stating that the military budget was unanimously recommended by the Joint Chiefs of Staff.

Early in February 1954 Secretary Wilson had told the Military Subcommittee on Appropriations that this was a unanimous recommendation. Admiral Radford had told the committee the decision was unanimous.

And, as shown in the printed volume of the Department of the Army appropriations hearings on the 1955 budget, on page 51, Representative WIGGLESWORTH, the then committee chairman, stated:

Mr. WIGGLESWORTH. I understand, General, from the testimony of Secretary Wilson and Admiral Radford, that this overall military program, of which the Army program now before us is a part, is a result of the New Look and has the unanimous endorsement of the President, of the National Security Council, and of the Joint Chiefs of Staff. That is correct; is it not?

General RIDGWAY. Yes, sir. So far as the Joint Chiefs of Staff are concerned it was on stated assumptions and limitations.

With this record of unanimity before you, are you not also surprised at General Ridgway's surprise?

The Natural Gas Controversy

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1956

Mr. MASON. Mr. Speaker, should the Federal Government regulate and control the price of natural gas at the wellhead? The House said no when it passed the Harris bill last summer. Briefly, the controversy came about as follows:

In 1938 Congress passed the Natural Gas Act regulating the rates charged by the interstate pipelines for transporting gas. Since these carriers enjoy a monopoly in the field of transportation, it is only proper that their transportation rates—like all other interstate transportation agencies— should be regulated and controlled. However, in the Natural Gas Act of 1938 Congress said "The provisions of this act shall not apply to the production or gathering of natural gas," leaving the price charged for the production of gas to be determined by the operation of a free market.

In 1954 the Supreme Court by a 5 to 3 decision—in spite of the clear prohibition contained in the act—ruled that the Federal Government had the power to regulate and control the price of gas at the wellhead. Since this decision was contrary to the express provisions of the Natural Gas Act of 1938 and violates the specific provision of that act, bills were introduced in Congress by Congressman HARRIS and Senator FULBRIGHT to nullify the Court decision and to place the production of natural gas where it had always been—the price at the wellhead subject only to the control of a free market.

Mr. Speaker, the price of natural gas for heating homes is made up of three factors, namely:

First. The price to the producers at the wellhead.

Second. The price charged by the pipelines for transportation, and

Third. The price received by the local public utility for distribution.

The last two factors are regulated and controlled as public monopolies, yet they get 90 percent of the price charged the consumer. The producer of the gas gets only 10 percent of the price charged.

In other words, if the average Illinois consumer pays $70 per year for heating his home with gas, the producer gets only $7, and the transportation and distributing agencies get $63. This figures out about 60 cents per month or 2 cents per day the consumer pays to the producer for the gas he uses. The balance of his bill goes to the pipeline owner and to the local distributing utility—each one of which has been and now is regulated and controlled by Government.

Mr. Speaker, I include as a part of my remarks the following editorial taken from the Saturday Evening Post of January 21, 1956:

IF GAS PRODUCERS CAN BE REGULATED, SO CAN THE CORNER GROCER

There is a shocking absence of understanding about the potentially destructive results of governmental regulation of individual enterprise. For evidence we refer you in advance to arguments made against the Fulbright bill.

The Fulbright bill is the Senate version of the Harris bill passed by the House last session. Both seek to release producers of natural gas from regulation by the Federal Power Commission. In June 1954, the Supreme Court ruled that FPC should regulate such producers, although the Natural Gas Act of 1938 had specifically stated that it should not.

This is not a remote legalistic controversy. It involves a housewife in a Chicago suburb who learns with dismay that she cannot obtain the inexpensive natural-gas service which she had expected for cooking and heating in her new house. At about the same time an Oklahoma housewife flips a switch in her house and a light glows. These two events are related. The electricity which fired the Oklahoma lamp bulb was generated in a utility plant fueled by the natural gas which had been intended for the Chicago housewife, but which she didn't get.

The reason for the diversion is simple. Oklahoma gas producers had planned to deliver to a pipeline a supply of natural gas which would have served the Chicago housewife and 200,000 other Illinoisans. But when the Supreme Court ruled that sales of gas by producers across State lines were to be regulated—that is, price-fixed—Oklahoma producers abandoned negotiations for the sale. Instead they sold their product within their own State, a transaction that was exempt from FPC control.

So many natural-gas producers were alarmed by regulation that the volume of gas committed to large interstate pipelines in 1954 declined approximately two-thirds from 1953, a loss to prospective consumers of more than 4 trillion cubic feet. And in 1955, drillers completed 12 percent fewer gas wells than in the previous year while at the same time oil-well completions rose.

Those who want regulation speak in the name of consumers who are supposed to believe that Federal regulation of producers is needed to curb monopoly and keep cost at a reasonable level.

Take cost first. The argument is that natural-gas producers, although competing against one another in discovery, production, and sale of gas reserves, are in a position to hike the gas bills of city consumers unless they are controlled. Why, then, during the years 1938 to 1954, when producers were free, did gas costs in the field rise only one-ninth as much as the cost of living? Moreover, the cost of natural gas in the field on the average is only 10 percent of the city consumer's bill. Ninety percent lies in transmission and dis-

tribution—two services which are properly under utility-type regulation because they enjoy certain monopolies. Anyway the proposed legislation contains specific protection for the consumer from unwarranted price increases.

But aren't the producers of natural gas a monopoly? There are 8,000 of them, none producing as much as 5 percent of the total. If they constitute a monopoly, then three-quarters of American industries are in exactly the same class, since natural-gas production is less concentrated in number of owners than are most industries.

It is curious that those who most violently predict high cost and monopoly are blind to the fact that regulation of producers will inevitably bring about exactly what they profess to fear. Natural gas has been cheap because it could be bought and distributed in a volume huge enough to distribute the expense of pipelines and city mains among millions of consumers. Cut down that volume and a smaller number of consumers will have to bear the transmission and distribution costs. Household bills will go up, not down, and unwillingness of producers to sell outside their own States could eventually deprive distant consumers of gas altogether.

What, then, becomes of the monopoly charge? A producer cannot gouge a consumer with whom he will not deal. The monopoly will become one of States, not of people, as producing States not only keep their gas at home but as a consequence attract industries from consumer States into their own areas. This is already happening. More than half of all natural gas is now consumed in the States where it is produced.

There is another sinister threat in this controversy. The regulation of producers of natural gas is the first example of regulation of a competitively produced commodity. It would hardly be the last. Natural gas is more often than not intermixed with oil production. Could we regulate the gas and not the oil from the same field? Then why not coal, lumber, iron, and on right into a complete statist straitjacket?

Sometimes we wonder if this is not the goal which the regulation advocates have had their eye on all along.

Meany's Talk to Rotary Meeting

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1956

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Herald Tribune of January 20, 1956:

MEANY'S TALK TO ROTARY MEETING

Following is the text of an address by George Meany, president of the A. F. of L.-CIO, yesterday at a luncheon of the Rotary Club of New York at the Hotel Commodore:

"I want to limit my remarks to a problem which is the problem of our age—the most urgent problem confronting our country, our community, our voluntary organizations, and each one of us individually—regardless of what profession or trade we have, regardless of the line of business in which we may be. I refer, of course, to the problem of preserving peace and safeguarding and strengthening human freedom. All other problems, important as they may be for our country, for our family, for ourselves, are not as decisive as this one. Whether we live in some isolated backward community, or in the skyscraper jungles of our big cities, none of us can escape the world crisis over the maintenance of peace and the future of freedom. No matter how much we may try to isolate ourselves, we can no longer be isolated—or isolationists.

"Today the big threat to world peace and human freedom comes from the Soviet Communist dictatorship and its worldwide fifth column operating as a subversive conspiracy throughout all countries and regions of the free world.

"This vast conspiracy has its base, its head and heart, its source of inspiration and instigation, its material and military support, in Moscow. Its aim is to conquer and dominate the world and then to transform it in the Soviet image. When I say the world, I don't exclude any one of us here or anywhere else. No smile or diplomatic agreement can hide or remove this aim.

"UNIONS NEED DEMOCRATIC CLIMATE TO SURVIVE

"We of free labor know that we simply cannot exist under any dictatorship—whether it be communism, nazism, fascism, falangism, or peronism. Free trade unions by their very nature must have a democratic climate in order to survive. And democracy needs free trade unions and other voluntary agencies of free assemblage and speech such as your group meeting here today for its survival.

"In the realm of diplomacy the Communist enemy of peace and freedom operates officially and openly under the banner of the Moscow-Peiping axis governments. In the nongovernmental realm the Communists operate through the Cominform, through the various Communist parties, the so-called World Federation of Trade Unions and a horde of camouflaged front organizations and fellow-traveler outfits. That is why there are no American Communists; there are only Communists in America. There are no French or Chinese Communists; there are only Communists in France or in China.

"Some people in our country consider the Communist Party and its various front organizations in the United States as the major threat to our peace, to our most cherished moral and spiritual values, to our liberty, to our prosperity. Therefore, these people think that the Communist menace can be ended by getting some congressional committees to hold some hearings, locate some Communist infiltrators, pass some stringent laws, and get some indictments and convictions. Of course, our democratic state has the right and the duty to defend itself. But I wish it were that simple and that easy. I am not minimizing the Communist danger at home. Since 1917 we of the labor movement have fought the Communists in the United States. We have given them no quarter in any walk of life. We have uniformly had the initiative against them.

"We have carried the fight into the Communist camp at home and abroad.

"MAJOR RED THREAT COMES FROM MOSCOW

"Years of experience have taught us that the major Communist threat to our democratic way of life, to our free institutions, to our national security, comes from the center and seat of Communist power—Moscow—rather than from its agencies or branches in the United States. Without the cash and the guidance which come from Moscow, there would be no Communist movement of any importance in our country today. The Communist movement in our country, as elsewhere, was made in, by, and for Moscow. If Moscow were ever really to stop supporting and training the Communist conspirators, or if the people of Russia were ever to overthrow their brutal dictatorship, the Communist movement in our country would go out of business overnight.

"Communism is the deadly enemy of the businessman, of his associations and his freedom. There can be no free enterprise without freedom. Yet, somehow or other, many in our American business community, are not sufficiently alert to the danger of world communism. Stressing this point may sound surprising to you, since the business community is certainly not pro-Communist. and not many businessmen are consciously at the forefront of any open or covert Communist outfit. What I have in mind is the costly mistakes some in our business community make in their attitude toward the Communist menace. Here are some of their typical errors:

"1. They have so much confidence in the strength of the American system, that they firmly believe it can't happen here. Such complacency and smugness are suicidal at a time when at least 1 billion people from the Baltic to the Formosa Straits are already under the yoke of the Communist bloc which has the biggest military machine on earth. Such talk reminds one of how some people used to say: 'Germany is a land of philosophers, poets, scientists, and great industry. In such a cultured, stable country, Hitler and his ignorant Nazis could never take over.'

"PROSPERITY NO BAR TO COMMUNIST GROWTH

"2. The second serious error in some business circles is that, because of our prosperity, communism can at best take very little hold in our country. This is just not true. The record will show that communism has made progress in many places where economic conditions are improving. For example, in France today, despite marked economic improvement over the last few years, Communist strength continues undiminished.

"3. The third and perhaps the most dangerous error on the part of some business circles is the belief that the main threat of communism to our country is to be found in the Communist organization within the United States.

"This mistake quite logically and inevitably leads to another very serious error. Since these businessmen don't see Moscow as the mainspring of the Communist menace to American progress and prosperity, to the security and freedom of our country and to world peace and human liberty everywhere, they turn to appeasing the Soviet rulers.

"APPEASEMENT POLICY CAN LEAD TO ANOTHER WAR

"They try to do business as usual with Stalin or Khrushchev. They have forgotten that this policy of business as usual toward Hitler helped him build his war machine and led to World War II. I warn you that business as usual and appeasement policies toward Khrushchev and Mao Tse-tung can only help these dictators build the Moscow-Peiping war machine and greatly encourage them to further aggression and even another world war.

"Some business and professionals believe that they can somehow manage to get along and become real friends within the Moscow dictatorship. These people forget the nature of communism and Communist regimes—a nature which cannot be changed as long as they are Communists. These well-meaning people forget that the Moscow regime has killed many hundreds of thousands of innocent people. It has robbed many millions of its own subjects of every human liberty. Since the close of World War II, the Kremlin has destroyed the national independence of 10 nations. It threatens many others today. This is the nature of communism.

"That is why every one who cherishes freedom and seeks peace is keenly disappointed at the shortsightedness and illusions shown by some of the leaders of the business community about trade with Russia. Let me cite the article by the president of General Motors, Harlow Curtice, in a recent issue of Look. Here, Mr. Curtice urges the increased sales of cars and other peacetime products to the Soviet bloc, as long as such sales fit in with United States State Department policies. Mr. Curtice stresses: 'I no longer see any reason why sales of cars

and other peacetime products to the Soviet bloc cannot be increased.'

"FOREIGN TRADE WEAPON AGAINST US

"Doesn't Mr. Curtice realize that to the Iron Curtain rulers, to the Communist warlords, foreign trade is not so much an economic undertaking, as we know it in the free world, but rather a political weapon to be used against us? They will buy from us only that which they need to bolster their dictatorship against their own people at home and build their war machine for aggression abroad. And, if they are to buy from us, we also have to buy from them. Otherwise, they will not have the dollars for purchasing General Motors cars. Such an interchange greatly helps the Kremlin rules to overcome the economic havoc of the fallacies and errors of communism.

"Mr. Curtice must surely realize that American cars bought in peacetime will serve the Russians aggressors in wartime. A good Chevrolet can serve a Soviet officer at war against a non-Russian people, just as much as it can and does serve a Communist bureaucrat at home in maintaining the totalitarian regime against the Russian people themselves. Mr. Curtice must know that if General Motors and other big-business corporations should expand their policy of 'business as usual' with the Soviet bloc there will have to be some policy readjustments. More than likely, it will be the State Department and not big busienss that will do the readjusting.

"Surely, Mr. Curtice must realize that our country's trade with Communist China or Communist Russia cannot be the same as trade with democratic Britain or democratic France. I really wonder why he 'no longer sees any reason' to differentiate between the two types of foreign trade.

"Those businessmen who see a 'New Look' and smile in every zigzag by the Kremlin diplomats are living in a fool's paradise. They are the prisoners of their own wishful thinking. They should heed Mr. Khrushchev when he frankly tells the world: 'Anyone who mistakes our smile for a withdrawal from the politics of Marx and Lenin is making a mistake.' If you think I am exaggerating this dangerous illusion on the part of some businessmen, let me cite the following written by Ernest Weir, one of America's leading industrialists, in the St. Louis Post-Dispatch:

" 'An auspicious moment has come which should be fully exploited. * * * The western countries, particularly the United States, should renounce their attitude of suspicion and distrust. Western countries should proceed from the principle that Russia now wants peace and more stable international relations.'

"On June 1 last, the Moscow radio greeted Mr. Weir's statement with great joy. In my opinion, Mr. Weir would be serving America better if he renounced his attitude of suspicion and distrust of collective bargaining in our own country before he showered his trust on Khrushchev and his comrades behind the Iron Curtain.

"My friends, as I have told you, the free trade-union movement has everything to lose, if communism should ever win. But you of the business world, you who proclaim loyalty to the principles of genuine free enterprise, likewise have everything to lose, if communism should ever win. Neither free trade unionism, nor free enterprise, can survive where and when communism thrives. I urge you not to let the prospect of momentary profits blur your vision. Know your enemy. Don't help him. Do more than that: Help the cause of free enterprise by supporting sound economic policies and good labor-management relations at home and democratic foreign policies overseas.

"HAVE EXPOSED RED PROPAGANDA ABROAD

"Perhaps business could take a leaf out of the book of American organized labor in another respect. We have gone abroad and exposed the fraud of antidemocratic, anti-American, Communist propaganda in the ranks of world labor. We have had our representatives go to other lands and tell the workers the truth about our free trade unions, about our other democratic institutions, our expanding freedom, and the ever-better conditions of life and labor in the American economic system. We publish a monthly International Free Trade Union News in English, French, German, and Italian editions, as well as numerous pamphlets. We give away free many scores of thousands of these publications explaining the truth about America and exposing the fraud of the Soviet paradise.

"Could not some of our business groups send capable representatives overseas to explain to their colleagues of Italy, France, Germany, India, or Japan how our American free-enterprise system really works? Believe me, their cartel-ridden economies have no idea of what free enterprise really is—let alone how it works in the United States.

"Perhaps your overseas business colleagues would then learn that it is more profitable to produce for a big market where you sell many items, each at a popular price, than to continue with their time-worn policy of selling few items, each at a high price and high rate of profit? Why could it not be made clear to some of the businessmen in the free countries of Europe, Asia, and Latin America what sales volume really means and how it is impossible to get that many sales without the working people and the middle classes in the offices and on the farms having adequate purchasing power?

"PROMOTE UNDERSTANDING OF FREE ENTERPRISE

"Once you would do that, many a European businessman, whose enterprise was saved by Marshall plan aid and other American economic help, would have more trust in the economy and the future of his own country. He would then reinvest in improving his own machines and in strengthening his country's national economy instead of rushing to export his capital to the United States.

"Now, don't mistake me. I am not advocating that United States business should go out and propose that the American economic system be imposed on, or even voluntarily transplanted, in other countries. The historical background and conditions of these countries may be entirely different from ours. I am proposing that you merely go out and promote better understanding in other lands of the free-enterprise system as it has worked in the United States and benefited the American people.

"I merely suggest that the American business community should help the business communities in the free world get a better understanding of American free enterprise. Greater international understanding and cooperation among the free peoples of the world provides the greatest hope for the defeat of the Communist threat to freedom, human decency, well-being and peace.

"Organizations like the rotarians, with worldwide connections, can do much toward realizing this great goal. I hope and pray you will."

A Farm Dilemma of Truman's Making

EXTENSION OF REMARKS

OF

HON. CLIFF CLEVENGER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1956

Mr. CLEVENGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Sunday Tribune of January 22:

A FARM DILEMMA OF TRUMAN'S MAKING

If any one man can be said to be responsible for the failure of farmers to participate in last year's general prosperity, it is a President of the United States. And not Roosevelt. For the unhappy consequences of experiments were erased by World War II. Neither was it Eisenhower. He only inherited the mess. The guilt rests on Truman. Oddly enough he has the crust to talk about his farm measures and call them good.

Mr. Truman made many mistakes in dealing with agriculture, but 2 of them are enough to talk about in 1 editorial. The end of World War II found farm acreage expanded in response to the price supports the Government properly offered to get enough food and other produce for our expanded home economy, our armies, and those of our allies, and to meet the needs of civilians in allied countries, cut off from peacetime supply sources.

With the coming of peace, a cutback in our agricultural production toward prewar levels was needed. Government intervention would then have been justified to offset somewhat the decline in farm income after the war demand for American foods and fibers had ended. But Truman's policy was to continue price supports, and at higher levels. To obtain bigger supplies, farmers were offered $1.23 a bushel in 1943, $1.35 in 1944, and $1.38 in 1945. In 1947 wheat was supported at $1.84, in 1948 at $2, and in 1952 at $2.20. For cotton, farmers were guaranteed 18 to 20 cents from 1943 to 1945, 29 cents in 1948, and 31 cents in 1952.

Thus when Mr. Truman should have been seeking to get farmers to grow less, he upped the inducement used during the war to get farmers to grow more. The resulting surpluses would surely have brought a collapse of the whole arrangement by the end of the Truman term of office, but for the temporary relief brought about by the European droughts and floods of 1947 and 1948 and the outbreak of the Korean war in June 1950. As it was, when Truman left office in January 1953, the Government was still holding corn dating as far back as the 1948 crop, and other products with varying amounts of accumulated age.

Truman's high price supports had other harmful effects. As the support levels used were above the price in world markets, countries which looked to the United States for supplies were offered an inducement to provide for themselves. Other countries with export surpluses were induced to step up their plantings to serve customers who used to get their supplies from the United States.

Another serious Truman mistake which also cut the outlet for American farm products is rarely mentioned. One of the declared objects of the Marshall plan of 1948–52, which has since been extended under other names, was to encourage "continuous application on the part of recipient countries, individually and jointly, of vigorous efforts directed to increasing the production of food and materials needed not only to meet their own essential needs but the needs of other countries as well, so that their requirements from abroad be limited to a minimum."

Thus countries which had been our biggest importers of farm produce were supplied at the expense of the American taxpayers with tractors, plows, disk harrows, grain drills and mowers, and fertilizer and seeds as well. By pricing American farm produce out of the world market with 90 percent price supports and grants of aid to foreign countries to enable them to produce more, farm exports have dropped to a fraction of what they formerly were.

That this appraisal of the evils of Trumanism in agriculture is not a partisan one

was made evident in the address of Prof. John D. Black, of Harvard University, as president of the American Economic Association late last month. Dr. Black said:

"No doubt a sizable fraction of the farmers of this country realize pretty well that our Government cannot keep on supporting prices on a level that brings forth growing surpluses. But many of these will say if asked, 'Labor is grabbing all it can get. Business always has been able to get pretty much what it wants. If we farmers don't grab the same way, we are being silly.'

"In this confused situation, there is a fair chance that rigid 90 percent price supports will be voted either in 1956 or 1957. The United States Department of Agriculture that has the task of administering such an act will be in a worse spot than the present Department of Agriculture is in now. It will be dramatic injustice if it is not a Democratic administration that has to take on this task. Such a course of events will simply mean that, bad as things seem now, they will have to get worse before the rank and file of the people of our Nation sense the situation well enough to take the necessary action. The party in power at the time they sense it will lose a good deal of standing with the general public in the ensuing 5 or 10 years."

It is always desirable that the birds of retribution come home to the proper roost. But can the country afford it if the result can be obtained only at the price of putting up with the lunacies of more Democratic administrations?

Slenderizing Program Set for United States Fiscal Operation

EXTENSION OF REMARKS
OF
HON. O. C. FISHER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1956

Mr. FISHER. Mr. Speaker, there is a ground swell of grassroot interest being manifested at this time concerning the budget and the importance of the Congress following a sound fiscal policy this year on the subject of tax reduction, a balanced budget, and the practice of commonsense economy.

A good example of that concern is contained in the following editorial which appeared in the January 18 issue of the San Angelo (Tex.) Standard-Times:

SLENDERIZING PROGRAM SET FOR UNITED STATES FISCAL OPERATION

The process of slenderizing the fiscal department of the United States Government, almost as unpopular as for fat folks to go on a diet began yesterday with the budget message of President Eisenhower. A balanced budget by July 1, 1956, if it is achieved, will be the first one since 1951, and at that time the balance came more from the sale of war material than it did from economical operations of the Government.

Of course, the proposed budget is still a little on the fat side, and the degree of slimming can be measured in small percentage. However, it is one of the three times since 1930 that the taxpayers have had any encouragement that we were going to stop the borrowing and start pulling in the belt.

The unprecedented thing about the recommendations is that in an election year a President, the leader of a party expecting votes enough to be returned to office, isn't making a bid for a tax cut.

It is realistic in that it does not presuppose that a high level of prosperity warrants our living it up at the expense of future generations. It begins to take some note of the future, of the taxpayer who has become more tax conscious throughout the years of big spending, of the recognition at the top that a little more conservative administration of tax funds is overdue.

One recalls that last year there was a move to give everybody a $20 income-tax cut. This would have cost $2.5 billion a year. It was hailed as a political move taken at the expense of any chance to reduce the debt. Had it prevailed there would have been no chance to balance the budget this year and no possibility of reducing the national debt.

It is fortunate that the move did not prevail.

If we can curtail spending to any degree, there, is a chance that the expected slim margin of balance can be increased.

That will be up to Congress. Our Congressmen ought to determine where there is any fat in our spending program. They will be responsible for implementing the program outlined by Eisenhower or denying some of its phases.

Representative O. C. FISHER, of this city, phrased the tax problem rather aptly in this fashion: "Tax reduction is a delusion, if, in order to have it, the resulting loss in revenue has to be made up in borrowed money and a corresponding increase in the public debt. Under these conditions tax reduction is really tax postponement—just passing the added burden to our children and our grandchildren to pay."

That sort of reaction to the Presidential message is realistic economy. It is cognizant of the public welfare—not a political party's welfare.

Kiwanis Trophy Award

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AYRES
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1956

Mr. AYRES. Mr. Speaker, throughout the world there are many organizations putting forth every effort to make the world a better place in which to live. One of these organizations is Kiwanis International.

Every Member of Congress is familiar with Kiwanis as I doubt if there is a single Member who has not at one time addressed at least one of the Kiwanis clubs in his district.

On Saturday evening, January 21, it was my privilege to attend the annual dinner honoring the past presidents of my own club, West Akron Kiwanis, in Akron, Ohio. Several years ago one of our members, Mr. Ray Fair, originated the idea of presenting a speech trophy each year to one of the members who proved himself to be an outstanding salesman for Kiwanis. It is customary to present the winner with a trophy patterned after the favorite sport in Spain. In the past the following Kiwanians have been so honored: Jacques Belet, Lee Shannon, Walt Garner, John Kistler, Ed Kusel, and Lloyd Oliver.

This year the honor was bestowed on Mr. Austin F. O'Brien. The choice was excellent and I feel confident Mr. O'Brien will uphold the tradition of the honor.

Defense Department Answers Waste Critic: It's Rough

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1956

Mr. PRICE. Mr. Speaker, under permission to extend my remarks, I include herein two very informative articles written by Robert G. Spivack, correspondent of the New York Post, and appearing in the issues of January 13 and January 14, respectively.

Mr. Spivack has followed this matter very closely, and is one of the best versed correspondents on the subject matter of the articles he wrote:

DEFENSE DEPARTMENT ANSWERS WASTE CRITIC: IT'S ROUGH

(By Robert G. Spivack)

WASHINGTON, January 14.—The Defense Department today offered no defense to charges by House Democratic Leader McCORMACK that its wasteful and inefficient purchasing policies are costing the taxpayers $500 million a year.

A spokesman for Defense Secretary Wilson said only it's rough trying to streamline the Department's buying policies on nonmilitary goods.

"You go slow and some people think you aren't doing anything," the Department said. "It is a terrific problem and Mr. Wilson is trying to deal with it as have all his predecessors."

This was the first time anyone high in the administration has come close to admitting failure in the GOP efforts to clean up the mess in Washington, as promised in the 1952 campaign.

The Post called Wilson's office for comment on McCORMACK's charges, published Friday, that overlapping in procurement by the Army, Navy, and Air Force have made a myth of unification.

McCORMACK said each service continues to duplicate the purchases of the others in everything from rubber bands and pencils to medical supplies and petroleum.

The Navy won't use materials stored in Army depots and the Air Force boycotts both.

Along with a group of economy-minded Democrats, McCORMACK has been fighting for months to cut nonessential expenditures in the Defense Department.

He said Wilson has proved helpless in coping with the Pentagon's strongly entrenched bureaucracy, despite GOP claims that business methods would be instituted when President Eisenhower took office.

Wilson's spokesman replied more in sorrow than in anger. The one thing the ex-GM boss prided himself on was his capacity to put over effective management.

The Defense Department, it was said, hopes soon to integrate its purchase practices by dividing up the various services.

Wilson takes credit for instituting a "new single manager plan" in the purchase of food for the services. This assignment has now been turned over to the Army.

The Navy, it was said, will probably soon be asked to take over all medical supply buying.

"The purchase of petroleum will probably be turned over to the Air Force," Wilson's spokesman said. He gave no date when this plan might be put into effect.

McCORMACK said the "single manager plan" was not very new, but he approves of it nevertheless. Only he wishes the department would hurry up.

The plan began under Defense Secretary Lovett, who tried it in medical purchases. For some unexplained reason the Republicans abandoned it.

Now, due to McCORMACK pressure, they apparently are trying to restore the Lovett system, even thought it originated in the Truman administration.

McCORMACK HITS DEFENSE DEPARTMENT WASTE

(By Robert G. Spivack)

WASHINGTON, January 13.—House Democratic Leader McCORMACK charged the Defense Department today with "wasteful and inefficient" purchasing policies that are costing the taxpayers $500 million a year.

The Boston legislator made his charge in an exclusive interview with the Post.

He detailed prolonged but fruitless efforts by himself, Senator PAUL DOUGLAS, Democrat of Illinois, and a handful of economy-minded Congressmen to eliminate "duplication and triplication" by purchasing agents of the Army, Air Force and Navy.

Despite "claims of accomplishment" by service officials, McCORMACK said Defense Secretary Wilson has been helpless against the Pentagon's "strongly entrenched bureaucracy" in curbing the waste.

Armed Forces "unification," so far as procurement policies are concerned, is a myth, McCORMACK said. Inter-service rivalry remains just as strong as it has ever been, he said, despite the Unification Act of 1946.

McCORMACK said there has been overlapping in the fields of medical supplies, petroleum, transportation, storage, health facilities and Armed Forces Research.

"I have yet to see any signs of an effective unification system as intended by Congress," McCORMACK said. "If there is one place where we could have 'unification' and where the taxpayers could be saved several hundred millions annually it's in the procurement field, particularly in the 'common use' items."

These are items which all services use and where tremendous savings could be accomplished through coordinated buying.

Despite propaganda about this being a "businesslike" administration, each service still goes off on its own, when it comes to nondefense spending money, McCORMACK said.

"There is no question of the duplication," McCORMACK insisted.

"If an integrated system were established for the three departments at least $500 million a year could be saved."

McCORMACK detailed his criticism 3 days before the President's budget message goes to Congress, on Monday.

In that message, according to informed sources, the President is expected to congratulate Wilson on the savings achieved during his management of the Department through institution of a "single manager plan" for the purchase of Armed Forces food.

Whether the expected congratulations are offered after McCORMACK'S blast is speculative. The Democrats are waiting to see.

McCORMACK, along with Representatives BONNER, Democrat, of North Carolina; CURTIS, Democrat, of Missouri; and Senator DOUGLAS, have been after Wilson for months to streamline the Department's buying program. They have also had support from Republican Representative BROWN of Ohio.

There has been a continuous exchange of correspondence, with various Defense officials patting themselves on the back for their claimed accomplishments. But they usually neglect to list facts and figures.

Said McCORMACK: "They talk one way and act another."

Most of the criticism centers about the O'Mahoney Act of 1952, which required the Defense Secretary to issue regluations bringing about integration of common-use items.

An order along these lines, known as Regulation 4000.8, was issued by Secretary Lovett in the fall of 1952 during the final months of the Truman administration. Lovett began instituting drastic reforms, but as soon as Wilson took over they were abandoned, McCORMACK said, notwithstanding 1952 GOP campaign promises.

As late as October 24, 1955, McCORMACK was still pressing Wilson return to the Lovett policies.

Even before the O'Mahoney Act Lovett had instituted the single manager plan for purchase of medical supplies. This was abandoned by the new Republican team.

Two weeks after McCORMACK'S October letter Wilson put out a news release announcing the virtues of what Defense press agents called a new idea. It was the single manager plan for purchase of subsistence items.

Since all other purchasing continued in haphazard fashion, DOUGLAS then wrote to Wilson on December 22, 1955. DOUGLAS found himself bewildered by the Department's inconsistencies.

"I was deeply disappointed when, in 1954, you gave up this centralized treatment and single manager system for medical supplies," DOUGLAS wrote, "and now I am bewildered * * * to find you are apparently establishing it for food and subsistence."

He asked what is being done to comply with the law in other purchases.

In one of his letters McCORMACK had told Wilson bluntly the Department had no overall plan and asked what Wilson intended to do about it. Wilson referred it to an assistant.

In 1951 General Eisenhower told a group of Congressmen in Paris, including Representative BONNER, that these problems of waste could be solved if we had a Defense Secretary "with enough guts" to go after the military bureaucrats. BONNER and his committee asked the general to put this in writing.

The language was then softened a bit, but General Eisenhower's meaning was still clear.

"I feel that what is really needed * * * is to vest in the Secretary of Defense sufficient authority and responsibility to permit him to accomplish whatever degree of improvement in the efficiency and economy of our service of supply system as is now necessary or that becomes so as time passes," General Eisenhower wrote.

As a candidate in 1952, General Eisenhower hit at Defense Department waste under the Democrats.

Investigators who have followed the Defense Department's extravagances tell of recent cases like these in substantiation of McCormack's charges:

At Fort Dix, N. J., the Army receives medical supplies from a depot at Schenectady, N. Y., although until recently there was a Navy medical depot at Edgewater, N. J., only a few miles away.

On the west coast, there are depots stocked with the same supplies at Stockton, Alameda, and Oakland, Calif., maintained by each of the services.

The Air Force ships supplies from New Jersey out to bases in the Rockies, but neglects to use materials closer at hand in Army depots at St. Louis.

One authority says there are over 100,000 separate items purchased by the three services. In 90 percent of the cases they are duplications of similar supplies stores by one of the other services, sometimes in depots almost across the street from each other.

The armed services now use in excess of 500 million square feet of depot space. Many depots are overflowing and the services are constantly obliged to sell as "surplus" thousands of items at a fraction of their cost to the taxpayers

Republicans, Democrats, and War

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1956

Mr. BYRNES of Wisconsin. Mr. Speaker, there has been plenty of hot air generated by the recent charges and countercharges over the policies of the administration and Secretary of State Dulles. An editorial appearing in the January 19 issue of the Green Bay Press-Gazette is a breath of fresh air in this debate.

After the quibbling is over, the real test of the success or failure of foreign policy is whether it brings war or peace. It is time for us to look at the record. The editorial referred to presents that record:

REPUBLICANS, DEMOCRATS, AND WAR

For stating that the art of diplomacy sometimes necessitates bringing the Nation to the verge of war, Secretary Dulles is under attack from the Democrats who took us not to the verge but into three wars in a generation.

From the very early days of the Eisenhower administration, it has been apparent that the ideas of President Eisenhower and Secretary Dulles on the strategy this country should follow in prosecuting the cold war were very different from those of their predecessors; and it also has been apparent that the Democrats simply have not understood what the administration was talking about a good deal of the time. For example, when Mr. Dulles soon after taking office warned the Soviets of "massive retaliation" should they commit aggression, Democratic spokesmen seemed to almost deliberately blind themselves to the real meaning of Mr. Dulles' words and instead insisted that he had threatened to blow Moscow and Peking and the other great Communist cities off the map in the event a conflict broke out in any part of the world.

These protests by the Democrats played directly into the hands of our enemies who would like to persuade the world that we are too trigger happy to be trutsed with nuclear weapons. Yet it was apparent to many people at the time that Mr. Dulles did not mean any such thing, but that nuclear retaliation could be tailored to fit the needs of any situation. At the very time that Mr. Dulles was making his statement, the newspapers were full of reports about the development of tactical nuclear weapons such as atomic artillery and rockets, yet the Democrats could see in the Secretary's statement nothing but big bombers hovering over great cities.

The Democratic leaders similarly could not or deliberately refused to understand the meaning of Mr. Eisenhower's discussion during the 1952 campaign of the necessity of giving the people of the Soviet satellites some hope of eventual liberation. They accused him of threatening aggression in Europe, and again the Communist propagandists found their words pleasing. The administration, of course, has carried on no aggression; but it has made it crystal clear in its public statements, through our propaganda outlets throughout the world, at the Geneva meetings and elsewhere that we will never accept Soviet colonization of the satellites as a permanent situation. Only recently this policy paid off to the extent of forcing Khrushchev to cry out in anguished

tones against the meddling of the United States Government in Eastern European affairs.

The Press-Gazette said several weeks ago that in its opinion foreign policy is a perfectly legitimate subject for discussion and debate during a presidential election campaign. The more we study the differences in the two parties' approaches to this most important of all problems that face us, the more we are convinced that the American people should clearly understand the respective positions of the parties on it.

We can think of no better way to illustrate the contrast between the Truman-Acheson and Eisenhower-Dulles ideas on the direction of our foreign policy than to compare the manner in which the former handled the Korean question and the way in which the latter handled the recent crisis in the Formosa Strait. Several months before the aggression occurred in Korea, Secretary Acheson had announced publicly that that country was not considered vital to America's defense. His statement was as irrelevant as it was unnecessary, for it had then been apparent for some time that our reaction to aggression against our friends anywhere in the world would not necessarily depend on how that aggression affected the strictly military security of our country. But it was interpreted—as the Secretary should have known it would be—by the Communists as an invitation to strike, and when their tanks rolled, Mr. Truman was faced with only two alternatives: War or appeasement. He made the right decision and made it courageously, but a President with a capable Secretary of State would never have been placed in that position in the first place.

In contrast, when the Communists threatened an invasion of Formosa, Mr. Eisenhower acted in such a way that our side took the initiative away from the enemy and held on to it. They wanted us either to appease them, in which case they would get what they wanted, or to draw a line and tell them that if they stepped over it we would shoot, in which case they could accuse us of interference in Asian affairs, and gain a propaganda victory. We did neither; Mr. Dulles simply let the Communists know that our forces were ready and that if we did strike it would be with every weapon at our disposal. But he let them guess as to whether we would strike or not. The Formosa crisis is now almost a year old and no aggression has yet taken place.

The best test of the Republican handling of our foreign policy is the fact that during the past 3 years the world has been at peace as it has not been for many decades, and that during that time not 1 inch of free soil has been gained by the Communists. Compare this to any similar period under the Truman administration, and it is easy to understand why there is debate today between the parties about foreign policy, and why the Democrats are so bitter over the contrast that is there for all to see.

What Is a Girl?—What Is a Boy?

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1956

Mr. CANNON. Mr. Speaker, by leave of the House, I include in the RECORD an appealing article received in this morning's mail from a friend:

WHAT IS A GIRL?

Little girls are the nicest things that happen to people. They are born with a little bit of angel shine about them, and though it wears thin sometimes there is always enough left to lasso your heart—even when they are sitting in the mud or crying temperamental tears or parading up the street in mother's best clothes.

A little girl can be sweeter (and badder) oftener than anyone else in the world. She can jitter around, and stomp, and make funny noises that frazzle your nerves, yet just when you open your mouth, she stands there demure with that special look in her eyes. A girl is innocence playing in the mud, beauty standing on its head, and motherhood dragging a doll by the foot.

Girls are available in five colors—black, white, red, yellow, or brown. Yet Mother Nature always manages to select your favorite color when you place your order. They disprove the law of supply and demand—there are millions of little girls, but each is as precious as rubies.

God borrows from many creatures to make a little girl. He uses the song of a bird, the squeal of a pig, the stubbornness of a mule, the antics of a monkey, the spryness of a grasshopper, the curiosity of a cat, the speed of a gazelle, the slyness of a fox, the softness of a kitten, and to top it all off, he adds the mysterious mind of a woman.

A little girl likes new shoes, party dresses, small animals, first grade, noisemakers, the girl next door, dolls, make believe, dancing lessons, ice cream, kitchens, coloring books, makeup, cans of water, going visiting, tea parties, and one boy. She doesn't care so much for visitors, boys in general, large dogs, hand-me-downs, straight chairs, vegetables, snowsuits, or staying in the front yard. She is loudest when you are thinking, the prettiest when she has provoked you, the busiest at bedtime, the quietest when you want to show her off, and the most flirtatious when she absolutely must not get the best of you again.

Who else can cause you more grief, joy, irritation, satisfaction, embarrassment, and genuine delight than this combination of Eve, Salome, and Florence Nightingale? She can muss up your home, your hair, and your dignity—spend your money, your time, and your temper—then just when you patience is ready to crack, her sunshine peeks through and you've lost again.

Yes; she is a nerve-racking nuisance, just a noisy bundle of mischief. But when your dreams tumble down and the world is a mess—when it seems you are pretty much of a fool after all—she can make you a king when she climbs on your knee and whispers, "I love you best of all."

WHAT IS A BOY

Between the innocence of babyhood and the dignity of manhood, we find a delightful creature called a boy. Boys come in assorted sizes, weights, and colors, but all have the same creed: To enjoy every second of every minute of every hour of every day, and to protest with noise—their only weapon—when their last minute is finished and the adult males pack them off to bed at night.

Boys are found everywhere—on top of, underneath, inside of, climbing on, swinging from, running around, or jumping to. Mothers love them, little girls hate them, older sisters and brothers tolerate them, adults ignore them, and heaven protects them. A boy is truth with dirt on its face, beauty with a cut on its finger, wisdom with bubble gum in its hair, and the hope of the future with a frog in its pocket.

When you are busy a boy is an inconsiderate, bothersome, intruding jangle of noise. When you want him to make a good impression his brain turns to jelly or else he becomes a savage, sadistic jungle creature bent on destroying the world and himself with it.

A boy is a composite—he has the appetite of a horse, the digestion of a sword-swallower, the energy of a pocket-atom bomb, the curiosity of a cat, the lungs of a dictator, the imagination of a Paul Bunyan, the shyness of a violet, the audacity of a steel trap, the enthusiasm of a firecracker, and when he makes something he has five thumbs on each hand.

He likes ice cream, saws, Christmas, comic books, the boy across the street, woods, water (in its natural habitat), large animals, dad's train, Saturday morning, and fire engines. He is not much for Sunday school, company, schools, books without pictures, music lessons, neckties, barbers, girls, overcoats, adults, or bedtime.

Nobody else is so early to rise or so late to supper. Nobody else gets so much fun out of trees, dogs, and breezes. Nobody else can cram into one pocket a rusty knife, a half-eaten pie, 3 feet of string, an empty Bull Durham sack, 2 gumdrops, 6 cents, a slingshot, a chunk of unknown substance, and a genuine supersonic code ring with a secret compartment.

A boy is a magical creature, you can lock him out of your workshop, but you can't lock him out of your heart. You can get him out of your study, but you can't get him out of your mind. Might as well give up—he is your captor, your jailer, your boss, and your master—a freckle-face, pint-size, cat-chasing bundle of noise. But when you come home at night with only the shattered pieces of your hopes and dreams, he can mend them like new with two magic words—"Hi, dad."

Another Mississippian Receives National Recognition—Illustrious Luther A. Smith, 33d Degree, Sovereign Grand Commander

EXTENSION OF REMARKS
OF
HON. WILLIAM M. COLMER
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1956

Mr. COLMER. Mr. Speaker, a few months ago Mr. Boyd A. Campbell, a citizen of Jackson, Miss., and a former college classmate of mine, was signally honored by being selected as president of the United States Chamber of Commerce, a position which he is currently serving with honor and distinction. Now another Mississippian, the Honorable Luther A. Smith, a distinguished jurist and citizen of Hattiesburg, Miss., has more recently been selected as the sovereign grand commander of the supreme council, 33d degree, Ancient and Accepted Scottish Rite of Freemasonry, southern jurisdiction of the United States of America.

Mr. Smith for many years has been an outstanding and consecrated worker in Freemasonry in Mississippi. He has possibly devoted as much time and effort as well as having made as great a contribution to that cause in the whole of the South as any other man. But all of his efforts have not been in behalf of Masonry. He has enjoyed an enviable record as an outstanding citizen and jurist in his native State. It was, therefore, no surprise that he was selected for this high honor by his fellow Masons. He is a man of high demeanor, an outstanding Christian gentleman of substantial character, who enjoys the confidence and respect of all who know him. His appointment to this full-time position re-

quired his resignation as judge of the court of chancery for the 10th district of Mississippi and his removal to Washington.

We predict that this beloved Mississippian will make an outstanding contribution in his new position not only to Masonry, but to his God and country.

Smith Act Needed in Cold War

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1956

Mr. WESTLAND. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial from the Bellingham (Wash.) Daily Herald of Sunday, January 15, which points up the value of the Smith Act as a weapon against Communist infiltration in our Nation:

In their petition last month to President Eisenhower urging the release of 16 top Communists convicted of conspiracy against the United States Government, 46 signers suggested by implication that the cold war between the free and the slave world is over.

The petition was presented several weeks after the Russian Soviet leaders had brusquely turned their backs on the West at the summit conference in Geneva, and after Soviet party boss Nikita Khrushchev had declared that the Kremlin would abandon Marxism—which calls for the triumph of communism over democracy—only when the shrimp learns to whistle.

In urging that the sentences of the convicted American Communists be commuted, and that 100 similar cases pending or under appear be postponed, the petitioners said the trial and conviction of the top Reds "was carried through in a period of the 'cold war' (in 1949) and in an atmosphere of hysteria."

In her remarks at Mount Vernon last week Mrs. Eleanor Roosevelt, one of the petitioners, said her stand on the Smith Anti-subversive Act, under which the convictions were obtained, coincided with that of the two dissenting justices of the Supreme Court—which sustained the constitutionality of the act by a vote of 6 to 2—and that her concern was not for the Communists, but for what she regarded as the dangers to civil rights and liberties involved.

The Alien Registration (Smith) Act was passed by a Democratic-controlled Congress. It makes it unlawful to teach or advocate the violent overthrow of the United States Government or to adhere to a group which underwrites such objectives. The House passed the bill by a vote of 282 to 4, the Senate without a rollcall.

In 1951 the Supreme Court sustained the act in upholding the conviction of 11 Communists tried in New York in 1949 for conspiracy.

Possibly many persons have forgotten that 9-month trial, in which "hysteria" was produced, not by the people or by the Government, but by the Communist defendants and their claques, while Judge Harold R. Medina maintained a judicial claim despite what a biographer describes as the sneering and shouting of defense attorneys (five of whom were later held in contempt of court) and their constant attempts to badger him into making a reversible error.

Most of the 11 defendants were high officials of the Communist Party, which the Senate Judiciary Committee has termed "the American branch of the Russian Communist Party," which "follows faithfully the conspiratorial pattern laid down by its parent body," and "looks upon our Government as its enemy, which it seeks to overthrow by forceful means."

President Eisenhower did not see fit to turn the convicted Reds loose. Had he done so the Communists would have won the greatest psychological victory in the struggle between free government and the Moscow-directed world conspiracy.

In 15 years the Communists have spread their control over 750 million people and 5 million square miles of the globe. They have done so both by military force and by infiltration and subversion. The Smith Act is intended to prevent subversion in the United States. It is a legal instrument in the cold war, which the Kremlin is waging on a global scale.

Thwarting Thrift—Hoover Reforms Will Face Powerful Foes in Congress

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1956

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial taken from a recent issue—January 13, 1956, page 8—of the Wall Street Journal:

THWARTING THRIFT—HOOVER REFORMS WILL FACE POWERFUL FOES IN CONGRESS

(By John Chamberlain)

What chances have the recommendations of the Hoover Commission for adoption?

Members of the voluntary Citizens Committee for the Hoover Report, which is headed by Clarence Francis, former head of General Foods, say that some 84 percent of the suggestions could become realities before many years have passed. Obviously, however, this way of putting it may mean much or little. To the extent that 16 percent of the recommendations are in the realm of the controversial, the big projected savings outlined by the various Hoover task forces could be postponed for a long time to come.

It should be relatively easy to do away with the foolishness that has resulted in a Navy depot storage of 79 months' supply of canned beef and gravy. The administration is already putting into effect some of the less controversial proposals. But when it comes to such things as the elimination or the mutualization of Government lending agency, or the establishment of a means test for veterans seeking hospitalization for non-service-connected disabilities, then all the familiar forces of pressure group politics can spring into play to stop the economizer in his tracks.

Ever since 1933 the executive branch has been the big spender of United States politics. This tended to obscure the fact that Congress itself is a congeries of special interests which are devoted to getting specific appropriations for specific things. There may be 96 Senators who are for economy in general, but when each one of the 96 has traded votes to protect his own regional specialties economy more often than not goes out the window.

STORY WITHOUT AN END

The story of the Texas City tin smelter is a case in point. Long ago the Hoover Commission singled this out as an example of unwarranted Government competition with private industry. The tin smelter lost over $1.5 million in 1954. Since it is no longer needed for strategic reasons, or even for producing for a Government stockpile which is now estimated at a 5-year war supply, President Eisenhower recommended closing it. But the Senate, partly in response to the wishes of Senator LYDON JOHNSON of Texas, forced a continuance of the tin smelter until June 30, 1956, at which time Mr. Eisenhower is supposed to report to Congress on feasible methods of maintaining a permanent domestic tin-smeltering industry.

Many of the Hoover Commission's recommended reforms could be legally accomplished by mere Executive fiat. But when Secretary of Defense Charles Wilson announced that he was going to make a beginning at getting the Pentagon out of competition with private industry by closing down 4 coffee roasting plants, 2 paint factories, 5 cobbler shops, a dry cleaning plant and a Navy rope walk, Congress intervened at once.

It did this by wigwagging a signal to the Comptroller General, who functions as a congressional agent in seeing to it that appropriated funds are spent in accordance with the intent of the law. The Comptroller General flatly advised Mr. Wilson that he would disallow any Pentagon expenditure made in connection with closing down coffee plants or cobbler shops.

The Comptroller General derived his authority for such action from a rider that had been attached to an appropriation bill. It reads: "No part of the funds appropriated in this act may be used for the disposal * * * of work that has been for a period of 3 years or more performed by civilian personnel of the Department of Defense unless justified to the Appropriations Committee of the Senate and the House."

Although President Eisenhower himself considers this particular rider to be an unconstitutional interference with the power of the Executive, the Comptroller General's neat little ambush has effectively kept the Pentagon from carrying out some very ponderable Hoover Commission recommendations. These projected economies in Pentagon business activity cannot now be made unless specific congressional approval is obtained.

Pressure groups have struck at the Hoover Commission's presumed intentions even in advance of their actual formulation. This happened last spring when the American Legion, confusing a task force report with the Commission's own opinion's attacked the Commission for "recommending the closing of 20 Veterans' Administration hospitals when at this time there are thousands of eligible veterans certified for hospitalization unable to secure proper medical care and treatment because of lack of beds."

REJECTED RECOMMENDATION

When the Commission made its final recommendations on health, it did not accept the task force recommendation that 19 (not 20 specific Veterans' Administration hospitals be closed. In its report to Congress the Commission limited itself to saying that "there are more veterans' hospitals than are necessary." It recommended that the Veterans' Administration "consider the recommendations made by the task force * * * and obtain the advice of the proposed Federal advisory council of health on these recommendations."

According to the Citizens Committee for the Hoover Report, the 12 "whereas" clauses and the 3 "resolved" clauses of the American Legion's attack on the Commission contained "5 allegations that are untrue, 2 that lack a factual explanation, 1 that is redundant, and 3 that are matters of opinion."

When arguments over the Hoover Commission reports begin in Congress—Senate hearings start on Monday—the important

figures to watch will be the youthful Senator JOHN F. KENNEDY, of Massachusetts, who heads the Reorganization Subcommittee of the Senate Committee on Government Operations, and Representative WILLIAM L. DAWSON, of Illinois, head of the House Committee on Government Operations. As between the two men, KENNEDY has shown the more sustained enthusiasm for the Hoover proposals. KENNEDY'S position takes on added significance because of his family background; he is the son of the former Ambassador Joseph P. Kennedy, who was himself an enthusiastic and hard-working member of the Hoover Commission.

TAXPAYER PRESSURE?

But even with Senator KENNEDY constituting himself a special watchdog, many of the projected reforms will stay bottled up in committee if the country remains apathetic about such things as economy and quality of Government service. The less controversial—and less costly—Hoover proposals should get by the Kennedy and Dawson committees easily enough. But the ones which would result in real savings may not even emerge on the floor of the Senate or House during the present session of Congress. This is an election year, and in election years economizers have traditionally had a hard time of it.

With billions in pork and perquisites at stake, the taxpayers of the Nation as a whole may have to act as a gigantic pressure group if the special pressure groups are not to combine to defeat major Hoover recommendations in both the Senate and the House.

Partnership at Work

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1956

Mr. WESTLAND. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial from the Mount Vernon (Wash.) Argus, which points up the successful operation of the power-partnership policy advocated by the Eisenhower administration:

PARTNERSHIP AT WORK

Much has been said the last 2 years about "partnership" in electric power development. For some politicians this declared policy of the present national administration—to encourage the cooperation and joint participation of private and public agencies in power development—has provided a handy subject for campaign oratory.

These partisan and power politicians would do well to take a second look before they say too much in our own Puget Sound-Cascade area. For here, in northwest Washington and over the Cascade hump in Chelan County, we already have a working partnership consisting of 2 public-utility districts, 2 municipal electric systems and a private power utility, who through their Puget Sound Utilities Council are planning to provide this area in the next 8 years with the equivalent in kilowatts, almost, of a second Grand Coulee Dam.

You can't shrug off this kind of partnership. When the people of this area begin to see the fruits of its efforts, surely they will recognize its merit. Already the Utilities Council's program has progressed so far that it is now urging local communities to work actively to attract new industry in order to, as the council says, "help boost your 'take home' pay." This the council members' leaders would not dare say if they did not feel assured they could provide the new power that new industry will need.

For our part, we prefer the kind of power we can offer new industries and new residents to the kind whose main potential is talk.

Thirty-Eighth Anniversary of Ukrainian National Independence

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1956

Mr. FEIGHAN. Mr. Speaker, on January 21, the eve of the celebration of the 38th anniversary of Ukrainian National Independence, it was my privilege to be the guest speaker at a dinner sponsored by the Ukrainian Congress Committee of America and Ukrainian Association of Washington, D. C.

I was happy to see so many of my colleagues in the Senate and the House in attendance at this dinner, and to hear stirring words of encouragement for the cause of human freedom. It was also significant that in attendance at this dinner were many representatives of organizations which advocate the restoration of national independence to all of the nations now enslaved. Because I feel my remarks on this occasion will be of interest to those Members of Congress who did not have an opportunity to attend this dinner, under unanimous consent I insert my address in the RECORD:

RUSSIAN COMMUNIST COLONIALISM: THE SCOURGE OF ALL MANKIND

Mr. Chairman, it is a real pleasure for me to join with you on this occasion when we commemorate the 38th anniversary of national independence of the Ukrainian nation. An occasion such as this is always a welcome one because it affords me the opportunity to meet so many old friends and to take part in a program which is always sure to bring forth some new ideas beneficial to the cause of individual liberty. This year, in my judgment, is a unique one because world developments are compelling us to return to fundamentals and to decide upon a course of action capable of beating the Russian Communists at their insidious game of peaceful coexistence. I believe it is apparent to all gathered here tonight, that the Russian Communists used the conferences at the so-called summit which took place in Geneva, Switzerland, to launch their latest political offensive, and that we have not yet awakened from the sedatives applied to liberty-loving men at the Geneva conferences, because we have failed to launch anything that could be called a political offensive against the Russia Communists. I am equally certain that everyone gathered here this evening would like nothing better than to see such a political offensive launched, if one could be produced, which would give better hopes than the sterile containment policy, or the latest version of containment which has been appropriately called evolution, not revolution.

I think it is very fitting that on this occasion we should discuss ways and means of restoring national independence to all those nations which have lost it to the Russian Communists. We meet each year on occasions such as this in order to keep bright the happy memory of the times when those nations were free and independent. We also hope that by keeping this memory bright, we will give added hope and promise to the hundreds of millions of people in those enslaved nations, that they are not forever doomed to a life of tyranny and colonial exploitation. More than anything else, it is high time that we developed a practical and winning program in order to give real purpose to our hopes and aspirations for all the people of the world.

In my considered judgment, the greatest threat confronting the free world today is that presented by colonialism. I mean, of course, Russian Communist colonialism because that is the only colonial power today which is in the acendency and which, in fact, does threaten all of mankind. I believe it is fair to say that whatever is left in the world of colonial empires, other than the Russian, represents nothing more than the death-bed throes of an archaic system which civilized mankind completely rejects. All of us are heartened to see so many nations formerly in colonial status, securing their national independence. We all hope that the numbers of nations regaining their national independence, while breaking the chains of colonial status, will continue to grow with each passing year. We cannot help but hope that the day has come when not one more nation on the face of this earth will be subjected to the degradation and agony of colonial status.

But we have not yet had the courage to face up to the many questions raised by the ruthless colonial practices of the Russian Communists. In fact, I am told that it is quite improper, while moving in certain circles here in Washington, to even make mention of the ruthless colonial practices of the Russians, or to even infer that the Russians are Communists. In those same circles, the rules of etiquette require that the word Soviet be used when referring to Russians, Communists, and Red colonialism.

This same phony etiquette has caused many Americans to become very confused as to whether the enemy is communism, Russian imperialism, or the workers, soldiers, and peasants of Russia. I say this because as most of you know, the only understandable meaning of the word "soviet" is a council of workers, peasants, and soldiers. I find it very difficult to believe that the American people would ever align themselves against a council comprised of workers, peasants, and soldiers. Certainly our basic traditions require us to take an unalterable stand against Russian colonialism and communism, regardless of what cover name these twin evils may be operating under.

With this understanding and with the assurance that I intend to break every rule of etiquette established by that crop of global strategists who acclaim themselves to be Russians experts, I would like to say a few words about the colonial practices of the Russian Communists. All one has to do is to consult any global map, other than those prepared in Moscow or by Russian sympathizers elsewhere in the world, and it becomes immediately obvious that the area of the world now occupied by the Russian Communists constitutes the greatest colonial empire in all of recorded history. That empire stretches from the Baltic Sea in north Europe all the way across the Eurasian continent to the Pacific Ocean. At a glance, one immediately realizes what a tremendous expanse of geography this empire occupies, but it takes a second glance to notice all the non-Russian nations which comprise this land mass, and which, in every sense of the word, are abject colonies being subjected to the most ruthless exploitation. It takes a little more study to learn that well over 900 million people are held within the bondage of this empire and that less than 9 million of that total population comprise

the new elite class called members of the Communist Party. It takes not only a little more study, but indeed a great deal more objectivity to acknowledge that in this empire of over 900 million human beings, less than 90 million of them are Russians. The importance of this last statement can best be measured by recalling to memory that Stalin frequently referred to the Russians as the superior people of the Soviet Union.

I am sure the record will bear me out when I say that the present empire over which the Russian Communists rule, is made up of more once free and independent nations than any other colonial empire in the history of mankind. It is startling when one recognizes that in addition to Ukraine the following nations are held in colonial bondage by the Russian Communists—Estonia, Latvia, Lithuania, Byelorussia, Poland, East Germany, Czechia, Slovakia, Hungary, Rumania, Bulgaria, Albania, Georgia, Armenia, Azerbaijan, Turkestan, North Caucasia, Idel-Ural, Inner and Outer Mongolia, Manchuria, China, North Korea, North Vietnam, and Tibet.

This empire certainly goes far beyond the imperialistic dreams of the czars, Peter and Ivan. Moreover, it dwarfs the conquests of Caesar, Genghis Khan, Attila, and Tammerlane. There can be no doubt, therefore, that the great problem of mankind in our times is that of Russian Communist colonialism.

It is one thing to recognize the menace created by the ruthless colonial practices of the Russian Communists, but it is still another thing to develop a program to counteract and defeat the Russian imperial empire. I feel that the platform afforded me here this evening is an ideal one from which to launch a four-point program which, at least, represents the beginning of a political campaign to eradicate the plague of colonialism from the face of the earth.

As a starting point, I believe it is necessary that we fully identify and then expose the Russian colonial empire for what it really is. The time has come for us to stop talking about Soviet imperialism and Red imperialism and to start using language that the man on the street the world over, understands. We must make it known to all the people of the still free world, particularly those who are indulging in the dangerous practice of neutralism, the unvarnished facts concerning the colonial empire of the Russian Communists.

When one understands the political struggle now taking place in Southeast Asia, it immediately becomes elementary that we expose to the world the fact that the Asian nations of Turkestan, Idel-Ural, Inner and Outer Mongolia, as well as Manchuria, China, Tibet, North Korea, and North Vietnam, are now being subjected to a colonial exploitation unequaled in any chapter of history. This same political principle applies in a geopolitical sense to every quarter of the world. As a first task, therefore, we must fully and objectively identify Russian Communist colonialism and then we must, by all the information media at our command, expose the ruthless practices to all the world.

As a second step in this political campaign, I feel it is necessary to acquaint the people of the world with our traditional stand on colonialism and imperialism. From my own personal experience, I state that there is a great deal of confusion in the world today concerning our position on colonialism. For example, throughout most of Asia, the people there who want terribly to be our friends, find it difficult to understand our basic stand on colonialism. This is so because we have attempted to straddle an issue which it is not possible to straddle. I am sure the people of Asia understand our desire to help them in their aspirations for national independence, but I am sorry to say that they still have grave doubts concerning our position on the question of colonialism. I believe this same situation applies throughout other areas of the world such as Africa, the Near and Middle East. This poses a problem which must be quickly resolved if we are to hold the confidence and good will of millions and millions of people, most of whom reside in the so-called twilight zones of the world.

One has only to recall the effort being made by the Russian colonizers in these twilight zones to understand the importance of the need for getting across our basic position on colonialism and imperialism.

It is fortunate that we already have a powerful instrument which properly conveys the position of the American people on the subject of colonialism and imperialism in order to meet this crying need in our foreign policy. I refer to House Concurrent Resolution 149, which was introduced in the Congress by the distinguished majority leader of the House—a great American patriot, the Honorable JOHN W. MCCORMACK, of Massachusetts. That resolution, in clear and inspiring fashion, sets forth our traditional policy against all forms of colonialism and imperialism as well as our unqualified support for the principle of national self-determination and the right of nations to national sovereignty. It restates our time-honored position of support in enabling all nations to assume and maintain an equal station among all the nations of the world. The McCormack resolution is an ideal starting point from which we can and must acquaint the people of the world of our stand against colonialism and imperialism. That resolution, in my judgment, is a magnificent weapon to remove the uncertainty which exists in the minds of so many people of the world who want to be our steadfast allies and warm friends.

Finally, it is an excellent vehicle to eliminate our fence straddling position on the subject of colonialism and imperialism which has caused us to lose a major part of the initiative in the conduct of the cold war.

As a third step, I believe it is urgently necessary that we shake the dust, feathers, and fuzz out of our foreign policy. In order to do this, I feel it is necessary that we make our primary national objective the eradication of colonialism and imperialism from the face of the earth. Once having taken this step, we must then harness the full strength of our diplomatic, political, and economic capabilities to the task of winning through on that objective. I would like particularly in this connection to point out the great opportunity that is ours in the forum of the United Nations to strike a blow on behalf of all the enslaved non-Russian nations in the Russian colonial empire. I am sure most of you are acquainted with House Resolution 183 which sought to require the United States Delegate to the United Nations to introduce a resolution branding Soviet Russia as an aggressor and therefore a threat to the peace. This same resolution will, if furthered by the Department of State, unavoidably raise all the pertinent questions on Russian Communist colonialism and the exploitation of the non-Russian nations.

I fervently hope and pray that House resolution 183 will be passed by the present session of Congress and that the United States delegation to the United Nations will have the honor to be joined by other nations in leading the fight against colonialism, in which fight they will surely be joined by the overwhelming majority of the nations holding membership in the United Nations.

As a fourth step in this program, it is necessary that we take maximum advantage of all the media of communications in getting across to the people of the world our determined position on colonialism and imperialism and our fervent desire to assist each and every nation which struggles against colonialism and for their national independence.

In the last session of Congress, I introduced House Resolution 433 calling for the creation of a joint committee of Congress on United States international information programs. The reason I introduced this resolution is that I am convinced that unless and until we begin to use all our scientific advances in the field of communications to bring our fundamental beliefs and aspirations to all the people of the world, we will continue to remain on the defensive in the face of the political offensive being carried out by the Russian Communist colonizers.

In connection with my resolution, I want to make one thing crystal clear. The purpose of this joint committee would be to work with the officials responsible for all our information programs in order that we can begin to build a program based upon long-range objectives and one clearly calculated to both expose and offset the massive propaganda output carried on by the Communist conspirators. The governing spirit of such a joint committee should be that it is one thing to criticize and find fault, but it is still another thing to create a long-range winning program in which the best brains and leadership in this country all play a responsible part.

All of us are heartened by President Eisenhower's advocacy of an enlarged and a more dynamic program for the United States Information Agency. I have no doubt but that Congress, in the face of the present world situation, will support the President in his call for an expanded and more dynamic program for the United States Information Agency. President Eisenhower's recommendation to the leaders of Congress underscores the need for a practical bipartisan approach to building the type of United States international information program demanded by the political offensive of the Russian Communists.

I hope that my resolution will pass in the present session and that we will thereby, in the years ahead, reap a rich reward from the benefits which will certainly come from a constructive, bipartisan approach in the field of international information programs.

I have this evening attempted to lay the cornerstone of a foreign policy that would give practical purpose to our long expressed hope that all the nations enslaved within the Russian colonial empire, will soon again be free and independent. I recommend this program as an expression of my fervent desire that Ukraine and all the other nations enslaved within the Russian Communist empire, will, in the foreseeable future, attain their God-given rights of equity among nations and a position of equality in the family of nations. I remain convinced that there shall be no true and just peace in this world until all nations are free and independent.

The Late Vera Buchanan

SPEECH

OF

HON. PETER F. MACK, JR.

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 3, 1956

Mr. MACK of Illinois. Mr. Speaker, it was with great sorrow the Members of the House heard the sad news of the untimely passing of VERA BUCHANAN.

Those of us who knew and admired VERA BUCHANAN as a friend and colleague through the years of her service in the House of Representatives join in expressions of deepest sympathy to the members of her wonderful family in their bereavement.

No one could have more ably served the 30th Congressional District of Pennsylvania than has VERA BUCHANAN. Her un-

selfish devotion to the things she believed in and her untiring efforts on behalf of her constituents have taken her far beyond the usual line of duty. She was gentle, gracious, and courteous at all times and made a deep and abiding impression on all who knew her.

The passing of such a capable Member of Congress leaves us all with a feeling of deep regret and sorrow. It can truly be said in consolation for the loved ones she leaves behind that she earned the esteem and gratitude of all of us, and that she was a faithful and loyal servant of not only her constituents but of our entire country.

Address by Hon. Estes Kefauver, of Tennessee, at Naturalization Ceremonies in the United States District Court, Washington, D. C.

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, January 23, 1956

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a brief address delivered by me at the United States District Court for the District of Columbia, on January 10, on the occasion of the naturalization ceremony at which about 125 new citizens assumed their citizenship responsibilities.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Fellow Americans, I am pleased and honored to be one of the first to welcome you as new citizens and to hail you as fellow Americans.

You have come to the United States from more than 30 countries throughout the world. I find that to be an extraordinary and happy fact. And I see in it a promise of ever-accelerating vitality for this new country of yours.

This great Nation will never become decadent, will never become ingrown and feed upon itself, so long as the strengths, the hopes, the skills, the aspirations and the cultural attainments of new citizens like yourselves continue to enhance its life stream.

You are going through a crucial experience which may not be apparent or entirely comprehensible to the millions of Americans who achieved their citizenship solely through the accident of birth. I think I have some understanding of how you feel as you raise your hands and swear allegiance to the United States.

Some of you came to us from other free, democratic nations because you felt that this country offered you a promise of greater opportunity for yourselves and for your children.

Others among you fled from poverty, persecution and degradation.

No matter what your national origin, no matter what your previous station in life, no matter what your cultural background, you share this in common:

The United States offered a beacon light of hope, to which your eyes were turned long before you set foot on our shores.

No matter how severe the poverty and persecution some of you are leaving behind, it was an emotional strain for you to cut your ties to your homelands. I wish more of our older citizens could comprehend this fact as easily as they can understand the feeling of exhilaration and hope with which you eagerly accepted your new status as Americans.

American citizenship is not given easily, nor should it ever be accepted lightly.

Citizenship bequeathes privileges. Citizenship also demands responsibility. And the greatest responsibility which has devolved upon you today in accepting the rights and privileges of citizenship is to so exercise them as to become evermore responsible citizens.

The complexity of our times throws a heavier and heavier burden upon every citizen. The citizens' responsibility in our times are no longer merely local and confined to his individual community. They are also national and international.

A great American, Benjamin Franklin, used to say that if a man keeps his business, his business will keep him. Nowadays, if a man should attend solely to his business, he might find himself ultimately with no business to which to attend. This is especially true in international affairs. For, as you know better than most native-born Americans, this country is engaged in a life-and-death struggle with a powerful enemy who is determined to subdue all others to his will.

Hence, the citizen must be profoundly concerned with the advances of this enemy and the counteradvances of his own government to meet them. Keep yourselves informed. For the more informed you are the more likely that you will not only act forehandedly but wisely.

Never forget that your new government is much more than just a group of men here in Washington. Government should be, and will be—if we all, new and old citizens, participate alike—a combination of the desires and the spirit and the willingness of all of us.

So long as this admirable spirit prevails among us, our democracy shall retain its continuing vitality and its ability to grapple successfully with questions of the greatest magnitude and complexity.

Fellow Americans, never forget that this is a nation of immigrants. We have drawn upon the diverse races and cultures of the world. Our prosperity and our preeminent place in the world are as much due to our greatest resource—people—as it is to our vast store of physical assets. Immigrants like you have tapped them and, consequently, this Nation has flourished.

Take, for example, the varying nationalities of men who helped the United States to create the first atomic bomb. Among them were men born in Germany, in Hungary, in Denmark, in Italy, and elsewhere. And without their minds and skills one doubts that we could have achieved atomic fission, and certainly not for many years.

Yet I must admit to you quite frankly that this Nation has, in recent years, piled up great difficulties for people from other nations who hope to make their home here. I am convinced that the period of hysteria on which this shortsighted policy is based will pass—as all periods of hysteria in our national life have passed—if those who truly love America and its great tradition of freedom will only act as freemen.

In conclusion, I want to assure you that there are no second-class American citizens. The rights and responsibilities you have just had conferred upon you make you the equal of all other citizens—no matter how many generations ago their forefathers first came to this land.

Enjoy your privileges and rights. Exercise your responsibilities. And welcome most sincerely, fellow Americans.

Brink-of-War Statement Is a Bonanza to Russians

EXTENSION OF REMARKS
OF
HON. EUGENE J. McCARTHY
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1956

Mr. McCARTHY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Walter Lippmann:

"BRINK OF WAR" STATEMENT IS A BONANZA TO RUSSIANS

(By Walter Lippmann)

There is not as yet available any plausible explanation of why Secretary Dulles chose deliberately to have the Life magazine article written about him. For the extraordinary thing about this article is that while it pretends to reveal the inner truths of our recent policy in the Far East, it provides a fundamentally false account.

The falsity lies in this: That Mr. Dulles describes what has happened in Korea, Indochina, and the Formosa strait in terms of unilateral deterrents by the United States. What has really happened is that both sides and all concerned have been held within a condition of mutual deterrent.

Thus, while it is no doubt true that the Communists have been deterred by fear of our retaliation, it is also undoubtedly true that Syngman Rhee, Chiang Kai-shek, Admiral Radford, and those who wanted to intervene in Indochina have been deterred by our fear of Soviet retaliation.

The existence of the military stalemate explains, as Dulles' one-sided account does not explain, the political situation in the contested area on the approaches to China.

The actual condition of mutual deterrent, or military stalemate, was first discerned by Winston Churchill when he learned the results of the hydrogen bomb test. Shortly after that the conclusion was drawn by the President in his famous declaration that there is "no alternative to peace." It was that declaration, which the Russians have since then subscribed to, that led to the first Geneva conference, and was the core of that conference.

Now if there is no alternative to peace, then no one can go to the brink of war in the sense that he threatens to go to war.

If war is not an alternative, then anyone who threatens war is either mad or is bluffing. If war is not an alternative, then issues have to be compromised. If, as Dulles' article implies—though he himself must know better—we were the unilateral deterrers in the Far East, we would have enjoyed a military superiority sufficient to make the Communists give in to us on the issues in dispute. In fact, all we have been able to get has been peace on the basis of the military status quo. Both sides have had to accept peace without victory.

Dulles must come very near to being the first foreign minister who has ever wanted to appear more warlike than in fact he was. Life magazine has painted a picture of a bold and threatening man who has overawed the adversary. The fact is that everybody has been overawed. The Communists have been deterred from aggression beyond the line of the status quo; we have been deterred from liberation beyond that line.

In order to maintain and stabilize that line—at which both sides are deterred—we have not only made known that we would fight if that line were crossed by armed forces, we have also given assurances that

we ourselves will not cross the line in the other direction.

In Indochina we were deterred from intervening with an air strike to save Dien Bien Phu by the fear that China would then intervene openly by invading northern Vietnam. Such an invasion would have required an air bombardment of China to repel it.

That was a course from which we were deterred by the fear that this would cause the Soviet Union to intervene. This is how mutual deterrents work.

In the Formosa strait we gave Chiang a treaty of guaranty which was, as Dulles says, a warning not to attack Formosa. But Dulles has, in his role of melodramatic hero, omitted the other half of the story. The other half is that we then released Chiang firmly, and sent word to Peiping through various diplomatic channels that we would not permit, much less assist, Chiang to attempt to return to the mainland.

In sum, the Eisenhower policy in the Far East has operated—as it had to—within the overall condition of a military stalemate. This has led to a series of compromises—probably temporary—based on the military status quo. What we have done is not glorious. It is merely making the best of things as they are.

The article has done damage to the country and to Dulles' own usefulness as Secretary of State. He has provided the Soviet propaganda with a text which is sheer bonanza.

The exasperating thing about it is that whereas ordinarily we have to contend with untruths that others tell about us, here we have to contend with half-truths that are tantamount to untruths put out by the Secretary of State himself.

Dr. Will W. Alexander

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1956

Mr. HAYS of Arkansas. Mr. Speaker, on January 18 I spoke briefly of the career of Dr. Will W. Alexander, a wise and good man who died at his home in Chapel Hill, N. C., on January 13. Later I read an editorial tribute to Dr. Alexander by Jonathan Daniels which eloquently expresses appreciation for the significant leadership which he provided. Dr. Alexander's life exemplified the idea that harmonious race relations are achieved by patience, good will, and commonsense, and Mr. Daniels' editorial is a deserved recognition of his remarkable service. Under leave to extend my remarks, I include Mr. Daniels' statement, which appeared in the Raleigh News and Observer on January 15, 1956:

DR. WILL W. ALEXANDER

It may be that Dr. Will W. Alexander and the time for the need of such a man as he was came to an end together when he died on the little farm of his retirement near Chapel Hill on Friday morning.

In a world which depends much on labels he had been famous for half a century as an "authority on race relations." But at the end of that half-century, as Dr. Alexander probably realized better than most of us, the relations had altered and changed. Indeed, in some respects they had disappeared. What had been relationships of men had become the antagonism of lawyers. And the problems which he had approached with a magnificent combination of love, humor, hardheadedness and common sense seemed only confronted by decree on the one hand and defiance on the other. Between those two there seemed when Dr. Alexander died less room for wisdom and warmheartedness.

Actually, of course, nothing could be further from the truth than such an idea. Dr. Will Alexander's death gives emphasis, never more needed than now, to the truth that real race reations can be established neither in the courtroom nor the legislative hall but at last and lastingly only in the human heart. He himself had understood that from the time when as a young man he retired from the Methodist ministry in Tennessee to become executive director of the Commission on Interracial Cooperation. He applied that understanding as vice president of the Rosenwald Foundation and as administrator of the Farm Security Administration in which last position his concern was not for Negroes as such but for a better chance for all little people on the land.

There never was a man who looked and acted less like a do-gooder than Dr. Alexander. He was never an idealist with his head in the clouds but always one with his feet on the ground. There was never a fanatic gleam in his eyes. No one appreciated more than he the comic aspects of the life and character of some of those he most sought to help—or of those, some of whom he had to bear, who became the pompous or arrogant stuffed shirts of reform. The comic faults in people, both the underprivileged and the overpretentious, never shook his faith. Indeed, his faith in the dignity of man was based upon his loving, often laughing, understanding of man's faults.

Such a man will not soon be an anachronism. Indeed, the need for his counsel to the last days of his life came from far places over the rural telephone line to his farm. Professors and students drove out the highway to sit on his porch or stand beside Dr. Will while he directed the clearing of a cornfield or knelt himself to plant an asparagus bed. In his retirement the wisdom which he possessed and the good will which he exuded never seemed more needed by so many than in his last days when sometimes race relations seemed darker and harder than ever before.

No one knew better than he that he did not have all the answers. In half a century of hard work he had not found them. But he did know, at last as at first, that the only ways to seek them are the ways of the warm heart, the humorous understanding and the wilingness to deal in good will and common sense.

Political Requirements for Prosperity

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Monday, January 23, 1956

Mr. HUMPHREY. Mr President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I delivered before the Congress of American Industry, sponsored by the National Association of Manufacturers, at New York City, on December 7, 1955. The subject matter of the address was the political requirements for an expanding American economy.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a privilege to be invited as one of the guest speakers at the 60th Congress of American Industry. You represent in considerable measure the economic lifeline of our dynamic American economy.

Let me at the outset give you a few words about my political and economic philosophy, in order that you may better understand the bill of particulars I intend outlining as essential political requirements for an expanding and prosperous economy.

I have great faith and confidence in the political judgment of the American people, and the economic know-how of American industry.

I believe in free and open competition in the market place of commodities, as well as in the market place of ideas. Political and economic freedom cannot endure long without the free exchange of ideas and material goods.

A balanced and orderly free society, however, requires not only competition, but cooperation, between the individuals and segments of that society. This cooperation must embrace not only private individuals and institutions, but also embrace the institutions of government.

The topic assigned for this discussion clearly indicates the widespread recognition of the importance of government in the American economic structure.

Government—Federal, State, and local—and I include all three levels—can act as a creative force, either through positive action or by negative and restraining influence.

Fortunately for the American people, the Constitution of the United States places a direct responsibility on the Government to promote the general welfare. That general welfare relates to the economic welfare of each and every citizen.

The first obligation of government is to be just—to assure equal opportunity for all. With this moral requirement of justice and equal opportunity, it has been necessary in the past, and it will be necessary in the future, for government to use its powers to curb the private exploitation of our human and natural resources, to regulate commerce in the interests of fair and honorable competition, and to assist the underprivileged and those who are the victims of economic and social injustice.

There are those who term such action by government as interference with free enterprise. I respectfully suggest that they are either unmindful of the constitutional requirements of the government to promote the general welfare, or have willfully and wrongfully in interpreted the rules of free enterprise to be synonymous with the code of the jungle.

Freedom is not license, nor is enterprise exploitation.

Free enterprise is a constructive force. It has a social obligation as well as a profit motive.

A political democracy or a constitutional republic cannot long endure when the social and economic needs of the citizenry are sacrificed or ignored. For that reason, the political requirements for prosperity must, above all, include social justice and equal opportunity.

Before looking ahead, it might be wise to look briefly at the past—to place in perspective where we are today. As in most areas of life, there is little that is new—but much to be learned from the past.

We have found it necessary to regulate utilities in the public interest. We now accept the obligation of government to design and administer programs on behalf of conservation of our great land, water, mineral, and timber resources.

We discovered in the late 1800's that competitive enterprise could develop organic

monstrosities in the form of monopolies and trusts. It became necessary for the Government to adopt a body of law, such as the Sherman Act, the Clayton Act, and the Robinson-Patman Act, in order to preserve an orderly and responsible competitive enterprise system.

We have witnessed within the past half century unscrupulous speculation in the stock market which seriously threatened the solvency of our entire financial and industrial structure.

Government had to act, to protect the public interest, by establishing the Securities Exchange Commission.

Likewise, the laws and regulations pertaining to our monetary and credit institutions had to be strengthened and revised in order to protect the public from unwise and, at times, unethical financial manipulation. The Government's response was establishment of a Federal Reserve System to assure an adequate credit for a growing economy, and a banking and monetary code to assure fiscal solvency and the confidence of depositors.

Social needs of the American people were recognized in passage of the Social Security Act, the fair labor standards law, and a wide variety of measures dealing with health, welfare, and education.

These are some of the lessons and experiences of the past.

But these public policies also have served us well in recent days and the present. Rather than stifling private enterprise, they have encouraged wholesome development and expansion.

Legislative policies of the past 25 years have greatly assisted in building a strong base for the American economy.

This is a mass-production economy, and mass production requires mass consumption.

This is a consumer's economy, and it can expand and remain prosperous only so long as it is geared to maximum purchasing power.

Every segment of the economy must be afforded an opportunity to share in prosperity.

Here, in my opinion, are the five major political requirements for that kind of prosperity:

1. We must coordinate programs and policies of Federal, State, and local governments, and private groups, within the framework of a free, private, competitive economic system, to insure maximum employment, production, and purchasing power. This means a continuing, effective concern for balanced economic growth and stability; for increased productivity which relates itself not only in an expanding volume of goods and services but also in a higher living standard and wages.

We have embodied this philosophy into public law—the employment Act of 1946. That act places upon Government a responsibility to assure maximum production, maximum employment, and maximum purchasing power. It calls for keeping our economy in balance. This is no idle gesture. It is but further expression of the constitutional mandate to promote the general welfare.

We need full employment and decent wage standards, not only to provide a rising living standard for workers and their families but also to maintain the output of industry and to provide the major incentive for capital-goods expansion. Our machines are no more profitable in their capacity to turn out goods and services than the economic capacity of our consumers to pay for and use those same goods and services.

Encouragement of responsible collective bargaining under law is an essential link to achieving the balance we seek under the Employment Act of 1946. Collective bargaining is labor's response to corporate business structure. We need both—but both without abuse of privilege or power.

We must expand and modernize such built-in safeguards to the economy as our programs of social security and unemployment compensation. Such programs, in effect, are part of our economic life insurance, for which principal and premiums alike must be constantly adjusted to keep pace with growth of our national production and population.

2. We need a tax structure at Federal, State, and local levels that not only meets the standards of social justice based on the principle of ability to pay, but also contributes toward our goal of economic growth and stability. Our Joint Committee on the Economic Report is right now conducting studies and hearings aimed at this very purpose, and I hope from such hearings will flow recommendations which can be enacted to meet this objective.

Personally, I feel that revision of our tax structure in line with these long-term objectives should include both greater allowances for families, thereby stimulating family purchasing power; and a more equitable structure for middle-income groups, who under present laws find it extremely difficult to accumulate reserve capital.

Independent small business cannot grow and expand on credit alone—even liberal credit. It must have the opportunity to reinvest earnings. I know of no better way to restrain the present trend toward monopoly and mergers—a trend that has been accelerated in the past 3 or 4 years.

Unfortunately, the present tax laws are a mosaic of inequities, loopholes, and favoritism. I remind my friends in business that for every special privilege loophole written into our tax laws, someone else must pay the bill through a heavier burden of taxation. The Government needs a certain amount of money for purposes of national security and Government services. If a few are permitted to evade paying their just and fair share of this national bill, then others are compelled to pick up the check. A just and fair tax policy is more than mere tax reduction. It is tax equity.

3. We must stop at once the sharp recession in American agriculture, and by well-directed and designed Government policies restore agriculture to a position of equality in the economic scene.

We need to attack the farm problem on several fronts, including more adequate and effective income protection for farmers through the most workable combinations of price-supporting crop loans, purchases, and possibly production payments; expansion of both domestic and overseas surplus distribution efforts; use of some form of a conservation acreage reserve land-rental plan as an incentive for production adjustments similar to the aid given wartime industry for conversion to peacetime markets; and improved and modernized credit facilities geared to modern mechanized farming's greater cash operating needs.

We must fully recognize the interdependence of all segments of our economy. There is no such thing as long-term prosperity in business and industry if agriculture continues to suffer from drastic income decline and growing indebtedness.

America's farmers are still one of the great potential markets in the world. I suggest that we spend as much time developing American markets as we do foreign markets. Both are important, but the potentialities of a stronger American market offer much greater opportunities to American industry for the immediate future. It is not trite to say that our problem is underconsumption, not overproduction.

A point 5 program to assist the underprivileged and underdeveloped areas of America will yield every bit as constructive a result as a point 4 program in foreign areas.

4. We need a liberal, long-range credit structure with flexibility to meet short-range needs. We can no longer evaluate credit policies on the basis of standards acceptable a generation ago. The amount of outstanding credit must be related to gross national income, and potential maximum production and employment. I am referring not only to commercial credit, but also to consumer and housing credit. Liberal credit terms for home construction may be justified not only in terms of our rapidly expanding economy, but equally so in terms of our rapidly growing population. There is yet another justification—the social values of home ownership.

Consumer credit is the life-line of consumer goods production. Expanded consumer credit becomes dangerous only when the economy slackens, or irresponsibility creeps into its use. Credit, therefore, must be closely related to our objective of increased investment, maximum employment, and economic balance between industry, labor, and agriculture.

Fifth, we must have a continuing long-range development of our natural resources—and encourage peacetime uses of atomic energy as newest of our resources. It is with natural resources in particular that government must play a paramount role. First of all, government is the only agency that can mobilize the manpower and technological resources of the Nation to control the erosion of land, the protection of forests, the harnessing of the rivers for the purpose of flood control, navigation and irrigation. Likewise, if these costs are to be offset in part, the building of hydroelectric facilities is sound economics. Such electrical energy is a new capital resource made available to the American people and to American enterprise, out of resources already belonging to all the people.

Atomic energy is our greatest untapped source of power and potential wealth. Because it is a Government-developed resource, the Government has a direct responsibility to stimulate its peacetime uses for the benefit of all. The Government must not jealously withhold such a resource, but instead share its great potentialities with private industry, with rural-electric cooperatives, and with municipalities.

These, then, ar my basic criteria for political economic policies required for prosperity.

But economic policies alone do not assure a wholesome and healthy environment for an expanding economy.

We still have objectives of social justice to be fulfilled, and social values to consider.

Health, welfare, and education of our American citizens is basic to a dynamic and expanding economy. It would be short-sighted to seek a material prosperity in which such basic human needs were brushed aside.

There are often costs to maintaining full prosperity.

Yet there have been and still will be far higher costs to industry as well as consumers for failing to maintain reasonably balanced growth in our economy.

The 1953–54 recession, measured realistically by lost production and consumption, is estimated to have cost all Americans about $30 billion. This is a loss which is never recovered. It is a mighty big chip out of the log of prosperity. During the 10 years of the great depression and partial recovery, estimates of our accumulated economic loss, due largely to unemployment and industrial idleness along with agricultural decline, ran as high as $600 billion to $700 billion in 1954 prices.

It is these economic facts about which we need to be concerned in considering whatever political and economic measures are required to assure prosperity.

A Government policy of doing too little, too late, of taking halfway measures when dramatic action is required, is false economy.

The question is not so much how much we spend or what tax adjustments we make to insure prosperity, but rather that we do the right thing early enough, and on a large enough scale, to obtain the results we need for our balanced objectives of maximum employment, maximum production, and maximum purchasing power.

In summary, the key to the success of any of these political requirements for prosperity is a constant alertness, a boldness of vision that refuses to be satisfied with any goals of the past as being satisfactory goals for the future, a determination to act aggressively and quickly on any of these related fronts when action is needed, and a willingness to accept change when change is called for rather than be chained to any dogma of the past.

Civil Service Week

EXTENSION OF REMARKS
OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1956

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I would like to include a speech by the distinguished chairman of the Senate Post Office and Civil Service Committee, Senator OLIN D. JOHNSTON, which he made January 21, 1956, at a banquet held in the Willard Hotel, Washington, D. C., observing the 73d anniversary of the establishment of the Federal civil service.

Senator JOHNSTON'S speech follows:

Mr. Chairman, distinguished guests, ladies, and gentlemen, it is a real pleasure for me to be here tonight and join with you in observance of the 73d anniversary of the establishment of the Federal civil service.

I think you will agree with me that we have come a long way since 1883—when the Civil Service Act was first signed into law—the purpose of which was to make Government service attractive to able men and women who wished to make the public service a career.

I am equally confident you will agree that from time to time the road has not always been an easy one—that on occasions the rate of progress and record of accomplishments have not always been as accelerated or productive as we would have liked.

We all can recall very recent instances of roadblocks that have been erected to slow down and even untrack the civil service system.

Yet—today our civil-service system is given almost unanimous public acceptance. Any thinking man or woman—in the Federal service or outside—is well aware that the caliber, integrity, and ability of the great rank and file of our career Government employees are not merely above reproach, but are outstanding.

I know that all of us are constantly acknowledging the progress and achievements of private industry.

But how many of us are familiar with, or even aware of the record of contributions by Federal workers to this amazing parade of industrial progress.

Private industry and management are thoroughly aware of it.

Hardly a day passes that some industry representative or technician, from almost any field of endeavor one cares to mention, is not seeking guidance and help from Government experts—career employees.

Unfortunately, my dear friends, despite its wide acceptance, there has been—and only too recently—a disposition in some quarters to discredit the civil-service system and Government employees. We noted with considerable alarm—efforts, blazingly unfolding before our very eyes, to wreck the civil-service law, throw out thousands of loyal, competent employees, and return Federal employment to the chaotic political spoils system from which it had emerged some 73 years ago.

Tampering with the public career service should not be entered into lightly. Certainly it is not an undertaking to be attempted by any political party.

It was my great pleasure to appear also at last year's civil-service anniversary observance.

At that time I expressed my deep concern over the misleading, unfair and un-American operation of the administration's so-called security program for Federal employees. I referred to the reporting of security statistics as the numbers game.

It is now 1 year later. And tonight, my friends, I think I can say with calm assurance that the American people have at long last been given the facts.

The record is now clear.

Swept away is the smokescreen of political intrigue and deliberate confusion.

No longer will anyone be taken in by politically motivated, deliberate misleading and unwarranted attacks on Federal employees. Not only has the web of confusion been swept aside, but exposure of repeated injustices to loyal, patriotic, competent employees has made those in charge of this program of planned deception more cautious and less eager to smear, without cause, the reputations of employees they wanted to be rid of for reasons which were solely political and had not the slightest relationship to national security.

I am happy to be able to say that our investigation of the security program has resulted in making the air in Washington somewhat cleaner this year.

In this respect, I want to take just a moment to pay tribute to the press, particularly the reporters in Washington, D. C. True to their finest traditions, they were not fooled by the political camouflage. They probed deep and exposed to public opinion the injustices, the outrages which were being attempted in the name of national security.

I have stated many times before—and I repeat it again—that politics are, and should be, a basic part of the operations of our Government, whether it be on a National, State, or local level. They are an integral part of the two-party system which has made the economic and social health of our great country so sound and progressive.

And it follows that patronage jobs are an elementary part of our political system. However, I say most emphatically, that the practice of patronage jobs should be confined only—and solely—to positions of topmost or policymaking level.

I am unalterably opposed to the philosophy that has sprung up during the last 2 or 3 years of claiming all Government jobs as political plums. That eligibility for Federal employment be considered on the basis of party affiliation and contributions. I am opposed to this type of job clearance or approval for either party—Democrat or Republican.

When the 84th Congress convened a year ago, the morale of the Federal career service was at low tide. The service had been visited by patronage raids and jobs both high and low were under scrutiny for merger with schedule A, B, or C.

The pay raise approved by Congress with enthusiasm only a few months earlier had evaporated like the morning dew with the rising of the sun.

Several administration bills enacted by the 83d Congress were found to be deficient or unworkable. Career employees were well aware of the frigid atmosphere sweeping down upon them from above.

In that setting there is little wonder that the future seemed dark and void of any real chance of improvement short of another 2 years.

When I stood here on this platform 1 year ago, I promised you that the 84th Congress had drawn a plan of definite objectives for strengthening and reestablishing the civil-service laws toward the purpose for which they were created—as well as generally improving the lot of Federal workers.

They were not idle words, nor empty promises.

The recorded accomplishments of the 1st session of the 84th Congress are unsurpassed and unparalleled in American legislative history.

We did not choose to wait for 2 years but moved with dispatch to improve immediately the lot of the Federal career employee by approving an unprecedented number of beneficial, needed, and workable measures.

Among such enactments were:

A bill to provide pay increases to career employees under the Classification Act of 1949.

A bill to increase the pay and provide other benefits to our postal employees.

These two pay bills marked the third attempt on the part of Congress to obtain a pay increase for Federal employees—for on two previous occasions similar bills were snuffed out by Presidential veto.

Additionally, the 84th Congress approved:

A bill to amend the Employees Uniform Allowance Act so as to make its benefits available to all employees who are required to wear a prescribed uniform.

A bill to amend the Life Insurance Act to protect the policies of thousands of Federal employees who were members of various beneficial associations.

A bill to require the Civil Service Commission to grant career appointments to a large number of employees who were denied conversion under the administration's program.

A bill to give persons now retired or who retire in the near future benefits equal to the increase in pay given to active Federal employees.

A bill providing for the purchase of bonds at Government expense to cover officers and employees.

The 84th Congress also approved:

A bill to increase travel allowances and a number of other measures of importance to certain groups of Federal emlpoyees.

I believe there is rather general agreement that the list of accomplishments during the 1st session of the 84th Congress in behalf of the carreer service is an imposing one.

But let me hasten to add that much is yet to be desired and I am so bold as to predict here and now that much will be accomplished during this, the 2d session of the 84th Congress.

We have established a group of experts to study the Civil Service Commission and its administration of the civil service law. To assist in this endeavor, I am inviting five outstanding Americans to volunteer their services as advisors and consultants to the committee for this study. I am happy to announce that your own president—my good friend and advisor Jim Campbell—has agreed to represent the Federal employee groups on this Advisory Council. The committee will make its report and recommendations later in the year.

This is also an appropriate time and occasion to announce that public hearings on S. 2875, the bill I introduced to revise the Civil Service Retirement Act from stem to stern, will be held February 1, 2, and 3.

It is my hope that the bill can be reported by the Post Office and Civil Service Committee within a few days after conclusion of the hearings and then be called up for consideration in the Senate soon thereafter.

The bill has many good features, some of the more important of which are:

1. It raises the factor for the computation of annuities for employees generally from 1½ to 2 percent.

2. It permits optional retirement after 30 years of service regardless of age under a vastly more favorable reduction formula for each year the employee is under the age of 60 at the time of retirement.

3. It provides for immediate annuities to employees who are separate through no fault of their own with 25 years of service regardless of age and to employees with 20 years of service who are 50 years of age or older.

4. It establishes minimum benefits for employees retired because of total disability.

5. It provides automatic cost-free annuities to surviving spouses up to one-half of the first $4,000 of an employee's annuity.

6. It increases the benefits payable to surviving children by one-third.

Finally, the bill corrects many inequities in a number of areas.

In conclusion I wish to express the hope that during the current session of the 84th Congress we will be successful in obtaining enactment of:

1. Legislation to provide health insurance to Federal employees on a joint Government-employee-contributory basis.

2. Legislation to guard against unjustified salary cuts as a result of the downgrading of an employee's position.

3. Legislation to provide longevity increases to wage-board employees.

4. Legislation to provide proper employee union recognition.

5. Legislation to redirect, reorganize, and revitalize the Civil Service Commission to the end that it once again will measure up to its responsibility as chief architect and protector of the civil-service merit system.

Any contribution I can make to the enactment of the legislation program outlined above is more than justified on the basis of the contribution made by our body of career employees toward making ours the greatest Government on the face of the earth.

I thank you.

Chance for Gas Bills

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1956

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Times-Picayune of January 20, 1956:

CHANCE FOR GAS BILLS

Washington reports say the chances of Senate passage of the Harris-Fulbright bills relieving several thousand natural-gas producers of the incubus of Federal regulation, are 50–50 or better. On the showdown, due next week on the Senate floor, we hope the results are so decisively in favor of the bills that the question of applying Government regulation in this field where it doesn't belong will not come up again soon. The House passed the Harris bill last summer.

The Federal Power Commission got into producer price regulation of gas against its own will through the Supreme Court interpretation in 1954 of a 1938 law. Much of Congress itself was surprised to learn from the Court that it intended to regulate producer prices when it passed the pipeline regulatory bill.

Of course there is no excuse for regulation. The number of producers, varying from time to time, has been figured at about 2,100 to 4,000. There seems to be no question of plenty of competition in selling the gas both locally and to the interstate pipelines.

Senator DOUGLAS, of Illinois, and some of his confreres have made much ado about the possibility of Southwestern producers holding the householders of the North in price captivity, charging them what they choose. That is ridiculous not only because the thousands of producers are in competition but also because the price of gas at the wellhead is only about 10 percent of what the ultimate consumer pays. What is more, the interstate pipelines have to show that they have a market and have contracts for a long-term supply of gas before they can get a permit to build a line.

There seems to be wide agreement that one principal effect of regulation at the wellhead is to discourage exploration and cut down the total supply of gas. That is anything but a help to the consumer. Senator FULBRIGHT and others have pointed out that another major effect would be to virtually guarantee the earnings of the pipeline distributors. Apparently that would be so where the FPC fixed a wellhead gas price lower than that named in the long-term contracts of the pipelines.

So far as big-producer States like Louisiana and Texas are concerned, regulation holds no particular terrors. Gas for intrastate transport and use is not subject to FPC rule. These States can use their gas at home and there will be plenty of it for local consumption regardless of the effect of Federal regulation on wildcatting. But failure to eliminate the wellhead price control would hurt the industry. Moreover the creeping extension of Federal controls into areas of economy where there is no good excuse for it should be stoutly resisted. To allow it makes for more regimentation, more expensive government, and more drag on our economy.

D'Ewart Is Well Qualified to Serve as Assistant Secretary of the Interior

EXTENSION OF REMARKS
OF
HON. ORVIN B. FJARE
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1956

Mr. FJARE. Mr. Speaker, under leave to extend my remarks, I would like to call the attention of my colleagues to the excellent qualifications of Mr. Wesley A. D'Ewart for the position as Assistant Secretary of the Interior. A brief résumé of his varied activities follows:

CONSERVATION AND LEGISLATIVE BACKGROUND OF WESLEY A. D'EWART, ASSISTANT SECRETARY OF THE INTERIOR FOR PUBLIC LAND MANAGEMENT

More than four decades of firsthand experience with natural resource conservation and development were brought to the Department of the Interior by Wesley A. D'Ewart, of Montana, who on October 6, 1955, was sworn in as Assistant Secretary for Public Land Management.

This experience dates from 1912, when he became a forest ranger, until 1955, when he served as a Special Assistant to the Secretary of Agriculture, which position he left to accept the appointment as Assistant Secretary of the Interior. During the intervening years, Mr. D'Ewart engaged in ranching in Montana, was a member of the State legislature, a member of the State College Advisory Committee, president of the Absaroka Conservation Committee and a Member of Congress. As a rancher he put together a cattle operation which he still owns and which is managed by his son. On this property he carried out the best soil and water conservation practices, reseeding at his own expense over 1,000 acres of his range, building a water storage reservoir and carefully managing his grasslands so as to greatly increase their productivity.

As a member of the Montana State Legislature's House of Representatives for 3 terms and of the State senate for 2 terms, Mr. D'Ewart served on committees concerned with resource development and management. Montana has a State water conservation board that has a national reputation for the development of small water and irrigation projects. Mr. D'Ewart took an active interest in this and supported legislation and appropriations to strengthen the work this agency was doing. During this time he was instrumental in organizing and was first president of the Montana Reclamation Association. This association has taken a very active part in supporting the State Water Board and the Bureau of Reclamation in developing the water resources of Montana. Montana has 5 million acres of State-owned land. Mr. D'Ewart as a member of the State legislature, made a study of their management and operation and sponsored legislation to improve their operation.

Mr. D'Ewart was elected to the United States Congress in a special election in 1945, and served continuously until January 1955. Throughout this decade in Congress, Mr. D'Ewart was a member of the House Committee on Interior and Insular Affairs, or its earlier counterparts. This committee is charged with the conservation, development, and operation of the vast Federal public domain of the United States and its Territories. As a member of this committee he made official visits to many of the national parks, and Indian reservations ranging from Alaska to Florida. On committee business, he toured Alaska, Puerto Rico, Hawaii, and the Virgin Islands, and became familiar with matters affecting those areas which came within his jurisdiction as Assistant Secretary.

As a Member of Congress Mr. D'Ewart made many positive and constructive contributions to conservation and land management. In the 83d Congress alone he introduced, and the Congress enacted, nine bills to protect, enlarge, and improve the management of the national parks. Despite his advocacy of reduced spending in almost every Federal activity, Mr. D'Ewart testified, debated, and voted in favor of increased appropriations for the National Park Service and the Forest Service in every session of Congress during his term of office. In 1954, when the Atomic Energy Act amendments were about to be passed, it

was Mr. D'Ewart who rushed through a last-minute amendment to protect the national parks from uranium prospecting. It was a D'Ewart bill which, by authorizing the National Park Service to obtain by exchange some 10,000 acres of State-owned land inside the boundaries of Glacier National Park, will enable the National Park Service to preserve the integrity of the park. For this action he received the thanks of all of the major wildlife and conservation groups, as well as the Department of the Interior itself.

Mr. D'Ewart has been a stalwart proponent of the wildlife refuge system. During the last session in which Mr. D'Ewart was a Member of Congress, he introduced what many conservationists regard as an outstanding bill to facilitate the management of our wildlife refuges. The bill provided also for an increase in the number of refuges by establishing a new Division of Duck Stamp Fees, which would provide funds for administration of the areas. The bill he first introduced was the basis for legislation pending in the present Congress.

One of the most important conservation measures enacted into law in recent years was Public Law 167. This law corrects the widespread abuses of the mining laws, particularly in the national forests. While in Congress, Mr. D'Ewart introduced and held hearings on a bill intended to end these abuses of the mining laws. Although his bill was not enacted, the attention it brought and the information brought forth in its consideration were beneficial and led to the introduction of a bill similar in form and intent which became law in the 84th Congress. As Special Assistant to the Secretary of Agriculture, Mr. D'Ewart also contributed importantly to the enactment of this legislation.

While a Congressman, Mr. D'Ewart was a member of the National Forest Reservation Commission, which has the important duty of blocking out national forest holdings by purchase of private lands lying within or adjacent to them. He gave much time to this program and was instrumental in obtaining expanded appropriations for it.

Mr. D'Ewart is one of the best informed men in the Nation on Indian affairs. He was one of those who was instrumental in the development of the Navaho-Hopi rehabilitation program, and has contributed to the enactment of other progressive measures in this field. While striving to safeguard the interests of those Indians desiring to remain on reservations, he has at the same time supported programs designed to provide increasing opportunities for those Indians who want to separate themselves from any special relationships with the Federal Government.

During his term in office, Mr. D'Ewart sponsored a number of measures, which Congress enacted, to improve public-land management in the Department of the Interior. Among these was the amendment to the Recreation Act, which permits the lease for a long term or the sale or donation of areas of the public domain having recreational value to nonprofit organizations, such as the Boy Scouts.

Assigned to the Assistant Secretary for Public Land Management are a vast and almost infinitely varied scope of responsibilities for conservation and development of the Nation's natural and human resources.

Under his direction are five key bureaus of the Department of the Interior—the Bureau of Indian Affairs, the National Park Service, the Fish and Wildlife Service, the Office of Territories, and the Bureau of Land Management.

In supervising these 5 agencies, the Assistant Secretary for Public Land Management directs the activities of more than 27,000 Department of the Interior employees, or more than half of the Department's total number. He is responsible for the custody or management of almost a billion acres of land; the welfare of 400,000 Indians; the administration of 176 national parks, monuments, and similar areas, the administration of 5 territories, numerous island possessions, and 96 trust territory island units; and the conservation of vital fish and wildlife resources.

Some indication of the responsibilities vested in Mr. D'Ewart as the Assistant Secretary for Public Land Management:

The Bureau of Land Management has exclusive jurisdiction over 486 million acres of unappropriated, unreserved public lands, varying degrees of responsibility for 300 million acres of reserved lands, and administrative jurisdiction over 58 million acres of acquired lands. This is a total land area of 826 million acres.

Land responsibilities of the Department of the Interior are varied. The Bureau of Land Management, for example, not only issues leases on public lands and processes withdrawals, but under the mining and mineral leasing laws it leases the minerals on public domain lands. An important phase of this latter activity in recent months has been the conduct of lease sales on the outer Continental Shelf, the first three of which returned more than a quarter of a billion dollars to the Federal Treasury in bonus bid payments and first year rentals.

Through the granting of grazing permits, the Bureau has numerous range responsibilities. It also carries out sustained yield forest management of timberlands under its jurisdiction.

The Bureau of Indian Affairs is responsible for 53 million acres of Indian land held in trust by the United States. It manages 300 reservations or similar areas located in 25 States. Activities of the Bureau of Indian Affairs include: Acting as trustee with respect to Indian lands and money and assisting the owners in making the most effective use of their lands; providing public services where needed; furnishing guidance and assistance to those Indians who wish to leave reservation areas; and collaborating with the Indian people in the development of programs leading toward full-fledged Indian responsibility for the management of their own property and affairs as well as the gradual transfer of public service responsibilities to the agencies which normally provide these services for non-Indian citizens.

The National Park Service administers 21,898,000 acres of Federal land in 176 national park system areas as well as 2,020,000 acres in 5 areas administered for other Federal agencies. It is responsible for the protection of natural and historical areas while providing for their use and enjoyment by the public.

The areas over which the Office of Territories has jurisdiction cover 582,000 square miles and include a population of 3 million. It guides and coordinates operating programs designed to promote the economic and political development of the areas under the jurisdiction of the United States. The office supervises and directs the operations of the Alaska Railroad and the Alaska Road Commission, and conducts public works construction programs in the Virgin Islands.

The Fish and Wildlife Service administers 264 national wildlife refuges in 42 States, Alaska, Hawaii and Puerto Rico, and 89 fish hatcheries in 42 States. The total land area administered by the Fish and Wildlife Service aggregates nearly 18 million acres. Its activities embrace the conservation of North American waterfowl; the administration of laws governing commercial fishing; programs for the maintenance of fresh water fisheries; the control of injurious species; and programs for fish and wildlife restoration.

Address by Hon. Clarence J. Brown, of Ohio, at Salute-to-Eisenhower Dinner, Wilmington, Del.

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Monday, January 23, 1956

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent address given by the Honorable CLARENCE J. BROWN, of Ohio, at a salute-to-Eisenhower dinner held in Wilmington, Del., on January 20, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My fellow Americans, it was with genuine pleasure that I accepted the invitation of your splendid chairman of this dinner, Barton Feroe, to come to Wilmington tonight to address the Republicans of Delaware, for my appearance here has given me the opportunity to see many old friends. I am always happy to appear on any platform with your great United States Senator, JOHN WILLIAMS, a man whose civic courage is unsurpassed in the Nation. He has contributed much to bring about honesty and decency in the affairs of Government.

It is also pleasing to come to the State which gave to our national life such outstanding legislators and statesmen as my old friends, Dan Hastings and John Townsend. Both gentlemen were, and still are, giants in governmental affairs. Both were outstanding leaders during their service in the United States Senate, and were so recognized far and wide.

Then, too, it is a real pleasure to come to the State of which my longtime friend, and

former colleague in the House of Representatives, Caleb Boggs, is the able and distinguished Governor. He has given a splendid account of his stewardship during the time he has occupied the Governor's chair. Under his direction your State has enjoyed good government, great prosperity, and almost fantastic growth. Delaware is today the fastest-growing State east of the Mississippi River, with the possible exception of Florida, where I understand they count the tourists. Delaware ranks fifth in the Nation, but even more important, it ranks first in the United States, in the percentage of its citizens who are gainfully employed, and last or lowest in the percentage of those who are unemployed. It is not difficult for any person who wants to work, to find a job at good pay, here in the State of Delaware. Such a condition springs not only from good government on the State, national, and local levels, but also as the result of forward-looking and enlightened industrial and business leadership within your State. And to add to my pleasure is the opportunity it affords for me to renew my friendship with your efficient State chairman, Ed Duffy, who has given to Delaware an effective Republican organization. There is none better in the land.

So I salute you—the political, civic, and industrial leaders of this great State of Delaware, in your forward march toward the fulfillment of your destiny.

We are here tonight to participate with thousands of other Republicans in the more than 60 salute-to-Eisenhower dinners which, at this very moment, are being held across the width and breadth of this land to pay tribute to one of the greatest Presidents this Republic has ever had—Dwight David Eisenhower. Like the immortal Washington, he was first in war when the forces of cruel dictatorship threatened our continued liberties and, in fact, our very existence. Like Washington, he has been and is first in peace, for no one has waged a more valiant battle for the cause of world peace than has our warrior chieftan of World War II—now the President of the United States—Dwight D. Eisenhower. And may I add, ladies and gentlemen, that like the first President of this Republic, Dwight David Eisenhower today comes first in the hearts of his fellowmen. It is due more to his efforts than to those of any other human being in this world, that the guns are now quiet on every battlefront and military planes no longer drop their cargoes of death and destruction.

Dwight D. Eisenhower, as a candidate for President in 1952, told the war-wearied people of the United States and the world that if he were elected he would go to Korea and do what he could to bring an end to the fighting there. There were those who argued, in the height of the campaign, that Mr. Eisenhower was playing politics—that he did not mean what he said. But he kept that promise—just as he has kept every other promise he has ever made. The guns in Korea were silenced in late July of 1953, less than 6 months after Mr. Eisenhower assumed the Presidency of the United States. Nowhere in the world tonight are American boys fighting and dying. True, they stand on guard tonight in many places in this troubled world to protect the security of their beloved country; but they are not being called upon to kill or be killed. Today, under the leadership of a gallant warrior and great statesman—our beloved President—our national defense is stronger; our people are more secure; and the outlook for world peace is brighter, than at any time since World War I first began.

So in the field of international affairs, Dwight D. Eisenhower has brought peace to the United States and hope to the world. While it is an uneasy peace we enjoy, it is a stronger, more secure one than we have had for many years. Under his leadership the people of a free world have united in a determination that the freedom of their governments, and of their individual citizens, shall be maintained and preserved.

On the home front the President we salute tonight has brought a reformation in our governmental affairs that is almost unbelievable. Above all else he has given us honesty and decency in Government. And only those who have served in Washington under past administrations can understand and appreciate the importance of the flat statement I have just made. The ever-recurring scandals of former years suddenly came to an end when Dwight D. Einsenhower became President, for he brought to Washington with him men of outstanding character and ability, all as part of a team, to help in the gigantic task of remolding and redirecting the affairs of state.

Not only did Ike bring honesty to Washington, but efficiency and economy, as well. For the first time in many years the budget will be balanced this fiscal year, and again next. Federal expenditures have been reduced during the Eisenhower administration by approximately $10 billion a year. The work of Government is being conducted more efficiently and effectively than ever before, with 175,000 less employees on the public payroll. We have a stronger national defense today—with less manpower—than at any time since World War II ended.

During these first 3 years of the Eisenhower administration the Nation has enjoyed the greatest peacetime prosperity in all human history—a prosperity which has been established upon a sound basis. Business and industry have been freed of costly, worrisome controls, and our national economy has been placed, and maintained, up a high level. Needs of the workingman have been met, and his rights protected and furthered, without bending the knee to corrupt labor bosses, or the placing of unfair or undue burdens upon his employer.

As President Eisenhower starts the fourth year of his administration today, he is in a position where his opponents dare not attack him personally, or his record. Instead they deal in generalities to make such charges as—and I quote: "The Cabinet is made up of millionaires," and "the Eisenhower administration favors the rich against the little man," and so on, ad nauseum.

Perhaps it may be well to look at the record. For 20 years before Mr. Eisenhower came to office we had one party doing a lot of talking about "the forgotten man," and how much it would do for "the little man." I cannot help but wonder if public memory is as short as some people would like us to believe. I do not believe the average wage earner has forgotten what went on during the Roosevelt and Truman administrations, and especially during the postwar years, under Truman, or the effect such activities actually had on his—the wage earner's pocketbook.

All of you here tonight, along with every wage earner, can remember the famous cost-of-living wage increases which came about under the Truman administration, and how our Fair Deal friends boasted of what they were doing for the workingman. If I recall correctly, there were five rounds of those so-called cost-of-living wage increases. Now I ask you, why were they called cost-of-living wage increases? The answer is simple. It is: That the Truman administration deliberately sponsored one of the most terrific periods of inflation this or any other country has ever endured. Between the end of World War II and the end of the Truman administration, the cost of living increased 47.4 percent. Just think of it. I repeat, under the Truman administration, the cost of living increased almost 50 percent—47.4 percent, to be exact. Do you wonder that the American workingman had to have five rounds of such so-called cost-of-living wage increases?

The truth is, the Truman administration had the American workingman on a treadmill. Or, to put it another way, it reminds me of the story about the farmer dangling an ear of corn on a pole just out of reach of his mule's mouth, just to keep him running.

Now let's take a look at the record of the Republican Party and Mr. Eisenhower's administration since he took office 3 years ago today. Let's see what our party and our President have done for the average workingman, or for the little man, if you please.

Inflation under the Truman administration has been stopped dead in its tracks by the sound Republican policies put into effect under the Eisenhower administration. In the 3 years we Republicans have been in power nationally the cost of living in the United States of America has increased less than 1 percent, as compared to the astounding 47.4-percent increase which took place, to the detriment of all, during the 7 years of Truman.

And now, get this: While we were checking inflation, the wise policies put into effect by the Eisenhower administration made it possible for our working people to get wage increases—real wage increases—not phony cost-of-living wage increases. Should you believe this to be only my personal opinion, let me cite my source of information. It is the American Federation of Labor. That great labor organization, in its monthly research report, volume 8, No. 2, issued in February of last year, stated that wage increases—and I quote—"were almost entirely over and beyond the amount needed to compensate for the cost of living." In other words, the AFL disclosed in its official report, that wage increases during 1954 represented the greatest gain in real wages since World War II. And they pointed out that those wage increases had been gained with fewer hours and less work-time loss through strikes, than in any year in recent history.

I repeat, my source of information is the American Federation of Labor. Do you wonder, ladies and gentlemen, that George Meany, president of the American Federation of Labor, said publicly, just a few months later, at a luncheon at the Washington Press Club—and I quote—"Yes, right now we never had it so good."

Let's take one more look at this whole matter of real wage increases. The pre-Eisenhower peak in real wage earnings was $61.28 during the year of 1944, which was the height of World War II. With peace under the Truman administration real wages plummeted nearly $10 a week and did not start back up again until the Korean war had begun. In the last year of the Truman administration real weekly earnings, with the Korean war going full force, averaged only $59.89.

But under President Eisenhower and the Republican Party, in peacetime, with none of our boys fighting and dying, real earnings of the American workers have climbed each year to set a yearly new all-time high, with the result that the latest official figure or real wage is $68.32 per week. I call this doing something for the little man instead of just talking about how much will be done for him, don't you?

But let's look at the matter in another way. Some of our friends of the opposition try to tell us everything is being done for the rich by this administration and nothing for the average American. Well, according to the United States Treasury we have approximately 9,000 millionaires in the United States, out of 168 million people. Last year the motor-car industry of America produced and sold over 8 million automobiles. Now you and I know that the 9,000 millionaires have not bought all of them. At least 8 million motor cars were sold to the little men of the country in 1955. During the past 3 years of the Republican administration, approximately 4½ million new homes have been built in the United States. Now I don't believe anyone can tell you that the 9,000 millionaires in this country are

occupying all of those 4½ million homes. Neither are they looking at the 30 million television sets, or using all of the millions of refrigerator and deep-freezes, automatic washers and dryers, and all of the many other appliances which make modern living so much better than it was a few short years ago.

Now the truth is Mr. Meany was right in his Press Club speech. The little man has never had it so good as under the Eisenhower administration.

Of course, that is not all of the story, by any means. The Republican Party under the leadership of President Eisenhower can list scores of other things it has done in the interest of the little man. For example: 10 million more workers have been brought under old age and survivor benefits of the Social Security system, while at the same time the actual amount of retirement benefits has been increased for all. Unemployment coverage has been extended to 4 million additional American workers. Draft calls have been reduced. And let me emphasize that no American boy is being drafted today to be maimed or killed in a futile war.

Taxes have been cut by 10 percent on the average. Numerous benefits have come to the average citizen in the way of reduced excise taxes, and other helpful tax law provisions have been voted. For example, 2,100,000 working mothers can now deduct $600 annually from their income tax report for child-care expense; 1,300,000 parents have been given an additional deduction of $600 where a dependent child earns more than his $600 exemption yer year; 1,800,000 retired people have been given an additional $1,200 annual retirement exemption from taxes, and 8,500,000 families get larger medical expense deductions than ever before, all thanks to the Republican Congress and a Republican President cooperating on the gigantic job of revising and rewriting the Nation's internal revenue laws for the benefit of the average American—the so-called little man.

And on the economic front, let me point out that in the year of 1955 our national product reached the grand total of more than $390 billion. The total of our individual incomes last year was $302 billion. More than 65 million Americans were gainfully employed in December of 1955, and less than 2 million were unemployed, mostly for reasons of their own.

So, if I may use the same sort of an expression as did that great leader of American labor, George Meany—Never did America have it so good as under the Republican administration headed by the man we salute here tonight—our President—Dwight David Eisenhower.

For many weeks now all Americans—and in fact thoughtful persons all over the world in every land and clime—have been concerned over the state of the President's health. There are very few human beings who do not know that in late September the man we honor tonight suffered a heart attack out in Denver, which incapacitated him for some time.

I cannot tell you tonight the condition of the President's heart, but I do know one think—he has a heart. Not since our Party a 100 years ago gave to the Nation the Great Emancipator, Abraham Lincoln, have we had a President more humane—more interested in the welfare of his fellow men, more religious in mind and nature, more ready and willing to take his difficulties and the troubles of his country to Almighty God in prayer, than the present Chief Executive of the United States, our beloved Dwight David Eisenhower. We know—not as Republicans but as Americans—that he is a good man, that he is a trustworthy man, that he is a man of faith and of courage; that he bears good will toward all men, and that he is dedicated to the pursuit of peace. May all of us here tonight, each in our own way, say a silent prayer that God in his wisdom may strengthen and renew the gallant fighting heart of our President so that he may continue to give to us and to the world the enlightened leadership which has been his during the past years.

So here tonight, not as Republicans alone, but as a grateful people, we give our salute to Eisenhower.

Petition for Arms to Israel

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. ANFUSO. Mr. Speaker, I am in receipt of a petition from a group of constituents of my district urging my intercession with the Department of State to make available arms to the State of Israel in its present crisis.

I am wholeheartedly in support of the views expressed in the petition. I shall do everything possible to bring to the attention of the State Department the urgent need for sending arms to Israel in order to safeguard its existence as an independent state. In the very near future I hope to introduce a resolution in Congress along these lines, and at that time I shall express my views in greater detail.

In the meantime, I am inserting into the RECORD the following petition of my constituents and the names of the individuals signing the petition:

To the Honorable Congressman VICTOR ANFUSO:

DEAR SIR: As the distinguished representative of our district we as American citizens appeal to you to bring to the attention of the State Department, that the course being pursued now poses a great threat to the very existence of Israel.

Our country being the first to recognize Israel as an independent country must consistently feel the responsibility to help protect its existence as well as its borders. Russia and her satellites for their own selfish and imperialistic reasons are rapidly arming Israel's enemies. Is the United States going to sit idly by and watch this young country which gave asylum to thousands of homeless and helpless people, this little country that has been a bulwark against communism, the only democracy in that region, being wiped off the face of the earth?

Our country since its very beginning has been a guiding light and a tower of strength to people all over the world, who chose to live the democratic way of life. Our tradition has always been to give them help and comfort in their struggle for freedom. Can we then, now deny to Israel the arms she so sorely needs to protect herself and her very existence?

Therefore we strongly urge and pray that you use your influence in Congress to see that justice is done. A policy of appeasement that did not work in Munich with Hitler will not work with Nasser.

Your efforts will be greatly appreciated and remembered by your constituents.

Sincerely and respectfully,

Abraham Lipson, Benzion Pfeffer, Shea Edelstein, Nathan Greneman, Hyman Lurie, William Goldberg, H. Schmell, Benj. Furman, Mr. and Mrs. Oscar Hoffman, David Sabath, Joseph Itzkowitz, Chane Pomerantz, A. Wolpinsky, Louis Kronowitz, H. Schwartz, Abram Leverkoop, Sam Peisner, David Turkish, Joseph Lanter, P. Weiner, O. L. Weiner, Mary Postofsky, Jean Peisner, D. Winter, M. Winter, I. Siegel, Abraham Weidberg, Mrs. Rae Greif, Jack Greif, Mrs. R. Lipson, Pauline Shneider, Jean Behar, Mrs. S. Peltz, Mrs. F. Pavany, R. Kieval, A. Sternblitz, M. Krawitz, L. Prager, R. Heslowitz, I. Shneider, H. W. Halpert, Maurice H. Kronowitz, Rabbi Elchanan W. Weitz, Hyman Peltz, Joseph Weinberg, Mrs. N. A. Posner, Mrs. E. Zureback, Irving Hirsch, Frank K. Wainawski, Irving Rosner, Gussie Citrin, William Meyer, Samuel Mishkin, Hyman Fischberger, Sylvia Fischberger.

Hells Canyon Giveaway

EXTENSION OF REMARKS
OF
HON. DON MAGNUSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1956

Mr. MAGNUSON. Mr. Speaker, the award of a license to the Idaho Power Co. for the construction of three low dams on the Snake River in Idaho unmasks the lack of regard by the Federal Power Commission for the principle of comprehensive, multipurpose development of our great Columbia River system.

The power partnership envisioned by this administration holds forth no partnership whatsoever. The partnership proposal has meant, instead, the use of administrative authority to block all further power development except where private utilities were cut in for all or most of the profits therefrom.

I offer for the RECORD a letter to the editor of the publication Public Power from Mr. Samuel Moment, of Portland, Oreg., formerly chief economist of the Bonneville Power Administration, which documents the destructive effect of this giveaway program.

The letter follows:

HELLS CANYON GIVEAWAY

PORTLAND, OREG., *September 21, 1955.*

The bitter truth of the giveaway of Hells Canyon Dam was virtually admitted yesterday by the Army engineers in the hearing on John Day Dam. The Board of Engineers rejected the request of private utilities for a low John Day Dam because it meant giving up 1,500,000 acre-feet of flood-control storage possible from a high John Day Dam. General Foote observed that we are losing what we had contemplated in Hells Canyon, referring to the loss of 2,800,000 acre-feet of storage resulting from acceptance of the Idaho Power Co. three-dam scheme by the Federal Power Commission, instead of the bigger Federal Hells Canyon Dam.

And so the engineers were instructed to restudy the matter, and see whether they can get storage elsewhere. Maybe they will look again at the Paradise Dam site on the Clark Fork where 5 million acre-feet of storage will be thrown away because the Montana Power Co. wants three lows dams in a repeat performance of the Hells Canyon case. Maybe the engineers will look to Mica Creek in Canada where 10 million acre-feet of storage will be thrown away because of opposition by Washington Water Power, Idaho Power, and former Idaho Governor Len Jordan, of the

Joint International Commission. And maybe the engineers will find that the simplest method of flood control for the lower Columbia River will be to let the Canadians divert most of the water on the Upper Columbia into the Fraser River, and also divert from the United States a few million kilowatts of electric power, and a few hundred thousand jobs.

That is the crime of Hells Canyon, the destruction of the principle of full development of the river. Out of that destruction has come a quarrel for bits and pieces—partial development at Paradise, partial development at John Day, and friction with our Canadian neighbors over storage proposals on the Upper Columbia in British Columbia. All this under the shadow of the worst floods in the history of New England. All this under the shadow of the 1952 worst flood on the Missouri. All this in the shadow of the right way to do things, the "308" Army Report in 1948 on the Columbia River system, born out of the brightest period in Northwest history when a Federal program of full development was under way at Bonneville, Grand Coulee, and Hungry Horse, with McNary, Chief Joseph, and The Dalles ready to follow, and Hells Canyon and others to have come later, bringing more of the industries.

All this because of the power-partnership plan, advocated by certain private utilities, and made into a political issue. Too bad that those who are destroying the principle of full conservation have no responsibility for replacing the jobs, the flood control, and the greater prosperity they would take away from the Northwest.

SAMUEL MOMENT,
Former Chief Economist, Bonneville Power Administration.

Address by Governor McKeldin, of Maryland, at the Salute to Eisenhower Dinner at Louisville, Ky.

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Monday, January 23, 1956

Mr. BEALL. Mr. President, in the many speeches lauding our great President, last week, there were hundreds of references to the many accomplishments of his administration. One of the finest tributes, however, was paid by Maryland's Gov. Theodore R. McKeldin, in speaking of the personal character of Mr. Eisenhower. "Like George Washington," said Governor McKeldin, President Eisenhower is human and "therefore he can make mistakes. But his strongest opponents do not believe that it is in him to be shifty, or treacherous, or cowardly, or mean." That point and others made by Governor McKeldin, during his speech in Louisville, Ky., are so worthy of consideration that I ask unanimous consent to have the entire address of Governor McKeldin inserted in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I propose to speak of you of Eisenhower. Not the President of the United States, not the world statesman, not the leader of the Republican Party, but the brave and honorable gentleman whom his countrymen of all parties delight to honor.

Without disparagement of other wise and patriotic men who have held the office, I think it may be said that seldom have we had a President whose hold upon the confidence of men was due in such great measure to his manifest integrity. He, as much as any living American, has earned the tribute that the Lord paid to Nathanael: "Behold, an Israelite indeed, in whom is no guile."

This sturdiness of character is the same element that made George Washington great, and that made Washington invaluable when the new Nation was threading its way along unknown paths to an unknown position in the world. At such a time brilliance, daring, vigor, resolution, qualities of immense importance to a leader, yet all these yield place to plain integrity. For when we are facing the unknown with no precedents to guide us, all these other qualities may be transformed into their defects: Brilliance may become fantasy; daring, recklessness; vigor, mere hardihood and resolution, ruthlessness. But integrity is unchanged by time or circumstance, and it is precisely when all else becomes uncertain that men cling to it most.

The United States is facing today a situation that in important respects is like that existing in Washington's two administrations. The problem then was to inspire confidence in the 13 former colonies, recently become independent States. They had just come through a dreadful war in which they had narrowly escaped falling under a tyranny that would have wiped out their national existence; so they were deeply, and rightly, suspicious of all organized power. Yet without organized power national existence was impossible. The problem then was to convince nervous, suspicious people that the power they had established in the new Constitution would be exercised reasonably and rightfully.

The problem was solved by putting the power in the hands of Washington and permitting him to establish the precedents by which his successors would be guided. It worked, not because of Washington's learning, or administrative skill, or intellectual brilliance, but solely because of his towering moral stature. It was admitted that Washington could be wrong; but it was not believed that he could be shifty, or treacherous, or cowardly or mean. So in his hands power was safely bestowed; and under his guidance the 13 States were welded into a solidarity that has endured longer than any other nation in the modern world has lived under its present constitution.

The problem of today differs from the one he faced, mainly in being larger and more complicated. The nervous and suspicious people are not inhabitants of 13 United States, but of nearly 70 disparate nations more loosely organized than the States were under the Articles of Confederation. The authority that the President of the United States wields over them is purely moral authority, with no legal power whatever. These people, too, have recently come through a great war in which they narrowly escaped falling under a tyranny that made the tyranny of George III seem benevolence itself. They are naturally, and rightly, suspicious of all power; and since a large part of all the military power remaining in the world is in our hands, they are suspicious of us.

It is unfortunately true that no man alive today has the moral ascendancy over the United Nations that George Washington had over the 13 States; but the man who comes closest to that lofty eminence unquestionably is Dwight D. Eisenhower.

Like Washington, he is human, therefore he can make mistakes. But his strongest opponents do not believe that it is in him to be shifty or treacherous or cowardly or mean. Therefore the nations know, even though some will not admit it, that power is safer in his hands than in those of any other man now prominent in public life.

While our tremendous armament undoubtedly has been a deterring force against war, armament alone is not enough to avoid involvement. We are fortunate in that ours is reinforced by the known integrity of the man who commanded the Armed Forces. Our enemies have been loudly accusing us of designing to attack them; yet, even the leaders of the Soviet Union have publicly admitted that the President does not desire war, and excuse their belligerent attitude by the unsupported assertion that other forces are driving him toward it. This means that even potential enemies know that from Eisenhower they will receive no stab in the back.

In a time of great confusion and perplexity, when all policies are questionable, all values uncertain, all defenses unreliabe, it is a priceless gift to any people to have one point of support that is fixed and motionless in the whirling chaos that surrounds it. We discovered that in Washington's time. Men knew that whoever else might lose his head and collapse into screaming hysteria, Washington would stand firm. Whoever else might forget his sense of values and be tempted to sell our national birthright for a mess of pottage, Washington would adhere to his standards of right and reason. So around his rock-like figure the Nation rallied and fought its way through its difficulties.

We are discovering it again today. At this moment of tribute to a man, I am not concerned with defending the political record to serve the interests of the party. For the moment I am claiming nothing except what our opponents themselves will not deny; I am merely pointing out that at a time when in much of the world all standards are being repudiated and the big lie is accepted as an instrument of policy we have in the White House honor and truth. Around that strong point the free nations have rallied and are forging ahead through one of the most difficult periods in history.

There is, of course, no indispensable man. That has been proved a thousand times. But in the government of a free people and the leadership of free nations there is an indispensable quality, namely, character, and when a man is distinguished for that quality above all others, while he may not be indispensable, his value is immeasurable.

The debt that this country and all free nations owe to Eisenhower was enormous before he came to the Presidency; but as "he that ruleth his spirit is better than he that taketh a city" so the gift of stainless honor surpasses in value the most brilliant military triumph.

We hope and pray that a gracious God may relieve us for a long time from any desperate need of military genius; but it would be blasphemous to hope or pray that we may not need integrity at the head of the state, now or ever. Masterly leadership against armed enemies is, at worst, an intermittent necessity; but masterly leadership against such foes as passion and prejudice, falsehood and dishonor is a necessity every day that the Nation exists. Eisenhower has given us both; but it is my firm conviction that the latter gift is more valuable than the former.

Nor am I ashamed of the swelling pride I feel when I reflect that this man is in the most exact and literal sense a product of America. He was tried and tested, and his quality was first proved under the African sun and on the beaches of Normandy; but stamped into his metal, never to be erased, is the line, "Made in U. S. A." What is any nation in the eyes of the rest of the world, except the roster of its illustrious sons? Greece is not an area on the surface of the globe. It is Pericles and the philosophers. Rome is Cato, Caesar, and the lawgivers. England is the Lion Heart and King Harry, and her poets and statesmen. So America, to the rest of mankind, is not her piled-up wealth, not her steel-tipped battalions, not

her fleets and flights of bombers, but those of her sons whose lives have added to the honor of the race.

Among these I count Eisenhower, not so much because he is what the Old Testament describes as "a mighty man of valor" as because in times when the souls of men were troubled even though their bodies were at ease he has consistently held up before them the ancient ideal of a gentleman, to fear God and tell the truth, and has never wavered in his belief that only through loyalty to that ideal shall we attain anything of our hearts' desires, or even physical safety, while we live.

The greatness of a country is measured by its production of such men, and it will not produce them save in measure as its own spirit is consonant with theirs. Eisenhower, the individual, may not be indispensable, but the spirit that animates him is; and if the time ever comes when America fails in appreciation of that spirit, fails to honor it with delight, and to cherish it fiercely, then, indeed, the decline of the Nation will have begun. For a great man is a diamond that is brilliant by collecting, concentrating, and flashing back the light that it receives. A great American reflects America:

"Her sights and sounds; dreams happy as her day;
And laughter, learnt of friends; and gentleness
In hearts at peace."

We cannot all be great, but the least of us can assist in creating the climate in which greatness can survive and flourish and come to its finest flower. The first step in this direction is for us to teach ourselves what true greatness is, and to applaud it, and foster it and cherish it wherever it appears. Brilliance is a part of it, but only the superficial part. Daring and strength and vigor and resolution all appertain to it, but they are not of its essence. The core and heart of it, or, let us say, the matrix in which it is formed, are none of these, but a thing that is not beyond the reach of any man. To describe it in Lincoln's words, it is simply "firmness in the right as God gives us to see the right." No man is so humble that he cannot achieve that; but no man is truly great unless he has achieved it.

The fact that this quality is so conspicuous in Dwight D. Eisenhower is sufficient answer to anyone who inquires why we follow him; for those who are loyal to a truly great man are inevitably touched by some reflection of his greatness. There are other reasons, many and strong—reasons of policy, reasons of history, reasons based on rigid logic, reasons based on our hopes and fears. If I have not touched on them, it is not because they are unsound, but because, for the purposes of this occasion, they are unnecessary. To all inquirers today I give one simple answer: We follow Eisenhower because, first of all, he is such a man that merely to be loyal to him is in itself a radiant badge of honor.

The Decision on the Proposed C. & O. Parkway

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Monday, January 23, 1956

Mr. BEALL. Mr. President, last week a newspaper in Hagerstown, Md., reported:

United States Senator GLENN BEALL isn't happy over the decision of the National Park Service and the United States Department of the Interior to abandon the long-discussed C. & O. Canal Parkway plan.

That observation, even if it had been expressed in terms 100 times stronger, would still be an understatement. After more than 5 years of working for a project, it leaves a man more than unhappy to find that someone has tried to cancel all his efforts. This is especially true when the goal is so worthy and when so many people will benefit. The situation, I feel, was summed up clearly in an editorial in the January 21, 1956, edition of the Cumberland News. I therefore ask unanimous consent to have printed in the Appendix of the RECORD the above-mentioned editorial.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A SHOCKING DECISION ON THE PARKWAY

The unexpected decision of the National Park Service and the Department of the Interior to abandon a plan to construct a parkway along the route of the old C. and O. Canal between Cumberland and Hancock comes as a great shock to the people of western Maryland.

Originally proposed by the Park Service itself more than 5 years ago, the people of western Maryland, led by Senator J. GLENN BEALL, overcame many an obstacle in order to push the parkway plan to the point where construction of the water-level highway between Cumberland and Hancock appeared to be in the foreseeable future.

Just what objections the Park Service and the Department of the Interior have to construction of the parkway are not specific, but reports indicate that canal rights-of-way and the Harper's Ferry national monument area will be tied in with a national historic park plan for the stretch between Cumberland and Seneca.

The most widely known individual opponent of the parkway plan is Supreme Court Justice William O. Douglas who walked the length of the canal to point up his argument that the canal area should be preserved for its natural wilderness beauty. Other outdoor and wildlife adherents took a similar position, evidently overlooking the fact that wildlife they want to preserve has been disturbed at rather regular intervals over the years by passing trains of the Baltimore and Ohio and western Maryland railroads, whose tracks run along or within a stone's throw of the canal for many miles.

Should it be that the Park Service and the Department of the Interior have yielded to the pressures of these groups, then is it not logical to ask why the Government ignores the wishes of the great bulk of the people of western Maryland in order to cater to the desires of the minority?

Cumberlanders and all western Marylanders have a great stake in construction of the parkway which we have looked upon for half a decade as an impending boon to our economy.

A parkway will not destroy the recreational aspects of the canal area. Instead, it will make the area more accessible to the people who want to use it. The Park Service undoubtedly had this in mind when, in their original plans for the parkway, they included numerous recreation spots adjacent to the road.

And as Senator BEALL pointed out when first advised of the decision of the Park Service and the Department of the Interior to abandon the parkway plan, "The recreational advantages to be derived from such a parkway * * * are many, but its use as a defense highway grows ever more important."

Further, it can be pointed out, tourists who now steer clear of Route 40 because of the mountains, doubtless would be inclined to follow such a level, scenic, historic route as the parkway would provide between Cumberland and Hancock. Cumberland unquestionably would benefit economically from the tourist dollars left here.

Senator BEALL properly was indignant at the decision to abandon the parkway plan as well as at the manner in which he was advised of the decision. He has promised to continue his fight for the parkway, and so has Representative DEWITT S. HYDE.

The parkway plan is vitally important to western Maryland, and western Marylanders should raise their voices loud and often at this decision to abandon the parkway. We have got to remember that the "squeaky wheel gets the grease," refight some of our battles to have the parkway again included as an integral part of the Park Service plans, and never again assume the lethargic attitude that the parkway plan is an accomplished fact—not until the wheels of traffic are turning over it.

Statement of Hon. Herbert H. Lehman, of New York, at United Jewish Appeal Dinner

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, January 23, 1956

Mr. LEHMAN. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD the remarks which I made at a dinner sponsored by the United Jewish Appeal at the Waldorf-Astoria Hotel on the evening of January 21, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A POSITIVE POLICY FOR THE MIDDLE EAST AND A LOOK BACKWARD AT PAST MISTAKES

(By Senator HERBERT H. LEHMAN, at dinner sponsored by United Jewish Appeal, Waldorf-Astoria Hotel, January 21, 1956)

I am much moved by the tribute you have paid me this evening. I do not consider the tribute to be directed to me personally. I would be vain, indeed, if I did.

I take your approbation to be for those causes and principles for which I have stood and fought for many years. I am proud and glad of the support you have thus expressed for those causes and principles, and thank you from the bottom of my heart.

I would surely be insensitive if I were not deeply affected by your having singled me out as a symbol of those causes and principles.

But what means even more to me is the fact that this large assemblage has shown with its deeds tonight a true devotion to some of those causes.

I mean the cause of freedom. I mean the cause of humanitarianism. And I mean the cause of democracy.

In a sense Israel symbolizes all of these causes, and more. Israel is also the cause of faith fulfilled, of prophecy come true, and of sacrifice recognized and rewarded.

But in contributing to the United Jewish Appeal, as you have so generously done tonight, you are doing more than contributing to the State of Israel and to the cause for which she stands.

You have contributed to the fight against prejudice and discrimination and oppression. UJA stands for these causes, as well as for the welfare and the upbuilding of the State of Israel.

You have contributed to the hope of a future for hundreds and thousands of Jews in north Africa, in Europe, and Asia, and wherever Jews still live with the mark of fear upon their hearts. You are holding out to them the lifegiving hope of emigrating one day to a land of refuge, freedom, and opportunity, and of escaping finally from either the shadow or the fact of terror and tyranny. This in itself is a noble and essential undertaking.

For these reasons, and just because I enjoy meeting with old and true friends, I am happy to be here tonight and to join with you in acclaiming the work of UJA.

I need not enumerate the full category of all UJA accomplishments, reflected in human souls rescued from every quarter of the globe and resettled in many quarters of the globe. That work is going on today, and, of course, it must continue to go on.

But it is surely worthwhile to reexamine and reassess the fundamental significance of what UJA has up to now accomplished in Israel, and the full scope of the present challenge there. Thus we may be able to see that problem in full perspective.

What has been achieved up to the present?

You have helped to build a State: a fortress of freedom, a haven of refuge, and a bastion of democracy in the Middle East.

You have helped to transform an idea into a fact, a hope into a reality, and a prayer into a realization.

You have helped to provide asylum for 800,000 hard-pressed human souls, the unwanted, the uprooted, the homeless and helpless.

You have helped to write history and to fulfill an ancient promise.

You, with your contributions, have helped to buy that which is beyond price and purchase—a future for an entire people and a place in history for a new democratic nation.

But all of us know that what has been done in the past provides only a measuring stick for that which remains to be done. The present challenge is far greater than any faced heretofore.

We must, however, understand better than we do the nature and magnitude of this challenge. It is not susceptible of simple description or simple solution.

Forces have been unleashed which we did not conceive when the establishment of Israel was first undertaken and pressed to realization. Stupendous dangers have arisen beyond any we foresaw. We must see them clearly now and grapple with them. There is, of course, no turning back now.

On the turnpike of history, there are few entrances, but the exits are equally few and equally difficult to reach. We are supremely confident that whatever the dangers ahead, Israel is on this turnpike to stay.

The forces and dangers rampant today in the Middle East were not brought into being by Israel. They were there all the time. But they were brought into focus by Israel, and today they are directed against Israel.

These forces are not local. They are international, just as the dangers are international. And they are not single, but plural.

First of all, and most apparent, is the force of international Communism, aggression and subversion. This force, while worldwide, has only lately loomed as an immediate danger in the Middle East. But in fact, it was potentially there all the time.

Side by side with this ruthless force is another, even more powerful and violent—the revolutionary force of the oppressed and underprivileged peoples of the earth, awakening after centuries of troubled passivity, to demand their share of the 20th century. This force was also there, in the Middle East, all the time. But it was not recognized. Some do not recognize it, and do not reckon with it, even today.

Frequently, these two forces, so utterly different and distinct, are mistaken for one and the same, because they often overlap each other. In this lack of perception on our part there lies a danger to us as great as from communism itself.

The tidal waves of these two tremendous forces, churning the waters of our time, wreaking havoc upon all shores, could easily be expected to spare Israel from their effects. And they have not.

In fact, Israel today lies at the very focus of both these forces, and is receiving the buffets of both of them.

For the Soviet Union, Israel represents an intolerable enclave of freedom and stability in the midst of a seething world, ripe for a Communist-type revolution. For the Arab leaders, Israel represents a convenient diversion for the surging forces of ferment and upheaval within their countries—a ready object for blind feelings of resentment and indignity among the ruled and oppressed peoples of the area.

Israel symbolizes a kind of revolution, too, but an orderly, western-type revolution, the unleashing of the energies of a people for dynamic progress, within the framework of democracy, and by the consent of the governed.

To both the Arab leaders and the Kremlin, then, but for different reasons, Israel is a menace—for the Arab chieftains, a dangerous example; for the men of Moscow, a dangerous center of western influence.

In the face of this situation, what has been the policy of the free nations, and more particularly, the policy of our own Government?

In brief, it has been a shortsighted policy, reflecting little resolution or determination, and no comprehension whatever of the basic forces or factors involved.

Our Government has followed a policy of so-called "impartiality" as if it were a simple question of favoring one or the other of two equal and equally good friends who cannot get along with each other * * * as if the merits were equally distributed on both sides.

Our Government has acted as if the Arab nations were stable powers and stable societies, like England and Norway and Holland and Denmark.

We sought to draw one and then the other of the Arab States into our complex pattern of world politics, as in the Baghdad Pact and the Northern Tier.

In this we have built a fortress out of straw, and set it up on quicksand.

What a folly this has been. What a lack of understanding this has shown.

We have reaped from some of the Arab nations, for all our so-called impartiality, a harvest of hostility and anti-Western agitation. And we set the stage for the direct entry of the Soviet Union into the very center of the scene. Perhaps it was inevitable, but we made it doubly easy for the Communists and doubly hard for ourselves.

Meanwhile our policies have served to give the Israelis a shattering sense of isolation—a feeling of having been abandoned and left to shift for themselves, though surrounded by deadly enemies bent on their destruction.

We should have based our policy on the bedrock facts of the Middle East today: grinding poverty, unrest, and instability in the Arab States; and dynamism, democracy, and stability in Israel. But instead of that, we based our policy on pious phrases about peace, meaningless sentiments about impartiality, and mechanical calculations of naive military strategy.

We undertook to build up a line of defense against the Soviet Union, without reckoning on the power of the Communists to leapfrog the line and come up in our rear.

We have given short shrift to the stable and democratic nation of Israel, whose ideals are the same as ours.

Meanwhile, we have vainly courted the favor of neighboring totalitarian regimes, which sit uncertainly on top of seething volcanoes within their own countries, and which logically look for any expedient to remain in power, even the expedient of alliance with the Soviet Union.

But where do wo go from here?

It is rather easy to criticize, and I would be less than fair if I did not say that the problem is hard and complex, even beyond description.

I do not envy Secretary Dulles his responsibility, although I strongly disagree with the solutions he has put forth up to now. Nor would I begrudge him his mistakes, if they were the result of efforts pointed in the right direction.

But it is not enough to speak of peace as a goal and of impartiality as a principle. The test of words and settlements lies in actual, specific policies and programs.

It seems crystal clear to me that as far as the Arab States are concerned, we must concentrate with all our might on helping them to resolve their basic problems. We must not let them fall prey to Communist-type revolutions or to Communist intrigues.

We must help to raise the status of their people.

We must assist and cooperate in basic economic undertakings, such as the Aswan Dam in Egypt and the Jordan River development plan.

We must offer large-scale assistance for the resettlement of the Arab refugees.

We must encourage progressive and forward-looking policies, such as land reform and the disestablishment of economic feudalism.

We must be generous but firm.

We must make clear that our economic assistance is designed to release the energies of the Arab peoples to enable them to help themselves to peace and prosperity, not to war and hostility against Israel.

Israel must be assured of security and territorial integrity. Her fears of aggression must be quieted, and the saber rattling that now resounds through the area on both sides must be stilled.

A program of progressive disarmament, as soon as peace has been agreed upon, should be and can be in order, so that all energies may be harnessed for the betterment of the peoples concerned:

This, then, must be our answer to the Soviet intrusion into this area:

1. A security pact with Israel, but open to all her neighbors.

2. Arms for Israel, as long as arms are needed to maintain the present precarious balance of forces.

3. Large-scale and long-range economic aid to the Arab States and to Israel.

And then peace and disarmament.

Does this not constitute a positive policy? I think so.

Let us then, as a Nation, without regard to any partisanship whatever, unite on some such policy, with all the collateral programs and conditions which are required. Let us take the lead and convince the other free nations of the desirability of this policy, and solicit their cooperation and participation in it.

Let us, as individuals, advocate and support such a policy. Let us meanwhile con-

tinue to support our embattled and endangered coreligionists in Israel and elsewhere with United Jewish Appeal and with bonds. Let us do this with unmeasured devotion and unstinted generosity.

And then let us all, together, work and look forward to the day when the spur to our efforts will not be the threat of war and destruction, but what Henry James called the moral equivalent of war: Heroic dedication to the uplife of humanity and the fulfillment of mankind's dream: Peace on earth, justice to all, and security for all.

This we will surely achieve in a not too distant day, if we have courage, and faith, and humility before God, the one Father of us all.

Politics and Public Office: Is It an Honorable Profession?

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Monday, January 23, 1956

Mr. SMATHERS. Mr. President, it is with particular pleasure and pride that I bring to the attention of the Members of the Senate an address entitled "Politics and Public Office: Is It an Honorable Profession?" delivered by one of Florida's outstanding citizens and public servants, the Honorable Stephen C. O'Connell, justice of the Florida Supreme Court, to the Coral Gables Kiwanis Club, on October 8, 1955. He points out with great clarity the case for public service in one of the finest presentations I have ever heard.

In public life we have all encountered too often a distressing and widespread cynicism toward politics and government. It is one of the most disturbing facets of the contemporary American personality.

While few officeholders have betrayed their trust, people are prone in this day and time to remember the exception rather than the rule. The popular concept of a public servant today seems to be that he is one who feeds at the public trough in a pursuit avoided by honorable men. Of course, this isn't so. Such a popular attitude, however, tends to turn away from public service young men of integrity and ability who normally would be the future keepers of the flame.

Justice O'Connell's address dealing with this problem is an excellent one, and I commend its reading to every Member of the Congress. At this time, Mr. President, I ask unanimous consent that the address be inserted in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

POLITICS AND PUBLIC OFFICE: IS IT AN HONORABLE PROFESSION?

(Text of speech given by Stephen C. O'Connell at Coral Gables Kiwanis Club on presentation of Allen Morris Award, October 6, 1955)

Obviously, most of you here would, under these circumstances, answer "yes."

Yet the attitude of the people of this State and this Nation generally gives a negative answer.

How many of you have, or ever will, offer yourselves for public office? Why not?

Chances are that the answer you would give would indicate that politics and public office is considered by you as neither being honorable, nor a profession, nor worth the sacrifice it requires.

Should this attitude concern us?

When there is a shortage of doctors and engineers we recruit more men and women to enter the field and make the reward more attractive.

We spend a great deal of money recruiting men and women for our armed services.

We portray the military as an honorable profession and increase the benefits to those in it.

Private business has learned that it must recruit, train, and educate its personnel to operate efficiently and develop leadership.

It has made tremendous strides in channeling young men and women into the proper courses of training, to selecting a vocation where they are needed and in placing them in the proper job.

There was a time when Jefferson's theory that government was best when governing least was acceptable.

However, the size of government, its scope and effect on our lives, and the world, has increased to the point that it is by far the biggest business in almost every town, county, and State in this Nation, including Florida.

We can no longer accept nor tolerate government by chance.

Unfortunately, our public officials for the most part enter politics and public office much in the same way they did in Jefferson's days, principally, by chance.

True, we offer courses in our schools in government. But those who major in the subject usually turn to teaching or a civil-service job. Seldom do they enter politics.

While there are 10 candidates for every acceptance in medical school and 5 applicants for each accepted in Harvard Graduate School of Business, hundreds of political offices in the State are filled by some group drafting an unsuspecting and unqualified citizen to fill the office as a stopgap measure.

Have you ever stopped to compare the relative qualifications and training of your political officeholder with men in private business holding posts of comparable importance, or to compare the compensation each receives.

Do these conditions exist only because we fail to establish strict entrance exams to politics, or fail to require qualifications of and examinations to be passed by those seeking public office, such as is required by a professional man or for a civil-service job.

Why, then, is it that politics and government, in too many instances, are getting the leftovers and business and the professions the more able and qualified.

Why, then, do so few young people, as well as so few of the more mature, plan to make a life of politics and political office. It is because politics and government are considered less important than business or the professions?

All the answers are not certain, but some are obvious.

While we spend millions in this country each year trying to determine why a person smokes a certain cigaret, listens to a certain radio or TV program, and to plot the love life of the cricket mole, we have done little if anything to determine who so few of our better qualified citizens make a life of politics and government service.

Nevertheless, I would be willing to say there are three principal factors which prevent politics and political office obtaining the status of an honorable profession, and persons entering it by plan for a life of service. They are:

A. Our failure to establish it as a profession and to offer schooling and training for it.

B. Our failure to establish adequate financial reward for the officeholder.

C. Our public and individual attitude, that politics and government is dishonest, lacks integrity and is for the incompetent who can't make a living in private business.

It is obvious that our more capable young people will select and plan a course of political life, by choice, only if we as parents, as citizens and as employers, urge them to do so, make such service more attractive financially, and remove the stigma now borne by politics and those in it.

More adequate salaries must be paid, but will be paid only when the voter recognizes that politics and government service is a profession that seldom is mastered by an act of will or by sudden and short exposure to political office.

One should not be required to be wealthy to afford public-service and conversely should not be required to strip himself of all business interests in order to enter political office. But we criticize the individual who doesn't do so.

But of the factors involved in improving the quality of politics, political office holders, and Government service, our attitude toward politics is the most serious.

We encourage our children to become a member of the professions or business.

We glorify the role of the actor and the actress and the professional and amateur athlete.

We gladly give our children and ourselves to service in the ministry, the priesthood, and the synagog, and it should be so.

We speak of the high ideals of service to God and country. Yet, we encourage the first and discourage the latter.

And we visualize and portray the politician and the officeholder as a cigar smoking heel in a backroom or on a soapbox making a fool of himself.

We picture politics and Government service to our young and to each other as something base, unclean, and to be avoided.

In a survey of a decade ago, 7 out of 10 fathers said they did not want their sons to enter politics.

A young business executive, banker, or professional man is likely to be passed over in promotions or to lose his job, if he enters politics or holds public office.

We, by our attitude, create the presumption that a politician is dishonest and incompetent.

We impute the few cases of corruption, dishonesty, and corruption to politics and officeholders, generally, using the broadsword when we should use the rapier.

We invite the incompetent to serve by establishing the qualifications of public office as being only:

1. A pleasing personality.
2. The endurance of a 2-mile runner.
3. A glib tongue and loud voice.
4. A big campaign fund.

It, therefore, becomes a vicious circle.

Politicians and government will be held up to scorn so long as they act from ignoble motives and are incompetent.

Until politics and officeholders improve in quality, they will be given a bad press, so to speak.

So long as they are held up to scorn and given bad reports, it will be difficult to persuade the more competent and able to make public service and politics a career.

Is it necessary to improve our politics and government?

It is not only necessary, but imperative. Other nations have in the past and some are now failing because of the lack of competent public officials, needed leadership, and quality of and confidence in government.

With the importance and complexity of present-day government, at every level, the selection of those to run it cannot be left to chance and whim. It requires those men and women with the best intelligence, judgment, and motives.

Politics, as we speak of it, being the process by which we select our officials, becomes increasingly important.

Is it possible to improve politics, to make it and government service an honorable profession?

I say it is.

It must be done.

How to do it?

First, recognize that politics and government service is a profession that is seldom mastered by an act of will or by sudden and short exposure to political office. It requires training and education.

Second, salaries must be increased to a point somewhere near that comparable to those paid by private business.

Third, women must be encouraged to participate in politics and to hold public office.

With their higher ideals and less willingness to be practical politicians they will raise the level of integrity and respect of politics and service.

Fourth, political organizations must seek and welcome the intelligent, the capable and the young, and select candidates on a basis of merit, first, ability to get votes, second.

Fifth, parents, employers, the professions and business must encourage the young, as well as the mature, to select politics and public office, not only as an avocation, but as an occupation.

Public service must be stripped of the air and presumption of dishonesty and incompetence.

The sacrifice of public service must be recognized for what it is, as being next in importance to that of service of the minister, the priest and the rabbi.

Sixth, and last:

We must stop deriding the politician and the officeholder. We must realize that he has the same right to make an honest error as the businessman.

Instead of treating him as a servant, to be verbally kicked and beaten at will, he should be treated with the common decency and respect that we treat the other professional and businessman.

The mudslinging, the backbiting, the attempt to reduce in character, the rumor mongering, can be outmoded by rejecting at the polls, he who uses it.

The media of news, the press, radio, and TV., the movies, all of which control public opinion, should and must, without sacrificing truth, seek to inspire confidence in Government and those who run it, and encourage men and women to enter the field, must portray politics and Governemnt as an honorable profession manned not by incompetents and racketeers, but by capable honest citizens.

If news is to be slanted, slant it to praise and encourage rather than to deride and assassinate character and lessen confidence.

The fear of public abuse, wagging malicious tongues, and of unfavorable publicity, sometimes justified, but more frequently not, does more to prevent men and women of integrity and ability from entering the political field than any other factor.

Most men and women have a desire to serve. It is inborn.

Adequate compensation is not a bar to entry of the capable into public service.

Given the opportunity and encouraged to enter the field of politics and Government and being assured that they will not be abused unnecessarily, that their families will not suffer from unwarranted attacks, and being made to feel that it is an honored profession, respected by their fellows, more of the capable with integrity and honesty would enter the field and work to make a life, not just a living.

The man or woman who decides on a career of public office, of Government service, makes the same decision and must be motivated by some of the same ideals as a man of God.

Both must have a desire to serve his fellow man.

Both must have placed the value of service above wealth.

The Honorable J. Saxton Lloyd, presently chairman of the Florida Development Commission, told me recently of an experience in which he had heard the remarks made at the last rites of a man who had served God all of his adult life.

The speaker stated that the deceased had every quality that would have enabled him to have been a man of wealth, of prominence in this State, yet he had decided to serve God.

Why? The speaker asked.

Because, he answered, that man did not mistake the pleasures of life for happiness, nor did he judge success by money.

Government service must be elevated to the same honored position, so that men and women can judge the value of it and gain some of the same satisfaction from it, as did that man.

It can be done, it must be done.

Education Is a Federal Problem

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, January 23, 1956

Mr. HUMPHREY. Mr. President, recently in response to an editorial entitled "Education Is a National, Not Federal, Problem," which appeared in the Star, of Minneapolis, Minn., I cited the activities of Federal Government which related to our educational system, with specific reference to legislation developed and passed providing Federal aid to education. I ask unanimous consent that my letter dated January 13, 1956, be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

JANUARY 13, 1956.

The EDITOR, THE MINNEAPOLIS STAR,
Minneapolis, Minn.

DEAR MR. EDITOR: Your editorial of Wednesday, December 21, entitled "Education Is a National Not Federal Problem" deserves further consideration. This editorial was written in reply to my letter of the same date printed in your column Everybody's Ideas..

You may recall that I served as a member of the President's Commission on Intergovernmental Relations. We studied with great care and detail the educational needs of our country, and gave specific attention to the efforts currently being made by the respective States and local subdivisions in order to meet educational needs. Furthermore, we studied the financial needs or capacity of States and localities to further develop their educational structure, including both facilities and personnel.

The primary responsibility for public education does belong to the State and its political subdivisions. The educational system should be close to the people. The management of our schools should rest essentially with the local citizenry. Our public education system is one of the great achievements of our people.

Indeed, education is a national problem. Your second paragraph indicates a lack of understanding as to the American tradition, or an unwillingness to accept the role of the Federal Government in our educational structure. You stated as follows, referring to my letter: "But he also implies that education is a problem for the Federal Government, and there he is at odds with the tradition of America. Financing education is a local and State problem, which on the whole has been handled well at those levels."

Let's examine the role of the Federal Government in education, and see whether or not my conviction that the Federal Government does have a responsibility in the educational field is at odds with the tradition of America.

The legislative milestones in the development of Federal aid to education are as follows:

In 1787 the Northwest Ordnance set aside certain public lands for public education purposes.

In 1826 the Morrill Act provided for grants of Federal land to each State for the establishment of colleges specializing in the subjects of agricultural and mechanical arts. Our own University of Minnesota is such a college.

1867: Congress established an independent Federal Department of Education. Its name was officially changed to the United States Office of Education after 1929.

In 1917 the Smith-Hughes Act established the first program of Federal grants-in-aid to promote vocational education in public schools. This in turn was strengthened and expanded under the George-Barden Act.

In the 1930's the Public Works Administration made loans and grants for school construction, and the Federal Emergency Relief Administration, along with the WPA, provided funds for school construction plus adult education and nursery school programs.

1936: The George-Barden Act.

In 1940 the Lanham Act, which authorized athletic aid to local governments for construction, maintenance, and operation of school facilities.

In 1944 the Servicemen's Readjustment Act, commonly known as the GI bill of rights, set up a program of additional benefits for World War II veterans, and later extended to veterans of the Korean war.

In 1946 the National School Lunch Act authorizing aid in the form of funds and food to cities for use in school-lunch programs.

In 1950 Public Law 874, authorizing Federal payments for maintenance and operating costs of schools overburdened by increased enrollment resulting from Federal activities.

Also in 1950, Public Law 815 authorizing grants to States for construction of schools in federally affected areas. Both of these laws have been extended.

In 1954 Public Law 530 authorizing the White House Conference on Education, along with Public Law 532 establishing a 9-member advisory committee on education.

This is but a brief review of some of the activities of the Federal Government directly relating to our educational structure. Again, I should add that our vast programs for scientific, technological and medical research are not included in the above listing of legislative enactments. The scope of our research programs is growing every year, and the amount of funds appropriated runs into the millions. Surely, Mr. Editor, it is within our tradition for the Federal Government to have an important role in education—a tradition which started in 1787 and continues to this day—a tradition which was recently reaffirmed by the reports and conclusions of the White House Conference on Education.

Until the 1930's the overwhelming share of school revenues were obtained at the local independent school district level. Then came the period of State aid to the local schools. State aid was bitterly opposed, but the economic necessities of a modern school system equipped to meet the growing population brought acceptance and approval of State aid.

The impact of the depression and World War II, along with the postwar surge in population, placed tremendous burdens on our school system. There can be no doubt

as to the shortage of school facilities, despite a major school construction program by local school districts. It is common knowledge that our classes are overcrowded, that our teacher shortage is growing every year, that our colleges are not graduating an adequate supply of new teachers to fill the gap and to replace those who are retiring.

Here are the facts as reported in the Congressional Quarterly for February 1955. Since then, the situation has grown even more critical despite the enlarged program of local school districts and States.

A report by the United States Office of Education shows that in the fall of 1954 there were 2,600,000 pupils in excess of normal school building capacity in the United States. About 9 percent of all pupils were being accommodated in makeshift or improvised quarters. Nationwide there is a shortage of over 340,000 classrooms. An additional 58,000 teachers were needed in 1955. The teacher total is diminishing rather than growing in relation to pupil population. It is estimated that in the next 5 years approximately 620,000 public elementary and secondary classrooms and related facilities will be needed. The 1955 building program was scheduled to produce about 60,000 classrooms, far short of current needs without taking into consideration the lag in construction during the depression and war and immediate postwar years, or the future growth of the population.

Again quoting from the Congressional Quarterly: "While school needs are essentially a State and local community problem, the Federal Government has played a major role in promoting education. For example, in fiscal year 1953, Federal expenditures for education in the States totaled $1,200,000,000. The bulk of the Federal funds, $725.6 million, were for education of veterans. Other major items were support of land grant colleges, vocational education and payment to the States for school construction and maintenance in federally affected school districts. This figure does not include the vast sums of money appropriated by Congress for research, much of which was allocated to our universities and technical schools.

I know of no public or lay spokesman who is recommending that the Federal Government take over the responsibilities for our public school system. However, our public education program is in trouble due to inadequate facilities, shortage of teachers, and lack of adequate local and State revenues. To be sure, some of the States could do a better job than they are doing. Federal legislation should not be designed to relieve States and local governments of their responsibilities. Federal aid should be supplemental and not replacement. Federal aid to public education should in the main be limited to school construction needs. Control over school management, curriculum, and educational program must remain in the hands of the local community and its appropriate school agency. There is no evidence that would lead one to conclude that Federal aid means Federal domination. Our land-grant colleges have not been dominated by the Federal Government. Our vocational education programs are not dominated or managed by the Federal Government. Yet, in both of these areas of education the Federal Government has made a sizable contribution.

Regrettably, many States and localities are restrained by constitutional and charter limitations in providing the necessary funds for school purposes. Theoretically, one can argue that city charters and State constitutions should be changed, and indeed this should be done. In the meantime, our public education structure continues to deteriorate and becomes evermore inadequate to meet the heavy increase in school enrollment. The Federal Government is the people's Government; it belongs to the people. The Federal Government is responsive to public opinion and public will, yes, even more so than some State and local governments. The Congress is elected by the people, just as is a State legislature. The President is elected by the American people, just as is the governor by the people of his State.

Our Nation is becoming evermore integrated. The American people move from one area to another. Our system of commerce and transportation has united this country into one great Nation. Education is a national problem, and the provision of proper educational facilities is the responsibility of the people of this country acting through their instrumentalities of government. While editors and Senators, governors and Presidents, Congressmen and legislators argue over Federal aid to education, our school system suffers and remains inadequate. We are in a struggle for survival. We need a strong, intelligent, and well-informed citizenry. We need competent scientists and technicians. We need, above all, equality of opportunity for education. That equality of opportunity is being denied today to millions of our young people—young people who are called upon to serve in the defense of this country; young people who may reside in our State or some other State in the years to come; young people who will be called upon to shoulder burdens of yet unknown and uncharted proportions in the future.

I suggest we bring this argument on Federal aid to education to a halt and get on with building the schools, training the teachers, providing scholarships for talented men and women, expanding our programs of research and development, equipping our universities and institutions of higher learning to meet an unprecedented enrollment. A rich and prosperous America can afford to pay the bill. Our failure to pay this bill could well result in jeopardy to our national security and long-term national prosperity. Education is a sound investment. There are no cutrate prices nor bargain-basement sales on the development of talent, skill, and good citizenship.

Sincerely yours,

HUBERT H. HUMPHREY.

Freedom for Suicide

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1956

Mr. McCORMACK. Mr. Speaker, I include in my extension of remarks a thought-provoking editorial Freedom for Suicide, appearing in the Catholic Standard, archdiocesan newspaper of the archdiocese of Washington, of January 20, 1956:

FREEDOM FOR SUICIDE

Last year Russian graduatel 53,000 engineers; we graduated less than half that many. In Russia, about 40 percent of the total secondary school time is devoted to science and mathematics; in our country, in 1954, only 4.3 percent of our high school students studied physics, which is generally now an elective course. As former President Herbert Hoover remarked some time ago, if our country is destroyed it will be by a flood of electives. It almost seems that only the private schools of the country insist on courses in physics and science in our secondary schools.

This decrease in the study of science is in itself thoroughly alarming. What is infinitely more alarming is that some American educators are determined to do nothing about it. Dr. Alan T. Waterman, director of the National Science Foundation, felt compelled to state to an audience, after rehearsing this dismal state of education, that there is no desire to depart from American principles of free choice of careers. American students are to be given the freedom to commit national suicide.

This incredible attitude of some American educators reveals two fundamental errors: American citizens, regardless of age, cannot be required by the Government to do whatever is morally right in order to protect their country; civil "freedom" means that school children cannot be taught a fixed curriculum if they choose not to accept it.

These pernicious errors, unknown a few years ago, contradict reason and a whole national practice. During the past war, our inductees were taught to learn flying and whatever trade was necessary for the protection of our country. For the same reason, a boy of 16 or 14 can be taught physics and science. Futhermore, education (by the very meaning of the word) means that a student's knowledge is broadened, that his faculties are developed, regardless of whether he likes it or not. Education, like medicine, can be given whether the person likes it or not—admitting that liking it is greatly desirable.

What has happened to the rule once fervently honored, that education is supposed to fit one for life? Prescinding from our defense needs, in a world of technology and automation, physics and science are among the basic courses. The need is even more imperative when we consider our defense needs. General Taylor, Chief of Staff, is desperately pushing the construction of the ultimate weapon, the intercontinental ballistic missile, in the belief that it is absolutely required for our defense. This is symbolic of the nature of future wars, if they cannot be averted.

But where will the skill and talent come from for our defense if students are given the freedom to reject all courses in physics and science? They may end with the freedom to surrender to tyranny or suicide.

Profit for Philanthropy

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1956

Mr. HAYS of Ohio. Mr. Speaker, under leave to extend my remarks, I insert an editorial from the Salem (Ohio) News dated December 16, 1955. This seems to me to be an effective answer to the critics of all the foundations in the United States and certainly the hospitals and schools through the generosity of the Ford Foundation can effectively refute the carping critics:

PROFIT FOR PHILANTHROPY

Half a billion dollars for better teacher salaries in colleges and better services in hospitals, on top of previous grants of $350 million since 1936, puts the famed Ford Foundation in a class by itself.

No other source of philanthropy can compare with the productivity of this organization to give away money, started by the original Henry Ford in 1936.

Despite the vast sum it has given away, at least $850 million, counting the latest half-billion-dollar disbursement, the growth

of the vast Ford enterprise and the declining value of dollars give assurance of a great deal more money where all that came from.

The profit system geared to continuing philanthropy is something new in the world of finance. It is a kind of tithe being paid by many profit-making enterprises to institutions and organizations that could not support themselves without the profit system's help.

The thing that makes the Ford Foundation distinctive is the large amount of its profit-producing holdings relative to the Ford enterprise as a whole. This is the direct result of the founder's initial success in retaining ownership of the company as it grew, instead of being forced to share it with money lenders.

The members of the Ford family thus were able to amass and control tremendous wealth. They, themselves, never have used their wealth extravagantly. They have run the Ford Co. as a family enterprise and will continue to do so under the new distribution of voting and nonvoting stock to outside investors.

But they have been running it largely for the beneficiaries of the Ford Foundation and will continue to do so.

Vast sums of money that otherwise would have gone through the corporation income tax wringer have been turned over intact to beneficiaries who could meet the foundation's standards for advancing human welfare.

Thousands of college teachers now can look forward to better pay and hundreds of hospitals will be able to provide better service because a mechanical genius also proved to be financial genius. They can testify that profit for philanthropy is giving the profit system a kind of glamor it never had when profit was for investors only.

Festival of Music

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, January 23, 1956

Mr. LEHMAN. Mr. President, I have prepared a statement commenting on a forthcoming musical presentation on January 30 to be broadcast over the facilities of the National Broadcasting Co. This presentation has considerable significance in the cultural world, and will be heard and listened to by many millions of our fellow citizens. It will bring together a very large number of outstanding artists of our time.

It has been suggested that in recognition of this event, as well as of the general public interest in music, the week of January 30 be proclaimed as Festival of Music Week.

I ask unanimous consent, Mr. President, that the remarks I have prepared for this occasion be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

On Monday evening, January 30, 1956, the National Broadcasting Co. will telecast in color and black and white, over its nationwide facilities, a major presentation entitled "Festival of Music."

Although the chief emphasis of this program is, of course, on music, it will have overtones of education, art, and culture. Because of the scope of this program, the great array of talent to be presented, and the groundbreaking nature of the transmission itself, this NBC undertaking commands our attention and invites reflection.

A century ago America was awakening to the universal language of music. Our forefathers were crowding into small concert halls—into drawing rooms and other available auditoriums, to hear the first performances of Beethoven's Fidelio and Verdi's La Traviata. But an opportunity to see and hear these performances was available only to the privileged few. Still, the national appetite for musical presentations was not to be denied. There were touring companies which appeared in centers of population from one end of the country to the other. Who of that era will forget the barnstorming production of Ben Hur, and the tours of the Metropolitan, Chicago, St. Louis, and San Francisco opera companies? The enthusiasm of those who attended band concerts by John Philip Sousa and the great philharmonic orchestras left their landmark in the thousands of public-park bandstands across the land.

Then there was the phonograph which caught the public fancy, then declined in popularity, then rose again to present heights. Surely it was a wise man who said he preferred to write a nation's songs rather than to make its laws.

Then, in recent years, the inventive genius so characteristic of America produced the television. American inventive genius made it possible, through television, for half the Nation's population to have the finest songs and the most notable performances of the greatest artists brought into their own homes. And now television, the world's seventh scientific wonder has added the brilliant hues of the spectrum—color television—to the conventional black and white.

It would seem appropriate, I think, as a recognition of the possibilities of this new medium, to establish a week in which we may remind our people of the values which can and sometimes do come to them through television—a Festival of Music Week.

The National Broadcasting Co.'s Festival of Music will be an unprecedented color-television transmission which for quality of artistic performance, I am told, will be outstanding. The NBC color-television transmission of Monday, January 30, will last 1½ hours. Mr. Charles Laughton will act as master of ceremonies. He in turn is to present the glories of the world's greatest composers, sung and played by such great artists as Marian Anderson, Jussi Bjoerling, Zinka Milanov, Jan Peerce, Roberta Peters, Gregor Piatigorsky, Artur Rubinstein, Isaac Stern, Rise Stevens, Renata Tebaldi, Blanche Thebom, and Leonard Warren.

Seldom has so distinguished a group of artists been assembled for a single performance.

It might be appropriate, therefore, to take advantage of this significant event and to set aside the week of January 30, by proclamation, as Festival of Music Week.

The United Nations: Some New Perspectives After 10 Years

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1956

Mr. MERROW. Mr. Speaker, on Friday, January 13, 1956, I attended a meeting of the National Press Club in Washington, D. C., and heard an address entitled "The United Nations: Some New Perspectives After 10 Years" by Hon. Francis O. Wilcox, able and distinguished Assistant Secretary of State for International Organization Affairs. Secretary Wilcox delivered, in my opinion, an excellent and outstanding address on the United Nations. It is a clear, eloquent, analytical, and forceful presentation of the activities, accomplishments, and possibilities of the United Nations. It has not been my privilege to hear a finer statement.

Under leave granted to extend my remarks in the RECORD, I include herein excerpts from the speech delivered by Assistant Secretary of State Francis O. Wilcox entitled "The United Nations: Some New Perspectives After 10 Years":

Just a few weeks ago the General Assembly concluded its tenth, and perhaps its most momentous session. High on the list of accomplishments was its action in enlarging the membership of the United Nations from 60 to 76 countries. This expansion of the organization's membership brings new vitality and new voices to the task of creating and maintaining peace with justice among nations.

The United States must now assess the implications for its foreign policy of a United Nations in which European representation has been increased, the voice of Asia and the Middle East has become strengthened, the number of so-called uncommitted countries has been enlarged, and the proportionate numerical strength of the Latin American group reduced.

* * * * *

The President in his state of the Union message stated the cardinal aim of our foreign policy: "The waging of peace, with as much resourcefulness, with as great a sense of dedication and urgency, as we have ever mustered in defense of our country in time of war."

In charting our course in a newly revitalized United Nations, we must search out and understand the new forces at work.

IMPACT OF BANDUNG AND THE GENEVA SUMMIT MEETING

Two important developments in 1955 made themselves felt in the 10th General Assembly. The first was the convening of the Bandung Conference. The second was the summit meeting in Geneva. Together they loosened the rather rigid cold war alinements which have thus far prevailed in the United Nations.

The Bandung Conference reflected an upsurge of confidence among the Asian-African countries. Representatives of the conference, it should be noted, rejected Communist colonialism, as well as the discarded colonialism of former times.

Within the United Nations the spirit of Bandung gave rise to increased expressions of solidarity of interest among members of the group and continued cohesiveness on issues of special mutual concern such as colonial questions, questions of race, the needs and desires of underdeveloped countries, and the question of membership. This current of Asian-African self-expression cut sharply across prevailing Communist-Free World alinements and brought the 10th General Assembly face to face with changing political and economic realities.

Despite the spirit of Bandung, however, the General Assembly, after voting to include the Algerian item on the agenda, subsequently decided not to consider the question further, and on the Cyprus item the Bandung powers were divided.

* * * * *

The Asian and African countries, however they may differ in their foreign policies, share a compelling desire for rapid advancement along the road of industrial, economic, and social progress. Many of these peoples

are newly free of colonial rule. They find the climate of independence no less invigorating now than it was for us in 1776. Nor did the United States, after winning its independence, emerge into a static world assured of a secure and prosperous place among the nations. True, it did not, as do the newly independent lands today, have recourse to a United Nations. But one may well imagine some of the issues we would have hotly pursued in such a forum.

The Summit meeting held in Geneva last July also left its imprint on the Tenth Assembly. This historic meeting reaised the hopes of peoples that the danger of war had further receded. It appeared that the U. S. S. R. joined us in realizing that neither side can survive a global hydrogen war. It seemed possible that some of the outstanding political differences could now be dealt with in good faith.

The General Assembly began its work in this warm afterglow of the Geneva summit meeting. Many delegates invoked the spirit of Geneva in their speeches. The Soviets came wearing the smile of conciliation. The great powers for the time being at least were not glaring at each other across conference tables, fighting out problems born of the Second World War.

* * * * *

While the Bandung Conference and the Geneva summit meeting did not confront us wtih an entirely new situation, we can agree that there was a shift of emphasis which resulted in blurring traditional issues and alinements. At least until the close of the second Geneva Conference in November, Soviet tactics in the assembly appeared more flexible than in the past. Prior to that time the Soveits used the gloved rather than the mailed fist.

Our impression from this past assembly is that Soviet leaders would like to maintain the appearance of cooperative relations, even though they are not willing to create the indispensable conditions for a secure peace. The cold war, in the sense of peaceful competition between conflicting ideologies, was in fact conducted with much vigor.

We must therefore reckon coldly with the true aims of the new flexibility of Soviet tactics in the United Nations. These are to divide the non-Communist world and to gain acceptance as the champion of all peoples seeking a better life.

The Soviet challenge was met resourcefully and to good effect. Let us consider four of the important issues before the Assembly: The admission of new members, the peaceful development of the atom, disarmament, and economic assistance for underdeveloped areas. These are issues of major import for the future of the United Nations and for United States policy.

ADMISSION OF NEW MEMBERS

* * * * *

There are six points that I wish to stress regarding the United States attitude on the admission of new members. I shall then try to assess the implications for our foreign policy of the increase in size of the United Nations.

First, we have followed a consistent policy based squarely on the principles of the charter. In the words of Ambassador Lodge, the United States was guided by three basic principles: "To bring into membership all qualified states which apply; to follow the provisions of the charter as to judging the qualifications of the applicants; to avoid thwarting the will of a qualified majority by use in the Security Council of the veto."

The admission of qualified states had been prevented solely by the Soviet veto. These would long ago have been members of the United Nations had not the Soviet Union used the veto 45 times on the membership question in the past 10 years.

Second, consistent with these principles the United States took the initiative early during the Assembly session. We actively sought the agreement of the five permanent members of the Security Council not to use the veto on the admisison of new members.

The United States has long favored such an agreement. We stressed this point in varying ways with each of the permanent members. In the present case we ourselves said publicly that we would not use the veto and that we would abstain in the voting on the applications of the Soviet satellites even though in our view their present governments are not independent and their conduct has been reprehensible. This voting position accorded fully with the spirit and intent of the Vandenberg resolution, adopted by the Senate in 1948 by a 64-to-4 vote, which expressed the view that there should be agreement among the permanent members not to use the veto to prevent the admission of new members.

Thirdly, we believed that the admission of qualified applicants would enrich and strengthen the United Nations morally and materially. Their participation in the Organization would outweight any disadvantages which might follow from the admission of the four satellites.

Fourth, it is evident that the pressure of world opinion does exert influence on the Soviet Union. Its original position was that the United Nations must admit all the Soviet satellites, including Outer Mongolia, or the Soviet Union would veto all qualified candidates. We made no comparable insistence. We did not condition the admission of one state upon another under threat of veto. But evidently, among other motives, the Soviets did not wish to bear the onus for having vetoed the long list of free-world applicants.

We should frankly recognize that Soviet willingness to see 16 nations admitted was a comedown from its rigid 18 or nothing position. But we must nevertheless hold them accountable for frustrating the admission of Japan. Contrary to the advisory opinion of the International Court of Justice, the Soviet Union conditioned Japan's admission on that of the fictional entity of Outer Mongolia. It withheld United Nations membership as a new instrument of pressure on the Japanese in their peace treaty negotiations. We deeply regret the continued exclusion of Japan, whose candidacy was backed by every member of the Security Council except the Soviet Union. We also deplore the exclusion of the Republic of Korea and the Republic of Vietnam, both of whom we regard as fully qualified.

Fifth, the abstention of the United States in the voting on the satellites does not mean that we accept as permanent the present situation in Eastern Europe. We will continue to hold the four new Eastern European members responsible for past agreements. We will continue to charge the Soviet Union with its undeniable responsibilities in this regard. As Secretary Dulles said recently, the United States "will accept no compromise with the Soviet Union" that would seem to be acquiescence in the present status in Eastern Europe.

* * * * *

Sixth, our abstention on the satellite applications does not mean any change in United States policy on the question of Chinese representation in the United Nations. We continue to support the Government of the Republic of China. We continue to oppose vigorously the seating of the Chinese Communists.

IMPLICATIONS FOR THE FUTURE

What are the implications of the admission of 16 new members? On the organizational side, it is clear that the number of members of the Security Council, the Economic and Social Council, and perhaps on other bodies should be increased.

Let us look, for example, at the Security Council. Asia has never been adequately represented on the Council. With the admission of six additional Asian members, this imbalance must be redressed. The increase of 10 European countries also requires a review of the number of Council seats allocated to the European region. While we have made no decision on this matter, it may be that only two seats need to be added, although perhaps 3 or 4 more will be required. I believe the concept of the semipermanent membership as it evolved in the League of Nations is also worthy of study.

Any increase in members of the Security Council would, of course, in turn affect the number of votes required for decisions. Moreover, this question of the size of the Council involves an amendment of the Charter which requires the concurence of two-thirds of the members of the United Nations, including the five permanent members of the Security Council. This complex question will obviously require extensive diplomatic negotiations. The United States hopes to begin such negotiations within the next month or two.

We can also expect that new and important political problems will be brought to the General Assembly for solution as a result of its new membership.

The enlarged United Nations will speak with wider authority. It will more accurately mirror underlying conditions as they are in the world and confront all of us in a more decisive manner with the crucial problems of the atomic age. A greater sense of responsibility will be required of all the members if the organization is to develop in a sound and practical way and if problems are to be solved and not aggravated.

There are, of course, those who are already predicting that the United States will lose voting support in the General Assembly. I have this comment regarding such dim predictions.

Up to the present time the United States has been able to retain a position of leadership through the justice of its cause and the logic of its arguments. Almost invariably on important issues our policies have been overwhelmingly supported by the members of the free world.

If the time should ever come when we found ourselves consistently outvoted on important issues in the United Nations, that would surely be a sign that we ought to reexamine in a hard-headed way our basic policies.

PEACEFUL USES OF ATOMIC ENERGY

We face another major challenge in promoting the peaceful uses of atomic energy. President Eisenhower originally announced his atoms-for-peace plan at the United Nations. We proposed that an Agency be established under its aegis. This reflected his estimate of the value of the United Nations as a mechanism for promoting international cooperation. That is why he also proposed that once established the Agency should be brought into an appropriate relationship with the United Nations.

The traditional way would have been to continue with our bilateral programs. The need to safeguard our security interests and the difficulty of working out an international mechanism for parceling out and controlling the use of fissionable materials would have justified a unilateral approach. But President Eisenhower rejected the pattern of the past in recognition of the needs of the present.

He rejected it in the knowledge that the acquisition of nuclear technology and material brings with it the capacity to manufacture nuclear weapons. Atomic-power reactors can be utilized to produce nuclear materials for weapons even as they generate electricity. Unless effective preventive measures are taken soon, the wider utilization

of atomic energy—which will occur whether or not an international agency is created—will inevitably hasten the day when many nations will be in a position to manufacture atomic weapons.

Think of what this means in terms of existing international tensions, current power relationships, and international plans generally. This is what gives the President's call for international cooperation in this field its great sense of urgency. In the long run it may well be that the greatest contribution of the International Agency will be to assure that atomic energy is used exclusively for peaceful purposes.

* * * * *

DISARMAMENT

Disarmament is a third important challenge. This past Assembly urged that the states concerned should continue to seek agreement on a comprehensive disarmament plan. It also urged that in the meantime priority should be given to the following "initial steps":

"1. Such confidence-building measures as President Eisenhower's plan for exchanging military blueprints and mutual aerial inspection and Marshall Bulganin's plan for establishing control posts at strategic centers"; and

"2. All such measures of adequately safeguarded disarmament as are now feasible."

With this resolution, which was the product of United States and United Kingdom initiative, the Assembly has revitalized 10 years of fruitless debate. It has adjusted its sights to a new and feasible disarmament goal.

This fresh approach to the disarmament problem will have its first test early this year when the Subcommittee of the United Nations Disarmament Commission resumes its work. If the Soviet Union will now agree to the early implementation of the President's "open-sky" plan, the United Nations will finally have the possibility of progressing to a more comprehensive plan of disarmament. Regrettably, Mr. Khrushchev's recent attack on the President's plan is far from encouraging.

Meanwhile this Government is making an intensive review of concrete measures which might be taken now to reduce or limit armaments and armed forces with adequate safeguards as to inspection and control. * * *

ECONOMIC ASSISTANCE TO UNDERDEVELOPED COUNTRIES

The shifting emphasis of the cold war has made the solution of economic problems even more vital. The current Soviet effort to exploit the economic needs of some of the underdeveloped countries, highlighted by the Khrushchev-Bulganin Asian tour, is a matter for serious concern to all those who are genuinely interested in the freedom as well as the progress of the economically underdeveloped countries.

I am convinced that from a dollars and cents point of view, economic aid through multilateral organizations is less costly to us in many instances since it spreads the burden over a larger number of contributors. Moreover, the multilateral approach may often be found more acceptable by some of the underdeveloped countries.

The crux of the matter is that we must remain flexible regarding the manner in which economic aid is made available to our free-world partners. When the job can best be done bilaterally we should use this approach. This is equally true of the multilateral approach.

In the face of the new challenge, it has now become even more important to increase the effectiveness of our economic and technical-assistance programs. Thus it is essential that we continue and strengthen our support of the expanded program of technical assistance of the United Nations which is generally recognized as a long-range program for the economic betterment of underdeveloped countries.

* * * * *

Another area which deserves imaginative exploration is the problem of international financing. There is no one answer to that problem. Much is already being done, and perhaps more could be done, through such bodies as the International Bank for Reconstruction and Development on the multilateral side and our own Export-Import Bank.

Further headway is likely to be made through the early establishment of the International Finance Corporation which the General Assembly endorsed unanimously at its last session. It will help to bring together opportunities in underdeveloped countries and potential investors in capital exporting countries and will, we trust, encourage the flow of private capital. The Congress has already approved this undertaking and the United States has formally adhered to the new organization.

It is an open question whether all these measures will be adequate to meet those basic needs for capital in the world which cannot be satisfied by the underdeveloped countries from their own domestic resources. While there can be no doubt that domestic savings must in the long run provide the bulk of the necessary funds, President Eisenhower has recognized that additional funds may be necessary. As you know, over the past several years there has been mounting pressure from the underdeveloped areas for a special United Nations fund for economic development. President Eisenhower has made it clear that as some success in disarmament is achieved, this Government will ask our people to join in devoting a portion of the savings thus achieved to an international fund for economic development within the framework of the United Nations. Such a fund would help in the development of roads and other means of transportation, the multiple use of water and other basic services which, in turn, will create better conditions for private investment.

The formula for a special United Nations fund for economic development as developed to date may not be adequate, but I hope that ways and means will be found for the United States to participate constructively in such a fund.

CONCLUDING COMMENTS

Since the General Assembly approved the idea of charter review in principle we must examine carefully in the months ahead the ways and means by which the United Nations can be improved.

In some respects the United Nations has never had a fair chance to function. When the Organization was born in 1945 those who drafted the charter did not know about the atomic bomb. Moreover, they assumed that the peace treaties ending the war would soon be concluded and the U. N. would be able to function in a relatively peaceful world. They also assumed that the five great powers would work together to win the peace as they had cooperated to win the war.

All these basic assumptions proved erroneous. The signatures on the charter were hardly dry when the atomic bomb was dropped over Hiroshima and we all realized the world had entered a new and dangerous era. Shortly afterward the great powers, instead of working together, fell to quarreling among themselves. The peace treaties were scrapped, and the United Nations, together with its members, became enmeshed in the cold war.

What we have, therefore, is a preatomic charter which is compelled to function in a nuclear age. Some United Nations critics point out that we are, in fact, sending a Cub Scout to do a man-sized job.

Chief Justice Marshall once said of the Constitution that "it was intended to endure for ages to come, and, consequently to be adapted to the various crises of human affairs." The Constitution has, in fact, proven a living document and has kept pace with the growth of our Nation.

In a somewhat comparable way the charter has proven flexible enough to be adapted to a good many new situations without the need for formal amendment. In the first decade of U. N. existence, for example, not one formal amendment has been put to the vote in the General Assembly. Even so, many important changes have taken place within the United Nations system. Some provisions of the charter have already fallen into disuse. Others have been applied in a way the framers of the charter did not contemplate.

It is important to remember that we are not examining the charter drafted in San Francisco in 1945. We are examining the charter of 1956 as it has been amplified by custom and usage, resolutions of the various U. N. organs, and treaties like the Atlantic Pact and the Southeast Asia Collective Defense Treaty. If we were to proceed now to consider amendments to the old charter rather than the new, it would be very much like a surgeon planning an operation on the basis of a diagnosis made 10 years ago.

What I am saying is that even though we have a preatomic charter, we do not have a static charter.

We ought to keep this fact in mind for any amendment we propose can be rejected by the Soviet Union. But even if this obstacle proves insurmountable, a decade of experience has taught us that a great deal of progress can still be made within the framework of the present charter without resorting to formal charter amendments.

* * * * *

If the next decade brings, as I believe it will, a greater striving for harmonization for relations among nations—the United States must be in the forefront in helping to create favorable conditions conducive to peace, security and well-being. In our relations with the United Nations we should be completely aware of its shortcomings, enthusiastic over it potentialities, and dedicated to its principles.

Equity on the Colorado

EXTENSION OF REMARKS

OF

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1956

Mr. ASPINALL. Mr. Speaker, I should like to give added emphasis to a letter recently directed to Members of Congress by Mr. Frank Gregg, editor of the conservation magazine, Colorado Outdoors.

With this open letter, Mr. Gregg forwarded an article from the January-February issue of Colorado Outdoors, entitled "Equity on the Colorado." In both his letter and the article, Mr. Gregg develops this point by an evaluation of recent modifications in the philosophy behind the Colorado River Storage and Development Act.

I do not wish to add much comment of my own to this material for it is self-explanatory. I do not necessarily endorse each statement or position taken by Mr. Gregg, but I am convinced that his material is, as he puts it, a straightforward explanation of recent changes affecting this proposal which deserves serious consideration by the Congress.

We of the upper basin States who have long been working for this sound plan of development firmly believe that the changes referred to have a material bearing on the feasibility of the program. As a consequence, I should like to urge a review of this material to those who may have some doubt or reservation about this legislation as it has been previously offered.

It will be noted that the controversial Echo Park Dam is no longer being supported either by the States involved or by the Bureau of Reclamation. With this out of the way, it is my hope that the legislation will now be considered, and approved, on its merits.

DENVER, COLO., *January 11, 1956*

To Members of the Congress of the United States:

Enclosed is a tearsheet from an article appearing in the current issue of Colorado Outdoors magazine, one of the Nation's leading conservation publications. The article is a straightforward explanation of the reasons behind and the details of Gov. Edwin C. Johnson's proposal for development of the upper Colorado River.

The Governor's proposal differs from others with which you are familiar over the matter of allocation of anticipated power profits from the storage project phase.

Previous proposals to the Congress for the development of the river have made no formal division of these profits. As a practical matter, however, future profit credits have been committed, arbitrarily and inequitably, through the Bureau of Reclamation's recommendations on repayment of the construction costs of participating projects in the four upper-basin States. The article points out clearly that all previous proposals have been made without regard either to the apportionment of water among the States or to any equitable allocation of power profits.

Equity is the key to the Governor's plan—equity in the sense that under his proposal power profits would be divided among the States on the basis of practical present and potential uses of water, as specified in the upper basin compact of 1949 which divides the water among the four States.

Such a division of the profits would allow each State to plan in an orderly fashion for construction of the projects necessary to put its allotted water to use. It would prevent any single State from so encumbering anticipated power profits that other States would be forced to seek appropriations that could not be repaid within a reasonable period. It might even be possible to claim that such a division would encourage each State to seek only the most efficient and economic projects for development, urged on by knowledge of the limited funds available from the power profits.

In recognition of the complexity of the entire problem, the Governor would ask the second session of the 84th Congress for authorization of and appropriation for Glen Canyon Dam, only, as a first step in the development of the whole basin. A glance at the tables will demonstrate that Glen Canyon is the key to the entire development plan. It stores sufficient water to allow expanded use in the upper basin while still meeting commitments to the lower basin, and it will provide an overwhelming share of the expected profits.

Those who have studied the Governor's proposal agree that it is sound and constructive. It has the virtue of simplicity. Above all it is just. It is fair to each of the States of the upper basin and it is fair to the citizens of all the United States, because it provides the best guaranty yet brought forward that the Federal investment in the upper Colorado will bring the desirable benefits that all of us seek.

There are many indications that the Governor's program will win the support that it deserves. Water authorities in the four upper basin States have reached tentative agreement on a division of the power profits similar to that proposed by the Governor. Several major national conservation groups, heretofore bitter opponents of any development on the river, have endorsed the proposal. Leading newspapers of the West have indicated basic agreement with the Governor's aims.

It is to be hoped that the Congress will give this constructive plan serious consideration. It is our firm conviction that immediate authorization of Glen Canyon plus an equitable division of power profits is the best means yet devised for assuring orderly and beneficial development of the vast resources of the upper Colorado River Basin, to the enrichment of all the people of the United States.

Sincerely yours,

COLORADO OUTDOORS,
FRANK GREGG, *Editor.*

EQUITY ON THE COLORADO

(By Frank Gregg)

BASED ON AN EQUITABLE DISTRIBUTION OF WATER AND POWER PROFITS AMONG THE UPPER BASIN STATES, GOV. EDWIN C. JOHNSON'S PLAN FOR INITIAL DEVELOPMENT OF THE UPPER COLORADO MAY WIN SUPPORT IN THE 84TH CONGRESS

The barebone facts about the efforts of the people of the upper Colorado River Basin to win congressional approval of a federally financed plan for development of the Colorado ought to be familiar to everyone.

Beginning a half-dozen years ago with the first proposals to the Congress, a violent controversy over Echo Park Dam in Dinosaur National Monument has kept the river constantly in the news. Conservationists, including many groups not opposed to the principle of development, were joined by advocates of economy in government and a solid block of representatives of one of the lower basin States, to block all proposed projects through the 1st session of the 84th Congress. Objections to Echo Park have been so effective that the upper basin has publicly abandoned it, and even the Secretary of the Interior has announced that the Bureau of Reclamation will no longer press for the unit.

As matters now stand, the Senate has approved a project which includes Echo Park plus additional power and storage projects, and several smaller participating projects. The House has taken no floor action on the project. Thus the future of the river for the incoming session depends on what is approved by the House, and on what finally emerges from the Senate-House conference committee.

A meeting of Senators, Representatives, and Governors of Colorado, New Mexico, Utah, and Wyoming was held in Denver a few months ago, with the announced purpose of reaching agreement on a compromise project. After an all-day session, the conferees agreed to eliminate Echo Park, and charge off the cost of the irrigation features of one of the most expensive projects (Navaho, in New Mexico) as a Federal gift to the Indians of the affected region.

The new and harmonious project, through the Echo Park and Navaho provisions, would seem to be welcome to everyone—except, of course, to the economy bloc and the dogged southern California interests, and excepting also one of the key figures in the upper basin itself—Gov. (and former Senator) Edwin C. Johnson, of Colorado.

The story behind this apparent defection from the common cause by one of the elder statesmen of upper basin politics involves a history of the basin and its vast resources and the long struggle over the waters of the Colorado—given in the following articles:

The basin and the river

A contagious feeling of optimism pervades the atmosphere of the upper Colorado River Basin—a conviction on the part of the people of northern New Mexico, eastern Utah, southwestern Wyoming, and western Colorado that after decades of painfully slow growth, the region stands but a step or two away from economic fulfillment.

There are impressive reasons for these buoyant expectations. For the past 100 years, since the first permanent settlement was established, the slowly growing population has supported itself by skimming the surface of the region's wealth.

The list of largely undeveloped resources of the upper basin printed elsewhere on these pages gives no more than a hint of the meaning of this wealth to the people of the United States.

The irrigation of a couple of million acres of land for the production of forage for livestock, as well as fruits and other cash crops, must be considered as adding to the wealth of the nation, especially when it can be—and should be—stated, that only insignificant acreages of the new irrigated lands would be used for the production of crops now considered surplus.

And, as the United States Bureau of Mines indicates in its summary of the mineral resources of the basin, these may well form the basis for an entire new industrial complex of the greatest magnitude—a vast industrial region where minerals are removed from the ground and processed and possibly fabricated into finished form, where at any rate the energy sources of the basin are transformed into usable form—liquid petroleum or processed ore or kilowatts of power—for operating the machines of our civilization.

In one important resource, nature was niggardly with the upper basin. The region is rich and vast and beautiful, it contains all that it promises, but it is dry save for the waters of one river and its tributaries—the Colorado. The whole future of the region—the extent of the development of its agricultural and mineral resources, whether it shall become an industrial center or an impoverished source of raw materials—depends on how and where the waters of the Colorado are to be used.

Under terms of the Colorado River compact of 1922, the upper basin States must share the waters of the river with Mexico and with the lower basin States—Arizona, California, and Nevada. Mexico is apportioned 1½ million acre-feet per year, as measured at the international boundary. The lower basin is apportioned 7½ million acre feet per year, as measured at Lee Ferry, Ariz. The upper basin is also apportioned 7½ million acre feet, and the compact architects provided that the first million acre feet of any surplus beyond these allocations would go to the lower basin.

In recognition of the fact that the annual flow of the river fluctuates widely—from as little as 5 million acre feet to as much as 23 million acre feet, the compact also provides that the upper basin must deliver not less than 75 million acre feet to Lee Ferry in any 10-year period following ratification of the compact. This provision in effect gives the lower basin's initial apportionment of 7½ million acre feet a clear priority over the upper basin's share, and (in combination with the delivery requirement to Mexico) forces the upper basin into the position of either storing enough water during wet years to provide for its own needs plus downstream delivery requirements in dry years, or doing without water in those years when the entire river flow was needed to meet downstream obligations.

The 1922 compact made no apportionment of water among the States of the two basins. The lower basin is still arguing the issue before the courts, but the four upper basin States got together in 1949 and settled their differences with the upper Colorado River Basin compact. This document apportions

51.75 percent of the water available to the upper basin to Colorado, 11.25 percent to New Mexico, 23 percent to Utah and 14 percent to Wyoming. Colorado contributes 72 percent of the water in the river at Lee Ferry, Utah 16 percent, Wyoming 10 and New Mexico 2; but the compact apportionments are based on present and practical potential uses of water, rather than on contributions.

The upper Colorado River storage project, as proposed in the Congress, is the means chosen by the upper basin to make possible the use of the water allocated to the four basin States by the 1949 compact.

The ultimate development plan for the river, as prepared by the Bureau of Reclamation, makes a clear distinction between two kinds of projects, and sets up a method of repayment for the money advanced for construction by the Federal Government. The storage project would authorize construction of several huge dams on the Colorado and its main tributaries, with two main purposes in mind: these dams would store enough water to allow use of the upper basin's apportionment while meeting the 1922 compact obligations to the lower basin and Mexico; and they would, through generation and sale of power, earn profits large enough to repay the cost of the storage projects plus a major share of the participating projects—those projects which are designed to actually put water to beneficial consumptive use, which are dependent on the storage project for an assured water supply, and on contributions from the power features of the storage project for financial feasibility.

The various versions of the upper Colorado River storage project that have been introduced into the Congress included, until it became obvious that no dam in Dinosaur would be approved, Echo Park and Split Mountain, a power dam a few miles downstream. Other storage projects included Glen Canyon on the Colorado in northern Arizona just above Lee Ferry; Flaming Gorge on the Green in northeastern Utah; either Cross Mountain or Juniper on the Yampa in Calorado above Dinosaur; and from time to time, Curecanti on the Gunnison below the town of Gunnison.

In its understandable eagerness to put the precious waters of the Colorado on the land, the upper basin States inserted a varying number of participating projects into the so-called storage project. Throughout the period, two participating projects have appeared in every version of the legislation—Navaho Dam (and its irrigation features) in New Mexico, and the first phase of the central Utah project, the latter a monumental undertaking to divert the waters of the Green into the populous section of Utah west of the Wasatch range.

Division of water and power profits

	Percent of water contributed by each State to total	Percent each State to receive under upper basin compact	Distribution of power profits under Bureau project in 50 years [1]	Percent	Distribution of power profits under Johnson proposal in 71 years [2]	Percent
Utah	16	23	$164,783,500	75.9	$98,000,000	23
Colorado	72	51.75	16,712,100	7.6	220,700,000	51.75
Wyoming	10	14	33,761,300	15.5	59,700,000	14
New Mexico	2	11.25	1,932,000	1.0	48,000,000	11.25
Total	100	100	217,188,900	100	426,400,000	100

[1] With Glen Canyon, Echo Park, and Central Utah project power units.
[2] With Glen Canyon alone.

The harmony meeting in Denver came up with the usual approval of the first phase of the central Utah project and the Navaho project, with the gift provision of the costly irrigation features to the Indians, as previously noted. And the meeting also brought forcefully to the attention of the public the defection of Gov. Edwin C. Johnson, of Colorado, when the governor appeared at the opening session of the meeting and announced that he considered the previous proposals completely unacceptable to Colorado, demanded equity as the basis on which Colorado's support for legislation could be obtained, and made his own proposal for initial development of the river.

The Johnson plan

Beginning well over a year ago, Governor Johnson explained his opposition to the then current development plan at a meeting of upper basin governors in Cheyenne:

Power profits from the operation of the storage project, after deducting the cost of building the storage project itself, are separately accounted for by the Federal Government, and are to be drawn upon by the upper basin States to repay the moneys advanced by the Federal Government for construction of participating projects. Without a formula for allocating these power profits among the States, it would be possible for one State to get authorization of a project so costly that the entire income from power sales might be needed to repay the cost of that one State's development.

Wouldn't it be wiser, wouldn't it be more just, the governor asked, to arrive at some agreement on division of the power profits, so that each State would know approximately how much money it would have to invest, and each could be assured of sound and orderly development of its share of the waters of the Colorado? And what better basis could be found for this division than the very formula on which the water is apportioned under terms of the upper Colorado River compact of 1949—a formula agreed upon by all four of the States, and based on present and practical potential uses of water.

In support of his position, the Governor presented, both at the governors' meeting and at the more recent Denver meeting, tables showing that the proposed projects implied a grotesque inequity in distribution of the power profits. One of the tables is given here as an example, based on the Bureau of Reclamation's project submitted to the Congress last year, and approved with minor changes by the Senate. If that bill were to become law, with all participating projects requested in it authorized, Colorado would receive but 7.6 percent of the power profits over a 50-year period, in spite of the fact that it contributes 72 percent of the water to the river and is apportioned 51.75 percent of the water under the 1949 compact.

The decision ultimately made by the Denver conference would improve this outlook somewhat by its device of charging off the major share of the Navaho project as a gift to the Indians under an existing law. But the inequities would remain, the only difference being a matter of degree; and, in any case, there is no reason to believe that an economy-minded Congress would approve an outright gift of a project that it turned down when at least most of the anticipated Federal investment would have been repaid.

Governor Johnson would ask the 2d session of the 84th Congress to provide for the division of the power profits and authorize construction of Glen Canyon Dam—the only storage unit to be sought at this time.

The parliamentary situation in Congress, in the opinion of the Governor, is not favorable to approval of a complex and costly project. The estimated cost of the Glen Canyon Dam and the power features of the project is $421 million; the cost of the Denver agreement would be several hundred million more, in spite of the elimination of Echo Park and the fund juggling on the Navaho project.

Glen Canyon would form a lake equal in capacity to one 9 miles square and 500 feet deep. It would operate power generators with a capacity of 800,000 kilowatts—more than 6 times the capacity of all power facilities now in the basin—generating up to 4.4 billion kilowatts annually.

As for the effect of the governor's proposal on power earnings, reference is made to the table. The 50-year total profit from the Bureau's much more costly program, including Echo Park (which is now out of the picture) and the central Utah project is estimated at just over $217 million. The profits from Glen Canyon alone in a 71-year operating period would be over $426 million.

The governor anticipated objections to his program on the grounds that it would not provide the storage necessary to allow use of water in the upper basin. Taking the Bureau of Reclamation's own figures, the governor showed that Glen Canyon alone will meet that need. Taking the worst 10-year runoff period on record (1931–40), about 23 million acre-feet of storage will be required. Glen Canyon's capacity is 26 million acre-feet, with well over 20 million of active storage.

Governor Johnson feels that with the construction of Glen Canyon underway and the division of power profits agreed upon, each State could plan for the expenditure of its funds on an orderly basis. His program, he states, would simplify a project proposal that has aroused great opposition because of its complexity and its apparent ignoring of the apportionment of water among the States. He points out that his plan would not prevent any State asking the Congress for funds in addition to its share of the power profits for construction of a participating project, but it would prevent the monopolizing of power profit funds by any one State.

It is the governor's belief that his program would launch the chain of events that might lead to the useful and prosperous period that the upper basin has dreamed of these many frustrating years. It might be the last major step for the upper basin in attempting to progress from its role as producer of raw materials to a secure position as an agricultural and industrial and recreational center of the United States.

Resources of the upper Colorado River Basin

Agriculture: Over 70 million acres of land in upper basin. Most is suitable for and used as grazing land. Three to four million acres are arable with irrigation; 1½ million now irrigated.

Forests: Over 13½ million acres in national forests, most in use for lumbering and grazing. Primary value is as watersheds.

Wildlife and scenic values: Deer, elk, bighorn sheep, bear, antelope, upland game, waterfowl and trout; incomparable mountain and canyon scenery.

Minerals:

1. Radioactive metals: The four corners area is the biggest source of fissionable materials in United States. Major discoveries are made every week throughout basin.

2. Coal: One-third of all coal deposits in the United States; one-sixth of all known coal deposits in world. Huge source of energy and variety of chemical derivatives.

3. Petroleum and natural gas: Over 50 developed major fields, frequent new discoveries. Full potential not known. Rangely area alone contins reserves estimated at 350–400 million barrels.

4. Oil shale: In northwest Colorado alone, shale deposits estimated to contain about 500 billion barrels of oil. Other great shale deposits in Wyoming and Utah. Full extent not known. Experiments by Bureau of Mines indicate production of liquid petroleum from shale is financially practical.

5. Other mineral resources: Huge bituminous sandstone deposits. Gold, silver, lead, and copper in quantity. Manganese and molybdenum. Phosphate rock, and magnesium and potash salts, of great potential importance as fertilizer.

Summary by United States Bureau of Mines: "This array of mineral fuel and carbonaceous materials is not approached by any region in any other part of the world."

Lamentable Incident for Dulles

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1956

Mr. McCORMACK. Mr. Speaker, I include in my extension of remarks one of the most severe articles of criticism, if not condemnation, I have ever read, written by Dorothy Thompson, and appearing in the Washington Star of January 20, 1956:

LAMENTABLE INCIDENT FOR DULLES

(By Dorothy Thompson)

Secretary of State Dulles, under questioning by the Washington correspondents, was a lamentable witness in his own behalf.

The subject was the article in Life. Mr. Dulles' attitude was surprised innocence. He didn't write the article, he told the press; he didn't know its publication date, and he didn't read it until after it was released for publication. He didn't collaborate with the author; he just had an informal chat, without even knowing whether an article would result. He wasn't conscious that anything he said might be quoted or he would not have expressed himself in quite that way. "Articles such as this, dealing with a complex subject, inevitably oversimplify and * * * tend to overemphasize."

He knew that a tape recording was made of the conversation, but did not hear it. He refused to discuss the contents of the article because that would make it into a sort of State paper.

The article, he was reminded, had been submitted before publication to the State Department. But he hadn't seen the manuscript or proofs. A change had been suggested, but by the Public Relations Division of the Department—and too late.

Remarkable testimony.

What did Mr. Dulles think the Life reporter was up to when he requested and was granted an informal little chat? Was he there merely to satisfy his personal curiosity on certain matters? Or to write an article for a weekly of enormous circulation?

Are exclusive informal chats with the Secretary of State everyday occurrences, or do they constitute a scoop? Was there any possible chance that an article would not ensue?

Did the Secretary warn the reporter that nothing he might say was for quotation? Did he insist that any article dealing with a complex subject should be submitted to him for possible revision? Did he reserve the right to decide after advance reading whether to sanction its publication at all?

And could the reporter have produced the article without the Secretary's collaboration in granting him the interview in the first place?

The Secretary's explanation of the genesis of the article was childish. His explanation of what followed was incomprehensible. Nor do we understand his press aids never informing him that Life had submitted the manuscript, but who made one correction on his own, too late. What was the correction, and why was it made too late?

Mr. Dulles refused to discuss the article because he was not its author. To discuss it would make it into a sort of state paper. Does the Secretary not know that any detailed and verbatim exegesis of his views is de facto a state paper?

Even for Mr. Dulles to have allowed the interview to be conducted as it was, on a very complex subject, made him, in fact, the author of the article. Even without direct quotation, the author records the Secretary's views, not his own. And not to have followed up the product of the interview, and have gone over every word was sheer irresponsibility.

Finally, if the article in any way misrepresents the conversation, why did the Secretary refuse to release the verbatim record to the national press?

A man who talks off-the-cuff in such a manner, affirms that he didn't know he was talking for publication, and expresses surprise but no self-dissatisfaction when he finds the gun was loaded, obviously understands little of statesmanship, diplomacy, or even of public relations.

It is a lamentable incident for Mr. Dulles, this administration, and for international confidence in America. It is a display of personal vanity and public irresponsibility. And, like much that Mr. Dulles says, it was completely unnecessary.

Tribute to Dr. William Manger

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Monday, January 23, 1956

Mr. SMATHERS. Mr. President, I also ask unanimous consent to have printed in the Appendix of the RECORD, a resolution proposed by Dr. César Tulio Delgado, Ambassador of Colombia and President of the Council of the Organization of American States, which was unanimously adopted on January 18, 1956, expressing the Council's deep appreciation for the outstanding achievements of Dr. William Manger as Assistant Secretary General of the Organization of American States.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

TRIBUTE TO DR. WILLIAM MANGER

Whereas Dr. William Manger, the Assistant Secretary General, has performed the duties of Acting Secretary General since October 19, 1955, when the Secretary General, Dr. Carlos Dávila, died; and

Whereas in the performance of these duties, just as earlier in the capacity of Assistant Director of the Pan American Union and later of Assistant Secretary General of the Organization, Dr. Manger has rendered exemplary service, showing the highest sense of responsibility and unselfishly devoting his exceptional talents and experience to Pan Americanism; the Council of the Organization of American States

Resolves:

1. To record the Council's deep appreciation of Dr. Manger because of his extraordinary achievements in the Organization of American States in the various positions that he has held, particularly in the executive positions of Assistant Director of the Pan American Union and Assistant Secretary General and Acting Secretary General of the Organization.

2. To extend to Dr. William Manger renewed assurances of its utmost confidence and personal esteem.

This resolution was approved unanimously by the Council in its regular meeting January 18, 1956.

United States Testing Ultimate Weapons, Too

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1956

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "United States Testing Ultimate Weapons, Too," which appeared in the January 16, 1956, issue of the Messenger, of Madisonville, Ky.

The editorial is as follows:

UNITED STATES TESTING ULTIMATE WEAPONS, TOO

Although the Alsop brothers continue to tout the superiority of the Russians in the superweapons race, we don't believe it is so. In fact, we believe that Uncle Sam is far from asleep, and that the Russians are indulging in propaganda in an effort to make the world think they are keeping up with Uncle Sam.

Premier Bulganin said the other day that Russia will soon test an intercontinental ballistic missile—called an ultimate weapon by military men. Bulganin's statement caused a flurry, of course, and the Alsops and some others were quick to swallow the Russian claims.

There are some steady and resolute minds in America who tell us that our fears lest the Reds be winning the race for pushbutton atomic war is groundless. They point out that Uncle Sam is completing arrangements to extend our missile testing range which now runs from Banana River near Cocoa, Fla., out over the Bahamas. Extent of the present range, we note in the Florida papers commenting upon the subject, is about 750 miles.

Anybody can draw the conclusion that the 750-mile range is too short for the guided missile Uncle Sam has ready for testing. Another 850 miles is being added, and this will place the last observation post on British St. Lucia in the Windward Islands.

However, that is not all. Talks are under way for an extension of our range past Brazil, where an observation post would be set up on an abandoned World War II base, into the South Atlantic for a distance of more than 5,000 miles. Yes, a distance of more than 5,000 miles.

This makes it clear that Uncle Sam is not sleeping, but is working on ultimate weapons which, if the truth could be learned, probably surpass in range and deadliness those which the Russians—and the Alsops—can boast.

As was pointed out the other day, there is an odd historical note in all this. Our country is able to negotiate for the right to fire missiles over British territory because Franklin D. Roosevelt—remember—traded some overage destroyers to the hard-pressed British early in World War II. In exchange for the overage destroyers we got 99-year leases on these island bases. After the war Uncle Sam surrendered the leases but retained the right to reoccupy them when necessary.

The destroyer deal kicked up a lot of fuss in its day, but it helped save England, our first line of defense in the war, and it is paying off now in the highly important field of ultimate weapon testing.

New York Letter Carrier Is Poetry Expert on $64,000 Question

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. ANFUSO. Mr. Speaker, millions of people throughout the country follow with keen interest each week the television program known as the $64,000 Question. On the night of December 13, 1955, a New York letter carrier Roscoe C. Wright reached the $16,000 question which he answered correctly and with ease. For 2 weeks he then debated whether to continue for higher stakes or accept the $16,000 he had already won. He decided on the latter course.

Roscoe C. Wright has not only covered himself with glory in this contest, but he is also a great source of pride to all those who are associated with our postal service in New York. He has demonstrated to the people of this country that our letter carriers, clerks, and all the others in the postal service are of a higher than average intelligence, ability, and education. He typifies the opportunities afforded the average citizen in a democracy such as ours.

Let me cite a few facts about him. Mr. Wright is 54 years of age. He was born in Lexington, Ky. During World War I he enlisted in the Army at the age of 15; he was made a sergeant the next year and served in the Medical Corps. After the war, he lived with his widowed mother in Boston for a time, then they moved to New York. There he met his wife, Edna, whom he married in 1940. They have 2 children, a boy of 13 and a girl of 10. His mother, Mrs. Willy Wright, now 71 years old, still lives with her son in his home in Jamaica, N. Y.

Besides his regular schooling, Mr. Wright had extension and evening courses at Harvard University for 1 year during the time he lived in Boston. Back in 1923 he took a job with the Post Office Department and has been a letter carrier for the past 32 years. He works at the Grand Central postal station in New York City. He delivers mail to some 5,000 people and it was at the suggestion and prodding of many of these people that he decided to get on the television program.

His hobby is poetry in which he became interested back in 1928. He has considerable knowledge in this field and an excellent memory. People would ask him all sorts of questions relating to poetry and he always knew the answers. When he was deciding whether to accept the $16,000 he had won or try for $32,000, the 5,00 persons whom he services on his mail route signed a scroll to wish him luck for the higher prize.

Mr. Wright is now using the prize money he had won for two main purposes: To pay off the mortgage on his home; and to give his church, the Lemuel Haynes Congregational Church, an organ.

Mr. Speaker, because many people will find it very interesting to read the questions and answers, particularly the literary content, I am inserting into the RECORD the exchange of questions and answers on poetry in which Mr. Wright participated so eloquently. It is as follows:

THE $64,000 QUESTION
MR. ROSCOE C. WRIGHT'S QUESTIONS (POETRY)

Questions on November 29

I'll read you the first line of a famous poem; you tell me the poet.

Sixty-four dollar question: "Tell me not, in mournful numbers, life is but an empty dream."

Answer: Longfellow (A Psalm of Life).

One hundred and twenty-eight dollar question: "I wander'd lonely as a cloud that floats on high o'er vales and hills."

Answer: Wordsworth (Daffodils).

Two hundred and fifty-six dollar question: "Of man's first disobedience, and the fruit of that forbidden tree."

Answer: Milton (Paradise Lost).

Five hundred and twelve dollar question: "Drink to me only with thine eyes, and I will pledge with mine."

Answer: Ben Jonson (To Celia).

Questions on December 6

One thousand dollar question: There is a famous narrative poem by Tennyson about a shipwrecked sailor who returned home after many years to find his wife happily remarried. He concealed his identity rather than spoil her happiness. For $1,000 tell me the man's name, which is also the name of the poem.

Answer: Enoch Arden.

Two thousand dollar question: Probably the most popular poem by the present English Poet Laureate, John Masefield, is Sea Fever. It begins, "I must go down to the seas again * * *"—and this phrase opens each of its three short verses. For $2,000 recite the rest of any one verse.

Answer (as Wright gave it): "I must go down to the seas again, to the lonely sea and the sky, and all I ask is a tall ship and a star to steer her by; and the wheel's kick and the wind's song and the white sail's shaking, and a gray mist on the sea's face, and a gray dawn breaking."

Four thousand dollar question: The anguish of parting has supplied inspiration for poets throughout the ages. For $4,000 tell me what poets lamented the following maidens: First, Highland Mary. Next, The Lost Lenore. Finally, Lucy.

Answer: First, Robert Burns. Next, Edgar Allen Poe. Finally, William Wordsworth.

Eight thousand dollar question: Many great poetic passages consists of two successive lines of poetry. I will give you the first line of four such well-known passages. For $8,000 you give me the second line and the poem's author. 1. "I am the master of my fate." 2. "For all sad words of tongue or pen." 3. "Theirs not to reason why." 4. "Lord God of Hosts, be with us yet."

Answer: 1. "I am the captain of my soul" (Invictus) by Ernest Henley. 2. "The saddest are these: 'It might have been!'" (Maud Muller) by John Greenleaf Whittier. 3. "Theirs but to do and die" (The Charge of the Light Brigade) by Alfred Tennyson. 4. "Lest we forget—lest we forget" (Recessional) by Rudyard Kipling.

Question on December 13

Sixteen-thousand-dollar question: Poetry has enriched the lives of us all. Certain immortal lines are especially well remembered. I will quote four famous poetic phrases. For $16,000 tell me, first, the name of the poem in which they appear; next, the poet who wrote the poem; finally, quote in full any 1 of the 4 poems involved. 1. "Sunset and evening star." 2. "When I was one-and-twenty." 3. "My heart leaps up when I behold." 4. "The year's at the spring."

Answer: 1. Crossing the Bar, by Alfred Tennyson. 2. When I Was One-and-Twenty, by Alfred Edward Housman. 3. The Rainbow, by William Wordsworth. 4. Song from Pippa Passes, by Robert Browning.

The following is the poem that Wright chose to recite in full:

"WHEN I WAS ONE-AND-TWENTY

"When I was one-and-twenty
I heard a wise man say,
'Give crowns and pounds and guineas
But not your heart away;
Give pearls away and rubies
But keep your fancy free.'
But I was one-and-twenty,
No use to talk to me.

"When I was one-and-twenty
I heard him say again,
'The heart out of the bosom
Was never given in vain;
'Tis paid with sighs aplenty
And sold for endless rue.'
And I am two-and-twenty
And oh, 'tis true, 'tis true."

Study Shows Squeeze

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1956

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Study Shows Squeeze" which appeared in the January 20, 1956, issue of the Franklin Favorite, of Franklin, Ky.

The editorial is as follows:

STUDY SHOWS SQUEEZE

If there has been any question about the squeeze on the small farmer a recent study of the Bureau of the Census seems to answer it. A study covering 5 years, 1950 through 1954, found an 11.1-percent drop in the total number of farms. However, the same study showed the total acres in cultivation remained about the same. This means fewer farmers farming, each cultivating or tending more acres.

During that 5-year period the average-sized United States farm grew from 215 to 242 acres—an increase of 12.9 percent in acreage. Here in Simpson County, where the trend in the 1940's was toward smaller farms, the average farm showed an increase in acres, reversing the trend.

One interesting—and perhaps surprising—point in the study is that a growing number

of farmers are doing their own farming. A larger percent of farmers owned all, or part, of their acreage than at any time since 1880 when census taking was started.

The study showed half of all farms now have telephones—with an amazing 90 percent of all United States farms having electricity. Together all farms owned 250,000 more tractors than at the start of 1950.

Sixty percent of the Nation's land is in cultivation with harvest crops spreading over 330 million acres, just a relatively fewer acres than in 1950 croplands.

From the report, it is obvious that farming is following the footsteps of business. It is moving toward mergers and bigger farming. If the trend reflects conditions not conducive to survival of the small family-size farm it is disturbing—just as the squeeze on the small-business operator is.

That squeeze means more than just throttling the small farmer or small-business man out of business. It strikes at the basic makeup of the Nation. Let our family-size farm be threatened—and our liberties are at stake.

News Dimout Blocks Defense Reappraisal

EXTENSION OF REMARKS
OF
HON. JAMES A. HALEY
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1956

Mr. HALEY. Mr. Speaker, nothing is more important to the American people than to know whether or not their Government is taking the steps necessary to make our military might so great that no aggressor will dare to attack us. I am alarmed at the secrecy that keeps the pulbic from knowing the facts about our defense. This secrecy is attacked in an article appearing in the February 1956 issue of the Democratic Digest and I ask unanimous consent to insert this article in the Appendix of the CONGRESSIONAL RECORD. The article follows:

WHAT'S HAPPENING AT THE PENTAGON—NEWS DIMOUT BLOCKS DEFENSE REAPPRAISAL

When Defense Secretary Wilson and Treasury Secretary Humphrey walked from President Eisenhower's cottage at Camp David to the National Security Council meeting at Laurel Lodge December 8, a reporter asked them if the meeting had made any change in the defense budget. Secretary Wilson's only comment was that he and Secretary Humphrey were still speaking.

The incident was but one of many fresh reminders to correspondents that the administration door is sealed tightly on the debate within administration circles on national security issues. From the outside, it appears that the Treasury boss man, Mr. Secretary of Everything Humphrey, still speaks with the decisive voice even though he recently has had to make some concession to spiraling prices for defense goods.

What most impresses reporters, however, is how little the press and the public have been allowed to share in the administration's deliberations on this vital issue. The public's participation in the debate is, in fact, perilously close to nil.

Literally, a multitude of questions about the defense program are pressing for attention from the American public, but the news clamp maintained by the administration makes it increasingly difficult for the people to debate any of them, or even to know that serious questions demand attention.

As one veteran Capitol newsman expressed it, "One thing is indisputably wrong with our defense program, and that is the 'paper curtain' which has been drawn around the Pentagon. The necessity for reappraisals of our defense posture is reemphasized daily by the fast-changing international picture, but we can't even begin to have an intelligent reappraisal unless the public has constant access to the actual facts of our military situation."

Similar alarms over the deepening dim-out on defense information have been sounded repeatedly in recent days, but the cloud of secrecy and censorship continues to settle more heavily over Republican Washington.

A "philosophy of secrecy" that might be called a "scorched freedom" policy "seems to pervade the defense establishment and the National Security Council," said J. R. Wiggins, executive editor of the Washington Post and Times Herald.

Mr. Wiggins, who is chairman of the Freedom of Information Committee of the American Society of Newspaper Editors, was testifying before the House Government Subcommittee on Information. He was one of 13 press spokesmen who appeared as witnesses at the opening in November of the subcommittee's inquiry into policies and practices being followed by the National Government in the area of news.

"What was variously described as a 'paper curtain' and a 'redtape curtain' was said to be cutting the American public off from the kind of information it needs to make intelligent decisions," the Post reported.

Summing up the editors' cause of complaint as stated by the chairman of the Freedom of Information Committee, the Washington Evening Star listed four examples of "a dangerous trend toward unjustified secrecy or suppression in the Defense Department and elsewhere." They are:

Classification of a letter of Gen. Matthew Ridgway last June as "confidential" because it might have been "misunderstood" if published at the time of the Geneva Conference. (The letter from General Ridgway, retiring Army Chief of Staff, was directed to Defense Secretary Wilson. In it, General Ridgway restated his reasons for his earlier expressed view that the administration's cut in Army manpower "jeopardizes" national security. His warning was buried under Wilson's "confidential" stamp until one New York newspaper got wind of the letter through a news leak.)

Introduction of entirely new categories of withheld information. (Answers to questionnaires—sent by the House subcommittee to 64 governmental agencies concerning their information policies—revealed that at least 30 new such classification types have been established in various agencies.)

A Defense Department directive last March to information officers to give out only such information as would "constitute a constructive contribution to the primary mission of the Defense Department." (That directive can be, and has been used as a gag rule—as many editors and writers have noted.)

Another directive last September advising defense project contractors to release no information that might be of "possible value to a potential enemy." (Such a blanket restriction on unclassified information serves to slam the censorship door on all news.)

The Wilson news restriction, which still stands, is but one feature of the Administration dim-out on defense facts. The gravity of this issue is underscored by protests like the following which have multiplied in recent months:

"Official figures belie claims by top civilian officials that the Army has been able to maintain its effective strength at the height-of-Korea level during the past 2½ years in spite of a reduction in personnel of better than 400,000. * * *

"Claims of maintaining the Army's strength based on these paper units is a case, in our opinion, of deliberately misinforming the public and is dangerous to the Army and the country." (Army Times, October 1, 1955.)

"Dr. Ralph Lapp, a noted atomic scientist, has accused the Atomic Energy Commission of withholding from the American people the fact that Russia has detonated a dozen nuclear devices within the past year.

"One possible reason advanced by Dr. Lapp for the AEC's withholding of facts is that if the people knew too much of Russia's atomic capabilities, they might 'resist a balanced budget.' This may or may not be true. For our part we do not feel that the American people want a balanced budget at the price of creating a risk to national security." (The Arkansas Gazette, October 30, 1955.)

"We hear a lot of statements that the Russians are moving forward in aviation, in military aviation, in a way which is outstripping us, and yet we haven't got the facts * * * we get driblets of information from the Pentagon, and the American people aren't told what the realistic conditions of our defenses are." (Gov. Averell Harriman, of New York, Face the Nation interview, October 9, 1955.)

"It is steadily becoming more apparent that this administration is not being candid with the American people with respect to the current relative strength of the United States Air Force as against that of the Soviet Air Force." (Senator STUART SYMINGTON, Democrat, of Missouri, former Secretary of the Air Force, July 9, 1955.)

"The Eisenhower administration is not yet giving the American people either a candid or a full explanation of why it is reducing by 400,000 the manpower strength of the Armed Forces by June 1956. * * *

"The explanations are not, I believe, half-truths, but even when added together are not more than two-tenths of the whole truth." (Washington Correspondent Roscoe Drummond in the New York Herald Tribune, January 5, 1955.)

"But even more serious than the growing threat of Russian air power is the deception being practiced officially by top-level civilians in Government that denies the American people the facts they must know if they are to make the intelligent judgment necessary to insure our survival as a nation." (Aviation Week, May 1955.)

"The public does not expect to be given military secrets. But it does expect an early end to the double talk in Washington. That only creates confusion. And confusion helps the Reds." (The Philadelphia Inquirer, May 23, 1955.)

Adding further to the public's confusion is the new Pentagon mystery—the hush-hush over the Killian report. A high-level study of our military situation with particular relation to scientific, technological, and industrial factors, the report takes its name from Dr. James Killian, Jr., president of the Massachusetts Institute of Technology. He headed a committee of scientists, industrial leaders, and other experts, who labored many months preparing a comprehensive analysis of the relative curves of Soviet and American armed strength for the National Security Council and the President.

In mid-September, an account of some of the disturbing conclusions in the report appeared in two articles written by Joseph Alsop in the New York Herald Tribune. His version brought a quick challenge from Murray Snyder, acting press secretary for President Eisenhower at the summer White House in Colorado. My Snyder termed the Alsop story "inaccurate," and added that the content of the Killian report is "classified."

Since then there has been complete governmental silence about the report, and growing speculation that it will never be released to the public. The facts set forth in the report would not, it seems, throw a favorable light on some of the administration's past and present defense policies.

In his account of the Killian committee's conclusions, Mr. Alsop writes that the report shows "the Soviet Union is now overtaking

the United States in the air atomic weapons race."

"As of now, by this report's estimate," Mr. Alsop adds, "the frequently mentioned American lead may be expected to become a Soviet lead in the period 1960–65. * * *

"This report that the National Security Council now has before it also includes recommendations for reversing this unfavorable trend in the American-Soviet balance of power. But these recommendations will be difficult, if not impossible, to implement without upsetting the administration's present budgetary and fiscal plans."

The conclusions which Mr. Alsop attributes to the Killian committee are findings supported by a formidable body of evidence on new military and scientific developments—facts which have been verified by sources outside Government channels, and which the administration is unable to suppress.

Some administration recognition that the defense cuts have gone beyond the bounds of prudence came with the President's late December decision for a $35.5 billion budget next year, $1 billion above the current annual expenditure. But, as the Washington Post reported, "Rising prices paid for weapons and equipment account for a major share of the increase in defense spending." Still other increases result from legislation passed by Congress at the last session. No new major step-up is involved.

The administration still holds the line for the heavy reductions which have been made over the last 3 years—the delayed Air Force build-up, resulting from the big 1953 slash in our air power; the reduction of nearly a third in Army manpower, the trimming of Navy and Marine Corps, and most of the cuts in the Armed Forces civilian manpower which were projected earlier in the winter. The Humphrey carving on the Defense Establishment stands virtually intact despite the deteriorating foreign situation, and despite the slump in the Reserve program, which was supposed to compensate somewhat for the cuts in existing forces.

Today it is undeniable that the administration's glossing over of the world military picture in 1953 led to a serious miscalculation with respect to the Air Force. Then the Air Force budget was cut by $5.1 billion, and the goal of a 143-wing Air Force by 1955 was abandoned. Developments this year have shown that Defense Secretary Wilson was 100 percent wrong 2 years ago when he reassured Congress that Russia was concentrating on a defensive air force of fighter planes.

A heavy shock to the whole country came last year with Russia's May Day air shows, exhibiting new jet long-range heavy bombers and new jet fighters which established that the Russians had stolen a march on American planners.

Administration efforts to keep the bad news from reaching the people were frustrated by reports of the Soviet gains in newspapers, in independent technical journals and in Congress. The Democratic Congress raised a storm over the developments which compelled the administration to ask reluctantly for an additional $356 million for stepped-up B–52 jet bomber production, and also to order speed-ups in jet fighter output and research.

The administration's defense cuts, as numerous observers have warned, constitute a perilous form of unilateral disarmament in advance of any agreement on international arms limitation, or any firm prospect of such agreement.

In computing the costs of this premature easing up of our defense effort, a formidable expense item will be the extra cost incurred as new crash defense programs are undertaken to offset the bad effect of the crash economy cuts.

Heavy though that extra dollar cost may be, the main loss lies in the effect which the decline in our relative military superiority has had in prolonging the cold war, with all its enormous hazards.

America's reduced defense gait obviously has encouraged Russia and Communist China in the hope that they can overtake and surpass the Western colossus in military power. That fact becomes doubly evident now that the Communists have used the smile tactic and the Geneva spirit to play for more time while they hurry with their crash armaments programs and stall off real settlements.

Reappraisals of our defense program become even more urgent with the revival of the cold war and the vanishing of the spirit of Geneva. For success in that enterprise it now seems conclusive that the first thing which needs to be done is to lift the administration's curtain on defense facts.

Ridgway Sheds Some Light on United States Defense Budgets

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1956

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Ridgway Sheds Some Light on United States Defense Budgets" which appeared in the January 19, 1956, issue of the Courier-Journal, Louisville, Ky.

The editorial is as follows:

RIDGWAY SHEDS SOME LIGHT ON UNITED STATES DEFENSE BUDGETS

Gen. Matthew Ridgway long has been on record as opposing huge and successive cuts in Army manpower. As Army Chief of Staff he told one Congress after another that in his opinion the cuts endangered the national security. To emphasize his restatement of this opinion, he retired 2 months ahead of schedule last June 30, a day before the newest military budget he had opposed went into effect.

Now in retirement, General Ridgway, again with the utmost circumspection, has begun to detail the explosive account of his successive defeats at the hands of the Eisenhower administration budget-planners. His six-part series, beginning in this week's Saturday Evening Post, was reviewed and cleared by the Defense Department with full awareness that they contained comment critical of the Secretary of Defense and the President of the United States.

This clearance by the Defense Department, let us hope, betokens both a willingness on the part of the Eisenhower administration to reexamine its policies and a hope that the impact of Ridgway's views on a complacent public might build popular support for a painful increase in our defense expenditures. For implicit in Ridgway's first article is the alarming indication that military budgets sold to Congress on the basis of President Eisenhower's own military expertness were instead measures prefabricated by his team of politico-economic planners and presented to the President most falsely as the "unanimous" recommendations of his own handpicked military team, the Joint Chiefs of Staff.

Has Defense Secretary Wilson put up an iron curtain between the President and the men who should be his military advisers? Have he and his economy-minded aides browbeaten some of the military into glum acquiescence with their own views by portraying them as a must from the White House and then transmitted this acquiescence to Ike as the unanimity so successful in selling their program first to Ike and then to Congress?

These monumentally grave questions presuppose that President Eisenhower did not bother to read—or never had before him—newspaper accounts of General Ridgway's troubled testimony correctly afforded when congressional committees asked for it. Whatever the detailed answers, the general's memoirs show that the President did indeed stun the nonconcurring general by presenting the 1955 fiscal-year program to Congress as "unanimously recommended by the Joint Chiefs of Staff." And the facts, General Ridgway says, are that the Army budgets for 1955, 1956, and 1957 were all directed verdicts, that the Defense Department tried to silence or suppress his disagreement as an expert witness, that he was pressured to fit his views to a preconceived politico-military party line, and that the force levels set in all three budgets were not based primarily on military needs but were squeezed within the framework of preset, arbitrary manpower and fiscal limits.

Such testimony from the Army's former Chief of Staff is political dynamite, of course. The Nation will be hearing much more about it. But it should become not a matter for partisan exploitation but for bipartisan concern. And both for the moment and for the long run the Nation's interest ought to be centered not on Secretary Wilson's methods and motivations for producing seeming unanimity in his empire, but on General Ridgway's persuasive argument that the Nation is courting disaster unless it reverses a 3-year program of defense cutbacks—a program that within a few months more will have reduced Army strength from 1.5 million to barely more than a million and the Army appropriation from 16.2 billion to only 8.9 billion.

The admen working for Secretary Wilson sold the cutback program as insuring "a bigger bang for a buck." Wilson and his supporters, in Congress and out, admitted that the Communist danger was as great as ever but said that huge reductions were justified for three reasons: (1) new weapons with enormously increased firepower, (2) the strength afforded by the impending new Reserve forces setup, and (3) the strength of the new West German armed forces.

The trouble with this "bigger bang" apparently is that it resembles a firecracker too much—all noise and no bullet. The new Reserve setup was mutilated by Congress at birth, and in any case, General Ridgway reminds us, won't amount to much for another 5 years, and even then will be of questionable value in what might well be a quick war. As for the West German Army of half a million, by the Germans' own estimate it will be at least 3½ years before the whole 12 divisions are ready. And the powerful new weapons? The number is extremely limited, General Ridgway says, and in Europe even the Russians know that we have there only a few guided-missile units plus 5 battalions equipped with only 30 of the vaunted 280-millimeter atomic cannon—a thin line indeed on the 400-mile-long front from the North Sea to the Alps.

These are the figures for the Army, and it is a brilliant Army man speaking. The figures do not include the new nuclear weapons of the Air Force or the Navy. And the viewpoint may be suspected of being too partial to the role and the needs of the Army. But General Ridgway reflects a dedicated concern not for the Army as such but for the national security. The concern is based on a belief, frequently voiced even by administration spokesmen, that we may face wars, little ones as well as great ones, in which no nuclear weapon will be used. And for such wars, General Ridgway grimly reminds us, the Communist powers, unworried by political

demands for cutbacks of manpower and firepower, have formidably superior forces. They are taking out double insurance on another Ridgway conviction; that nuclear warfare itself will require greater instead of lesser manpower, but that if the bomb is never dropped you stand to lose only money, not the war.

Obliquely—and by happenstance—Secretary Wilson has just answered some of the Ridgway reasoning. He quoted President Eisenhower as having warned his Cabinet in December that excessive defense spending might disrupt the Nation's economy and lead to dictatorship.

That is an ancient fear. And it has some validity, of course. But General Ridgway's point is that he assesses only the military needs of the Nation against its hopes of survival, against its dangers and its specific commitments around the world—to Canada, 20 Latin American and Caribbean countries, Berlin, West Germany, Spain, Yugoslavia, 14 NATO nations, Libya, Ethiopia, Saudia Arabia, Iran, Australia, New Zealand, 7 Manila Pact nations, Pakistan, Korea, Japan, the Republic of China; and the United Nations Organization. If we can't afford to pay for freedom, that's for civilians to say.

To us his argument spells out the need for a sharp reexamination of defense policies by the President and the Congress. We can spend a lot more on defense before we have to start worrying about a native dictatorship, and we would prefer to face even that danger in preference to foreign conquest. Better a shortage of butter and Buicks and bourbon now than a shortage of guns and fighting men when the chips are down.

General Ridgway reports that his 2 years in the Pentagon shocked him far more than did any bomb or bullets in battle. His record of those 2 years will probably shock his compatriots even more. It might even shock the White House censors into letting the President hear about it.

The Women of the Bible

EXTENSION OF REMARKS
OF

HON. JIM WRIGHT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1956

Mr. WRIGHT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include with considerable pride the following address by my friend and constituent, Edith Deen, which was delivered before more than 300 Fort Worth Kiwanians and their wives on January 5.

Mrs. Deen will be recognized as the author of the current best seller All of the Women of the Bible, which in less than 2 months has gone into three printings and parts of which are to be offered to the public as a syndicated feature by a national news agency during the pre-Lenten season.

Edith Deen and her illustrious husband, Edgar Deen, the former mayor of Fort Worth, are examples of the best in truly constructive American citizenship. Her remarks commend themselves to the reading of the Members of Congress.

The story of the women of the Bible, from the creation on through the Christ and the formation of the New Testament church, is one of the most dramatic on record. In fact the Bible is the only literature in the world up to our own century which looks at women as no better and no worse than men. It is no wonder then that the Bible presents a feminine portrait gallery unsurpassed in the world of literature.

Because these women of the Bible give us the world's most imperishable record of women's influence for good and evil, they are the most important women in the world. To think that these women have survived these thousands of years is the wonder of it. The time of the Old Testament, as you know, is a disputed question. But to say the least, we know that it dates back thousands of years before Christ.

In a few centuries the great women of our generation, Eleanor Roosevelt, Queen Elizabeth, and others, will have passed into oblivion. But there will still loom large in the hearts and minds of Christians everywhere these same women of the Bible.

These women are as much alive today as they were centuries ago. They are as immortal as the Bible itself. They cannot pass into oblivion because they represent the world's most wonderful record of woman's relationship to God, and that record is imperishable.

After more than 3 years of relentless research on "All of the Women of the Bible," I am fully convinced that as woman goes so the world goes. In her elevation the race is recreated. In her degradation the very fountains of life are poisoned at their sources. In nowhere is this more evident than on the pages of the Bible, where you find traced the story of man and woman's search for God, written in the history of His chosen people.

The ultimate aim of our book is to show the part women played in the civilization of Bible times. Particularly have we endeavored to stress woman's spiritual role in civilization.

As someone has aptly put it, "The hand of the clock today is pointed Godward, and women must realize their role as God intended it, the equal partners with men in the spiritual destiny of mankind." We have this confirmed right there in Genesis 2: 24, "So God created man in His own image, in the image of God created He him: male and female created He them."

Here, too, we have warranty for woman's dominion. The fact that God did not give man dominion until he had woman standing beside him is evidence enough of her exalted place in the creation.

As molders of civilization the Bible seems to tell us that women must realize to the fullest their partnership with men in the spiritual destiny of mankind.

In Kings and Chronicles, we have warranty for the fact that women were molders of the race. In the biographies of the Kings of Israel, we find appearing 20 times, like a refrain in a song, "And his mother was * * *. And he did that which was evil in the sight of the Lord," or "And his mother was * * *. And he did that which was good in the sight of the Lord."

In every epoch of the Bible, from the creation on through the crucifixion, these women of the Bible stand preeminent. They are the first at the cross and the last at the tomb and later among the first to assemble in the upper room to form the new church. Finally we find them as colaborers with Paul in the spreading of the Christian gospel throughout Europe.

These women—all of them—live on the pages of the Bible, a great river of spiritual reality rising out of Israel's remote past and continuing to flow more deeply and powerfully through succeeding centuries and right into your life and my life.

The Bible gives direction and continuity to our individual understanding of things spiritual. It is a story of man's search for God and in studying it as we should, great spiritual vistas open before us.

All of the Women of the Bible is divided into three parts. In the first section are the 52 searching studies of the 64 women of the foreground. This is the part of the book that I labored on for months and months, writing and rewriting some of them as many as 20 times. All the while I was trying to create a living procession of women beginning with the larger-than-life figures of Eve and the partiarchal mothers, on through the women of Israel's years of triumph and calamity and finally the women of the early Christian church.

In All of the Women of the Bible you will find saints and harlots, faithful mothers and wives, queens, fortune tellers, concubines, business women, all of whom give the Bible much of its color, charm and drama.

In the second edition of our book are all the named women in alphabetical order with a Bible chapter, verse and sketch about each. Here, for example, you find every named woman in the Bible from Abi, the mother of Hezekiah to Zipporah, the wife of Moses. And all between these names beginning with A down through those beginning with Z, you find many others, 2 Abigails, for example, 2 Abihails, a Bernice, a Chloe, 2 Deborahs, an Elizabeth, a Gomer, a Huldah, an Iscah, a Jemima, a Keturah, 7 Maacahs, 6 Marys and on and on they go through a Tryphena, a Vashti, and a Zibiah.

In the third section are those nameless women arranged for easy reference into the sections of daughters, wives, mothers, widows, and so on. Many of these nameless women, such as Sisera's mother and Potiphar's wife, are remembered only through their son or husband.

Among other nameless ones is the woman with 7 husbands. She was the woman of the New Testament, you recall, who was married first to 1, then another of 6 brothers. As each one died, without leaving a child, she became the wife of another of the brothers. Her marriage was in keeping with the early levirate law, making it obligatory for a man to marry his brother's widow.

The Pharisees and Sadducees, desiring to place Jesus at a disadvantage, brought to Him this unusual but hypothetical case of the woman with seven husbands, asking Him whose wife she would be if the husbands arose in the resurrection. And he told them that they knew not the Scriptures nor the power of God, for in heaven they neither marry nor are given in marriage, but are as angels in heaven.

Among other nameless ones are two women at the mill, a picture used by Jesus to make clear to His disciples how necessary it was to be ready for the day when the Son of Man should be revealed. He said, "Two women shall be grinding together; the one shall be taken, and the other left."

Jesus used this story immediately after that of the 2 men in bed, 1 of whom shall be taken and the other left, and just before the story of the 2 men in the field, 1 of whom should be taken and the other left. The fate of everyone was dependent upon whether he or she was ready for the sudden and unexpected coming of the Kingdom of God.

Jesus wanted woment to know, just as he wanted men to know, that none was exempt, not even women busy at their household tasks.

Another nameless one is the woman with leaven, who appears in one of Jesus' parables about the Kingdom of God. He likens the Kingdom of God to leaven, "Which a woman took, and hid in three measures of meal, till the whole was leavened." Three measures were probably more than a bushel, an enormous amount for bread, but the quantity probably was large in order to emphasize the extent of God's rule. In this parable Jesus teaches that His Gospel, though apparently small and weak, nevertheless possesses the power quietly to transform all of life.

Woman the loaf giver as well as man the seed sower are both needed to feed the hungry.

Among these nameless ones also are the women of Proverbs. Among these are the

evil woman, and there is strong warning not to lust after her beauty or be taken by her eyelids. There is the foolish woman, who is said to be clamorous, simple, and knoweth nothing. We have, too, the brawling woman, and we are told it is better to dwell in the corn of the housetop than with her in a wide house. We are told it is better to dwell in a wilderness than with the angry woman. There is also the contentious woman, who is said to be like a continual dropping in a very rainy day.

Finally there is the virtuous woman in that last chapter of Proverbs, a woman "whose price is far above rubies." Totalizing as it does the most noble attributes of the wife and mother, this is literature's most perfect portrait of the ideal woman.

Her chastity, charity, diligence, efficiency, earnestness, her love for her husband and children, even her business foresight, are brilliantly illuminated in words that rise up majestically from the page. The light in all its effulgence shines upon her godliness. This quality, the Bible seems to say, is what gives meaning, purpose, and direction to this womans' life.

But you know those magnificent lines, which I quote in part, "Who can find a virtuous woman, for her price is above rubies? The heart of her husband doth safely trust in her. She will do him good and not evil all the days of her life. Strength and honor are her clothing. * * * She openeth her mouth with wisdom; and in her tongue is the law of kindness. She looketh well to the ways of her household, and eateth not the bread of idleness. * * * Her children arise up and call her blessed; her husband also, and he praiseth her."

Another nameless woman who appears in our searching studies is Lot's wife, the woman who looked back. Though only 15 words tell her story—it's the shortest biography in literature—it has placed her among the well known women of the world. The 15 words are, "But his wife looked back from behind him, and she became a pillar of salt."

Even though Lot's wife was well out of Sodom with her daughters and husband before the destruction came, she could not be influenced either by the warnings of the angels or by the pleadings of her husband. And as she looked back, she was turned to a pillar of salt.

Tradition has pointed out, however, that a mountain of salt, at the southern extremity of the Dead Sea, was the spot where the event took place. The text described it as a rain of brimstone and fire from the Lord out of heaven, "by which the whole district was overthrown."

Geologists explain that the south end of the Dead Sea is a burned-out region of oil and asphalt. A great stratum of rock salt lies underneath the Mountain of Sodom on the west shore of the sea. This stratum of salt, they say, is overlaid with a stratum of marl, mingled with free sulfur in a very pure state. Something kindled the gases which accumulate with oil and asphalt, and there was an explosion. Salt and sulfur were carried up into the heavens red hot. Literally it could have rained fire and brimstone. The cities and the whole plain and everything that grew out of the ground were utterly destroyed. This may explain the incrustation of Lot's wife with salt when she turned back.

The difference of opinion regarding the myth and literal aspect of Lot's wife do not change the great truths of the story. She still stands as a permanent symbol of the woman who looks back and refuses to move forward, the woman, who, faced toward salvation, still turns to look longingly on material things she has left behind.

Women of the Bible had many tests and trials, heartaches and punishments. That's what makes them so real. I know they are real, for I lived with them intimately for more than 3 years as I wrote this book, and they always came up as real live human beings.

There was Rebekah, for example, whom we first see as a gracious, beautiful young girl in love with her husband Isaac. But like some other women, as they grow older, Rebekah's love for her son Jacob came before everything else, even before her loyalty to her husband and her fairness to her other twin Esau.

Finally we find Rebekah deceiving her blind husband and at the same time wrongly influencing her son Jacob to ask for his father's blessing. And so we see her at the end, an old woman bidding her beloved Jacob goodbye as he started on his long journey to Padan-Aram, with his staff in his hand and his bundle of clothes over his shoulder. We can picture this Bible mother as she takes a long look at her son's form as it becomes lost on the horizon.

The tingle of goat's bells and bleating of the sheep would be heard as usual. The sun would rise on the morrow. When night would come the stars would be there as usual, but Rebekah would never see Jacob again. It would be more than 20 years before he would return, and then she would be buried in the sepulchre beside her mother-in-law and father-in-law, Sarah and Abraham. Rebekah spent her last years with a son Esau, who always remembered his mother's part in deceiving him and with a husband who had lost confidence in her.

Oh, these are wonderful stories, filled with the drama of human lives, and all showing what happens to people when they forsake what is right and good.

We even have in the Bible the five daughters of Zelophehad who declared their property rights. Their father had died. They were entitled to what he had left, but because they were women—women didn't have many rights in these times—they had been denied this property. But these five girls marched courageously before Moses and declared their rights to their father's property. You lawyers know of course that the daughters of Zelophehad filed one of the earliest reported lawsuits on record, and they won.

One of the most lovable women in the Bible is Ruth, the central figure in the Book of Ruth. And her abiding love embraces the person you would least expect, her mother-in-law Naomi.

And so it was Ruth, the widow of Naomi's son, gave up her homeland of Moab, and traveled with her aged and poverty-stricken mother-in-law back to Judea and never swerved from her unselfish purpose during the many trials that followed. Or did she complain because she had given up everything: her country, her relationships with young friends, or her chance to marry a man of her own nationality. Or did she complain because she had to go into the hot fields and glean, in order to earn for her mother-in-law and herself.

But how much she gained. Ruth became the wife of one of the richest and most influential men in Judea, the noble Boaz, in whose field she had gleaned. From this marriage sprang an auspicious lineage, the House of David.

Love had worked the miracle in Ruth's life. She had proved that love can lift one out of poverty and obscurity, love can bring forth a wonderful child, love can shed its rays, like sunlight, on all whom it touches, even a forlorn and weary mother-in-law. Ruth's love had even penetrated the barriers of race.

We can never give a talk on women of the Bible without centering on Mary, who as the mother of Jesus Christ stands apart from all women in history.

Adoration of the mother of Jesus is ageless, classless, raceless, and timeless. Mary's divine mission of being the mother of the only Begotten Son of God never faltered from the manger to the Cross on Calvary. Because she bore nobly such loneliness and such heartache at the foot of the cross, countless people down the centuries, in moments of anguish and pain, have found comfort. Mary's silent endurance of what she could not change is her great lesson at the cross to the world.

Mary the mother was to experience new confidence in her own mission after she learned that her son had arisen from the dead. She now was not so conscious of her own motherhood as she was of the divine Sonship of Jesus.

The last mention of Mary is when she was gathered with the infant church after the ascension. She was praying with the apostles in the Upper Room in Jerusalem. We can know that great now was her faith in the eternal.

I wish I could bring dozens of these great women of the Bible before you, but that is impossible. We could prepare countless talks such as this, always using different women. For we have the stories of more than 300, you know, in "All of the Women of the Bible."

Among some of the more notable ones are Eve, the first woman in the Bible, Rachel and Leah, the two sisters, who as the wives of Jacob became the mothers of the 12 tribes of Israel. Another was Jochebed, the faithful mother of Moses. Another was Miriam, the sister of Moses who led the women of Israel in that oldest of all national anthems, "Sing Unto the Lord," when four centuries of bondage in Egypt had been lifted.

And there were two mothers who came before King Solomon, who received them as would a judge presiding over a court of justice.

Each had given birth to a son. One child had been born 3 days before the other. Like most infants of such a tender age, they looked much alike.

The real mother rushed before Solomon telling him how the other mother had lay on her child as she slept in the night and had awakened to find it dead. And then spoke this mother excitedly to King Solomon, "She arose at midnight and took my son from beside me, while I slept, and laid it in her bosom, and laid her dead child in my bosom."

After hearing the case King Solomon called for his sword and said, "Divide the living child in two, and give half to the one, and half to the other." Of course it was the real mother who hastened to say, "O my Lord, give her the living child, and in no wise slay it." And the other said, "Let it be neither mine nor thine, but divide it." You know to whom Solomon gave the child. Of course it was the mother who had real concern for the fate of her child.

Many of these stories of women of the Bible are filled with drama, just like this. And all tell a lesson that will be helpful in solving problems in our own lives today.

The stories of these women of the Bible, though ages old, are as new and fresh as if these women lived today. It is no wonder that this feminine portrait gallery is unsurpassed in the whole of literature and that these women will still be alive centuries from now, for they are as immortal as the Bible itself.

New Year Warnings

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Monday, January 23, 1956

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an editorial

entitled "New Year Warnings," written by Frank D. McKay, which appeared in the Michigan Times under date of January 6, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NEW YEAR WARNINGS

(By Frank D. McKay)

When General of the Armies Dwight D. Eisenhower campaigned for the Presidency, he preached commonsense and a return to the traditional ways of American life. People responded, and elected him.

He promised things almost everybody wanted, namely:

1. Stopping the Korean war—and by implication overseas wars, also.

2. Balancing our unbalanced budgets, so we could pay as we go, and stop making debts for our grandchildren to pay.

3. Cut tax takes down to somewhere near the American levels that used to be.

4. Stop the creeping communisms and sneaking socialisms set going by New Dealers.

5. Cut out the palsy-walsy playmate games we'd been playing with the Kremlin's killers.

Ike's long army career showed administrative ability and cleverness in managing masses of men. Hence most practical people felt he could pull us out of the political pitfalls the New Dealers dug to return to traditional American ways.

But Ike's military career and genius wasn't quite able to conquer the political abilities of the Lefties and Liberals who had entrenched themselves in Government offices widely; whose organizations were still able to formulate policy.

So it was that many lifelong Republicans felt disappointed over the clear continuance of the New Deal, the death of Senator Bob Taft and his rightwingers, and Ike's inability to outsmart the Russians or to put our finances on sound, American basis.

Ike's heart condition today prevents Republicans generally from looking clearly into the future, or from waging any practical election campaign at present. The well-financed Democrats are making hay rapidly, and getting men and money and the masses of voters lined up on their side.

All that leaves the American future largely in doubt, unclear. Perhaps a resurgence of new new dealism. Creeping socialisms, patterned after the European revolutions may come with a strong drift toward a dominant Labor Party government which might confiscate business and private wealth, and put Washington, D. C., in undisputed control of our 48 States and Territories, our 3,000 counties, and 55,000 cities, towns, and villages.

Most citizens never anticipate a robbery until the thieves have come and gone. Most people are murdered secretly and quietly by criminals who leave no clues or trails, and who have well-made alibis to prove they never done it nohow.

Most of communism's takeovers have come quickly, sneakily, under some polite camouflage, with polite names and personable "front" leaders.

The murders, the pillage, the rapes and rapine, and robberies come after the Commie criminals are in full control of all government agencies and officials.

It happened just that-a-way in France, Russia, Italy, Germany, England, East Indies, South America, Middle East, the Balkans, and the Baltics.

I am told that over 25,000 Socialists, Communists, liberals, lefties, and un-Americans went into important Washington positions during the Roosevelt and Truman administrations.

Only a very few, a mere handful (such as Hiss, Remington, Weiss, and the like) have been legally exposed as fully proven traitors, spies, and agents of Russian secret police.

Our American outcries have merely frightened the others underground, where they cover up and wait for some better opportunity to continue their reforms of our American ways of life.

Our long-time traditions favor free speech, free assembly, free press, free thinking, freedoms of every kind and description, including the civil rights necessary to run down the Constitution, to reform the Republic in any way we wish, and to completely change our ways of life.

All these American concepts seriously impede justice and our courts from catching up with and exposing the un-Americans.

The Civil Rights Congress (long a defender of outright Commies and criminal subverters) rightly claims such privileges for all the foreigners and social dynamiters they defend in court—and similarly for all foreigners working to upset our American prosperity and world trade.

Almost every other country in the world, and its commerce, of course, would profit greatly by a letdown of American prosperity, by a stock-market panic, or by any cutdown of American power and prestige and popularity.

Hence, with Russians as the spearhead, there is great power and much trickery behind the newspaper scenes. Many agencies are dedicated to cutting us down to size.

Our prosperity and peace could be upest and confused. This would profit multimillions of foreign traders and businessmen all over the world.

They have already copied our methods, borrowed our machines, hired our labor experts, gotten gifts of billions of dollars, so they can now compete strongly.

Foreigners today have a legal claim on fully half our national gold supply, buried at Fort Knox, Ky.

Foreigners today legally own enough American securities, stocks and bonds and United States Government obligations, so that a united drive on our stock markets and bank reserves could easily upset and confuse our present prosperity.

Such a drive selling short our securities may someday produce a panic fully equal to that disaster of 1929, in which foreign interests were so prominently charged with pushing off our panicy toboggan slide.

Foreigners today resent our world-wide superiorities in goods and gadgets and industrial methods. They have copied our best techniques and, with union labor's connivance, have set themselves to win away much of our world trade, just as they took away all our farm crop markets and trade.

Foreigners today figure that the more socialism that creeps into Washington's policies, the better chances they will have for benefiting, just as world traders benefited when socialisms cut Russians out of world trade 100 percent during the past 38 years.

Foreigners' factories have a great advantage over us in cheap labor supplies. Most of them can undersell us now with equal-quality goods at 50 percent to 75 percent less than our homemade goods must sell for.

Only our protective tariff walls prevent this today, and many Washington experts want these walls torn down, so foreign goods can enter our home markets more freely.

These are a few random thoughts and a few commonsense warnings that all Americans ought to keep in mind. They should not frighten or upset us. They should merely put us on guard, so we can prevent consequences. These facts are indisputable. Everybody should know about them.

Let us not be lured into pitfalls and deadfalls like blind men. Let's spot the Indians' ambuscades and avoid them, before bloody disasters strike secretly and suddenly.

Coal Turns the Corner in a Big Way

EXTENSION OF REMARKS

OF

HON. WILLIAM H. NATCHER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1956

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Coal Turns the Corner in a Big Way" which appeared in the January 20, 1956, issue of the Madisonville Messenger, of Madisonville, Ky.

The editorial is as follows:

COAL TURNS THE CORNER IN A BIG WAY

The coal industry, which shared for several years the plight of agriculture as stepchildren in the American economy, is held by experts to have entered a new era of rapid development and expansion. This will lead, by 1970, to a 100 percent increase in output, the optimists say, which translated into tonnage will mean production of 800 million tons per year.

This new era which is forecast for coal had its first full year in 1955, with a gain of 73 million tons or 18.6 percent. The next few years are not expected to witness a repetition of such a rapid increase, but within the next 5 years the industry will reach a potential production level of 600 million tons, or an increase of 50 percent over 1954.

Predictions along this line, based on increased demands for energy throughout the world and increased production efficiency within the coal industry, are made by Joseph R. Forsythe, general manager of Keystone Coal Buyers Manual, a McGraw-Hill publication which is widely circulated in the industry.

Forsythe says the upswing for the coal industry, which turned the corner in the summer of 1954, also promises prosperity for coal's allies—mining equipment manufacturers, transportation industries, electricity, steel, chemicals and finance.

Eight major factors supporting the growth prospects of the coal industry cited by the McGraw-Hill man are:

1. Coal's largest consumer the electric utilities, now have under contract additional facilities on which a valid estimate of a 37 percent increase in coal use can be made for the 1955–60 period.

2. The aluminum industry, faced with a possibility of expansion at a rate even higher, is turning to coal.

3. Overseas export demand is now near an all-time high, with every likelihood that it will establish new tonnage records in the next few years.

4. The competition of gas and oil has passed its peak.

5. Coal's top management is developing new techniques in mining, in transportation and in merchandising.

6. The steel industry, dependent on high-quality coking coal, is finding it necessary to use coal in a new way. Anthracite coal will be used in pelletizing taconite, which will supply immense quantities of iron ore to steel furnaces, and bituminous coal will be used to supply the electricity required.

7. The chemical industry holds coal's greatest growth potential. Development of low-temperature carbonization for both energy and byproducts for chemical use holds a potential of sizable tonnages.

8. Experimentation with coal-burning gas turbines is now on the verge of success, and it is now a possibility that these will replace diesels for railroad use as fast as diesels replaced steamers.

On the basis of all these things, it is calculated that to meet the challenge of the future the coal industry will have to develop production capacity over the next 15 years. This will call, of course, for investment of billions of dollars in new properties and new equipment, and also will contribute to the development of communities in which the industry expands.

United States and Latin-American Relations—Tributes to Dr. William Manger

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Monday, January 23, 1956

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter which appeared in the Washington Daily News on January 16, signed by Persio C. Franco, former Chargé d'Affaires of the Dominican Republic in Washington, which is highly complimentary of the great talents of Dr. William Manger, who has served at Assistant Secretary General of the Organization of American States, together with a similar editorial which appeared in the New York Times on January 19, also laudatory of Dr. Manger's great contribution toward the betterment of United States and Latin American relations.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

[From the Washington Daily News of January 16, 1956]

DR. WILLIAM MANGER URGED FOR OAS POST

This is an open letter addressed to the governments of Latin America by a Latin American who has always tried humbly to serve the ends of justice.

It would be in the best interest of the Organization of American States and an act of justice to Dr. William Manger to elevate him now to the position of Secretary General of OAS, as successor to the late Dr. Carlos Davila.

In the best interest of the OAS, because Dr. Manger is unquestionably the best qualified person in the world to discharge the duties of such high position.

An act of justice to Dr. Manger, because he has devoted a lifetime to that organization, and because the opportunity to give an eminent reward for his contribution to Pan-Americanism will not present itself again while he is still of desirable age.

Dr. Manger is, intellectually and spiritually, a son of Dr. Leo S. Rowe, the man who has made the greatest and noblest contribution to the realization of the Pan American ideal formulated by Bolivar and maintained by Lincoln, Roosevelt and others.

The position of Secretary General of the OAS is so unique that the question of nationality should never be taken into consideration. The best qualified person—man or woman—should always be chosen to fill it. All persons employed by the OAS, from the humblest to the highest, should be made to feel at all times that it is through merit—and through merit alone—that anyone can climb to the top. The failure to elect Dr. Manger now for Secretary General would be demoralizing to all of them.

I know that all those presently working for the OAS are friends and admirers of Dr. Manger and give him their best cooperation in every way. That being so, they should sign a petition addressed to the council of the OAS signifying their desire that he now be appointed secretary general. It is their privilege and they should consider it their duty to do so.

When Dr. Rowe passed away I addressed a letter to the editor of the New York Times, which was published December 16, 1946, in which I stated, among other things, the following:

"He was an idealist, a model citizen of the Americas, a generous heart, a perfect friend. His cordiality, courtesy, spirit of service, modesty, imaginative perception and intellectual capacity and diligence evoked the utmost admiration. * * * Each and every Latin American, from the most exalted to the humblest, who has had the good fortune to be in contact with him were made to feel that they were his fellow countrymen."

For the above reasons, all Latin Americans, including those that have been mentioned as probable candidates for the position, should favor Dr. Manger. He should be unanimously chosen by Latin America.

PERSIO C. FRANCO,
Former Chargé d'Affaires of the Dominican Republic in Washington.

[From the New York Times of January 19, 1956]

SECRETARY OF THE OAS

An admirable choice has been made for one of the most sensitive official posts in the Western Hemisphere. Ambassador José A. Mora of Uruguay has been elected Secretary General of the Organization of American States to finish the unfilled term of the late Carlos Davila of Chile. Dr. Davila, in his turn, succeeded one of the outstanding statesmen of Latin America, Alberto Lleras Camargo of Colombia.

It is well that the OAS keeps to such a high standard, as the position—regionally speaking—is the equivalent of Dag Hammarskjold's in the parent organization of the United Nations. Of all the regional organizations, the OAS is the most successful. No area in the world has such a fine record as ours in the peaceful settlement of disputes and the Secretary General, as the administrative head, always plays a key role when trouble arises.

As it happens, Dr. Mora was the chief negotiator in the two most recent quarrels in Latin America and he performed so well that he became a natural choice to succeed Carlos Davila. The first of these occasions, and the more important, was the settlement of the dispute between Costa Rica and Nicaragua a year ago. Dr. Mora also handled successfully the nervous charges by Ecuador against Peru last September.

It has always been thought necessary to appoint a Latin American to the post of Secretary General and there are sound reasons for doing so. However, this means that our own Dr. William Manger, who has served as Assistant Secretary General since 1947 and who has been with the organization since 1915, could not take the top post for which he, also, is so eminently fitted. Dr. Manger is one of those selfless, devoted public servants who is indispensable and fully appreciated by all his colleagues but who does not come before the public eye. It is thanks to Dr. Manger that Ambassador Mora picks up a smoothly functioning organization.

Everyone can feel sure that the OAS has now chosen a man who will make a notable Secretary General, and our hearty congratulations are extended to Ambassador Mora.

Educational Benefits for Veterans

EXTENSION OF REMARKS
OF
HON. EDMUND P. RADWAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1956

Mr. RADWAN. Mr. Speaker, for the past several weeks I have been working intensively on a bill which I consider most essential to the continued progress and security of our Nation. Today I was privileged to introduce it for the approval of the Congress. It is entitled "A bill to extend the educational benefits of the veterans' Readjustment Assistance Act of 1952 to all veterans of the Armed Forces who have served therein since June 27, 1950." Because the purposes of this proposal can easily be hidden behind such an austere title, I would like to explain them briefly.

As you all know, Congress passed a bill during the closing days of World War II which was intended to show our 11 million citizens under arms the Nation's appreciation for their victory, and to lend them a helping hand as they returned to civilian life. That was the purpose of the "GI bill of rights," as it was promptly dubbed, but as it turned out, the Nation could not have done itself a greater favor in its efforts to aid the veterans. Just as an example, the 7,800,000 veterans who took advantage of the education and training program are now paying back the cost of that program, because their education has permitted them to attain an income level at which they are paying an extra billion dollars in Federal income taxes. These benefits were revived for the Korean vet, and then once again permitted to expire.

For some time, as my constituents are aware, I have been concerned with several serious national problems. It is said that Russia has now surpassed us in the education and training of scientists and engineers, and that they are at the present time training over twice as many engineers as we are. Everyone knows that science and engineering is the key to survival in this scientific world.

Another problem is represented by our need to keep our guard up in this period of so-called peace. It is difficult to make the Armed Services attractive to our young men when we are technically at peace. Still a third problem lies in the fact that we have and probably will continue to have a serious shortage of doctors in this country. A fourth problem exists in the need to aid and improve our educational system generally. The recent White House Conference on Education, and the constant efforts to bolster our colleges and universities are ample proof of that. Finally, as I indicated above, we have been a Nation that has always shown gratitude to its veterans.

My purpose in introducing the above-described bill is to extend the education and training benefits of the GI bill to all veterans of the Armed Forces. Rarely does one enactment serve so many useful

purposes. It should certainly encourage enlistments in the Armed Forces, and at the same time encourage many who would otherwise not receive a higher education to acquire training in the sciences and engineering. As happened after World War II, many beneficiaries of the act will undoubtedly study medicine. The Nation's colleges and universities will receive a much needed helping hand, and the veteran will know that his gift of a period of service is not unappreciated. The overall benefit to the Nation will be incalculable.

I have long been active in veterans affairs and have served on that committee in the House. I can sincerely say that I never experienced greater satisfaction in presenting a bill concerning the veteran.

A Letter to Peggy

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1956

Mr. SMITH of Mississippi. Mr. Speaker, in the CONGRESSIONAL RECORD of January 16, on page A319, is an address entitled "What's Right With America," by Boyd Campbell, president of the United States Chamber of Commerce. The highlight of Mr. Campbell's speech was a reply he gave to a farm housewife in Texas who had asked him for a letter to her daughter, to be placed in a scrapbook she was preparing.

Because Mr. Campbell's reply to Peggy was not a part of his prepared speech, the reply was omitted from my insertion in the RECORD. I have since secured a copy, and would now like to include it in the RECORD, prefaced by the original letter from Peggy's mother:

DEAR MR. CAMPBELL: I am a farm housewife, the mother of a 7-year-old daughter, Peggy.

Since, in all probability, I will be unable to leave her anything much of this world's goods upon my death, I am making her a scrapbook of Americana.

Mr. Campbell, would it be possible for you to send Peggy a letter about what you think of America, so that I can place it in her book?

If you can't do this, could you send your autograph and one of your business cards, as I do want you, as a representative of American business, to be in my little girl's book.

Thank you for your kindness, and may the Lord bless you.

Sincerely,

———— ————.

JACKSON, MISS., *September 6, 1955.*

Miss PEGGY WILLIS,
Forestburg, Tex.

DEAR PEGGY: There are millions of people around the world who would give everything they have for that which cost you nothing—your American citizenship.

That does not mean, Peggy, that the priceless freedom which is yours was not dearly bought. Many of those who came before you paid for it with their lives.

The United States is the greatest Nation on earth. Its greatness, however, is not in the things you can see—not in its skyscrapers and banks and assembly lines, nor in its ships and automobiles and airplanes.

The greatness of America is in the things you cannot see—in human freedom, individual dignity, and trust in God. These values comprise the deep-laid foundation of our Nation. Upon them the things you can see were built.

America was a clean start in its economic, social, and political life. It was built into a great Nation by a free people for you, Peggy, and for all the girls and boys who will come after you.

To you and to your generation, and to each succeeding generation, comes the high privilege of defending our precious heritage.

Sincerely,

BOYD CAMPBELL.

A Résumé of Schoolroom Progress, U. S. A.

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Monday, January 23, 1956

Mr. SMATHERS. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a statement entitled "A Résumé of Schoolroom Progress, U. S. A.," a traveling exhibition which started its tour of the United States on September 19, 1955, under the direction of Mr. Lee Howard, of Miami Beach, Fla. The statement was prepared by the participating organizations.

The purpose of Schoolroom Progress is to encourage interest on the part of young Americans in teaching as a profession, to pay tribute to the contribution of the American teacher, and to increase interest in our schools and school facilities. These are highly laudatory objectives and merit the enthusiastic support of educational and civic organizations on both the local and national level.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

A RÉSUMÉ OF SCHOOLROOM PROGRESS, U. S. A.

Schoolroom Progress, U. S. A., is a traveling exhibition which started on its tour of the United States in Washington, D. C., on September 19, 1955.

It is cooperatively sponsored by the Henry Ford Museum and Greenfield Village of Dearborn, Mich., and the Encyclopedia Americana, and is under the direction of Lee Howard, of Miami Beach, Fla.

It has three basic purposes—to encourage an ever-increasing interest on the part of young Americans in teaching as a profession, to pay tribute to the contribution of the American teacher, and to increase interest in our schools and school facilities. As such, it merits and has the cooperation and enthusiastic support of educational and civic organizations on both a local and national level.

Schoolroom Progress, U. S. A., travels, and is exhibited, in its two railroad cars. In each exhibition city, these cars are exhibited either in the railroad station or at a convenient station siding—very much in the same manner as was the Freedom Train.

It will visit approximately 40 major cities per year over a period of 3 to 5 years, and will spend each summer on exhibition at Greenfield Village in Dearborn, Mich. During the summer hiatus, therefore, it will be viewed by the additional hundreds of thousands of persons who visit the village each summer.

The exhibit is contained in specially designed railroad cars containing both heating and air-conditioning facilities for the comfort of visitors. These cars were donated to the exhibition by the Chesapeake & Ohio Railway Co.

The exhibit graphically depicts the contrast of the American schoolrooms of yesteryear with those of today. It exhibits a frontier log-cabin schoolhouse, a replica of the McGuffey-type school of the early 1800's. This schoolroom contains an open fireplace, whaleoil lamps, split-log benches, a birch rod switch, slates, quill pens, McGuffey readers and many other wonderful, authentic artifacts from the collections of the Henry Ford Museum and Greenfield Village.

Similarly exhibited are American rural and city classrooms of the 1880's with its kerosene lamps and wood-burning stoves and other historic equipment of the classroom of 19th century. Exhibits of early American books, writing implements and other school equipment made or used by famous Americans are also exhibited in the old section of Schoolroom Progress, U. S. A. This yesteryear section of Schoolroom Progress, U. S. A., is truly a historical museum on wheels.

Then, in sharp contrast, Schoolroom Progress U. S. A. exhibits five schoolrooms of today. The most modern of classroom architecture, equipment, and audiovisual devices are exhibited along with architect's drawings and photographs of outstanding examples of today's school buildings and classrooms. These classrooms consist of the following types: Kindergarten, elementary, home economics, industrial arts, and office practice. These rooms have been designed by five architects who were award winners in the American Institute of Architects' honor awards program. Also exhibited are prize-winning entries in the school division of the American Institute of Architects' honor awards competition.

Thus the exhibition portrays the great progress in American educational facilities and will, we sincerely hope, stimulate interest and activity in our schools.

Since it is felt that adequate school facilities are great assets in attracting young people to the profession of teaching, we feel this exhibition serves that purpose. Further, it is hoped that Schoolroom Progress U. S. A. will serve as a "peg" upon which educational campaigns of newspapers, radio, and TV stations may be hung, bringing their influence to the side of the American school.

Schoolroom Progress U. S. A. does not attempt to say, "This is what your school should be like." It merely contrasts the educational limitations and hardships of years gone by with the wonderful school facilities which exist—are available—and are in use in American schoolrooms today.

The Henry Ford Museum and Greenfield Village, authorities in historic Americana, are sponsoring the old section of the exhibition. The research, reproduction, and artifacts of the old American schoolrooms are provided by this famous institution.

The modern section of Schoolroom Progress U. S. A. is sponsored by the Encyclopedia Americana. The outstanding research facilities of this great educational organization have been lent to finding the most effectual and advanced classrooms and school equipment extant and which are already in practical use.

Schoolroom Progress U. S. A. is accompanied by its own curator from the Henry Ford Museum. He is Robert Johnson, formerly community relations director of the Indianapolis public schools. Its executive director is Lee Howard, of Miami Beach, Fla.

In each exhibition city, Schoolroom Progress, U. S. A., is locally sponsored as a public

service of a prominent local organization. Local sponsoring organizations are usually utility companies, banks, chambers of commerce, and/or outstanding newspapers.

In each exhibition city, prior to opening Schoolroom Progress, U. S. A., to the general public, the local sponsor holds a press preview. Actually, press preview" is a misnomer since, in addition to representatives of press, radio, and TV, invitations are issued to the following groups: All educational authorities, teachers, boards of education, parent and teacher associations, and other educational organizations, and civic, business, industrial and political leaders, et cetera. In other words, every effort is made to attract the attendance of persons of leadership in each exhibition city, as well as from all surrounding communities. Consequently, although Schoolroom Progress, U. S. A., is expected to visit approximately 40 cities annually, it is believed that the "leader public" of some 200 cities or more will visit the exhibition each year.

Then, following the preview and its ceremonies, Schoolroom Progress, U. S. A., is viewed by students and the general public during an average visit of 5 days in each exhibition city. In the case of students, arrangements are made wherever possible to have them attend the exhibition en classe, accompanied by their teachers as scheduled field trips.

Persons visiting Schoolroom Progress, U. S. A., are given a 32-page booklet. This literature provides a detailed description of the exhibition—its contents and its purposes. It also credits those industrial organizations whose products (school furniture, equipment, instructional material, etc.) are seen in the modern schoolroom section of the exhibit. On this point, it should be explained that some outstanding industrial organizations, whose products are utilized in modern schools and classrooms, have been invited to participate in Schoolroom Progress, U. S. A.

The introduction to the 32-page booklet is written by Dr. S. M. Brownell, United States Commissioner of Education. Dr. Brownell's statement pays tribute to the modern American teacher. This statement is also displayed on the exhibition train.

The National School Public Relations Association, a department of the National Education Association, has provided a "suggestion sheet" containing thoughts pertaining to the local use of the exhibition to highlight and aid the activities of local educational groups. This material is distributed by the local sponsor to local educational groups in advance of the arrival of the exhibition.

Previous experience indicates that Schoolroom Progress, U. S. A., will probably have an attendance of close to one million persons per year. Between one and one and one-half million booklets will be distributed annually. Publicity will be released through all media. Many local radio and TV stations will cover the exhibition as public service programs, utilizing direct remotes or by tape and films for later playback.

We sincerely believe Schoolroom Progress, U. S. A., will represent a major contribution to educational thinking.

NATIONAL INDUSTRIAL ORGANIZATIONS PARTICIPATING IN SCHOOLROOM PROGRESS, U. S. A.

American Seating Co.; Carrier Corp.; Congoleum-Nairn, Inc.; Crane Co.; Curtis Lighting, Inc.; Day-Brite Lighting, Inc.; De Walt, Inc.; A. B. Dick Co., Inc.; Eastman Kodak Co.; Electric Auto-Lite Co.; Felt & Tarrant Manufacturing Co.; General Electric Co. (lamp division); General Outdoor Advertising Co.; Ludman Corp.; The Miller Co.; Monroe Calculating Machine Co.; New York Silicate Book Slate Co., Inc.; Owens-Corning Fiberglas Corp.; Philco Corp.; Pittsburgh Corning Corp.; Pittsburgh Plate Glass Corp.; Radio Corporation of America; Remington Rand; Silvray Lighting, Inc.; Singer Sewing Machine Co.; United States Plywood Corp.; Wakefield Brass Co.; Yale & Towne Manufacturing Co.

Policies of Secretary of the Interior McKay Relating to Conservation of Natural Resources

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, January 23, 1956

Mr. NEUBERGER. Mr. President, one of the West's great editors, Mr. Robert W. Ruhl, of the Medford, Oreg., Mail-Tribune, has written a most cogent editorial about the policies of Secretary of the Interior McKay, which are so inimical to the conservation of our natural resources. Mr. Ruhl is a former winner of the Pulitzer prize for excellence and achievement in editorial writing. His trenchant comments in the Mail-Tribune of January 17, 1956, emphasize that personal attacks are not being directed at Secretary McKay but, rather, at a program of abandonment and surrender which threatens the heritage of the American people.

I ask unanimous consent to have printed in the Appendix of the RECORD an editorial under the title of "It's His Policies, Not McKay," from the Medford Mail-Tribune of January 17, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IT'S HIS POLICIES, NOT MCKAY

It is somewhat disappointing to find some of our favorite newspapers in Oregon joining the GOP press at the wailing wall over the alleged abuse suffered by Secretary of the Interior Douglas McKay.

They don't dare attack the popular President, so they pick on poor little "Doug." "Doug," who is new in Washington, didn't realize what a hot spot he was getting into when he accepted the Interior job. In fact he should be getting bouquets instead of brickbats, for he is as honest as the day is long, and doing his best to serve the best interests of the administration, etc., etc.

That is the general line of the defenders of the Interior Department.

We have heard no one question Secretary McKay's basic honesty.

Nor in previous administration did we hear of anyone on the other side of the political fence, question the honesty of two of President Truman's Cabinet members, Secretary of the Interior Harold Ickes or Secretary of State Acheson.

But there were plenty of brickbats thrown at both of these controversial figures in the last Democratic administration, and the same were not heaved at the Democratic President.

This has been true ever since the Harding administration and the reign of Secretary of the Interior Fall, and will undoubtedly be true again—and again. For that is the only sensible procedure—the blame rests—if there is blame—not with the man who appointed the officials, but with the officials themselves, guilty of the misdeeds.

So these complaints about "picking on Secretary McKay," instead of President Eisenhower, rather than arousing sympathy for Oregon's former governor are likely to do the reverse.

As before remarked, it is not Douglas McKay's integrity that is at issue. In fact as far as this department is concerned we believe the man is entirely honest and sincere, just as we believe his ideas about democracy, conservation, and public power are honest but entirely wrong.

We doubt if there is anyone in the present administration who believes more thoroughly in Secretary Wilson's dictum and its implications that what is good for General Motors is best for the people of the country, than Douglas McKay—unless it be the Secretary of Defense himself.

That is a matter of fact, the basic, and extremely practical philosophy of accepted GOP doctrine.

And thousands—in fact millions—of good law-abiding American citizens believe it.

So giving tidelands oil to a few States and a few large oil companies instead of to the people of the country as a whole, as the Supreme Court directed, was "good politics because it was good business." Handing over the power at Hells Canyon to the Idaho Power Co. instead of the Government for the benefit of the people was similarly good business. Secretary McKay's most recent "give away" opening of wild-life refuges to mining prospectors and oil company representatives, as well as 252 game refuges is also good business—why consider the dumb animals or nature conservation when a few smart operators could make more millions out of the natural resources formerly protected and conserved for future generations.

The only fly in the ointment, as far as Secretary McKay is concerned—and the Republican Party for that matter—is that there are more millions of entirely honest and law-abiding citizens who do not believe making money is everything; who do believe that the public welfare should be considered before private profit, and who not only believe in the conservation policies of Theodore Roosevelt and Gifford Pinchot but are willing when the issue arises, to fight for them.

In short, the critics of Secretary McKay have no personal grudge against the "little Secretary of the Interior," no desire to "pick" on him, impugn his motives, or question the purity of his character—they just don't like his policies. They don't like what he has done since he became head of the important Department of the Interior, and what he promises to do before he gets out.

It is no defense to call this playing politics—unless all efforts by individuals to secure a government in whose policies they believe, instead of one in which they don't believe, is playing politics.

We don't believe even Secretaries McKay and Wilson would uphold that doctrine.

Decrease of Family-Size Farms

EXTENSION OF REMARKS
OF
HON. PRICE DANIEL
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, January 23, 1956

Mr. DANIEL. Mr. President, I know of no person in Texas who has given more serious thought to the plight of family-size farmers than has Mr. Walter Malec, publisher of the Hallettsville Tribune and other south Texas weekly newspapers.

Mr. Malec was among the first persons to interest me in the seriousness of this

problem, and the need for Congress to take more of the human and social elements into consideration while trying to improve our farm program. The San Antonio Express of January 17 contains an article entitled, "Size of Farms Increasing as Farm Population Drops," in which Mr. Malec's picture is carried as that of an authority on this problem, and in which he is quoted by the writer, Mr. R. G. Jordan.

I ask unanimous consent that the article from the San Antonio Express be printed in the Appendix to the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SIZE OF FARMS INCREASING AS FARM POPULATION DROPS

(By R. G. Jordan, agriculture editor)

Farms are getting fewer, the average size of the farm in Texas is increasing while the number of people residing on farms continues to decline.

These facts are borne out by the 1954 Federal farm census. It follows a trend which has been underway for the past several years.

For instance, in 1950 the number of farms in the State was 331,567; in 1954 it totaled 292,946. But during this period the average size of the farm increased by almost 60 acres—from 438.5 in 1950 to 498.3 in 1954.

The number of farmers residing on the farms operated in 1950 was 292,296; in 1954 it had declined to 251,253.

Another factor which points to the trend away from the farms is that the census report showed 103,477 farm operators in the State in 1949 who had income exceeding the value of agricultural products sold. By 1954 that number had increased to 112,139. In 1949 a total of 134,682 operators were working full time away from their farms while in 1954 the number had risen to 142,948.

For the past few years economists have cited that some 13 to 14 percent of the population is now feeding and clothing the remaining 86 to 87 percent. The ratio now may be down even somewhat more.

But let's take a look at some of the individual counties in south Texas where the farming population has shown a steady decline in the past two or more decades.

Walter Malec, publisher of the Hallettsville Tribune, claims that his county (Lavaca) has lost some 1,000 farmers since 1940 and that adjoining Gonzales County has lost fully 1,300 farmers.

"I would guess that since 1940 Texas has lost at least half of its small farmers," said Malec. "These losses which have occurred in this county are true in almost every county in the State," he added.

In Lavaca County, census figures show 3,398 farms in 1950 and 3,294 in 1954. The average size of farms had gained from 159 acres in 1950 to 171 in 1954.

The number of farm operators who did not reside on farms jumped from 128 in 1950 to 231 in 1954, and the number of those who were totally working off their farms increased from 618 in 1949 to 1,042 in 1954.

Uvalde County is another example of where the number of farms is declining and the average size of the farm is increasing. In that county 690 farms were listed in 1950 and 641 in 1954. The average size of a farm in that county was 1,878.9 acres in 1950 and jumped to 2,307.5 acres in 1954.

Another example is Bexar County where the number of farms declined from 3,132 in 1950 to 2,772 in 1954 with the average size of the farm set at 203.5 acres in 1950 and 192.5 in 1954. A total of 2,871 operators resided on the farms operated in 1950 but declined to 2,500 in 1954.

The figures which are cited from these few counties give an indication of the trend of people away from the farms as they seek more gainful employment in other lines of endeavor, and the trend toward larger farming units in many of the counties.

As Malec cited in an editorial in his paper some time ago: "The more people we have owning their farms, the safer all of us are. These fundamental facts are largely ignored. Yet there is no escape from them. And it's not only farmers, but all of us."

The Farm Situation—Broadcast by the Farmers Union Grain Terminal Association

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Monday, January 23, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the Daily Radio Round-Up of the Farmers Union Grain Terminal Association, of St. Paul, Minn., for January 19, 1956. The broadcast deals with the farm situation.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

THURSDAY, *January 19, 1956.*

In Washington, this week, the seed from which the 1956 farm program will sprout is being planted. And, as the biblical quotation says, "As ye sow, so shall ye reap." But, before a harvest can come, a lot of ground must be cultivated, the plants tended and watched over, and a good deal of machinery tinkered with and repaired.

The seed for this new farm program is the testimony being given by farm leaders, farm-State legislators and Government officials before the farm committee of the United States Senate. Is it good seed? Well, some is, and some isn't. Farmers know that when they want a big, bumper crop, they must plant the best seed they can get their hands on. Some of the people testifying this week don't want a big, bumper-farm program, and they're planting second-rate seed.

But, Farmers Union and GTA want the biggest and best farm program it is possible to get, and they're planting top-quality seed. Jim Patton, for example, testified yesterday. He's president of the National Farmers Union. Other farm organizations, of course, have had their say—the Grange, the Farm Bureau, milk producers, cattlemen's groups. Some good points were made, and also, unfortunately, some bad ones.

But, tomorrow, GTA's M. W. Thatcher takes the stand. He left yesterday for Washington. He carried with him a carefully thought-out statement on what should be included in this new farm program. Long in the preparation, Thatcher's statement draws on the experience of more than 30 years of working at the grassroots with the thousands of dirt farmers who own and control GTA.

Yet, no seed grows well unless it is in the right soil, well plowed and worked. The Congress itself is the soil that will grow this new farm program seed. For 2 years now, members of the House and Senate farm committees have worked through the farm areas of the Nation. They've talked to the farmers themselves, getting at the true needs of the people who farm for a living. And, in the GTA Family Farm Survey, they at last, have the facts and figures that document agriculture's economic crisis. Now it is up to the Congressmen—men like HUMPHREY, MARSHALL, HOPE, ELLENDER, and all the others—to separate the wheat from the chaff and come up with a farm program that will do the job.

So, the soil is well prepared, and the seed is being planted. Will it grow and produce as bountiful a farm program harvest as farmers have produced bountiful harvests of food and fiber for the Nation? Time will tell.

Tomorrow, on this program, we'll tell you about M. W. Thatcher's testimony before the Senate farm committee in Washington. He'll be appearing before that group as we go on the air here. Listen in—you'll be interested in what he has to say. It is the voice of the farmer, heard in Washington through GTA, the co-op way.

Address of Gen. Robert E. Wood, Before Corps of Cadets at the Citadel

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1956

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address before the corps of cadets at the Citadel, January 14, 1956, by Gen. Robert E. Wood, president, Sears Roebuck & Co.:

I am pleased to have the honor of addressing the staff and faculty, the corps of cadets, and veteran students of the Citadel. Your institution, founded in 1842, has had a long and honorable history. West Point, V. M. I., and the Citadel have stood for many years in the front rank of military schools. The Citadel furnished 193 officers out of 224 graduates to the armies of the Confederacy. It furnished 6,000 men to the United States Army in World War II, of which 2,200 were officers. Three hundred and fifty-two of its sons have given their lives for their country on the fields of battle.

Beside my interest in your institution and its history, I have a very personal interest. One of my best friends was a Charleston boy—Edmund Rhett. I have known your president, General Clark, since his boyhood. I served with his father in the Philippine Insurrection, and members of his family have been neighbors and friends of mine for many years. I have rejoiced at his success as a soldier, a citizen, and a patriot. He deserved this success because he had courage, ability, and character.

Perhaps I can talk to you understandingly because, like you, I had a similar course of military training and discipline that you are now undergoing. Like many of you who may choose the military profession permanently as a career, I served 19 years after my graduation from West Point in our Army. But 80 percent of your graduates will eventually enter civil life after their graduation. I have been in civil life for 35 years—as vice president, president, and chairman of a large corporation (Sears, Roebuck & Co.). I have seen both sides of the picture, military and civilian—the Army and business life.

During my period as cadet at the Military Academy, Dr. Elliott, then president of Harvard University, introduced at Harvard the elective system, which was to revolutionize university education. This system has had

a great impact on our higher centers of education. To my mind, it was a bad impact; as a matter of fact, the system was modified later from the very wide elective system to a much more restricted one.

It seems to me that our educational system at West Point, which I assume is similar in many ways to yours, is the very best. With the military training as a background, it prepares students for life far better than the average college or university. Our Nation needs discipline, devotion to duty and country as we never did before.

While I hope that many of you may enter the armed services as officers of the United States, the fact remains that the majority of you will enter civil life, either in the professions or in business life. Business may be roughly defined as the process by which the men and women of a country earn a living. The standard of living of a country is largely determined by the honesty and integrity of its government, the ability of its business managers, the intelligence and industry of its working people, the charater of the machines, tools, and equipment developed.

The United States has the finest industrial plant in the world. It has the finest machines, tools, and equipment in the world, the ablest business management, the most intelligent labor force. There is no other nation in the world (with the exception of Germany) that really understands mass production, and it was the productivity of the United States that was the largest factor of our victory in World War II. It was only the policy of the U. N., aided and abetted by our State Department, that prevented us from winning a complete victory in Korea.

To cover the whole field of business administration in a single speech or article would take too much of my time and yours. I will only touch on the high spots. As head of Sears, Roebuck & Co., for many years I had a wonderful opportunity of watching the economic panorama of the United States—for that matter, of the whole Western Hemisphere. We had stores in every section of the United States. Dealing as we did in every commodity except food and automobiles, we had contacts with 9,000 manufacturers, of every industry, located in every part of the country.

The most important changes I have seen in the past 30 years have been:

1. The increase in population.
2. The decentralization of manufacturing.
3. The decentralization of distribution to the larger cities.
4. The change in distribution of income.
5. The change in management's attitudes.

I. INCREASE IN POPULATION

The most important crop in the United States is the baby crop. In 1932 there were 2,200,000 babies here in the United States. In 1955, over 4 million. The average increase in population in the United States in the decade 1930–40 was 800,000 per year. Since 1950 it has averaged 2,500,000 people per year. At the present rate of increase we will have a population of 200 million by 1970. Now, this increase makes for good business in that, to keep up with this expanding population, there is increasing consumption of goods, and facilities have to be constantly expanding, with a resultant tremendous capital investment. There is, however, another side of the picture: Unless our increased productivity keeps pace with the increased population, our standard of living will decline. So far we have been able to increase our production more than our increase in people. It remains to be seen whether we can keep this up.

II. DECENTRALIZATION OF INDUSTRY

Up to World War I the Northeast and Middle Atlantic States were the great workshops of our Nation, and the products of their manufacturers were distributed nationally. Beginning in World War I the textile industry began its migration to the South, followed by many other industries. In the past 30 years more and more a regional pattern has developed; and each great region—the Middle West, the Southeast, the Southwest, and the Pacific coast—are developing and increasing their manufacturing to the point where they can supply the needs of their own people.

III. DECENTRALIZATION OF DISTRIBUTION IN THE LARGER CITES

Beginning about 10 years ago, the movement in all the great cities, as well as many of the smaller cities, began in the migration of large portions of the population to the suburbs and the outer periphery of the city. Thousands of small ranchhouses are springing up in every section of the country, transferring the city flat dweller to the country or suburban home dweller. This movement has caused a profound change in distribution. Stores are following their customers to the suburbs, as well as manufacturers, and even office buildings. The primary causes of the migration were the automobile, the increasing congestion in the shopping districts and business districts of all cities, the higher wages, increased purchasing power, and increased mobility of the worker, wage and salaried.

IV. CHANGE IN DISTRIBUTION OF INCOME

I have not always been in accord with our tax laws—income taxes and inheritance taxes. However, they have had a marked effect on the distribution of income. The poor and the middle classes have a far larger share, and the rich a small share, of the national income. Up to a certain point this is all to the good, but beyond that point it will have a harmful effect.

V. CHANGE IN MANAGEMENT ATTITUDE

Thirty years ago, corporate management was stupid and reactionary. The heads of corporations, as a result, did not have the proper perspective. But there has been a great change in management itself, the character of their thinking, and their attitude to their employees and to the communities in which their plants are located. The shoe is on the other foot, for I have seen in the past few years the union leaders make the same mistakes, show the same arrogance and disregard of the rights of others as did the corporate managers of the country in the 1920's.

These factors mentioned are causing profound changes in our national life. While the population of the United States is increasing rapidly, there is a marked disparity in the rate of growth. The areas of great growth are the gulf coast and the Pacific coast—the area starting from Brownsville to Houston, Beaumont, Port Arthur, Mobile, Pensacola, and Tampa. Beginning in 1964, California and Texas will furnish as many delegates to the conventions of the two parties as New York and Pennsylvania. It is certain that, within the next 25 years, political, financial, and economic power will pass from the New England and Middle Atlantic States to the Middle West, the Southwest, and the Pacific coast.

No man can foretell the future. If we have no basic change in government, if our system of free enterprise is allowed to function, if we have no major war, if through the discoveries of science, capital, and labor, we are able to apply these discoveries, and thereby further American war productivity, and our standard of living, the economic future for the next 10 years looks good. But there are many ifs, so we cannot be too sure of our future. As a matter of fact, the whole modern cult of security is founded on false premises. There is no real security except in ourselves, our individual character, our intelligence to work, and our devotion to our country. That does not mean that we should not do our best to protect our population against old age and sickness.

I hope you have not been bored by these generalities. Though it is well for you to understand the changes that are occurring in this country of yours, I realize that you are probably more interested in your chances in the world of business and the professions, after your graduation.

To begin with, it is more important for the young man to pick the right employer than it is for the employer to pick the young man. If you enter business with an employer whose business is static, or poorly managed, in a static locality, you have very little chance of advancement, no matter how hard you may work and what ability you may exercise. If our rate of economic progress continues, you can pick and choose, which, of course, is not possible in a time of economic depression.

In the generation after the Civil War, when the South was in a period of economic depression, a large number of the brightest and best brains of the South went to the great northern cities, while other thousands of the finest and most adventurous of the southern young crossed the Mississippi River and built up the great Southwest, including the great State of Texas. Today with the industrial renaissance of the South, there are and will be great opportunities in the South itself. Its immense natural resources are realized; it is entering a period of great growth in every field.

I am a believer in the eternal verities, faith in a divine power, religious faith, the maxim of duty, honor, country, which I am sure is taught here, as well as at West Point—the emphasis on character and discipline which you get here—I have been out of sympathy with what I consider as the false liberalism of the past 20 years, of the shallowness of much of modern thinking, the shallowness and mediocrity of so many of our so-called radio announcers, literary performers, columnists, who distort and slant the news of the day. But I believe in your generation. I believe that thinking will change, that we will get back to the eternal verities and that we will have a better country and better world.

I conclude by congratulating you on your alma mater, on the training you get here, on the fact that you have a great leader in Mark Clark, and that this institution is bound to grow and progress and to continue to be a source of pride to the State of South Carolina and its citizens.

For 50 Years

EXTENSION OF REMARKS

OF

HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Monday, January 23, 1956

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "For 50 Years," by Dr. George S. Reuter, Jr., head, department of education, Arkansas Agricultural and Mechanical College, College Heights, Ark.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FOR 50 YEARS

(By Dr. George S. Reuter, Jr., Arkansas A. & M. College)

The writer recently returned from the 25th biennial council and 50th anniversary celebration of Phi Delta Kappa, an honorary professional education fraternity, where he

served as the delegate of Beta Pi Field Chapter. The meeting was held on the campus of Indiana University at Bloomington.

Pi Kappa Mu was first founded at Indiana University. Dr. John Andrew Bergstrom, of the department of education of that institution, was one of the founders. The date of this organization is recorded as January 24, 1906. Eight students joined at that time, and Joseph A. Williams, one of this number, was present at the recent meeting.

At Columbia University on April 6, 1908, four students met to organize Phi Delta Kappa. The organization was completed on May 13, 1908, with six members. Robert W. Selvidge, of Missouri, was one of the six.

On February 23, 1909, a third independent organization developed at the University of Missouri. It was called Nu Rho Beta.

There were other groups, too. Dr. E. L. Hendricks was the first secretary-treasurer of the chapter at the University of Chicago. He later became president of Central Missouri State College, and is buried at Sunset Hill, Warrensburg, Mo.

The present fraternity was a result of the bringing together of these earlier ones. This was accomplished at the Claypool Hotel, Indianapolis, Ind., at a meeting which started on March 1, 1910. Dr. Hendricks was again present. The new name became Phi Delta Kappa.

Some prominent Missouri leaders through the years other than Dr. Hendricks and Dr. Selvidge were Dr. C. H. McClure, Dr. Earl A. Collins, and Dr. W. W. Carpenter.

The first three campus chapters were and are: Alpha, at Indiana University; Beta, at Columbia University; and Gamma, at the University of Missouri. The writer joined the latter chapter.

The first three field chapters were and are: Alpha, at San Francisco, Calif.; Beta, at St. Louis, Mo.; and Gamma, at Topeka, Kans.

There have been several headquarters. The one at Homewood, Ill., will be remembered by many; some will remember the one at Cleveland, Ohio, but the writer likes to think of the one at 63d and Woodlawn, Chicago, because he did business with that bank when he resided in Chicago from 1946 to 1948. The fraternity office was upstairs in that building until 1938. The new building, the first owned by the fraternity, was dedicated at Bloomington, Ind., Eighth Street and Union Avenue, on December 31, 1955.

Dr. Paul M. Cook will soon retire as executive secretary. He was honored for 30 years of service. The officers during the meeting were: Dr. Emery Stoops, president; Dr. M. L. Cushman, first vice president; Dr. J. Roy Leevy, second vice president; Dr. John C. Whinnery, recording secretary; and Dr. Maynard Bemis, comptroller. Logan Anderson is the editor of the Phi Delta Kappan and John R. Jones is the business manager.

Several commisisons have attracted favorable attention. Among these are: Free Public Education, The Study of Integration in the Public Schools, The Selective Recruitment of Teachers, Research, and International Education. The second listed commission has changed a part of its name, with council approval, from the word "integration" to "desegression," which probably was an error. Seldom is progress aided by stepping backward.

This council made the forward step of including area coordinators in future councils. Also, the writer served on the subcommittee that recommended the University of Michigan at Ann Arbor as the 1957 meeting, which was wise. As to finance, the steps taken are doubtful. Those of us who prefer avoiding deficit spending were unable to raise dues even though more than a majority voted with us. Deficit spending is wise only in an emergency, but has developed as a trend of the times.

Dr. Carter V. Good, of the University of Cincinnati, was present to report on his revised Dictionary of Education, which will be published in late 1956 or early 1957. Not only did the original dictionary make money for Phi Delta Kappa, but it was received by the public very nicely.

Several fine addresses were delivered. Dr. Wendell W. Wright, dean of School of Education, Indiana University, gave a fine one termed "Welcome." Dr. Paul M. Cook's address, The State of the Fraternity, was also fine.

Dr. Herman B. Wells, president of Indiana University, spoke on the subject, The Uniqueness of American Education, and he noted: "As we look to the next 15 years I know of no reason why we shall not accomplish again in our State what we have achieved in the past 15 years and twice in the past 35 years. Why can we not double again if we must? I am not dismayed by the statistics that attempt to prove that we cannot build the classrooms, cannot find the teachers, and cannot pay for the necessary expansion. I have faith in the vitality and energy and resourcefulness of our people. Our past experience disproves the charts."

Dr. Samuel M. Brownell, United States Commissioner of Education, spoke on the subject: Fifty Years of Progress in Education and a Look Ahead, and he said: "The Nation's colleges and universities are spending $350 million on research in the sciences, and that if every dollar spent on educational research could be traced down and added to this, it would only change the last digit of that 350 figure.

"What I am saying, in short, is that we are not doing nearly enough in the field of education to insure that we will solve our immediately pressing problems, let alone be prepared for future developments."

Phillip Lovejoy, former executive head of Rotary, gave the dedication address, which was wonderful. He said: "The historian will observe that America was founded by a group that wanted to get away from oppressions, that wanted to establish a country where the worth of each individual would always be in the ascendancy and where he could develop in accordance with his individual ability. There were to be no barriers to his advancement if he were willing to work. He would be enabled to go as far as his individual ability would permit. From the earliest times when man began to think for himself, there has been a wide consensus that the basis of true civilization is the belief in human dignity and the intrinsic God-given value of every human person. The United States of America was created out of that faith in liberty and the integrity of the individual. Our ancestors in the United States knew that each individual must be educated to take his rightful place. He must have knowledge of affairs past and present and he must see the place of the individual in the total picture in an uneducated democracy is self-destructive. Thus from the earliest times in America, education and the means thereof were to be forever encouraged."

Dr. Russell J. Humbert, president, De Pauw University, gave the final address, which was Sunday morning, January 1, 1956. He stated: "Great advances have been made in our lifetime in the understanding of the human mind, yet we stand at the edge of mystery in the age of the mental. It can be said that the mind has come of age in our generation. The wise providence of God has timed this well, for when man is surrounded by his own creations, he is forced to sharpen his God-given mind to guide his creative ability. It is important that we feel the tug of the eternal as we stand at the edge of mystery in the area of the mind. Man by himself can become arrogant, deceitful, and destructive. We need the nudge of the divine to become moral constructive agents."

Many additional comments could be made about such things as the fine way Indiana University treated the delegates, or the nice way ex-President Douglas G. Graffin of New York presided at the recognition banquet. The writer left feeling the meeting was a great experience in his life.

While in this section of the Uinted States, the writer witnessed additional fine things. Some few will be mentioned. There was the service at Bellevue Baptist Church in Memphis, Tenn.

The visit to the George Rogers Clark State Memorial at Vincennes, Ind. Hirons and Mellor of New York were the architects and Bennet, Parsons and Frost of Chicago, did the landscaping. The murals were painted by Ezra Winter, and Herman A. MacNeil was sculptor of the bronze statue. President Franklin D. Roosevelt dedicated the memorial on June 14, 1936, after it was erected at a cost of $2,500,000. The memorial is open daily to the public without charge. Clark did so much yet he lived a life without the "girl of his dreams," because they were isolated by the events of the times and she became a nun. He, like George Gershwin, gave so much to the world and yet received so little, and finally Clark died in poverty.

President William Henry Harrison's home is also in Vincennes. It was built in 1803–04. The bricks were made at the Thompson (later Vigo) farm, 3 miles east of Vincennes. The solid walnut woodwork is hand-carved. Wooden pegs and hand-forged nails were used. The house was divided into the following places for the visitors: council chamber, family living room, passageway between the main house and the kitchen and dining room, family dining room, stairs to servants bedroom, west bedroom, master bedroom, nursery, trap door section, bedroom (now museum room), wine room, servants' kitchen, servants' dining room, and school room.

On this trip, my mother, was very impressed with Santa Claus, Ind. This small community of less than 50 inhabitants was founded by a group of pioneers of German descent and thus named in 1852. There has been a post office here since 1856. It is on State highways 162 and 245. It has a superior place to eat and many fine attractions for children. The one for adults is the Hall of Famous Americans.

Here the artist, Lewis Sorensen, has created life-size people. The characters and settings are: early American Indians, Benjamin Franklin (1706–90), Betsy Ross 1752–1835), George Washington (1732–99) and Martha Washington (1732–1802), Eli Whitney (1765–1825), Thomas Edison (1847–1931), Henry Ford (1863–1947), Thomas Jefferson (1743–1826), Andrew Jackson (1767–1845), Abraham Lincoln (three scenes 1809–65), Stephen Foster (1826–64), Lillian Russell (1861–1922), Man and Lady of the 1880's, Mark Twain (Samuel Clemens 1835–1910), Tom Sawyer, Becky Thatcher and Huckleberry Finn, Little Women, James Whitcomb Riley (1849–1916), Will Rogers (1879–1935), and Babe Ruth (1895–1948).

Nearby is Nancy Hanks Lincoln State memorial where President Abraham Lincoln's mother was buried when she was 35 years of age. The shrine, which is across the highway, was dedicated in 1943. The memorial is divided into: The Kentucky Panel (1809–16), The Indiana Panel (1816–30), The Illinois Panel (1830–61), The Washington Panel (1860–65), and The Apotheosis.

En route home, we finally visited again the Reverend and Mrs. Clarence J. Jacobson and the Louisville Friends of Israel. This capped a fine trip, as it gave the necessary spiritual phase. It is doubtful if there are two more devoted Christians than this dedicated couple.

After returning home, the writer thought of the words of three council songs. They were:

"PHI DELTA KAPPA'S LIGHT

"(Valentine-Jones)

"Phi Delta Kappa's light preserves, where men the sons of men do serve.
Loyal hearts have lit the flame where shines the beacon of her name.
Her faith is steadfast as the star that guides the mar-i-ner a-far;
And as a guide o'er trackless sea, Phi Delta Kappa's star shall be.
Where men the sons of men do serve, Phi Delta Kappa's light preserve."

"PHI DELTA KAPPA MEN

"(Magnell)

"We are Phi Delta Kappa men, united in a band to give a helping hand to research, service, leadership, all for the child, the home, the school.
We are Phi Delta Kappa men, with a desire our strength to pool.
Child centered learning Interaction too, the whole child, every child, nothing else will do.
Ever evaluating! Phi Delta Kappa Hail!"

"THE DELEGATE'S DIRGE

"(Bertram G. Chalmer, Alpha Psi)

(Tune: Roll Out the Barrel)

"Roll out the motions
We'll have a lot of fun
Appropriations
We've only just begun.

"Phi Delta Kappans
Vote for your favorite choice
Now's the time for speech and seconds
'Til you lose your voice.

"Meet in committees
Separate wheat from the chaff;
Recommendations
Cut all expenses in half.

"Push legislation
Let's cut all stresses and strife
Let's complete our council business
And I'll get home to my wife!"

Report of United States-Israel Relations—Part I

EXTENSION OF REMARKS

OF

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, January 23, 1956

Mr. IVES. Mr. President, I ask unanimously consent to have printed in the Appendix of the RECORD part I of a Report on United States-Israel Relations, which was made in December of 1955 by Jacob K. Javits, attorney general of the State of New York. Attorney General Javits made an extended stay in Israel during the month of November 1955 and this report contains a great deal of factual material as well as his findings and recommendations. It is a valuable document, and should be given the broadest possible circulation.

Part I of this report deals with the economic and financial situation of Israel, while part II pertains to Israel's international position. At a subsequent session of the Senate, I shall request that part II also be printed in the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

REPORT ON UNITED STATES-ISRAEL RELATIONS

(By Attorney General Jacob K. Javits of New York)

PART I—INTRODUCTION

This report continues a study I made as a member of the Committee on Foreign Affairs of the House of Representatives in November 1951 and reported in a committee document in January 1952.

I have revisited Israel and made an intensive survey of the situation renewing the close contacts which I have maintained with United States-Israel relations since 1946 and through visits to Israel (then Palestine) in December 1946, in December 1949, and in November 1951.

The days I have just spent in Israel were closely packed with conferences with government officials, opposition leaders, trade-union leaders, businessmen, workers, established citizens and new in-migrants. I conferred with the Prime Minister, David Ben-Gurion; with other ministers including Mr. Levi Eshkol, the Minister of Finance, and Mrs. Golda Myerson, Acting Foreign Minister; the speaker of the Knesset, Joseph Sprinzhak; the representatives of the major Knesset parties; the Chief of Staff of the Israel Army, Maj. Gen. Moshe Dayan; the commander of the Israel Air Force, Maj. Gen. Dan Tulkowsky; leading officials of the courts of Israel, including Chief Justice Olshans, officials of Histradut, Israel's labor federation; and with Maj. Gen. Yakoo Dori, former chief of staff and now president of Technion, and many others. I visited key areas throughout the country including the Galilee and the Negev to get a picture of conditions. I was able to observe the situation along the Gaza strip, along the truce line between Israel and Jordan, passing between new and old Jerusalem, and along the line between Israel and Syria, including the Huleh and the Sea of Galilee. It should be possible therefore, by putting together the information which I have brought back, with information otherwise available, to get a fairly balanced view of the present situation in Israel.

ECONOMIC AND FINANCIAL SITUATION—PROGRESS TOWARD VIABILITY

1. Inmigration

In May 1948 when her independence was proclaimed, Israel had a Jewish population of 650,000, and by the time the armistice frontiers were established in 1949 a non-Jewish population of 150,000—a total of 800,000.

As a result of the vast tide of immigration and natural growth, the Jewish population soared to about 1,600,000 at the end of 1955. Meanwhile, the non-Jewish population rose to 200,000, bringing the total population to nearly 1,800,000.

This unprecedented and necessary inmigration is one of the major causes of the critical economic problems faced by Israel. The other causes grew out of the efforts of the Arab States to eliminate Israel by aggression in 1948 and by economic boycott and blockade since that time—unremitting pressure which has compelled Israel to keep on strengthening its defense forces to preserve the continuously deteriorating balance of power in the Near East.

It is, of course, well known that the basic law of Israel—the law of return—permits free immigration for every Jew who wishes or has to come to Israel.

It should also be added that the warm support which Israel has received from the American public generally and from those of Jewish faith particularly, is largely attributable to this policy.

Between the establishment of the State and until the end of 1955 more than 770,000 inmigrants will have found their home in Israel. At the beginning, the high tide of inmigration reached 30,000 per month, and, during the first 2 years population increased at the rate of 30 to 40 percent per annum. Since 1951 however, the rate of influx of inmigrants declined from the record figure of 1,000 per day to less than 1,000 per month in 1953.

The rate of inmigration into Israel is determined partly by the wish of many to return to an ancient homeland, and also by the degree of physical insecurity to which Jews may be exposed in some countries in which they live, as well as by Government policy in those countries, etc. Hence, for example, in 1951 there was a rapid evacuation of thousands of Jews from Iraq and Rumania because of dangerous internal conditions in those countries and because the government imposed strict time-limits on the grant of exit permits. There are still more than 2 million people of the Jewish faith in the U. S. S. R. aside from about 500,000 in Soviet statellite areas.

When life for Jews became increasingly unbearable in north Africa, Israel experienced a new upsurge of inmigration. On August 20, 1955, riots in the Jewish quarters of Morocco reached a climax. Jews were murdered, children were kidnaped, property was looted and many had to flee from their homes. A few days later the Knesset (Israel Parliament) held a special session and endorsed the Government program to bring 45,000 Jews from Morocco in the next 12 months. This decision more than trebled the rate of inmigration into Israel from 1,000 per month to 3,800 per month. The estimated cost of the initial absorption stages of these inmigrants (including travel expenses, modest housing facilities) is I£75 million (over $40 million). In order to raise these funds, the Israel Government made the population tighten belts by raising taxes and duties on some essential goods.

The Israel Government has made radical changes in its immigration and resettlement policies. Methods of absorbing inmigrants have gone through three main stages.

In the first years of the mass immigration, the newcomers were housed in huge tent camps, such as, for example, in Beit Lid with a population of 22,000 refugees largely from Europe, and Ras-El-Ein with a population of almost 10,000 largely from Yemen. The inmigrants remained in these tent camps until they were provided with housing and employment elsewhere in Israel.

In the year 1951, the system was improved. The inmigrants were received at reception centers, processed for identification, health, and so forth, and immediately decentralized in camps which are called Maabaroth, literally meaning "passing over." There have been two types of Maabaroth: Those which were originally designed to develop into permanent settlements, and those of a temporary character located where employment was available. This system accelerated the process of absorption by enabling the inmigrants to become economically independent more rapidly.

Last year a ship to village program improved the system of absorption further. Villages with parceled-out lands, and installed utilities are erected in advance. On their arrival the inmigrants are brought directly to their future homes and farms. This system will insure more efficient absorption of the refugees from north Africa.

A major problem in the early mass immigration was the large proportion of hard-core cases of the old and sick. That situation has changed. The Jewish Agency, which is responsible for the transfer of inmigrants into Israel and the initial stages of their integration, decided to give preference to inmigrants in the productive age group and meeting established minimum health standards. However, these preference standards are to be suspended whenever an emergency situation arises in a Jewish community

abroad. This policy of selective inmigration has speeded and facilitated the absorption of new immigrants as productive members of the economy.

The inmigrants are, as a rule, unskilled and untrained or without occupational experience in a pioneering community. The Government initiated vocational projects. Between 1948 and 1954, more than 60,000 persons attended courses in about 200 trades, over and above a large number who received on-the-job training, in industry and agriculture. Such vocational training was carried out by Israel's ministries (often aided by United States economic and technical assistance ORT, Haddasah, Technion and other voluntary organizations receiving United States citizens' support.

The inmigrants came from 65 different countries, from as many cultural backgrounds and spoke almost as many different languages and dialects. Their social and cultural absorption into the existing community, was one of the Government's major tasks. The Israel Ministries of Education and Culture, together with many public and private organizations, established an elaborate system of Hebrew courses throughout the country. Professional inmigrants mastered Hebrew in 5 to 6 months of intensive study in special schools, called Ulpanim. Since 1951, 8,000 inmigrants finished such courses. By 1954, 50,000 pupils and 600 teachers were engaged in this activity.

2. Economic stabilization and growth

As mass inmigrations declined in 1952, the Israel Government took drastic measures to overcome serious imbalances in the economy.

Israel's new economic program established more realistic exchange rates and intensified credit control; tax receipts increased (income-tax receipts have tripled since 1952); the budget deficit was eliminated; the rise in prices was slowed down after an initial upswing; administrative controls were reduced and the country's economy was stated to have been liberalized. By 1954 it was claimed inflation had been curbed and a measure of economic stability achieved. In 1954, the price rise was estimated at only 10 percent as compared with 60 percent in 1952.

The larger degree of stability enabled the country to develop its output and productive capacity at a faster rate.

In 1954 the national income of Israel is reported to have reached a level of almost I£1.5 billions, an increase of 20 percent over 1952 in real terms. In 1954, the average per capita income increased by over 10 percent.

In physical terms, net investment from all sources, domestic and foreign, increased by 20 percent in 1 year (from 220 to 300 million Israel pounds). One-third of the investment in 1954 was channeled into agriculture, another third into housing and the balance into industry and other branches of the economy.

3. Agricultural production

Between 1951 and 1954, agricultural production is reported to have nearly doubled. In 1954 alone, the increase reached 24 percent of the 1953 figure. As a result of this intensive development Israel has become self-sufficient in fruits, vegetables, milk, eggs, and poultry. It is now developing industrial crops. The rehabilitation of citrus groves following the period of war damage, 1948–49, was very rapid. By 1955, the area under citrus cultivation increased by 50 percent compared with 1948, and expanding citrus exports amounted to 35 percent of the total exports in 1954.

The irrigated area has trebled since 1949. To a large extent, further development in agriculture is dependent on the rate of land reclamation and on irrigation projects. The Yarkon-Negev pipeline which was put into operation a few months ago will supply water to another 50,000 acres of now arid lands, largely in the Negev. Within recent years, Israel has been restoring neglected grazing lands, training cowboys, bringing in new strains of cattle, and expanding its meat supply.

4. Industry

Industrial output in Israel increased during the last 5 years by 60 to 80 percent. The use of electricity in industry, a reliable indicator of activity, increased by 50 percent in 1952–54 alone. Most of the increases in 1954 were recorded in metals, machinery, electrical appliances, diamonds, tires, chemicals, and building materials. Much of the increase occurred in export branches.

The deficit in Israel's balance of trade was reduced by more than $20 million between 1953 and 1954. In 1949, Israel earned only enough to pay for 11 percent of its imports. By 1954 its earnings mounted to 30 percent of import expenditures.

5. Foreign trade

The reduction of the deficit in the balance of payments on current account was due to the increase in production of import substitutes as well as to a significant rise in exports.

In 1954, exports increased by 50 percent over 1953—from $59,700,000 to almost $88,-100,000. Exports doubled between 1952 and 1954; 24 percent of the exporting plants in 1954 were founded after the State was established. In that year, their share in industrial exports amounted to almost 70 percent.

Progress continued in 1955. Agricultural and industrial production mounted; the economy grew more stable; confidence in the local currency was strengthened; savings schemes were launched; and productivity was stimulated by technical assistance and vocational training.

6. United States Government Aid

United States assistance has proved of crucial importance in Israel's extraordinary economic record. Loans from the Export-Import Bank, now being repaid by Israel, totaled $135 million; grants-in-aid amounted (at the end of fiscal 1955) to $228,400,000; technical assistance (1952–55) to $6,296,000. More recently there have been sales of surplus agricultural commodities to Israel under favorable payment terms pursuant to Public Law 480. In addition to United States Government aid, Israel has benefited from the receipt of reparations payments from the German Federal Republic (West Germany), from sales of Government of Israel bonds in the United States and other countries, and philanthropic remittances. The economic development of Israel, the rapid growth of its agricultural and industrial plants, the transformation of barren land into farm communities, industrial sites, and flourishing towns, all bear out that the United States Government aid to Israel has been effectively used for the purposes intended.

If Israel is to reach economic viability, exports will have to be increased by five times the 1954 level and national income will have to be doubled. Expansion of tourism, the main invisible export of the country, would contribute materially toward this goal.

7. Disturbing factors

Nevertheless, several disturbing clouds darken Israel's economic horizon. In addition to a partial drought which necessitated increased agricultural imports and caused a sharp rise in the prices of vegetables, the main factors which seem now to threaten growth and stability are as follows:

First, Israel has been forced to divert a larger part of its resources to defense because of the deterioriating military situation on the borders and because of the unrestricted sales of Communist supplies of arms to the Arab States. This must inevitably retard the country's rate of economic development.

Second, the resumption of large-scale immigration, due to the emergency situation of the Jews in north Africa has again forced the Government to increase its budgetary expenditures for inmigrant absorption purposes. Since the contribution of the new inmigrants to output is negligible at the outset, the menace of inflation has again increased.

Third, the reduction of United States Government grants-in-aid to Israel from $70 million in fiscal 1952 to $40 million in fiscal 1955, and probably to an even lower figure in fiscal 1956, has reduced the resources available to Israel for basic economic development and investment.

In view of Israel's past remarkable performance, there should hardly be any serious question as to the ability of the Israel economy to attain economic viability. The question is how soon and how smoothly will the goal be reached.

8. German reparations

Because of the importance of German reparations in supplying a substantial part of the imported capital equipment Israel needed, the date on which these reparations end, i. e., 1963–64, is commonly regarded as the date by which Israel is to achieve economic viability, assuming that the requisite foreign financing will be available. By then, Israel should be able to complete the network of irrigation projects which are vital for further expansion of agricultural production. On the basis of existing water resources (except the Jordan River), it is possible to put some 100,000 additional acres under irrigation. This, however, will require huge investments which, it is reported, cannot possibly be financed from existing reserve under present conditions. The aid of United States financial institutions is vital for the accomplishment of this objective. It is already 2 years since negotiations started on the proposed Jordan River development. In spite of the vigorous endeavors by the Honorable Eric Johnston and the Israel Government, no solution has been found as yet because the Arab States still withhold final approval. Thus, 2 years which could have been devoted to constructive progress, both on the part of Israel and the Arab States, in economic development for the region, have been wasted. For the execution of the irrigation plans based on the Jordan waters, Ambassador Johnston, the special Ambassador of President Eisenhower, called for a grant of $60 million, which is only part of the total sum required. When the Jordan water plan is completed, another million dunams (250,000 acres) could be put under irrigation. Under those conditions, agricultural production could provide all the necessary foodstuffs and agricultural raw materials for industry and for a population in Israel of more than 2 million. Agriculture would then be able to finance from its exports of citrus and other agricultural products all the requirements for agricultural imports of raw materials and foodstuffs in foreign currency.

9. Mineral resources

The large investments necessary to exploit Israel's potential mineral wealth should be forthcoming. In addition to the expansion of Dead Sea potash and Negev phosphate exports, there will undoubtedly be an exploitation of copper deposits and the production of bromide from the Dead Sea waters. The foundations of a petro-chemical industry area to be laid. This should prove to be especially worthwhile, if further quantities of petroleum are discovered. This discovery of petroleum in Israel was made possible by large private investments, both local and foreign, and industrial investment in Israel should greatly increase in all lines of production, especially in the export fields.

10. Technical assistance (United States)

United States achievements in economic and technical assistance to Israel continue to be widely recognized and appreciated and have a high standing and esteem in the country. The head of the United States Opera-

tions Mission to Israel, Dr. Lincoln B. Hale, and his principal assistant, Dr. Paul B. Orvis, Director of the project of the State University of New York, are extremely well known and respected in Israel. The most distinguished achievement in United States technical assistance has been in the field of agriculture, where remarkable strides have been made with United States help. The emphasis in American aid is now shifting to industrialization and this too looks very promising. Much domestic construction has come through the use of counterpart funds realized through United States grants-in-aid. One of the most important projects aided by our program is the Yarkon-Negev pipeline to extend 75 miles (63 miles completed) and bringing water from the north to irrigate the land in the Negev; an undertaking absolutely indispensable to the settlement of immigrants in Israel and vital if Israel's present territory is to be developed to meet the needs of her contemplated population.

Text of President's Talk at GOP Salute Dinner

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1956

Mr. AUCHINCLOSS. Mr. Speaker, I appreciate the permission of the House to extend my remarks in the RECORD and include the address made by the President of the United States on the occasion of the salute to Eisenhower dinners held in many parts of our country on January 20, 1956.

Of course, this was a partisan affair, perhaps the largest of its kind ever held, and in his brief address the President was at his best. In it he revealed the sincerity of his character which has profoundly impressed the people of our country; he stated in simple language his philosophy of government; and he showed in no unmistakable terms the reverence for duty and service to his country which have dominated his entire life. Americans everywhere admire and respect such devotion, free from the taint of personal ambition, and his underlying and undying resolution to do the right as "God gives him the power to see the right." Yes; it was a partisan occasion, but President Eisenhower spoke as a dedicated American, and his principles are enshrined in the hearts of us all.

The above-mentioned address follows:

TEXT OF PRESIDENT'S TALK AT GOP SALUTE DINNER

Thank you, thank you very much indeed. Mr. Vice President, Chairman Hall, my very dear friends here and throughout the United States, in this past half hour, on the magic carpet of television, I have traveled around the country, recognizing faces of old friends hundreds of miles distant, recalling visits to cities as I glimpsed them on the screen, feeling the enthusiasm and warm friendship of so many thousands whom I have never met. I wish I could meet them so that I might personally say to each, "Thank you."

In fact, my friends, all my friends, after such a tribute as has been paid to Mrs. Eisenhower and to me this evening, the heart is so full that it is indeed dangerous to try to say more than "thank you." I shall let it go at that.

GRATEFUL TO ALL

Naturally, I have been deeply moved through the flying minutes of this electronic hour. I am grateful to everyone—the Republican clubs, and all the organizations and individuals and their friends—who, directly or indirectly, participated in this salute.

But my deepest emotion is concerned with things not shown by the TV cameras, things of the mind and heart and spirit—the memory of millions of our people—Republicans, Independents, and Democrats—who in 1952 worked tirelessly to make reality of their ideas of good Government; the memory of men and women who stirred their friends and communities to action and who—when the election was done—returned to their jobs and their homes, quietly performing the work of America, raising their families, discharging their responsibilities of citizenship, living worthy, rewarding lives.

Those many millions made possible the event whose anniversary you observe today. They are the basis and the strength of what so many have called a new era. They brought fresh vigor to the political life of America with their vision, energy, and dedication. We in Washington—inspired by them—have sought to be worthy of their trust. The heartfelt thanks of everyone at these dinners tonight goes to them. They, in the homes of America, are the ones who truly merit a great salute.

During recent months I have had an unusual, even an enforced, opportunity to ponder on many subjects—the essential goodness and honest purposes of people; the common bonds that join all Americans, regardless of ancestry, faith, or politics; the anxiety of multitudes, at home and abroad, to encourage and pray for one stricken by illness; the unity of aspirations that binds humanity together.

DEFENSES ARE ALERT

In pursuit of these aspirations, we in the Federal Government strive with all our strength to convert the uneasy peace in which we live to one that is genuine, based on the great moral principles of justice and right. Knowing well that true peace cannot be achieved by retreat from reality and responsibility or by desertion of friends, we make certain that our defenses are alert and strong; that our partnerships with others are based on deep friendships and common great purposes; that gradually the truth of our Nation's peaceful goals and our respect for the rights of others is brought to all peoples of the earth. Let no one be in doubt; this struggle for peace will be waged relentlessly by Americans of all parties and all creeds until at last success shall crown our efforts and reward our faith.

At home we enjoy prosperity; not the false prosperity of a dizzy inflation or of economic activity based mainly on arms spending; not the tragic prosperity of a few who can squander and of millions who must pinch; rather, the genuine and widely shared prosperity of an immense productivity for peacetime satisfaction of human needs.

This record is the product of an industrious citizenry, supported in the Federal Government by a program designed for progress, and dedicated to integrity, to concern for every individual, to faith in America and its principles.

Many tasks still await action. Problems involving sectors of the home front and relationships abroad demand the earnest and sympathetic attention of all Americans. Thus the present and the future are heavy with challenge, rich with opportunity. We must not relax merely because the general record is good.

For every good citizen, his party is, or he wants it to be, an instrument for genuine service, united in its devotion to a program that preserves intact the vital principles of the American creed; that attacks every problem in the light of those principles; that recognizes inescapable change and meets it; that believes in the dignity of every individual, in his equal right to justice and fair play, in his equal opportunity for the exercise of his talents, in his right to proper sharing in the Nation's prosperity. This is my conception of the Republican Party on this January 20, 1956. As long as our party lives by these principles and dedicates itself to these goals, it will continue to draw into its ranks in ever-increasing numbers, men and women of idealism from every walk of life and from every section of our country.

PONDERS HIS ROLE

As we move toward the solution of existing problems, my own future role in our party remains undetermined; whether to be a candidate for your nomination or a worker in the ranks. I could devoutly wish that there were some method by which the American people could, under the circumstances, point out the path of my true duty. But it appears that this is a question that first I alone must answer.

That answer will be forthcoming as quickly as it is firmly fixed in my mind. I trust that it will not unduly reflect concern for self, and I pledge that in whatever capacity I shall serve, I shall support with all my strength the foreign and domestic programs for America that have been the guide of all of us for these past 3 years. That work must go on to fruition, in the interests of all Americans.

Again my warmest thanks to all of you.

Extension Through June 30, 1957, of Poliomyelitis Vaccination Assistance Act

EXTENSION OF REMARKS
OF
HON. J. PERCY PRIEST
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1956

Mr. PRIEST. Mr. Speaker, I have today introduced a bill to extend through June 30, 1957, the duration of the Poliomyelitis Vaccination Assistance Act of 1955—Public Law 377, 84th Congress. The present terminal date contained in the act is February 15, 1956.

In view of the fact that little time is left before the expiration of Public Law 377, 84th Congress, the Subcommittee on Health and Science of the Committee on Interstate and Foreign Commerce has scheduled hearings on the bill, which I have introduced today, to begin Tuesday, January 24 at 10 o'clock.

The extension of the Poliomyelitis Assistance Act has been requested by the Secretary of Health, Education, and Welfare and, in introducing this bill, I would like to make public the letter dated January 19, 1956, signed by the Secretary of Health, Education, and Welfare, and addressed to the Speaker requesting introduction of the extension bill:

DEPARTMENT OF HEALTH,
EDUCATION, AND WELFARE,
January 19, 1956.

Hon. SAM RAYBURN,
Speaker of the House of Representatives.

DEAR MR. SPEAKER: I am enclosing for your consideration a draft of a bill to amend the

Poliomyelitis Vaccination Assistance Act of 1955 (Public Law 377, 84th Cong.). The proposed amendments would extend the terminal date for the availability of funds appropriated for carrying out the purposes of the act, but would not otherwise modify the original program authorization.

The present terms of the act authorize the appropriation of such sums as may be necessary for making payments to States which have submitted, and had approved by the Surgeon General, applications for Federal grants. Sections 2 and 6 of the act, however, contain provisions terminating the availability of funds appropriated for this purpose on February 15, 1956. The Supplemental Appropriation Act, 1956 (Public Law 219, 84th Cong.) included an appropriation to the Public Health Service of $30 million for "grants to States for carrying out the purposes of the Poliomyelitis Vaccination Assistance Act of 1955."

The legislative history of both the enabling legislation and the appropriation for carrying out the purposes of the act indicates that it was the intent of Congress to authorize and initiate immediately a program of Federal assistance to States but to provide an opportunity for reviewing program developments early in the second session of the Congress before completely implementing the Federal grant provisions of the act. Thus the objective of program review is the apparent reason for the inclusion of the February 15, 1956, time limit on the availability of appropriations, as well as the limitation of the initial appropriation to an amount sufficient to provide the several States with approximately half of the allotments indicated by section 3 of the enabling act.

On the basis of our experience to date, we believe that the enabling legislation provides an adequate base for program planning and administration, and we see no need for amendments other than the proposed extension of the time limit on availability of funds.

The progress of program development thus far has been contingent upon two key factors, apart from the availability of Federal funds: (1) the development and approval of State plans under the act and (2) the rate of production of vaccine required for State vaccination programs, as well as for distribution through private channels.

The progress of State plan development to date has been very satisfactory. With one exception all States have completed, and had approved, their plans for vaccination programs, and have initiated their programs of vaccine purchase and distribution. As of December 31, 1955, Federal payments totaling $7,674,766 had been made to these States from the initial appropriations for this purpose. Further progress in the implementation of these programs will therefor be governed primarily by the availability of vaccine.

The volume of vaccine production and release during 1955 was limited but it is expected that the rate of production will now accelerate. Through December 31, 1955, a total of 16,390,608 cubic centimeters of vaccine had been released for sale to public agencies and commercial users (in addition to the 13,571,223 cubic centimeters of vaccine supplied to the National Foundation for Infantile Paralysis). Approximately 53 percent, 8,750,000 cubic centimeters, has been reserved by the States for public agency purchase. It is presently estimated that by February 15 of this year, the amount of released vaccine reserved for public agency purchase will aggregate approximately 15 million cubic centimeters. This will be about one-fourth of the total required for implementation of the federally aided vaccination programs indicated by the allotment formula in section 3 of the Poliomyelitis Vaccination Assistance Act. The purchase of this amount of vaccine, together with additional State program expenses authorized by the act, will require payments to the States by February 15 of approximately half of the $30 million appropriated last year.

On the basis of present data on prospective vaccine production, we are recommending that the availability of funds appropriated pursuant to the act be extended through June 30, 1957. This should allow ample time for vaccine production to reach the required levels and for the available supply to be distributed and administered.

We shall appreciate it if you would refer the enclosed draft bill to the appropriate committee for consideration.

The Bureau of the Budget advises that enactment of this proposed legislation would be in accord with the program of the President.

Sincerely yours,

M. B. FOLSOM, *Secretary.*

Statement by Senator Lehman Before Senate Judiciary Subcommittee on Immigration

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, January 23, 1956

Mr. LEHMAN. Mr. President, because of the increasing interest, in and out of Congress, in our present immigration and citizenship laws and policies, I ask unanimous consent that there be printed in the Appendix of the RECORD the highlights of the testimony I gave on November 22, 1955, before the Subcommittee on Immigration of the Senate Committee on the Judiciary, urging and advocating general revision and liberalization of these citizenship and immigration laws.

This testimony may be of use and interest in the continuing study which is being given, and is yet to be given, to this vital subject.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR HERBERT H. LEHMAN BEFORE THE SENATE JUDICIARY SUBCOMMITTEE ON IMMIGRATION IN SUPPORT OF S. 1206, AN OMNIBUS BILL, PROPOSING REVISION AND LIBERALIZATION OF OUR IMMIGRATION AND CITIZENSHIP LAWS

Mr. Chairman, I appreciate this opportunity to appear before you. I need not tell you what high importance I, personally attach to these hearings, on a subject in which I have a deeper interest and with which I have a closer identification than perhaps any other legislative subject before the Congress.

I would like to pay tribute, Mr. Chairman, to your own leadership as chairman of the Judiciary Committee and of this subcommittee, a leadership which has resulted in the convening of these hearings.

As you know, I have been urging the holding of hearings on proposals to revise our basic immigration and naturalization laws for the past 3 years, since January 1953. Hence, I personally consider these hearings to be historic—the opening phase in a procedure which must lead certainly—whether next year or the year after—or the year after that—to a wholesale revision and overhaul of the Immigration and Nationality Act of 1952, the so-called McCarran-Walter Act.

In paying tribute to your leadership, Mr. Chairman, and to the support given to the holding of these hearings by other members of your committee and of this subcommittee, I would also like to pay my special respects to the ranking minority member of this subcommittee, Mr. WATKINS. My tribute to him is not on account of his views on this particular subject, because I think we start off in basic disagreement on the McCarran-Walter Act, as on quite a few other matters. But I have always found him to be deeply sincere in his desire to get the facts and to be fair and judicious, and to do the wise and honorable thing in any situation. I know that he is eager, as I am, to arrive at a proper jugment on this pending matter. I am pleased and gratified with his presence at these hearings, in this recess period, here in Washington, at such a great distance for his home State.

I make this special mention of Senator WATKINS, because I want to emphasize the completely nonpartisan nature of the move to revise the McCarran-Walter Act.

I assume that the first question before this subcommittee is: Should we revise the McCarran-Walter Act at all? Is there need or strong support for revision?

These hearings will give you the answer to that question, Mr. Chairman. But let me point out, should there be any question or doubt, that the drastic revision of present law can be correctly described as a public mandate, long overdue in being carried out.

In 1952, when the present law was approved, the President of the United States vetoed it, and the support for his veto fell only two votes short of the necessary one-third of the Senate. During the original Senate consideration of the McCarran-Walter Act, despite the absence of an adequate debate on the subject, almost one-third of the Senate voted for radical amendments to that measure.

And in the presidential election campaign of 1952, the candidates of both major parties, including the successful candidate, pledged revision of the act. President Eisenhower, as a candidate, made a number of speeches and statements to this effect. So did the candidate for the Vice Presidency, who now presides over the Senate of the United States.

Subsequent to that election, President Eisenhower urged revision in his first state of the Union message, and in many subsequent speeches, statements, and remarks.

Mr. Chairman, there are pending before the Senate at least three major bills for drastic revision of the present law, bearing the names of 20 Senators, of both parties. I have not had time to count the number of bills pending in the House on this subject, but it is a very great number indeed.

I would guess that if Congress does not make a comphehensive revision of the law in the next session, this will be a political issue in many parts of our country, and both parties will be called upon to make an accounting of the attitude of their representatives in the Congress toward the revision of this law. And many individual candidates will likewise be called upon. Let no one think that the people are not watching or are not interested. I am sure these hearings will bear me out on this point.

But Mr. Chairman, as I have said again and again, this is not a partisan question. I am critical of the officials of the present administration for not having responded to your recent efforts—extending over many months, as I understand it—to get the Secretary of State and the Attorney General to testify before this committee in regard to this legislation. But I am equally critical of the fact that no Attorney General or Secretary of State of any other administration has personally appeared to testify on this vital subject in the past 20 or 30 years.

But today this is an issue which begs for the concern of all men of good will. It calls for a strong and consistent bipartisan effort to erase from our statute books the shame of the McCarran-Walter Act.

I am sure that most of those who voted for the McCarran-Walter Act in 1952, and who voted to override the President's veto, did so in good faith but without a thorough knowledge of the provisions which they were voting to fix upon our statute books. With respect to my colleagues in the Senate who voted for this law, I believe it is fair to say that very few of them comprehended its scope and impact, at that time, when its 302 pages of highly technical material were thrust upon them during the closing days of the 82d Congress.

Few of them had any idea what effects their vote would have on the lives of literally hundreds of thousands of naturalized American citizens, resident aliens and potential immigrants overseas.

I hope that these hearings will help to dispel any remaining illusions about the McCarran-Walter Act.

I think, then, that the question of whether there is a demand for the revision of the McCarran-Walter Act answers itself. The reply to the question "Shall we revise the McCarran-Walter Act in any respect?" must be in the affirmative.

The next question, of course, is: "How shall we revise the McCarran-Walter Act? What, exactly, is wrong with the present law?"

Mr. Chairman, the rest of my remarks today will be devoted to answering these questions.

I need scarcely remind the committee that there is pending before you, among other proposals, a comprehensive bill introduced by me and 12 other Members of the Senate, S. 1206. My cosponsors on this bill are: Senators GREEN, HUMPHREY, KEFAUVER, KENNEDY, LANGER, MAGNUSON, MCNAMARA, MORSE, MURRAY, NEUBERGER, PASTORE, and CHAVEZ.

I think I may say without fear of contradiction that S. 1206 is the most complete proposal before this subcommittee. It is a complete rewrite of present law, a complete recodification of the codification of 1952. I shall discuss this bill at length in the course of my remarks.

Of course I would like to see S. 1206 adopted in substantially its present form. But Mr. Chairman, despite the herculean labors which went into the drafting of my bill—and I will describe those, too, in a few moments—I have no pride of authorship. I want to see the present law overhauled and drastically revised. I don't care whose name is attached to the bill reported out by this committee. As long as a bill of appropriate amendments curing the substantial evils of present law is reported out, I shall support that bill with all my heart.

The question then is: What are the substantial evils in our present law, Mr. Chairman, and what kind of a bill must be reported out to overcome those evils?

The McCarran-Walter Act has some good parts in it. Of course it has. It provided, within its four titles and 407 sections, some improvements over preexisting law. But the improvements were relatively few. And the preexisting law had many repressive, discriminatory, and restrictive features. The McCarran-Walter Act adopted most of the worst features of preexisting law and added scores of new evils.

So today I will not try especially to distinguish between those unfortunate features of the McCarran-Walter Act that were newly added in 1952 and those taken over from the legal jungle of immigration and nationality laws which preexisted the McCarran-Walter Act. They were all included in the act of 1952 and must all today be scrutinized and reexamined.

The Immigration and Nationality Act of 1952 is characterized by a consistent philosophy. That philosophy we must scrutinize first of all.

That philosophy is based on a collection of discarded theories—really myths—which are absolutely alien to all our legal, social, and political institutions.

I will enumerate some of those myths in a moment, but first let me say that the present law, in my considered judgment, has done more harm to our country than can be easily repaired—and I was abroad for 2 months this summer and saw at first hand the evidence of some of the damage that the McCarran-Walter Act has done, in terms of our prestige and reputation, among the plain people of Europe.

The McCarran-Walter Act represents a pyramid of unfounded fears—fear of foreigners; fear of criminals; fear of Communists and anarchists; and fear even of naturalized American citizens. Waves of fear have passed over America—fear of depression in peace and of betrayal of war. Each wave has left its flotsam and jetsam imbedded in our immigration and citizenship laws.

Like the inhabitants of ancient China, we have built a great wall designed to keep out fancied hordes of invaders. And like China's Great Wall, our modern-day wall—the McCarran-Walter Act—has, in fact, served only to isolate us, and not to protect us. Those few resourceful Communists or criminals who are determined to enter our land can enter with a minimum of danger to themselves across the long, unguarded borders of Mexico and Canada.

But our official gates of entry through which we could admit selected, qualified, and useful immigrants—and visitors—are kept so heavily barred and guarded that application for lawful entry is discouraged; only those driven by the direst necessity persist in their efforts to gain legal admission into our country. This might be called admission by adverse selection.

I know that some aliens do gain admission to the United States, but it is a fact that some of the most desirable, both would-be immigrants and would-be visitors—scientists, teachers, writers, professionals, and businessmen—are either discouraged from applying or barred from entering.

The issue before us is not just one of immigration. It is citizenship, too. The whole basic concept of membership in our Nation is involved in this legislation. And that concept affects every citizen of our land, and, of course, those living abroad, too.

Once upon a time, American citizenship was an unqualified patent of membership in our society. Once acquired by birth or naturalization—without distinction—it could not be forfeited, save by deliberate and willful surrender—by an oath of renunciation.

Under present law, citizenship acquired by naturalization may be stripped from the citizen or may be forfeited by the citizen—on any one of a half dozen or more grounds. And in many cases the citizen involved may not even know that he has forfeited his American citizenship or has been stripped of it. Some of the grounds for denaturalization are acts which a native-born citizen may perform without major penalty or without penalty at all.

And even native-born citizens may lose their citizenship on relatively minor, technical grounds, also without ever knowing about it.

This whittling away, bit by bit, of the inviolability of American citizenship status, is, in my judgment, one of the most dangerous and reprehensible aspects of our present law. And the violent distinctions between naturalized and native-born citizens are, to my mind, un-American and intolerable.

I believe that if the Congress, as a whole, and the American people, as a whole, knew of these provisions in the present law, they would not rest until the cancerous encroachments upon the sanctity of citizenship were completely cut out of the law.

These provisions, and all the other evils in the present act, were lumped together and justified as being made necessary to combat Communists.

Mr. Chairman, none of us want to see Communists gain entry into the United States. But as I have already indicated, this law does not prevent real spies or saboteurs from entering this country, if they really want to. All they have to do is either come in as diplomats, or walk across the Canadian or Mexican borders.

All this law does is hurt our own people, and our own country in the eyes of the people of the rest of the world. And it hurts thousands and hundreds of thousands of innocent people here and abroad.

In order to guarantee absolutely that no Communist ever enter the United States, it would be necessary to forbit all entries, even by diplomats. We would have to seal all our borders. Such a solution would, of course, be untenable, and impossible.

We can and should be careful about whom we admit into the United States. But we should be reasonable—not hysterical. We should have clear and enforcible standards of entry—not an impassable maze of barriers.

We have built into our immigration laws scores, and even hundreds, of restrictions which depend completely on the discretion and judgment of minor government functionaries. And from the decisions of these functionaries there is, in many cases, no appeal whatever. We have made a grant of unreviewable authority to these officials. Questions of life and death can be decided without a chance for review or appeal.

This law, as now written, presupposes that these minor functionaries have both the gift of clairvoyance and the profoundest knowledge of the inner secrets of human nature. An alien can be barred from admission if, in the opinion of a consular officer, within his sole judgment, the alien might, in the future, after his admission into the United States, join an organization on the Attorney General's subversive list. A consul may, in his discretion, bar an alien from admission into this country if it appears to the consul, again within his sole judgment, that such an alien is likely, after admission, to engage in a public disorder.

And there are scores and scores of such restrictions—all of them meaningless except insofar as they provide the consular official, or the immigration officer, with a justification for rejecting any and every alien whom the consul or immigration official does not happen to like.

Mr. Chairman, this law resembles no other law of which I have knowledge. The criteria it establishes for admission into this country are so numerous and so impossible of standardization that they violate the basic principles of our Constitution.

I realize, of course, that no alien has an absolute right to be admitted into this country. Nor is the Constitution effectively applicable to aliens seeking entry into the United States. Still, I think it would be desirable if we would apply, to the maximum possible extent, our legal principles of justice and fair play to all who come into contact with our laws—whether they be aliens or citizens of the United States.

We need to apply human standards to human beings. It has been many centuries since trial by ordeal was a practice under Anglo-Saxon law. The presumption of guilt until innocence is proven is repugnant to us. Yet, the McCarran-Walter Act provides for trial by ordeal and presupposes guilt until innocence is positively proven.

This law, Mr. Chairman, bears the dark stains of prejudice, of fear and suspicion. It is an archaic law—something out of the

dim past. The law needs to be modernized, humanized and liberalized. It needs to be simplified.

It must be made flexible so that its implementation can be adapted to the changing needs of changing times.

It must be simplified so that it can be understood by all our people at home and by those abroad, too.

It must be strengthened so that a positive and uniform control can be exercised over immigration from all parts of the world in a way to serve the best interests of the United States and the needs of the people desiring admission into our country.

I said a few moments ago, Mr. Chairman, that the McCarran-Walter Act is based on a collection of outmoded myths and theories entirely repugnant to the great body of American law.

The first of these myths is that the American people have a particular blood strain which would be corrupted by Italians, Poles, Greeks, and other peoples from southern and eastern Europe, unless protected by the national-origins quota system. According to this racist theory, a person of Anglo-Saxon blood is 20 times more desirable as an immigrant and as a citizen than a person of Italian blood.

The general concept of blood strains, on which the national-origins quota system is based, is an old one, but it was generally discredited and discarded by the beginning of the present century. Still, it was embraced in the national-origins quota system when that system was adopted by the Congress in 1924. This concept was also adopted at around the same time by Adolph Hitler, who used it as justification for his notorious nonsense about the so-called Aryan race.

But in 1952, the national-origins quota system was revalidated in the McCarran-Walter Act, although its supporters insisted, at that time, despite all the evidence to the contrary, that no racial bias, prejudice, or discrimination was intended. I contend, however, that you can't change a skunk by insisting that it's a kitten.

The second myth underlying the philosophy of the McCarran-Walter Act is that all aliens are potential criminals, Communists, and saboteurs, or must be treated accordingly.

The third myth is that immigration is a burden on the national economy and that immigrants threaten the jobs and wage levels of American workers.

There are other myths, too, but these are the ones which most clearly dominate our present immigration and citizenship policies. I believe it is necessary to bring these myths out into the open, so that we may better understand what the McCarran-Walter Act is all about.

I believe it is necessary, Mr. Chairman, to eliminate the last trace of this mythology from our immigration and citizenship policies.

That is whly, Mr. Chairman, I cannot go along with a proposal for piecemeal amendments to the present law.

This law needs radical surgery, not minor patchwork. It needs to have the spirit and the philosophy cut out of it, and to be infused with a new and different philosophy, as well as a new and different set of provisions.

In my opinion, Mr. Chairman, the best way to amend the present law is by an omnibus bill, retaining the good features, and there are some, but replacing all the objectionable provisions. Immigration and citizenship law is so complex and the whole immigration and citizenship code is so inextricably interwoven that the job of piecemeal amendment would be a totally impossible one, if there is to be a sincere effort to eradicate the marks of suspicion, discrimination and injustice from the present law.

At the time of the consideration of the McCarran-Walter Act, I, and some of my colleagues, including you, Mr. Chairman, prepared over a hundred amendments, perhaps there were 200, in an attempt to improve the bill. Even the sum total of these amendments did not get at some of the worst features of the law.

So, I repeat, that in my view the only way to remedy the evils complained of is to enact a substitute measure. I realize, of course, that there can be differences of opinion over the content of such a substitute measure.

I have submitted our bill, S. 1206, in the belief that it is not only the most comprehensive, but indeed, the best legislative proposal on this subject, and I say this without personal pride. I did not personally draft this bill, although I participated in scores of drafting conferences on it over a period of many months.

I believe that our bill, S. 1206, represents the best thinking and the most expert information now available in legislative form on this subject. It was the work of perhaps 30 to 40 different experts and legislative draftsmen, outstanding lawyers, professors of law, former officials of the immigration service, social scientists and lay workers in the field of immigration and citizenship.

I want to add that we worked directly from the report and hearings of the President's Commission on Immigration and Citizenship, headed by the former Solicitor General of the United States, Mr. Philip B. Perlman, and including some of the most distinguished representatives of the Government and of the great religious faiths in our country.

This bill, S. 1206 conforms in general to the recommendations of scores of religious and nonsectarian organizations of all kinds and complexions, veterans groups, church organizations, labor unions, scientific organizations, and representatives of industrial and commercial firms in this country. This bill was drafted after exhaustive consultation. I hope this committee will find it worthy of exhaustive study and review.

And now, Mr. Chairman, I would like to turn to some of the specific provisions of S. 1206, and in the course of commenting upon them, I will also comment upon the comparable provisions of the McCarran-Walter Act.

Incidentally, Mr. Chairman, I shall append to my testimony, and ask that there be inserted into the record, a detailed summary of the provisions of S. 1206. Hence, my testimony this morning will touch only upon the highlights of this measure.

APPROPRIATE ADMINISTRATIVE AGENCY

The Immigration and Naturalization Service in the Department of Justice and the Bureau of Security and Consular Affairs of the State Department, are the agencies presently charged with primary responsibility for the administration of our immigration laws. This divided responsibility is the result of a long history of transfers, consolidations, and separations which have accomplished little in efficiency or logical administrative organization except to establish the relative immunity of both the INS and the consular service to cabinet-level direction. The general attitude which prevails in the lower echelons in these services—and understandably so—is anti-alien.

I do not mean to cast any reflections on the individual civil servants involved. They merely reflect the general spirit of the present law.

It is clear to me that neither the State Department nor the Justice Department is equipped to discharge the full responsibility for this highly sensitive operation. The Secretary of State cannot give major attention to this complex problem. His concerns are already far too burdensome.

I can say the same of the Attorney General.

The Congress has been faced before with the problem of coordinating and consolidating complex programs. In many instances, the solution has been found in the creation of an independent agency of the Government.

In this bill we are proposing the creation of a single, new and independent agency to be known as the Immigration and Naturalization Commission, and to consolidate within this commission the present immigration and naturalization responsibilities of both the Attorney General and the Secretary of State.

I believe this subcommittee would be extremely interested in reviewing the discussions in Congress which led to the establishment of the Atomic Energy Commission following World War II. You will remember that there were those who sincerely believed that all atomic energy functions and activities of the Federal Government should be vested in the hands of the Department of Defense. But witness after witness, representing many varied backgrounds, argued in favor of an independent Atomic Energy Commission.

When I recently reviewed some of this testimony, I was struck by the many parallels between the arguments used for the establishment of the AEC and the arguments which persuaded me to propose the creation of an independent Immigration and Naturalization Commission. It occurred to me that we might never have had the success in our postwar atomic energy developments if the sole responsibility had remained with the military, whose prime concentration and interests would have logically been in the weapons field.

In the same way, the primary concentration of the Department of Justice is upon detection of law violations and the apprehension of violators. Hence the prevailing spirit in the Immigration and Naturalization Service is naturally one of suspicion and even of antagonism toward the alien. The whole emphasis is on prevention of immigration and to deportation of aliens already here. I do not mean to say that there are not individual immigration officers who have a kindly and humanitarian spirit. I do say, however, that the prevailing attitude, which springs, as I have said, from the law, is that of the cop on the beat.

I would like to see the emphasis placed on the welcoming of duly qualified aliens and on resettling them and helping them to integrate into our national life. This can best be done by setting up a new agency which will reflect the spirit of the proposed new law.

In reference to the Consular Service, the immigration function is, for most consular officers, a part-time and transient duty, the least interesting in their category of duties and generally regarded as the most onerous. It is an apprenticeship job for foreign service officers on their way up the ladder of promotion. Yet this vice-consuls and consuls have what amounts to the power of life and death over aliens who apply for admission into our country.

The Hoover Commission has, in the past, recommended that the Consular Service and the Immigration and Naturalization Service, be merged for the sake of efficiency. They do duplicate each other's work to a major extent.

I agree with the Hoover Commission in this respect. I think these functions should be combined, and that they should be placed in a new independent agency, along the lines I have suggested. I hope this committee will look favorably upon this important aspect of S. 1206. The approval of this proposal will help give a fresh start to a radically modified immigration and citizenship policy.

Today, the alien seeking admission to the United States has no assurance of uniform justice and no right of appeal from the decision of a consular officer. The alien who has landed in the United States has a limited right of appeal and review; but these rights

are far from being either adequate or uniform.

Under present law, administrative review in deportation and exclusion cases is not assured by statute; it exists at the pleasure of the Attorney General in the form of a Board of Immigration Appeals set up by order of the Attorney General. And the Attorney General is not bound by the decisions of this Board.

The proposed act establishes an orderly system of fair procedure and adequate review, by an independent, quasi-judicial tribunal. This so-called Board of Immigration and Visa Appeals would be independent of the Commission itself and is modeled after our Tax Court.

As is generally true of other independent agencies, the Commission, under the terms of S. 1206, would be governed by the Administrative Procedure Act. And this would assure a separation of the prosecuting and adjudicative functions, and fair and open hearings, unavailable under present law. It is my proposal that the Board's decisions in visa denial cases would be final, but limited judicial review would be permitted in other matters coming before this Board.

QUOTA SYSTEM

In the year 1797, a Congressman looked at the population of the new American Nation, and said that while a liberal immigration policy had been a good thing up to then, the United States had already reached the peak of its absorbable population, and that immigration to the United States should be stopped altogether. That was in 1797.

This Representative was the forerunner of many others down through the centuries who thought that they recognized the limits of the potentialities of the United States. It is unfortunate that some of this heritage of pessimism is still present in our land today.

Our capacity for absorbing immigration is still great today. I do not know what it is. No one knows. But it is a fact of our history that our greatest periods of economic expansion took place immediately following great tides of immigration. Our Nation continues to support an ever-increasing population at an ever-higher standard of living.

Other witnesses will be more competent than I to discuss in detail the economic implications of immigration. I am sure, however, that we not only can absorb; but that we critically need a constant but controlled stream of fresh immigration for the expansion of our economy.

Of course, I do not propose unlimited immigration into the United States. I know of no responsible student of the subject who does. Indeed, I propose a very conservative level of immigration, not measurably greater than the average number who have been entering the United States for permanent residence in recent years.

I propose a limit of roughly 250,000 immigrants per year, which is considerably less, in my judgment, than the number we could safely admit. But I wish to be conservative in this matter. My main purpose is not to increase greatly the flow of immigration but to change radically the discriminatory and restrictive manner in which immigration is regulated today.

Indeed, if S. 1206 is approved and if proper enforcement powers are given to our border patrols, the amount of immigration into our country—if we include illegal immigration from Mexico and Canada—would be considerably reduced from the present level.

I don't know how many illegal immigrants are currently entering the United States from Mexico and Canada, but I have seen official figures for 1952 and 1953 indicating that this illegal immigration has been in the neighborhood of 2 million entries per year.

I propose, of course, the long-overdue abolition of the national origins quota system.

I propose, in its place, a so-called unified quota system, an entirely new manner and formula for the selection of individual immigrants.

I believe that with due consideration for a potential immigrant's ability to meet specified standards of health, security, literacy, honesty, and ability to earn a living, the alien's admissibility should be based on the criteria first of our country's need for him, and then of his need for our country.

The national origins quota system reflects neither of these two criteria. And of course the national origins quota system, whatever its merits—and I know of none—is stamped with the loathsome stigma of racial and national discrimination.

In fact the national origins quota system is a totally inflexible and unworkable method of selecting immigrants. It is so unworkable that ways and means must constantly be found to get around it. The whole series of emergency immigration bills we have enacted in recent years, the hundreds and thousands of private bills we enact periodically, and which take up so much of the time of this committee, and the special bills, such as the bills to admit sheepherders—all these are made necessary solely by the incredible national origins quota system.

I say that this is no way to run the immigration policies of our Nation. It is unwise, expensive, unfair, discriminatory, and above all, works against the best interests of the United States in foreign policy, economics, and national defense.

May I say further, Mr. Chairman, that it is a little realized fact—but a very true fact—that the national origins quota system has never accomplished its own stated purposes. The advocates of the national origins quota system in 1924 had as their avowed purpose the maintenance of the so-called pattern of national origins as it was purported to be in the United States in the year 1920. I will not discuss further the fallacy of the underlying theory. I have already done so.

Rather, I must point out that the NOQS has worked in an exactly opposite manner. In reality we have not received 42 percent of our immigrants from Great Britain and Northern Ireland since 1927, as contemplated in the original statute. It has been much less for the very simple reason that Englishmen do not particularly wish to emigrate to the United States.

It is perfectly clear that the NOQS has not served to preserve our so-called national origins pattern.

If this is so—and I am sure that it cannot be refuted—why then did the authors of the Immigration and Nationality Act of 1952 continue this system? The answer is quite clear—this was a devious way by which immigration from Spain, Italy, Greece, the Middle East, Africa, Asia and all areas of the world, except a few northern European nations, could be kept to a bare minimum.

True, there was a slight—a very slight relaxation of restrictions for the Nations of Asia by means of the Asia-Pacific Triangle formula. But it was a most paradoxical relaxation—one which fixed the concept of the blood test into our immigration laws. Today not only is an immigrant born in Japan charged to the Japanese quota and to the overall Asia-Pacific Triangle quota, but an immigrant born in England whose mother was Japanese and whose father was English is also charged to the Japanese quota and to the overall Asia-Pacific Triangle quota.

Mr. Chairman, I believe the unified quota system, which is at the heart of S. 1206, is logical and administratively practical.

I have outlined it in a simple chart which I will append to my testimony.

In simple terms, four preference categories are established. The first preference category is designed to expedite the reunification of families. The second preference is designed to bring to the United States persons with special skills and technical and artistic abilities who will promote our national economy, our national security, and the arts. The third preference category is designed to provide a quota to be used for the oppressed, the persecuted, and the refugees, including orphans, of the world. The fourth and final preference is designed to be allocated to promote the foreign policy interests of the United States.

Finally, S. 1206 provides for a so-called newcomer quota of 50,000 a year for all qualified persons throughout the world wishing to immigrate who are eligible on a first-come-first-serve basis.

Mr. Chairman, I commend this new quota approach to you for your most serious consideration. No halfway approach, no pooling of unused quotas, can remedy present law.

There is one aspect of the unified quota system which has elicited some criticism—namely, placing the nations of the Western Hemisphere under the general quota system. I would like, briefly, to answer the criticism.

In the first place, it is inaccurate to say there is no quota system for Western Hemisphere nations today. In actuality there is and there isn't, depending on where you live, who your parents were, and the sometimes informal quotas established by individual consular officials.

I say to those who criticize placing Western Hemisphere nations under the quota system, let's be fair to all. The same criteria should apply to all peoples, regardless of the place of their birth. I believe our Latin American neighbors will respect us for such a policy.

FAIR PLAY AND DUE PROCESS

Mr. Chairman, I turn to another general area of immigration policy on which I would like to comment. I turn now to the question of the violations of our standards of justice and fair play written into our present immigration laws.

We should have an immigration law which guarantees to aliens and to naturalized citizens the maximum possible sweep of administrative justice and judicial review available under our system of government. The Immigration and Nationality Act of 1952 does not do this. S. 1206 is, I believe, a fair and honest attempt to achieve this goal, while at the same time providing adequate safeguards for the security of our Nation.

In the proposed act, every practical protection has been provided for our national security. Comprehensive and workable standards are established so that genuine subversives and antidemocratic elements are effectively barred from the United States. The proposed law contains enforceable provisions for the deportation of those truly undesirable aliens who, despite all precautions, might obtain entry into this country.

It is my belief that the antisubversive provisions of the proposed act will be more effective in actual operation than those of the 1952 act. The fact is, that the 1952 act erects such a confused and contradictory network of antisubversive provisions that it catches in its web many anti-Communists while allowing true subversives—Nazis, Fascists, and Communists, to slip into the United States.

Turning to the question of the deportation provisions in present law, I believe that these sections of the law ride roughshod over our Constitution. Here the special inquiry officer of the Immigration Service is both prosecutor and judge in deportation hearings. The statutes of limitations on deportation were abolished in the 1952 act, and all of the new grounds for deporting an alien have been made retroactive.

I would like to comment at this point on the subject of private immigration bills. In every session of Congress, hundreds and thousands of these bills are introduced by Members of both Houses. I do not believe we should deny to an alien or to a citizen the recourse to congressional relief in extraordinary circumstances calling for such relief.

But what Congress is doing today is acting as a supreme court of immigration appeals.

I believe that the Congress—in order to provide a more just and orderly procedure for the handling of the thousands of these individual cases—should establish a statutory Immigration Review Board with adequate powers, together with authorization for limited review of the Board's decision in our courts.

This was the justification for the establishment of the United States Court of Claims—and while it hasn't completely solved the problem of private claim bills, it has greatly relieved the Congress of this burden.

I have already discussed the impact of present law on citizenship status. Under S. 1206, two basic changes are made in present law:

First, those acts which automatically cause loss of citizenship are limited to (1) renunciation of United States citizenship; (2) obtaining naturalization in a foreign country; (3) deserting in time of war; (4) leaving the country to avoid military service; (5) conviction for treason; and (6) an attempt to overthrow the Government by force of arms.

But under the terms of S. 1206, all distinctions between native-born and naturalized citizens are removed.

Mr. Chairman, I have spoken at great length—much too great length, I am sure—in view of the number of witnesses you have yet to hear today and during the many days to come. You have indulged me, I know, because of your awareness of how deeply I feel about this issue.

I want to make clear, however, that in this testimony I have only scratched the surface. I have not undertaken to describe all the defects in the present law or all the provisions of my bill designed to cure these defects. To do so would not only try your patience, but would be beyond my physical capacity at one sitting. I have given some of the highlights. Some further details—but by no means all—are included in one of the appendixes which I have attached to my testimony. I am also submitting for the record various pertinent statements, data, and material which I believe will supplement the record in regard to this legislation.

In conclusion, let me say only this. You have as heavy a responsibility as any committee I know. The complexity of the legislation before you is as apparent to me as it is to you. You have sought and will receive the guidance of many persons who are more expert than I on some of the technical phases of this legislation.

I know that you, and members of the staff of this committee, will continue, during the months ahead, to explore all the manifold intricacies of this legislation. I know also that many aspects of the matter will receive no public testimony whatever.

I can only suggest and urge that you give this legislation all the time that it needs.

I would be less than honest with you, or with myself, if I held out the hope, or entertained the hope, that a major revision of present law is likely in the coming session of Congress.

But progress toward that goal can be made. The hearings which you are now holding represent such progress. I hope that the committee may reach some definite conclusions regarding some of the legislative proposals before you.

If this much can be done, much will have been accomplished, not only for the thousands and hundreds of thousands of aliens directly affected, but for the prestige of America throughout the world.

Classic American Democracy—XV

EXTENSION OF REMARKS

OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1956

Mr. O'HARA of Illinois. Mr. Speaker, in my letter of December 12, 1955, to a representative group of American leaders it was proposed, first, that a decision be reached by a jury of informed public opinion as to the 20 or 30 books that best represent the classics of American democracy, and second, that they be translated into the principal languages of the world and be made readily available and at reasonable prices to peoples everywhere who wish better understanding of the political philosophy upon which our Government is based. The response has reflected a widespread interest in the subject. Reading the letters received from leaders in all the activities of our American life, each contributing of his study and thinking to answering the question, what are the basic classics of our democracy, I have thought that these letters unabridged and unedited should be given through these extensions to the Members of the Congress in both bodies and, as far as the CONGRESSIONAL RECORD is read, to the American people. As has been suggested by Philip L. Graham, published of the Washington Post, and others, it is hoped that this discussion may stimulate our own people into the reading and rereading of the works that an enlightened jury of American public opinion selects as the classics of our democracy and which we should in cheap and translated editions bring within the reach of peoples everywhere. Continuing with the letters responding to the questionnaire:

DEAR MR. CONGRESSMAN: Your letter of December 12, 1955, was received in my office only yesterday, perhaps due, as indicated, to a faulty address.

I am pleased to have the opportunity to comment on the plan mentioned in and attached to your letter.

Enclosure, part 1—Plan for Publication of Democratic Classics.

I am most favorably impressed by the proposal that the United States Information Agency translate and publish in the principal languages of the world a select list of the time-tested classical statements of democratic theory in their original forms. particularly since the present programs and plans of the agency do not include a similar operation. If such statements are widely available in quantity and at attractive prices, they may do an infinite amount of good.

Enclosure, part 2—Suggested authors and works.

I suppose that at this time, with crisis following crisis, and the world in tension, with the need for security in our country, that our basic freedoms may not be lost, in balance against the fear that in overconcern as to the form of security we may lose its substance, any list of authors and works may be suspect in one quarter or another. To me it seems that authors and works you have listed may well and properly and safely be read by any intelligent American. Accordingly, I think they should be read by intelligent people in other countries, and that the probable effect will be that such readers will be informed about and helped and inspired by the fundamentals of American political philosophy.

Should such an inspirational document as the Declaration of Independence be included? I think so. Should the sublime Gettysburg address be included? I think so. It seems to me that by reason of their brevity they will appeal to many readers, and that their inspirational effect might be profound. Should well-balanced American histories be included, showing our country in action since its beginning, and telling of the fabulous development of our country? Might it not be that the story of the winning of the West would be a challenge to undeveloped countries in which nationalism is now strongly stirring, whose people must be saved from communism?

I strongly hope that the preliminary discussions by Congressman FEIGHAN, of Ohio, and yourself begun on the floor of the House of Representatives will be followed by specific implementation of the plan. I think you are entitled to great credit for what you have done in this connection.

Sincerely yours,

RAY MURPHY,
Past National Commander, American Legion.

DEAR CONGRESSMAN O'HARA: Replying to your letter of December 12, I concur wholeheartedly with reference to your proposal for enabling legislation directing the United States Information Agency to publish for nominal prices, in the principal languages of the world, a small library of basic statements of democratic political philosophy. In my opinion, the suggested list of authors and works is extensive enough for the initial proposal.

If I can personally be of any assistance to you and your group in this matter, please accord me that privilege.

Sincerely yours,

CLYDE A. LEWIS,
Past Commander in Chief, VFW.

DEAR SIR: This is in reply to your letter of December 12 outlining a proposal for the translation, publication and distribution of democratic classics.

The idea seems to be an excellent one, although the extent of interest in these publications among Europeans would have to be determined from your sales.

One thought does occur to me that I should like to pass on to you for consideration. The Communist writers you mention all wrote in a modern idiom, and addressed themselves to questions of political and social structure largely in the context of an urban industrialized society—even though I am sure we would agree that the Marx-Engels picture was based on poor assumptions and poorer predictions.

Among the writers on democracy whom you list, however, the majority either predate the industrial age, or have little interest in the problems of democracy in an industrial civilization. Only Bryce, Dewey, and Wilson survived into the 20th century. Burke, Hamilton, Madison, Jefferson, Kant, Locke and Rousseau are of the 18th century. While I believe that what they have to say

is relevant today, conditions are so changed that the translation is not always easy.

I wonder, therefore, whether it might not be desirable to add the names of some contemporaries or near-contemporaries, such as the Beards, Brogan and the Schlesingers.

I wonder, too, whether you would consider adding two peculiarly American spokesmen—again of the 18th century—Thomas Paine and Samuel Adams.

Among specific titles you could consider (in addition to those you have listed), I could suggest the following: Norman Cousins (editor), A Treasury of Democracy (Coward-McCann, 1942); Charles Beard, Economic Interpretation of the Constitution; Thomas Paine, The Living Thoughts of Thomas Paine, presented by John Dos Passos (Longmans, Green, 1940); Samuel Adams, Selections from the Cushing Collection of Adams' Writings (Putnam's, 1904); Thomas Jefferson, Basic Writings (edited by Philip Foner, Wiley, 1944); Clarence B. Randall, A Creed for Free Enterprise (Little, Brown); Clarence B. Randall, Freedom's Faith (Little, Brown).

Very truly yours,

WILLIAM G. CAPLES,
Vice President Inland Steel Co., Chicago, and Regional Vice President, NAM.

DEAR MR. O'HARA: This is in reply to your letter of December 12 in which you advised us that a group of Members of Congress plan to push for enabling legislation directing the United States Information Agency to publish for nominal prices, in the principal languages of the world, a small library of basic statements of democratic political philosophy. You submit a proposed plan and a list of books and request us to give you our opinion of them.

I have carefully examined the proposed plan as well as the list of works and authors suggested and am wholeheartedly in accord with both.

It is obvious to most people who have traveled in foreign countries that Americans or America have not succeeded in selling democracy to most foreign nations. This may be in a large part due to the fact that not enough effort has been made in the form of an educational program to place the facts before other peoples. I am sure that the plan that you suggest is a very worthy one.

Sincerely yours,

O. J. MISCHO,
International Secretary-Treasurer, Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America.

DEAR SIR: I read your letter of December 12 with a great deal of interest and I believe the plan for a publication of democratic classics is an excellent one.

I am indeed sorry that I have no suggestion for any additions or corrections to the list of suggested authors and their works.

Sincerely yours,

HERBERT S. SHOCKNEY,
Director of Research and Education, Laundry Workers International Union.

DEAR MR. O'HARA: Please forgive my delay in responding to your letter of December 12. I was particularly interested in checking personally and through friends and educators, the list of books referred to in part 2 of your enclosure. My checking has indicated that they are all suitable for publication overseas with one exception, namely the book by von Humboldt The Sphere and Duties of Government with which I am not familiar. My reference to its elimination in no way implies that it is not suitable, but merely that it unknown to me.

In regard to the general proposal, I cannot see that it would do anything but good to distribute basic knowledge of the economic, social and political background of this country. I quite heartily concur that too often our way of life becomes an exaggeration of the rather opulent life portrayed in our moving pictures.

Sincerely,

SYDNEY E. LONGMAID,
President the Estherbrook Pen Co., Camden, N. J., and Director, NAM.

DEAR CONGRESSMAN O'HARA: Thank you for your letter of December 12, acknowledgment of which has been delayed by my absence. I have not had an opportunity to read a good many of the works which are listed upon the enclosure submitted with your letter. However, I have read the works by the following authors: Emerson, Hamilton and Madison, Jefferson, Kant, Lincoln, Locke, Mill, Rousseau, Thoreau, and de Tocqueville. I think that anyone who would read those particular works would secure a better understanding of our American form of government. Your courtesy in writing me on this subject is greatly appreciated.

Best personal regards.

Cordially yours,

JAMES L. DONNELLY,
Executive Vice-President, Illinois Manufacturers Association.

DEAR SIR: Answering your letter of December 12, I believe the objective in part 1 is good and the expense involved would be much less than the benefits.

With respect to part 2, Suggested Authors and Works, I have checked the authors whom I have read and approve. I am not too familiar with the works of the others, but if the substance is in keeping with the expressions of those checked, I would approve them, also.

While the selection of authors and their works will be of utmost importance and involves considerable risk if the wrong authors or works are selected, still I believe this is a matter for judicious determination by people who are in full sympathy with the spirit of the program.

Yours very truly,

GUS OTTENHEIMER,
Little Rock, Ark., Director, NAM.

Note: Authors checked and approved: Bryce, Burke, Dewey, Emerson, Hamilton and Madison, Jefferson, Lincoln, Wilson.

DEAR CONGRESSMAN O'HARA: With reference to your letter of December 12 regarding the publication you refer to as the "Democratic Classics," I would like to make the following comments.

First, the translating and publishing in the principal languages of the world the classic documents which served as the foundation for the American Government would, of course, be a good thing. Knowledge and understanding concerning the principal role of government in the lives of people is very limited. I believe it might also be desirable to include in this list of publications some of the more recent published works dealing with these American fundamental principles.

I am always a little bit frightened by such a movement because there is a tendency on the part of too many people to publish a watered down variety of these fundamental American principles and if the intention is to really oppose the Communists and refute the works of Marx, Engels, Lenin, etc., we must use our very best and most effective writers.

I would suggest that any list of books to be selected would, necessarily, include the works of Ludwig von Mises, Frederick Hayek, Albert J. Nock, Henry C. Link, Leonard Read, William Graham Sumner, Henry G. Weaver, etc. These authors present the opposition to communism and its teaching in a forceful and effective manner. For example, I would think the list of books would include as a must, The Mainspring of Human Progress, by Henry G. Weaver; Our Enemy the State, by Albert J. Nock; The Man Versus the State, by Herbert Spencer; What Social Classes Owe to Each Other, by William Graham Sumner; Rediscovery of Morals, by Henry C. Link; The Key to Peace, by Clarence Manion; Planning for Freedom, by Ludwig von Mises; The Road to Serfdom, by Henry Hayek; Government—An Ideal Concept, by Leonard Read; and, in my judgment, copies of the Declaration of Independence and the Constitution of the United States.

Yours truly,

JOHN T. BROWN,
President, J. I. Case Co., Racine, Wis., and director, NAM.

DEAR CONGRESSMAN O'HARA: Your letter concerning proposed legislation authorizing a small basic library on democratic political philosophy came shortly before the holiday season when I did not have the time to give it that the question deserves, hence my delay in answering.

Personally, I believe your plan is well worth trying and I would anticipate that it would have very beneficial results in putting the United States before the peoples of the various countries in a more realistic and more favorable light than is now the case. Too often people of other countries form their opinion of Americans from the western and gangster type movies they see and the cheap magazines they may come across. They get too little information about our basic beliefs, our political philosophies and practices, and our ideas of democratic government. I believe it would be a big step in building international understanding among peoples, which must be done, in my opinion, if we have any hope of a lasting peace.

I cannot speak for the National Federation of Business and Professional Women's Clubs, of course, but it is my belief that the members would heartily endorse your proposal, and if it comes to concrete form, I would be more than pleased to present the program for endorsement at our next biennial convention in July. Will you keep me advised?

The list of books you suggested was submitted to some of my librarian friends and they approve it. We suggest the first and second series of Emerson's Essays, Jefferson's Democracy and Lincoln's Speeches and Letters, as edited by Merwin Roe. Also, possibly the addition of Herbert Agar's The People's Choice and Norman Cousins' Treasury of Democracy.

Thank you for giving me the opportunity of writing this letter on your project.

Sincerely yours,

FAYE CRAWFORD,
National Chairman, International Relations, National Federation of Business and Professional Women's Clubs, Inc.

Classics of American Democracy—XVI

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1956

Mr. O'HARA of Illinois. Mr. Speaker, by unanimous consent, I am extending my remarks to include further letters

from representative Americans on the most interesting and vital question of stepping up our way to win the minds of men by making everywhere available in cheap and translated editions the classics of our democracy, as follows:

MY DEAR MR. O'HARA: Mr. Charles F. Moore, Jr., vice president of public relations of the Ford Motor Co., today had the following comments on the list of books sent to me:

"I would like to see the list include Montesquieu's The Spirit of Laws, Paine's Common Sense, and a brief folio of Supreme Court decisions which have been influential in charting the course of American democracy.

"It seems to me that the least valuable contributors in the list you distributed are von Humboldt, Kant, and Emerson. I think those might be omitted if the list is to be pruned.

"In the selected writing for Thomas Jefferson, I would include The Declaration of Independence, The Virginia Statute of Religious Liberty, 'The Framing of the Declaration' from his autobiography, his first inaugural address and three essays from his Notes on Virginia—'No Dictators,' 'Education for Democracy,' and 'Religious Freedom.'

"In the list of Lincoln's writing, I would include his first and second inaugural addresses, his Gettysburg Address, his Emancipation Proclamation, his 'House Divided' speech dated June 17, 1858, his Message to a Special Session of the Congress dated April 1, 1861, his letter to Horace Greeley dated August 22, 1862, and his Proclamation of Amnesty and Reconstruction dated December 8, 1863."

Sincerely yours,

EDWARD L. BERNAYS.

DEAR MR. O'HARA: The suggestion for supplying books in foreign languages to spread knowledge of the basic nature of democratic political philosophy sounds like an excellent one.

I have not had time to make any specific suggestions but I am happy to give the entire idea my support.

While this type of material would not be read by a large number of people in foreign countries, I think that those who would read it would be apt to be quite influential in molding of opinion.

Sincerely yours,

PAUL S. PLUMER,
Managing Editor, Daily Kennebec Journal, Augusta, Maine.

DEAR MR. O'HARA: I have looked over the suggested list of authors and works which has been put together with a view to having this material circulated through the United States Information Agency.

The list seems to me to be an excellent one and I do not believe you could go wrong in promoting its circulation. It contains a number of titles that I have never read, but I am sure I should have read them and that other people ought to.

I have no suggestions for any change in the list.

Sincerely yours,

ROBERT E. CUSHMAN,
Professor, Department of Government, Cornell University.

DEAR MR. O'HARA: I was, I admit, both shocked and delighted to learn of your proposal to make available, in cheap editions, the basic political and philosophical writings of our tradition. I was shocked, because it is only recently and through a discussion of your proposal that I was brought to realize that these works were not available already.

I was delighted, of course, that the Government is on the point of doing the right thing about it.

I have spent about 16 months in Europe pursuing my own studies in philosophy, and from this experience, I think it is beyond discussion that very little could enhance the reputation of our country more than a knowledge of the broad principles which lie in our background and which are taken as self-evident by us but not by all the peoples of the world. In fact, at least according to my own observations, the most general assumption even among intellectuals who should know better is that we have no philosophy and no principles beyond amassing wealth for the purposes, they suppose, of power and display. Little is more disheartening to an American abroad than this persistent failure of many Europeans, particularly those who have not traveled here or who know us largely through the movies, to grasp that there is a philosophy of rather consistent outlines behind our life. And, if they know of us only through our movies and not also through our philosophers and political thinkers, what else could they think?

I like your list of works. It surely contains some of the soundest political thinking in any language, and has the advantage of being drawn from many nations in the western tradition; with Germans, Britishers, French, Italians, and Americans all represented, it will be difficult for anyone to suppose that these writings represent a subtle form of American imperialism. It will appear to be what it is, namely, some of the best works in a continuous tradition in which we participate, and for which we are interested in gaining comprehension. I was happy to see that no sloganistic or shrill pamphlets were included. And I sincerely hope that there will not be too much bickering on the exact selection of titles. These you list are all excellent and essential; others perhaps might be added, providing they are sufficiently broad in scope. After all, it is the principles we cherish most deeply, rather than every day to day decision which may flow from them. I also like the idea of cheap editions; expensively bound works would only find their way into university libraries, which no doubt already have their copies. We must also have in mind the village schoolteachers who would like to understand what we are about, but are blocked by the inaccessibility of these sources.

I should therefore like to congratulate you and your colleagues both for discerning the problem and for doing something about it, and wish you the best success in your program.

Very truly yours,

WILLIAM EARLE,
Associate Professor of Philosophy, Northwestern University.

MY DEAR CONGRESSMAN: Your group's plan to provide enabling legislation for the publication of basic statements of democratic political philosophy for international circulation is a most worthy objective and I am happy to have this opportunity to comment on it in response to your recent request.

While I have not read all of the suggested authors and works on your list, they seem both basic and representative.

One thing I miss, however, is an example of the democratic truths of our way of life expressed in the simplest of terms and in the popular idom of our day. As one who has spent his career in the wholesaling of products and ideas, I am convinced that effective persuasion of large groups of people is accomplished only if they are addressed simply, directly, and in terms of their individual interests.

Accordingly, I would like to suggest consideration by your committee of these two examples of material which is popular, simple, and factual: Primer for Americans (copyright 1950 by Sigurd S. Larmon, president, Young & Rubicam, Inc); Know Your "Isms" (by Martin Dodge, chairman, board of directors, American Viewpoint, Inc., published by Farrar, Straus & Co., 1950).

It seems to me that, for every interested foreign national who reads and is moved by the books which make up the main body of your present list, many more could be influenced by the clarity and impact of works such as those I am suggesting.

Thank you again for giving me this opportunity to express myself on the approach you are making to a vital project.

Very truly yours,

CHARLES G. MORTIMER,
President, General Foods Corp.

MY DEAR MR. O'HARA: In response to your request for suggestions respecting the proposed preparation of a library of American political thought, I am forwarding to you a report prepared for you by Professor Arnaud B. Leavelle, our specialist in this field. I trust that you will find it helpful.

Yours truly,

JAMES T. WATKINS IV,
Executive Head, Department of Political Science, Stanford University.

Professor Leavelle's letter follows:

STANFORD UNIVERSITY,
DEPARTMENT OF POLITICAL SCIENCE,
Stanford, Calif., January 4, 1956.

DEAR JIM: Representative O'Hara has seized upon an excellent idea, however, there is an obvious incongruity between the stated objective of providing basic classics of American democracy and the list of books in part 2. In selecting a group of classics, these considerations, I think, should govern:

1. The works should all be by American authors. Burke, Humboldt, Kant, Mazzini, and Rousseau, do not represent characteristically American viewpoints, and their inclusion would not only confuse foreign readers, they would unwisely and unnecessarily contribute to the prevalent idea of American cultural poverty. Locke and Mill might be regarded as an exception, because of their direct reception into American constitutional and judicial documents, and Bryce and Tocqueville might be retained as the two best examples of insightful foreign commentary on American institutions.

2. There should be an honest representation of the range and diversity of American thought, including radical thought, which should appeal to the people we need to reach most. The suggestion in paragraph 2 of the first page of the enclosure that discussions of current, short-run interests of the United States should be avoided is, of course, sound, but any reader abroad (especially one familiar with the writings of Marx, Lenin, and Stalin) will know that vital political theory cannot be divorced from specific, historical, politicoeconomic problems.

With these considerations in mind, here is a tentative list:

Benjamin Franklin: Proverbs of Poor Richard's Almanac, 1757; Letter to Gov. William Shirley, December 22, 1754; Letter to Lord Kames, April 11, 1767.

Thomas Paine: Common Sense, Crisis Papers.

Jay, Hamilton, Madison: Federalist Papers.

Thomas Jefferson: First Inaugural Address, March 4, 1801; Letter to Benjamin Rush, January 16, 1811; Letter to John Adams, October 28, 1813; Letter to Samuel Kercheval, July 12, 1816.

John Adams: Discourses on Davila, 1790; Letters to John Taylor and Thomas Jefferson; Farewell Address, March 4, 1837.

Ralph Waldo Emerson: Politics, 1841; The American Scholar, 1837; Self-Reliance, 1841; The Transcendentalist, 1843.

Henry David Thoreau: Civil Disobedience, 1849.

William Ellery Channing: Slavery, 1841.

John C. Calhoun: Disquisition on Government, 1850.

Abraham Lincoln: Speech to the Wisconsin Historical Society, 1859; speech at Springfield, Ill., June 26, 1857; speech at Peoria, Ill., October 16, 1854; First Inaugural Address, March 4, 1861.

Andrew Carnegie: Wealth, 1889.

William Graham Sumner: What Social Classes Owe to Each Other, 1883.

Henry George: Progress and Poverty, 1879.

Henry Demarest Lloyd: Wealth Against Commonwealth, 1894.

Herbert Croly: The Promise of American Life, 1909.

Thorstein Veblen: Theory of the Leisure Class, 1899.

Woodrow Wilson: The New Freedom, 1913.

Paul Elmer More: Aristocracy and Justice, 1915.

John Dewey: The Public and Its Problems, 1927.

Great Opinions of American Jurists: Selections from the writings of John Marshall, Roger B. Taney, J. David Brewer, Benjamin Cardozo, Oliver W. Holmes, Jr., Learned Hand.

This list provides a representation of American democratic thought in its economic and social, as well as its political and constitutional, aspects—surely of great importance and interest to non-Americans.

Sincerely,

ARNAUD B. LEAVELLE, Jr.

DEAR MR. O'HARA: With pleasure I refer to your letter of December 12, 1955.

Regarding the plan for the publication in the principal languages of the world of important works at hand which might serve as basic statements of democratic political philosophy, I agree it should be tried to get Congress interested in it, thus I am humbly recommending the following works contained in part 2 of your letter:

Bryce: The American Commonwealth, Modern Democracies.

Dewey: The Public and Its Problems.

Hand: The Spirit of Liberty.

Von Humbolt: The Sphere and Duties of Government.

Kant: Perpetual Peace.

Locke: Letters on Civil Government, Book II.

Mazzini: The Duties of Man.

Mill: Representative Government.

Thoreau: Civil Disobedience.

de Tocqueville: Democracy in America.

Wilson: The New Freedom.

Wish that you can put your plan successfully through Congress and remain.

Cordially,

ENRIQUE N. VELA,
Commander, The American Legion, Department of Puerto Rico.

DEAR CONGRESSMAN O'HARA: Your letter of December 12 to Mr. Layton concerning the translation and publication of a list of books on American democracy by the United States Information Agency has been referred to me for reply.

We have read with interest your plan for the publication of the democratic classics and in our view this will be a welcome addition to the general overseas program of USIA. We have studied the list of suggested authors and works and in our opinion they form a suitable nucleus for the project. We wish you all possible success with your plan.

Sincerely,

L. M. CLUCAS, Jr.,
Assistant to the Director of Public Relations.

Note: Mr. Layton is vice president of Crown Zellerbach Corp., San Francisco, and director NAM.

DEAR MR. O'HARA: I reply to your letter of 12 December—received, I'm afraid, over our Christmas holidays—which takes up a matter that I consider to be of the first importance. Here are my notions, for what they are worth.

First of all I want to applaud you for your initiative in this project. The situation that it would be designed to correct is a real one, and a grave one. I would have only two reservations to enter: First of all, I would hope that your program would be proposed to Congress in such terms as to avoid further agitation of the question of USIA's competence; this is not to deny that there have been occasions for such question, but rather to indicate that in my opinion what USIA needs most of all now, along with such general guidance as your program would imply, our general strengthening and support. Second, I would question the limitation of the program to "basic texts." These we should have by all means, along the lines indicated in your tentative list. But these texts in no instances constitute fixed formulations of democratic theory; they are rather the reflections of stages in the historical democratic process. It is this fact that separates them most sharply from the documents of totalitarian theory, but that also makes me question the advisability of limiting your program to them. Along with them, it seems to me, we would need a further list of basic texts in interpretation and historical orientation. Perhaps such a secondary list has already been devised, or even already published, so that my suggestion is gratuitous. But in any case here on the attached sheet are a few items that have occurred to me as indicative of the sort of material I have in mind.

I hope that, whatever the usefulness of these suggestions, my letter will serve at least to indicate my genuine concern with this problem. I would appreciate your letting me know how your program proceeds.

Sincerely yours,

J. E. PALMER,
Editor, the Yale Review.

Following are Mr. Palmer's suggestions:

Carl Becker: Freedom and Responsibility and the American Way of Life.

Daniel Boorstin: The Genius of American Politics.

Erwin Cannon: New Frontiers for Freedom.

Russel Davenport: U. S. A.: The Permanent Revolution.

Frederick Lewis Allen: The Big Change, 1900–1950.

Ralph Gabriel: The Course of American Democratic Thought (also published in a German edition).

Altheus T. Mason: Free Government in the Making (an excellent selection of basic documents, with commentary).

Ernie Pyle: Home Country.

For a Jefferson selection, I would suggest Saul Padova's edition.

Classics of American Democracy—XVII

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1956

Mr. O'HARA of Illinois. Mr. Speaker, as I have mentioned on other occasions, and as is stated in the questionnaire of December 12, 1955, mailed to representative Americans, the proposal for a worldwide distribution of the classics of American democracy translated into all languages and in inexpensive editions, has been advanced by a group of Chicagoans, including the Reverend Harold Fey, executive editor of the Christian Century; Dr. Jerome Kerwin, professor of political science and chairman of the Walgreen Foundation for the Study of American Institutions at the University of Chicago; John McGinness, official of the Brotherhood of Railroad Trainmen; Dr. Richard McKeon, professor of philosophy at the University of Chicago; Thomas Stauffer, educator with wide experience and contacts in the foreign field; and others. The Chicago Daily News has shown active and sympathetic interest, and in its edition of June 6, 1955, poinpointed the need by dispatches from its foreign correspondents throughout the world, showing the present inaccessibility to the average man of the classic works of our democracy.

Prof. Richard P. McKeon has been especially helpful because in addition to his deep knowledge on the subject he has the experience and practical contact with the problem as a member of the United States National Commission for UNESCO. From this experience, most helpful in the present consideration, Dr. McKeon draws in his letter of January 10, 1956, which follows:

DEAR CONGRESSMAN: The last time we discussed the plan to make available, in translation into all the major languages of the world, the classics of Western political thought, I mentioned my experience with the publication project sponsored by UNESCO. It was a program that was discussed at several of the general conferences of UNESCO and was finally turned over for execution to the International Council of Philosophy and Humanistic Studies. The project was to publish the classics of tolerance and democracy in the language in which they have not yet appeared. The funds available are extremely small, and therefore the project has gone along very slowly. What encouraged me in my meetings with the group that supervises it is the number of requests that we have received for assistance in publishing such works and for participation in the program.

At the first meeting of the committee that discussed the plan, the German representative insisted on the great need for such works in German. The title which we planned to make our first title was Locke's two Letters on Toleration. He pointed out that 1 of the 2 had never been translated into German, and the 1 that had been translated had not been available for many years. The committee agreed to his request, and therefore the first volume in the series will be a German translation of Locke. Both the Italian and the Spanish representatives expressed their willingness to make arrangements for the publication of the same work in Spanish and in Italian. The Italian representative was sure that the Italian group that he was in contact with would be able to supply the subvention, and his chief interest was in the preparation of a common list of books that would appear in the major languages of the world. The Indian representative is interested in importing into India an edition of Locke priced at a level that would make large distribution possible, and in turn, he is preparing a translation into English of the Edicts of Asoko which we will add to our list for translation into other European languages.

In addition to the German, Spanish, Italian, and Hindu projects, we have had requests from the Greeks, and I have been in communication with representatives of the

Egyptian and Japanese National Commissions of UNESCO who are interested in translations into those languages. We have not had the funds for wide discussion or circulation of the idea, but it has caught on wherever it has come to the attention of people who have thought about the problem of international understanding and communication. We hope, within the current year, to have 4 books in 4 languages, either available or well on their way, and since the total fund that we have had up to this point is only $2,000, I take the experience to signify that this is a need widely recognized and one that could be satisfied with very small funds. The list of classics of Western democracy which you have sponsored in your bill is aimed at a similar need and would serve excellently to supplement the UNESCO project. I thought that the experience we have had in this very modest program would be encouraging to you in your sponsorship of the classics of Western democratic thought.

Your sincerely,

RICHARD P. MCKEON.

Other letter follows:

DEAR MR. O'HARA: In response to your letter of December 12, I wish to congratulate you for your interest and personal effort in sponsoring this proposed plan for Publication of Democratic Classics.

Below are listed the books that I suggest for your committees' consideration, most of which were in your submitted list. The substitutions are predicated on the theory of a more realistic application of our American understanding of democracy.

AUTHOR AND WORK

Bryce, The American Commonwealth.
Bryce, Modern Democracies.
Dewey, The Public and Its Problems.
Emerson, Political Essays.
Hamilton and Madison, The Federalist Papers.
Hand, The Spirit of Liberty.
Jefferson, Declaration of Independence.
Jefferson, Notes on Virginia.
Kant, Perpetual Peace.
Lincoln, Gettysburg Address.
Lincoln, Cooper Union Address.
Locke, Letters on Toleration.
Locke, On Civil Government.
Mazzini, The Duties of Man.
Mill, On Liberty.
Mill, Representative Government.
Thoreau, Walden.
De Tocqueville, Democracy in America.
Wilson, The New Freedom.
Hobbes, Thomas, Of Commonwealth.
Bennett, Jesse L., The Essential American Tradition.
Becker, Carl, The Declaration of Independence.
Brogan, D. W., Politics in America.

I also wish to thank you for the courtesy extended to me and assure you of my best wishes for your success in this undertaking.

Cordially,

WALTER S. VANALSTYNE.

NORTH TONAWANDA, N. Y.

DEAR MR. O'HARA: Your plans for pushing enabling legislation directing the United States Information Agency to publish for nominal prices in the principal languages of the world a small library of basic statements of democratic political philosophy is splendid and has our hearty approval. Your selection of authors and works as listed is comprehensive and excellently suited to the purpose.

Any additions, omissions, or substitutions I might suggest would not, I believe, improve the overall picture. On Emerson, Jefferson, and Lincoln, where you ask which writings, I have only this to say: If you are not going to include both it would seem that the political essays of Emerson would be more pertinent than the moral ones. Among Jefferson's selected writings, the Declaration of Independence—particularly the first section—and his first inaugural are musts. From the selected papers of Lincoln you will, of course, include the preliminary and final emancipation proclamations, the Gettysburg address, the first and second inaugurals, and the senatorial nomination acceptance speech.

Best wishes for the success of your worthy project.

Sincerely yours,

Mrs. W. EUGENE PHARIS,
President, League of Women Voters of Missouri.

DEAR MR. O'HARA: Your letter of December 12, has been noted and I apologize for the delay in answering it. I was away without having mail forwarded during the holidays.

I like the idea immensely of translating and publishing a select list of the timetested classical statements in their original forms in the principal languages of the world in order to make them widely available to these people.

Also, I am in no position to advise you of further items than you have listed. In my school days I know I read from many of them but in later years my activities and preoccupations have not been in such reading. I endorse the idea and realize the fine worth in the ones mentioned.

My suggestions is that as you can, some simple and interesting pamphlets or small books be made available that might have a wider reading among these peoples than the direct translations may have. I do not mean to substitute the simpler for the direct translations. I mean both so that the scholarly person will have the classics and the person of limited time to study or inclination or education can have much of the principle in an easy readable form. That will reach more people and we need to give an appeal to both groups.

I trust this idea will appeal to enough people that it may become a working force for democratic philosophy and practice in the whole world.

Sincerely yours,

GENEVIEVE L. DAVIS,
Mrs. Walter A. Davis,
President, United Church Women of South Carolina.

DEAR MR. O'HARA: The idea embodied in the resolution outlined in your letter of December 12 has my warm approval. It will, I dare say, be difficult to frame a list which is both representative and acceptable to a majority of the Congress. I would suggest the addition of Milton's Areopagitica and Thomas Paine, The Rights of Man.

Sincerely yours,

LOUISE OVERACKER,
Professor of Political Science, Wellesley College.

DEAR REPRESENTATIVE O'HARA: I was very pleased to get your letter of December 12, concerning proposed legislation directing the United States Information Agency to publish for nominal prices, in the principal languages of the world, a small library of basic statements of democratic political philosophy. This to me is a very worthwhile and interesting piece of proposed legislation. It is with pleasure that I personally indorse it.

Since the area of political philosophy is an area with which I am not as familiar as I should be, I consulted two university professors in this field. This one placed a stamp of approval on the two enclosures in their entirety. It was the opinion of the other that the book The Rise of American Civilization by Charles and Mary Beard should be included in the list. He also gave this opinion which, of course, was a personal opinion and I quote: "I do not think that Rousseau should be in this list. His influence on American institutions and democracy has been greatly exaggerated. Why not include the great volumes of Walt Whitman?"

As State president of United Church Women of New Mexico, I have submitted your letter and the documents to the 30 members of the board of directors. I shall have their reaction in probably 1 week. At that time I shall forward their reaction to you probably in a simple statement.

Thanking you for the opportunity of expressing my opinion on this proposed legislation.

Sincerely yours,

LUELLA MADDEN,
President, United Church Women of New Mexico.

DEAR CONGRESSMAN: I have for acknowledgment your letter of December 12, and I wish to commend you on your plan of disseminating badly needed factual information about the basic virtues of our way of life to peoples of other countries.

We must admit that the Communists' propaganda program is being waged far more effectively than ours in capturing the minds of people everywhere, therefore the impelling need on our part to find a way of doing a better job than they if we are to successfully stop its progress. We have failed to let the world know that Russia is as much a capitalistic country as America, the difference being that in Russia the capital is in complete control of the Politburo whose conduct in the handling of the capital cannot be questioned or even criticized by the people, except at the expense of imprisonment or death, whereas our capitalistic system is in the hands of the people, under constant scrutiny by the people, subject to the imposition of restraint by the Government. Quite a contrast.

The suggested list of authors and works you mention have no doubt been carefully screened, and I regret I have no other suggestions to make.

My best wishes in your endeavor.

Yours very truly,

W. R. ARCHER,
Houston, Tex., Regional Vice President, NAM.

P. S.—May I suggest you read Dr. E. Marrill Root's new book Collectivism on the Campus?

MY DEAR MR. O'HARA: Please pardon my delay in replying to your letter of December 12, 1955, with enclosures. I wanted to give the matter some study and thought.

I believe the idea which you have in mind is a splendid one, and should be effective and helpful.

I, also, commend highly the list of books; however, it is my belief that, if practical and possible, some of them should be condensed and abridged.

Only students, for example, would read Bryce's The American Commonwealth, or Mills' Representative Government in their entireties.

If I can be of any assistance in this connection, please do not hesitate to call on me.

With best wishes.

Yours very truly,

P. H. HASKELL, Jr.,
President, Holly Grove Mining Co., Birmingham, Ala.; director NAM.

DEAR MR. O'HARA: It is my opinion that your plan to furnish books at nominal cost through the United States Information Agency is a most worthwhile project.

However, it is also my belief that the cost should be little or nothing, as too many of the Communist pamphlets are distributed free.

It is really appalling to visit Europe and to find that the majority of people, even in the better educated classes, think we are interested only in movie stars, etc.

Many years ago, I was the wife of a member of the American diplomatic corps when American prestige in Europe and the Far East was especially high. That feeling has changed so much that it is at a dangerous point. We need to impress upon the present generation the real picture of the beliefs of the ordinary individual American citizen, those beliefs and tenets which made America great through the ordinary, little man.

May all success go with you.

Yours sincerely,

DOROTHY B. (MIMI) SOUTHWICK,
President, Florida Federation of Business and Professional Women's Clubs, Inc.

DEAR MR. O'HARA: Your letter concerning publication of a small library of basic statements of democratic political philosophy was forwarded to me here from the University of Washington, which I left some 8 years ago. I hope my reply is not too late to be of use to you.

With the general idea behind the undertaking I am heartily in accord. I can conceive, however, that at least some of the peoples of Europe might be mildly annoyed at our appropriating and distributing their classics, especially since in their own and other European countries cheap editions are often available. Moreover, it is my own view that it would be most desirable to make available works which, while dealing with the theory and practice of democracy, were either by Americans or about the United States, especially since we, who have developed democratic theory and practice rather more fully and over a longer period than other peoples, have some real ideas to export, while we are also rather seriously misunderstood and misinterpreted.

I should therefore feel inclined to keep those works which are by or about Americans and to abandon the others. I am not able to give any advice as to which Lincoln papers should be selected, but I think the little popular edition of Jefferson's selected writings, edited, as I recall, by Adrian Koch, would fill the bill very nicely.

It is conceivable that it would be worth adding to the list a more recent foreign critic and evaluator of the United States, if copyright problems do not cause difficulties. I suggest either André Siegfried or Dennis Brogan or both. I also think that for giving the spirit of American institutions as they are today, the work of Jacques Barzun, born a foreigner but long a citizen, entitled "God's Country and Mine," would be an admirable one, again if copyright difficulties did not prevent it. Likewise my own feeling is that Justic William Douglas' An Almanac of Liberty, does a good deal in brief little essays both to inform without pains about some major events in our history, and to give an interpretative viewpoint on our way of life.

There is, manifestly, a vast literature on American democracy, but a great deal of it, even when thorough, is perhaps a little too scholarly for the broader appeal which I take it you have in mind. Nevertheless, I should hope that if such an undertaking proves initially successful, it would subsequently be possible to extend the coverage and to make available what might be follow-up or supplementary books.

I venture to add one thing. While in some cities such as Rome the American Library is doing a suberb job, I do get the feeling, and not least I may add in England, my land of origin, that ever reasonably informed opinion is becoming increasingly ignorant, as well as, I fear, increasingly prejudiced about this country. At least one of the difficulties is the high cost of American books for the European scholar, and even for libraries. Anything that could be done to make serious American work available in Europe to scholars and to other interested persons would, I think, be highly valuable. And, in relation to Government expenditures generally, or our various aid programs particularly, I cannot but feel that such costs would not loom large and would have disproportionate returns.

May I wish you every success in your undertaking. If I can be of any further assistance I shall of course be delighted.

Yours sincerely,

THOMAS I. COOK,
Professor Department of Political Science, John Hopkins University.

Classics of American Democracy—XVIII

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1956

Mr. O'HARA of Illinois. Mr. Speaker, I am extending my remarks to include among others a letter from Arthur H. Thornhill, president of Little, Brown & Co., publishers, as follows:

DEAR MR. O'HARA: It was with considerable interest that I read of your plan to encourage legislation directing the United States Information Agency to publish a small library of basic statements of democratic political philosophy.

Certainly this agency has done a great deal to enhance the position of free nations and to disseminate information which will enlighten the relatively illiterate and oppressed populations of the world. As you probably know, we have cooperated in every instance with the various programs which implement this goal.

However, the plan to strengthen this activity by approaching the matter on a highly intellectual level makes a great deal of sense and the recommendations which have been made by your consultants are excellent ones indeed. It appears as though they have recommended the basic theses and philosophies which truly touch the heart of our way of life.

With best wishes for the success of your activity,

Sincerely yours,

AUTHUR H. THORNHILL,
President, Little, Brown & Co., Boston.

MY DEAR MR. O'HARA: I am sorry for the long delay in answering your letter of December 12.

In general, I think the idea is quite sound and good provided the USIA is given additional funds to cover the cost. I have observed the operations of this agency in a number of European countries and I feel they are doing an excellent job but that much more could be done and should be done there. I suspect the same conditions prevail in other parts of the world. I cannot criticize the list of books you have compiled but it might be useful to include a few more recent books.

Very truly yours,

HENRY Z. WALCK,
President, Oxford University Press.

DEAR CONGRESSMAN O'HARA: I hope I may be forgiven for my tardiness in replying to your letter of December 12. Alas, December is one of my worst months in that my agenda is crowded with meetings of our managers assembled from all parts of the country, and so-called year-end sales conferences.

I am wholeheartedly in favor of the translation program put forward in your letter of December 12. But I feel that care must be employed in implementing the program lest we defeat our purpose by making it possible for our enemies to declare the program nothing but propaganda.

I feel that the actual books to be injected into the program in any given country should at least appear to be selected for publication by a local publisher in the country in which we wish the book distributed in translation.

I think it important, too, that a book which we want distributed in translation in any given country be published in the normal way by a regular well-recognized publisher of that country, by which I mean that the publisher would be responsible for selecting a translator who would do a scholarly translation, the foreign publisher would be responsible too for designing the book and having it manufactured in his own country. I would not consider it appropriate under any circumstances to have the books manufactured in this country. These books, if the program is to be successful, must at least have the appearance of having been selected by the foreign publisher for publication, designed, manufactured, and merchandised by him.

Now in order to accomplish this, unquestionably the foreign publisher will have to be subsidized to make it possible for him to offer the book we want sold at the price at which it should be sold in order to acquire the widest possible market.

As I see it, what you are suggesting is quite close to the Franklin operation, which has been headed by Datus Smith, formerly the head of the Princeton University Press. As a matter of fact, I would think that your program could be implemented by Franklin at less cost than in any other way. Why not confer with Datus Smith about the possibilities of this?

Sincerely yours,

GEORGE BRITT,
President, the MacMillan Co.

DEAR MR. O'HARA: I am very grateful that you have given me the opportunity to comment on your plan for publication of Democratic Classics.

I am wholeheartedly in favor of this proposal; in fact, it has the kind of imaginative simplicity about it that makes one wonder why it had not been done before. I can think of no way in which the United States taxpayers could more profitably spend some of their tax dollars.

I have carefully studied the list of suggested authors and works in enclosure No. 2, and I am enclosing a separate sheet with my comments on them. Some of the works I am unfamiliar with and the fact that I leave them off my list of comments does not mean that we do not approve of them.

With every wish for the success of your project, I am,

Very truly yours,

JEAN HOLMER,
Mrs. Paul Holmer,
President, League of Women Voters of California.

Mrs. Holmer's approved list and comments follow:

I would certainly agree that the list should contain the following classics:

Bryce: The American Commonwealth and Modern Democracies.

Burke: Reflections on the Revolution in France.

Hamilton and Madison: The Federalist Papers.

Hand: The Spirit of Liberty.

Locke: Letters on Toleration.

Mill: On Liberty and Representative Government.

DeTocqueville: Democracy in America.

Wilson: The New Freedom.

As to which writings of Jefferson should be included, this presents somewhat of a problem since Jefferson did not put down in any treatise a thoroughly reasoned account of his political philosophy. Any such selections should certainly include the Declaration of Independence; a Summary View of the Rights

of Americans; Notes on Virginia; and the Inaugural Speech which is his splendid elucidation of the differences between aristocratic government and republicanism.

From the works of Lincoln, I would include: The Peroia Speech of 1854 on the Kansas-Nebraska Act, in which he gives a wonderful expression of the democratic and humanitarian viewpoint on the slavery issue; the Douglas Debates of 1858; the Cooper Union Speech. I would certainly include his poetic expressions of the democratic ideal—The Gettysburg Address; The Second Inaugural; The Emancipation Proclamation; and, The Letter to Mrs. Bixby. In addition I would include the less familiar First Inaugural Message in which Lincoln explains his basic democratic philosophy. He makes it clear that he thinks the Union is sacred because it makes possible the great experiment in government of the people.

Finally I would like to have your committee consider the addition of Montesquieu's Esprit des Lois—at least the first section dealing with law in general and forms of government. This certainly might be considered the greatest book of the French 18th century, and one of the most important ever written because of its original views on law and politics and because of the great influence it exerted upon some of the American Founding Fathers.

DEAR SIR: Your request to Mr. J. McWilliams Stone, board of directors, NAM, for opinion of the plan of the United States Information Agency to publish, for nominal prices, a smal library of the basic statements of democratic political philosophy in various languages, has been referred by him to me.

I believe the plan is an excellent one and should be of much value to anyone desiring information on this subject. I feel strongly that we should share our heritage of these inspiring classics with all mankind.

WORK AND AUTHOR
The American Commonwealth: Bryce.
Modern Democracies: Bryce.
Political Essays: Emerson.
Gettysburg Address: Lincoln.
Second Inaugural: Lincoln.
Civil Government: Locke.
On Liberty and Representative Government: Mills.
The Inequality Among Mankind: Rousseau.
Democracy in America: de Tocqueville.
The New Freedom: Wilson.
The above seem to be within the scope of this project.
Walden: Thoreau.
Revolution in France: Burke.
The above seem less desirable.
Suggested additions:
The Declaration of Independence.
The Constitution of the United States.
The Bill of Rights.
Introduction to Works of Lincoln, and a Charter of Democracy: Theodore Roosevelt.
Recent Speeches on the Dignity of Man, the Heritage of Free Man, and the Armistice Day Address: Herbert Hoover.

Sincerely yours,

D. A. GIBSON,
DuKane Corp., St. Charles, Ill.

MY DEAR MR. O'HARA: My delay in answering your letter of December 12 has been occasioned by a desire to give it more than passing study.

The suggested authors and their works seem to be about as fine as we could wish for and I cannot add anything to it.

Thanking you for this courtesy, I am,

Very sincerely yours,

ALFRED P. GODDIN,
General Vice President, Sons of the Revolution.

DEAR MR. O'HARA: This will acknowledge your letter of the 12th advising that a group of Members of Congress will push for enabling legislation directing the United States Information Agency to publish for nominal prices, in the principal languages of the world, a small library of basic statements of democratic political philosophy. It occurs to me this is a splendid idea as certainly the democratic philosophy should be known the world over.

I appreciate your kindness in bringing this to my attention, but at present I have no suggestions to offer concerning additional material, etc.

Needless to say, any legislation proposed in Congress needs the support of the people and I would suggest that you bring this matter to the attention of the Railway Labor Executive Association.

Sincerely yours,

JESSE CLARK,
President, Brotherhood of Railroad Signalmen.

DEAR REPRESENTATIVE O'HARA: This is to acknowledge receipt of your letter of December 12, 1955, addressed to Mr. J. Paul Beadle, education director of the International Typographical Union. Mr. Beadle is the director of our bureau of education which handles our technical education program for apprentices. He has referred the letter to me.

Of course the International Typographical Union as such could make no expression of opinion on the plan that has been advanced to print and distribute among foreign countries in foreign languages "a select list of the time-tested classical statements of democratic theory in their original forms."

Part 2 is a suggested list of authors and works which might be so printed and distributed and you ask for expressions of opinion as to the plan and the selected books.

You say the plan has been approved by the President's United States Advisory Commission on Information and by the Commissions Committee on Books Abroad and by many eminent Americans mentioned in your proposal.

If you want my personal opinion on the matter I would say no doubt the plan would be helpful and any or all of the books you mentioned which have the approval of certain eminent educators would no doubt be helpful in the long run.

However, as I see the picture there is no long run at this time. We have been running too long already without delivering to the peoples of the world a clear explanation of what American capitalism is and how it differs from the capitalism that has been damned through the ages in all countries of the world.

It is my opinion that what is needed is widespread distribution of a book, in all languages, giving a grade school explanation of what American capitalism is, how it works and the results thereof. It should be copiously and graphically illustrated so that the message is in pictures as well as in words.

I might add that such an explanation of the American economy could well be published in our own country and made available in schools and even colleges. In my opinion there is a lack of such a publication even in this country or if there is one it has not come to my attention.

Trusting the above will be helpful and with kindest personal regards, I am

Cordially and sincerely,

WOODRUFF RANDOLPH,
President, International Typographical Union.

DEAR MR. O'HARA: I am very sorry to have been so slow in answering your letter of December 12. However, our Washington office, to which you addressed your inquiry, was closed during the holidays and the letter was forwarded to me here at my New York address only since the beginning of the year. Now that I have it, let me answer promptly and briefly. I think the plan excellent and the list of books equally so.

Sincerely,

HIRAM HAYDN,
Phi Beta Kappa and Editor the American Scholar.

MY DEAR MR. O'HARA: I wish to express, though very tardily, I regret, my endorsement of the proposal to have translated and made available at low cost to the peoples of many lands the basic text dealing with democratic political philosophy. It seems to me an excellent countermeasure to use against the weight of Communist political propaganda so easily available in other lands.

My acquaintance with such literature as is listed on enclosure 2 is too sketchy to permit me to make specific suggestions of titles or selected passages.

I think the proposed undertaking is worth the wholehearted endorsement and favorable action on the part of the Congress of the United States, and I sincerely hope it is carried out.

Sincerely yours,

LOUISE C. LINE,
Mrs. Robert C. Line,
President, Montana Council of Church Women.

DEAR MR. O'HARA: This is to acknowledge your very good letter of December 12, in which you solicit my opinion as to the books which Congress might publish in different foreign languages and having to do with the basic democratic political philosophy.

Enclosed is a list of the books which I would recommend. I have listed these in the order of their importance.

Sincerely yours,

J. HOWARD PEW,
Philadelphia Director, NAM.

Mr. Pew's list follows:

Mises, Ludwig von: Human Action, Yale University Press, 1949.

Hazlitt, Henry: Economics in One Lesson (1946), Foundation for Economic Education, 1952.

Paton, William: Shirtsleeve Economics, Appleton-Century-Crofts, 1952.

Hayek, F. A.: Road to Serfdom, University of Chicago Press, 1944.

Mises, Ludwig von: Socialism (1922), Yale University Press, 1951.

Jefferson, Thomas: The Writings of Jefferson, Modern Library, 1944.

De Tocqueville, Alexis: Democracy in America, 2 volumes (1835 and 1840), Knopf, 1945.

Locke, John: Second Treatise on Government (1690), numerous editions.

Paine, Thomas: Common Sense (1776), numerous editions.

Hamilton, Jay, and Madison: The Federalist (1788), Modern Library, 1937.

Bryce, James: The American Commonwealth (2 volumes), revised edition, Macmillan, 1924.

Burgess, John W.: The Reconcilation of Government and Liberty, Scribners, 1915.

Essays on Liberty, volume 1, 1952; volume 2, 1954, Foundation for Economic Education.

Harper, F. A.: Liberty, A Path to Its Recovery, Foundation for Economic Education, 1949.

Beston, Henry: American Memory, Farrar & Rinehart, 1937.

Emerson's Essays and Other Writings, Modern Library, 1940.

Garrett, Garet: The American Story, Regnery, 1955.

Thoreau, Henry: Walden and Other Writings, Modern Library, 1937.

Beard, Charles: The Republic, Viking, New York, 1943.

Bastiat, Frederick: The Law, Foundation for Economic Education, 1950.

Lippmann, Walter: The Good Society, Little, Brown, 1937.

Mill, John Stuart: On Liberty (1859), numerous editions.

Mill, John Stuart: Representative Government (1861).

Spencer, Herbert: The Man vs. the State (1874), Caxton Printers, 1940.

Orton, Wm. A.: The Liberal Tradition, Yale, 1945.

Weaver, Henry G.: The Mainspring of Human Progress, Talbot Books, 1947.

Ashton, T. S.: The Industrial Revolution, 1760–1830, Oxford, 1948.

Belloc, Hilaire: The Servile State (1912), Holt, New York.

Read, Leonard E.: Government—An Ideal Concept, Foundation for Economic Education, 1954.

DEAR SIR: I think it is an excellent idea for the United States Information Agency to publish for nominal prices several books outlining our political philosophy.

The suggested list of books seems most appropriate and I have no suggestions for changes. I hope these publications will be made available to our citizens as well as those of foreign countries as I feel there is a need for a better understanding of our basic principles.

I hope this legislation will be enacted.

Sincerely yours,

NINA M. RUSSELL,
Maryland Federation of Business and Professional Women's Clubs.

Classics of American Democracy—XIX

EXTENSION OF REMARKS
OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1956

Mr. O'HARA of Illinois. Mr. Speaker, I am extending my remarks to include, among other communications, a letter from Roy A. Gould, of Portland, Oreg., transmitting a most interesting analytical study of the classics of American democracy it is proposed to translate into the principle languages of the world and to make available in cheap editions to peoples everywhere:

DEAR MR. O'HARA: This is with further reference to your letter of December 12 and my reply of December 29 regarding a bill to be proposed recommending that the United States publish several books in foreign languages and make available in foreign countries.

The purpose of this would be to give those people an opportunity to read obout our free-enterprise system and our way of life in this country.

As I stated in my letter of December 29, I did not have time to review these books, however, I engaged a very competent person to do so, Miss Shirley Ann Sackman.

Shirley Ann has a master's degree from Columbia University and has traveled quite extensively in Europe and taught school 2 years in Australia.

I am enclosing her analysis of the books. In reading it I note she is reluctant to state that some books should not be published because, as she explained, she did not know exactly how the program would be handled.

For example, if these books are to be placed in schools only and for the instructors to read, books could be recommended that could not be understood by the average individual in foreign countries who quit school to go to work at the age of 14.

Then, too, there are books beyond the comprehension of and, because of their style, etc., would not be read enough by teachers to make their printing worthwhile. I think Dewey's The Public and Its Problems is one of these.

You will note that Shirley Ann added to the list The Great Rehearsal, by van Doren. While I did not find time to read this, I sketched through and agree it is one that might well be added.

May I take one moment to comment on this program. The Communist countries are more active in promoting hatred for our capitalistic, democratic way of life in this country than many of us here realize. Should we simply place these books abroad in convenient places for the rank and file to pick them up and read them they would not last as long as it would take to put them there. This also goes for placing them in free school lending libraries. The only place they would be well preserved is where they are not needed. I think some books in some places would be an excellent investment, although they may disappear quite readily.

However, to try and saturate most foreign countries with our literature would be a waste of money. It may be wise to cut down on the number of books printed and try and get more current news, in printed form, into these countries; such as translating our Readers Digest, etc.

I sincerely hope this will be of some help to you.

Cordially,

DIAMOND LUMBER CO.,
ROY A. GOULD.
President of Diamond Lumber Co., of Portland, Oreg., Director, NAM.

Miss Sackman's study and comments follow:

Bryce, The American Commonwealth: Bryce listed the strongest recommendation for this book as a subject for foreign translation when he stated in the preface: The American Commonwealth was originally written with a view to European rather than American readers. The entire volume is accordingly oriented and excellently organized. Beginning with a study of the presidential powers, he evolves into cabinet, Senate, House of Representatives, congressional complexities; handling all with a concise and eminently readable style. Bryce mentions many comparisons between European and American forms of government; e. g., the "classless society." This book should provide one of the most powerful translations in the group.

Bryce, Modern Democracies: This work seems to have all the qualities of the preceding but would it not be more to the point to publish the second volume only? In itself a volume of over 600 pages, it has lengthy sections on American, Australian and New Zealand democracies which might be unavailable to Europeans, whereas governmental forms in Switzerland, ancient Athens, etc., should be obtainable information in most libraries of the world.

Burke, Reflections on the Revolution in France: Would an abridged edition be possible? Burke makes many fine points but one must read pages of involved rhetoric between.

Dewey, The Public and its Problems: If this collection of political philosophies is for distribution to the reading public abroad. Dewey seems to have no place. Granted that he may have been an outstanding American philosopher; the abstractions of this work make it exceedingly hard going. I feel that this book should be deleted from the list.

Emerson, Moral and Political Essays: Politics, Prudence, The Over Soul, Self-Reliance, Spiritual Laws, New England Reformers.

Hamilton and Madison: The Federalist Papers: For this study The Enduring Federalist, in which Charles A. Beard edited and analyzed the Papers, was valuable. Though Beard abridges the documents slightly, he gives cogent arguments for their present-day significance. It seems an indispensable book on the American system of politics, especially concerning the relationship between federalism and a constitutional form of government.

Hand, The Spirit of Liberty: This seems to me a wise and beautifully composed collection. It should prove refreshing and enlightening for readers to see how the freedom and justice fought for 180 years ago, is being applied in American courts today.

Von Humboldt, The Sphere and Duties of Government: Unavailable.

Jefferson, Selected Writings:

1. A summary view of the rights of British America, August 1774.
2. A declaration by the Representatives of the United States of America, in General Congress Assembled, July 4, 1776.
3. Comments on the Federal Constitution, December 20, 1787.
4. Report on the privileges and restrictions on the commerce of the United States in foreign countries, December 16, 1793.
5. Program of competition for the United States Capitol, March 14, 1792.
6. The need for rebellion, January 30, 1787.
7. Notes on party policy, 1793.
8. Aristocracy and liberty, October 28, 1813.
9. Government by the people, July 12, 1816.
10. Origins of self-government, June 5, 1824.
11. Prospectus on political economy, April 6, 1816.
12. A manual of parliamentary practice, 1800.

Kant, Perpetual Peace: This magnificent writing has a theory which well could be emphasized in a study of this kind. It also has psychological import in the light of a warmongering reputation America has acquired in some countries abroad.

Lincoln, selected papers:

1. The Perpetuation of Our Political Institutions, January 27, 1838.
2. Letters to George Robertson, August 15, 1855.
3. Fremont, Buchanan, and the extension of slavery, August 27, 1856.
4. A House Divided, June 16, 1858.
5. Fragment: The Constitution, 1860?
6. Address at Cooper Institute, February 27, 1860.
7. Letter to Horace Greeley, August 22, 1862.
8. Final Emancipation Proclamation, January 1, 1863.
9. Address delivered at the dedication of the cemetery in Gettysburg, November 19, 1863.

Locke, Letters on Toleration: "* * * toleration * * * the chief characteristic mark of the true church." In this work from the Age of Reason, Locke points up practices and prejudices in the church current even today. Though many before him had argued for religious tolerance, this is probably the writing on the subject that had most influence upon the American constitutionalists. Another hint which became rock-ribbed policy in America was separation of church and state.

Locke, On Civil Government, Book II: Locke's contribution to democratic thought here seems to be his belief that government should devote itself to the preservation of man's natural rights. Furthermore, since "* * * all are equal and independent, no one ought to harm another in his life, health, liberty, or possessions." Such sentences, antedating the Preamble to the Constitution, may have helped to pave the way for the revolutions that followed.

Mazzini, The Duties of Man: In contradistinction to Locke's theory, Mazzini's conviction that the duties of man necessarily precede his rights balances subject of responsibility versus reward in the democratic state. His articles on the emancipation of women and of the working classes might have been surprising to the Europe of a cen-

tury past but may not that style be conceived the ravings of an insurrectionist today?

Mill, on Liberty: This work and the following, like the writings of Locke, Burke and Montesquieu, is definitive of democratic thought and therefore eligible for this collection. If it is being prepared for the university student of political science, well and good, but may the layman, threading Mill's style, be unable to see the forest for the trees?

Mill, Representative Government: These theories are of undoubted scholarly value and of interest to creators and students of constitutional government. It would appeal to a limited reading public.

Rousseau, The Social Contract: This book admittedly, is a basis for a great deal of modern political thought and as such should be included in any grouping of democratic political philosophy. As a literary classic, however, it is widely available in Europe. Perhaps a publication in this collection would reduce its cost.

Thoreau, Walden: These thoughts create an atmosphere of peace and loveliness, a soft contrast in reading and in spirit. According to E. W. Teale, Walden is, "without doubt, the most original work in American literature. It might impress readers with the possibilities of creative living by a man who came as near as possible to exerting freedom of will.

Thoreau, Civil Disobedience: Unavailable.

de Tocqueville, Democracy in America: Some of de Tocqueville's impressions of America, about 1834, of which he wrote to de Chabrol in France, may be anachronistic today: "The States have few soldiers, because they have no enemies, and consequently no armies; there is neither taxation nor central government. Executive power, being nonexistent, is a source neither of money nor power." Though he revised some of these opinions later, his book is important because it is a first hand study of a democratic society, of which de Tocqueville thought America the example par excellence.

Wilson, The New Freedom: These campaign speeches make interesting reading and present a picture of what one man, at least, felt the United States had become 150 years after its inception. His contrast of the power of corporations to the ideals of Jeffersonian democracy is particularly impressive. The book also seems appropriate because it illustrates some of the alterations in application of democratic theory in this country during the past century and a half.

Van Doren, The Great Rehearsal: Although this work does not appear on the list of suggested titles for this collection, I feel that it embodies in dynamic form, many of the writings and personalities involved in the making of the Constitution. When Washington wrote: "Let us raise a standard to which the wise and honest can repair" and Lincoln considered the Constitution the rock upon which American democracy was founded, it would be well to emphasize, as Carl van Doren does, the basis for our democratic way of life.

DEAR CONGRESSMAN O'HARA: In response to your recent letter calling our attention to the proposal that the United States Information Service translate and publish a select list of classic statements of democratic theory, we believe that it might be well to add the following works to the list:

(1) Abraham Lincoln's speeches, including the Gettysburg Address, his second inaugural address and his Cooper Union address;

(2) Benjamin Franklin's autobiography;

(3) Charles Beard's Rise of American Civilization;

(4) The Education of Henry Adams;

(5) The collected papers of Franklin D. Roosevelt;

(6) Thomas Paine's The Rights of Man.

We hope that you will find these suggestions helpful.

Sincerely yours,

GERALD R. COLEMAN,
Executive Secretary, United Hatters, Cap and Millinery Workers International Union.

MY DEAR CONGRESSMAN: This is in reply to yours of January 11:

I think your plan for providing translations of the great books dealing with the American Idea is indeed admirable. I hope you succeed in persuading Congress to adopt it.

The only general suggestion I would make is to have each language's translation made by a conspicuous national (perhaps a university historian) of the home country of that language. Seems to me this would add greatly to the acceptance of the texts.

As for the list, it seems to me the only omission is a reprinting of some notable American documents: surely the Declaration of Independence and The Constitution (plus, as an introduction to either, the Oath of a Free Man, the first piece of printing on what is now the United States of America).

Another item, along this line, might be Heritage of Freedom (about the documents in the Freedom Train) by Frank Monaghan, published by Princeton University Press, 1947.

Also I would think Walt Whitman's Leaves of Grass would be a "must"—if scholars agree translation would not destroy its power.

Another pet idea of mine is that we should circulate regularly very many copies of Life and the Saturday Evening Post, throughout the world, as typifying the American scene * * * not in translation but as typifying what our economy offers to 10 million Americans, week by week.

Cordially,

WILLIAM REYDEL,
Senior Vice President, Cunningham-Walsh, Inc., New York.

DEAR MR. O'HARA: I wish to reply to your letter of December 12, 1955, concerning a small library of basic statements of democratic political philosophy to be published by the United States Information Agency, if approved by Congress. I realize that Congress is now in session and that you may already have prepared your bill.

I believe that the general plan for publication of democratic classics is very desirable. The fundamentals of democracy upon which our country was founded should be helpful to citizens of other countries, and would not necessarily be apparent from current literature.

I have few improvements to make upon the suggested authors and works. I would suggest the removal of Rousseau and the addition of Hendrik Van Loon's The Story of America. I suggest that Lincoln's Selected Papers include his second inaugural address and his Emancipation Proclamation.

If you could advise me as to the most effective time to write to my Congressmen, I would like to write in support of this bill. In any case, I will follow the bill with interest. Perhaps I can judge the timing from the CONGRESSIONAL RECORD.

Sincerely yours,

LUELLA DEVLIN
Mrs. Frank Devlin,
Chairman, Committee for a State League of Women Voters, Casper, Wyo.

DEAR MR. O'HARA: I do hope you will forgive the delay in answering your letter of December 12, due to the holidays and out-of-town commitments.

I would like to commend you and the other Members responsible for your plan for publication of democratic classics. It should go far toward alleviating the scarcity of books on democratic political philosophy.

Thank you for writing, and best wishes for every success in this worthwhile program.

Sincerely yours,

ETHYL YOUNG
Mrs. Basil Young,
President, League of Women Voters of Minnesota.

Classics of American Democracy—XX

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1956

Mr. O'HARA of Illinois. Mr. Speaker, with this extension of my remarks I am concluding the first presentment to my colleagues of a poll of representative Americans in all activities of our national life on the proposal to translate the basic classics of our American democracy into the principal languages of the world and to make them easily available at reasonable prices to people everywhere. I trust these letters have proved as interesting and stimulating to my colleagues in both bodies of the Congress as they have to me. Certainly all will agree that they reflect a wide interest and an enthusiasm for a stepped-up program that eventually will make crystal clear to all the world what is the philosophy of government by which we live, the faiths that gave us national being and from which we derive our moral and spiritual strength, the secret of our well-being.

DEAR MR. O'HARA: I am attracted by the proposal you outline in your letter and trust the enabling legislation can be passed to implement it.

The book list strikes me as a good one. I would raise a question about the inclusion of Rousseau's The Social Contract; it has the germ of totalitarianism in it. Since Dewey is represented a place might be made for Reinhold Niebuhr and I suggest his book The Children of the Light and the Children of Darkness. One of the best books on democracy is A. D. Lindsay's The Modern Democratic State and I commend it to your notice. Ought not something also to be on the list from the Cromwellian period, say the Putney Debates?

With every good wish for the success of the enterprise,

Yours faithfully,

R. J. MCCRACKEN,
Minister, The Riverside Church, New York.

DEAR MR. O'HARA: In response to your letter of last month, may I say that I think the proposal is excellent. The suggested authors and works could not be better.

I think, however, that it would be a good idea to add a book like Abraham Lincoln by Benjamin Thomas, as well as The Epic of America, by Adams, and The Flowering of New England, by Van Wyck Brooks. Indeed, biographical sketches of great Americans like Jefferson, Washington, and Benjamin Franklin would be very important assets to the goal we seek to achieve.

There is no story of democracy which more effectively presents its greatness than the life of great Americans who grew up within

the framework of the American democracy.

Wishing you and your colleagues everything good, and assuring you, sir, that I shall be glad to help in any further way that you may request, I am

Yours faithfully,

HYMAN JUDAH SCHACHTEL,
Rabbi Congreation Beth Israel, Houston, Tex.

DEAR CONGRESSMAN O'HARA: Thank you for your letter and for the enclosure describing the Plan for Publication of Democratic Classics. I appreciate your request for my comments.

My experience in mass communications predisposes me to think in terms of potential markets or audiences. In my opinion such books as are suggested will be read and understood, for the most part, only by people with the equivalent of a college education. I suppose, accordingly, that the market for these books would vary widely from country to country, depending on the literacy, background, and formal education of the people. Although I do not know what languages or countries you have in mind, I would suggest that the number of colleges and universities, and the general intellectual climate of a given country, would be important considerations in estimating the probable circulation, or at least the probable understanding, of the books.

If wide circulation and understanding of the ideas in such books as those suggested is the goal, I wonder whether the initial project should not include some provision for teachers and discussion groups. It is my impression that this is an important part of the Communist success in propagating the ideas and slogans in their classical political literature.

Finally, I wonder whether the propaganda value of our political and philosophical classics will be as effective in winning the cold war as increased emphasis on the practical advantages of current American capitalism would be. I believe that the most powerful weapon in our cold war arsenal is the power of our way of life to raise the standard of living for whole populations. I would hope, therefore, that this project would not decrease the USIA's effort to tell, with increasing effectiveness, the story of our current economic programs of aid to our allies as well as to the uncommitted countries.

Having raised these points, I would like to emphasize my high respect for the authors you list. They are certainly prominent among the intellectual leaders who gave birth to the ideas on which this Nation is founded. It is certain, too, that sound intellectual leadership is important to the success of contemporary mass movements, and that these books would be of great importance in the education of intellectual leaders. But I am disturbed, as I am sure you are, by the threatening speed with which alliances, affiliations, and preferences crystalize in our time. It is my earnest hope that the full impact of our power will be applied where it will have the greatest effect for the extension of freedom and prosperity.

Thank you for this opportunity to comment, and all good wishes.

Sincerely,

FRANK STANTON,
President, Columbia Broadcasting System.

DEAR SIR: Your proposal that the United States Information Agency translate and publish in the principal languages of the world a select few of our basic documents explaining American Governmental theory is an excellent idea. We are all becoming more aware that one of the best ways to fight communism is through education.

I would very much like to add the following suggested authors and works to the list contained in your letter of December 12, 1955:

John Adams: A Defense of the Constitutions of Government of the United States of America.

John C. Calhoun: A Disquisition on Government.

Montesquieu: The Spirit of Laws.

Jefferson's writings: 1. A Summary View of the Rights of British America. 2. Notes on the State of Virginia (portions dealing with Government). 3. The Anas.

Emerson's writings: Man, the Reformer.

Lincoln's papers: First and Second Inaugural Addresses.

Sincerely yours,

J. R. FLUOR,
Executive Vice President, the Fluor Corp., Ltd., Los Angeles.

DEAR MR O'HARA: In reply to your letter, we suggest the possible elimination of Walden and your consideration of the Americanization of Edward Bok, the Education of Henry Adams, the Almanac of Liberty by Supreme Court Justice Douglas, Tom Paine's Age of Reason, Leaves of Grass by Walt Whitman, and Benjamin Franklin's Poor Richard's Almanac, also the latter's autobiography.

Sincerely yours,

SCHWAB AND BEATTY, INC.,
Advertising, New York.

DEAR COMRADE O'HARA: Reply to yours of December 12, 1955, I will be happy to approve of your proposal as submitted to me. If you have approved of the books listed in your enclosure it is O. K. by me.

Being an old veteran of the Spanish-American War, and a former senior vice commander in chief of the Society of the Army of the Philippines, I, therefore, place my trust in you.

Yours in comradeship,

F. WARNER KARLING,
Post Commander in Chief, Society of the Army of the Philippines and Veterans of Foreign Wars.

DEAR CONGRESSMAN O'HARA: I am delighted to support the excellent suggestion that the United States Information Agency publish a basic library of democratic classics for use abroad.

I wonder if there is another possibility that you might want to explore in this connection. It might be desirable to publish a coordinate set of volumes that could be called The Universal Truth Series. It could include such volumes as The Universal Truth Taught by Gandhi and would emphasize excerpts from his writings that condemn communism. Another volume could be The Universal Truth Taught by Confucius and Lao-tse which would emphasize precisely those items that the Communists are most interested in suppressing—this can contribute to our winning support from the overseas Chinese whom Peiping is now wooing as a potential fifth column in other lands. In essence, this concept aims to use the best in each people's tradition which could serve as ideological ammunition against communism.

Your project, in my opinion, is a very valuable one, and I am glad to see that it is being pushed so aggressively by you and your associates. I hope this additional suggestion is of some value.

Sincerely yours,

LEO CHERNE,
Executive Director, the Research Institute of America, New York.

DEAR MR. O'HARA: I believe that Kurt Enoch, president of our publishing enterprise, has already written you in response to your letter of December 12. Your letter addressed to me did not arrive until just before the New Year.

I fully subscribe to Mr. Enoch's comments. It is greatly to be desired that the basic classics which have molded and interpreted the political and ethical philosophies of the United States be more widely known in the native languages of other areas of the world, especially among students, political scientists, and others destined to leadership in the future. Your current list of titles is commendable, although it certainly would be necessary to expand and adapt the list for the special interests of certain countries.

I would not want to see the carefully planned program of the USIA diluted to include this long-term translation project at the expense of its already strained budget. I served one term on the board of Franklin Publications, and came to appreciate the necessity for a somewhat more elementary translation program in some parts of the world, the Moslem countries particularly. I also regard with dismay the deterioration of the English language in such multilingual regions as the subcontinent of India, and Ceylon.

As you will note on the attached statement, American Books Abroad, which we distributed to the participants at the Princeton conference in September, the New American Library of World Literature, Inc., has been instrumental in giving wide circulation to the basic writings of the Middle East and the Orient in the United States, which we are told has done a great deal to enhance the spiritual reputation of our country in Moslem and Buddhist areas particularly. This, of course, in no way modifies the objectives of your proposed special program, but it is relevant. As specialists in inexpensive books we have, also, been participating in the USIA scheme for special inexpensive editions of pertinent books at the equivalent of 10 cents, in English, in India.

We maintain a fairly comprehensive lot of associations with scholars and universities throughout the world, and our Mentor books are used as texts and extracurricular reading from Cairo to Tokyo, and in between, almost as naturally as they are used throughout the United States and Canada. I mention this because we include quite a few of the authors suggested in your list—Tocqueville, Thoreau, Jefferson, Dewey, Emerson, and, in our Mentor Philosophers Series, Locke, Mill, Whitehead, and all of the principal western philosophers.

The rendition into other tongues of many of these writers would be very useful, and we would be happy to offer more detailed suggestions as your plan proceeds. We have great admiration and respect for Harold Fey, the Chicago Daily News group, and the University of Chicago group with whom you have been consulting.

Sincerely yours,

VICTOR WEYBRIGHT,
Chairman and Editor, the New American Library of World Literature.

GREETINGS: This acknowledges your letter of December 12 with respect to the United States Information Agency publishing a small library of basic statements of democratic political philosophy.

To the excellent list that you supplied with your letter I would suggest that you add the following:

1. John Adams: A Defence of the Constitutions of Government of the United States of America.

2. John C. Calhoun: A Disquisition on Government.

3. Montesquieu: The Spirit of Laws.

Of Jefferson's writings, the following seem to me to be the most essential:

1. A Summary View of the Rights of British America.

2. Notes on the State of Virginia (portions dealing with Government).

3. The Anas.

Of all of Emerson's writings, in my opinion, the most important work for such a purpose as you have in mind is Man, the Reformer.

Of all of Lincoln's papers, it seems to me that the most important for this purpose are the first and second inaugural addresses.

Respectfully,

M. B. PENDLETON,
President, Plomb Tool Co., Los Angeles.

DEAR CONGRESSMAN O'HARA: The overall plan outlined in your letter of December 12 would unquestionably lead to a better understanding of the fundamentals of democratic political philosophy, if adequate distribution of these books could be obtained at a reasonable cost.

This, I presume, would be a part of an overall program of indoctrination to the peoples of the world, and is certainly on the constructive side.

I do not feel competent to judge the list of books enclosed with your letter, but would rather leave this to someone better qualified.

Sincerely yours,

FELIX W. COSTE,
Vice President, the Coca-Cola Co.

DEAR MR. O'HARA: The idea of making available statements as to the philosophy of democracy is undoubtedly a good one. The list suggested is good, but much of it, as for instance Emerson, is rather difficult reading. What is needed are statements understandable by the very common man. More of Rousseau and perhaps something from Thomas Paine might well be added.

It is undoubtedly difficult to please everyone in a modern statement, but something of how democracy works in America today would seem to me to be most significant. At least some statement about the protections and safeguards of individual rights through our courts should be possible. And this should have the greatest appeal.

Sincerely yours,

ESTHER L. CLARK,
Mrs. LeMon Clark,
President, League of Women Voters of Arkansas.

DEAR MR. O'HARA: I have your letter of December 12 concerning the proposal that certain books on American democracy be translated for use by the United States Information Agency.

The purpose of this proposal seems to be commendable. However, I recognize that caution should be exercised in the selection of books. So often a statement which might have one meaning to us, with our background of democracy, might be interpreted very differently by one who does not have a similar background.

I am sorry that I am not conversant with all the books on your list, and therefore do not feel that I am in position to offer comments as to their worth.

Sincerely,

T. M. MARTIN,
President, Lion Oil Co., El Dorado, Ark., and Director, NAM.

DEAR SIR: Thank you for your letter of December 12, and please excuse my tardy reply.

Your purpose and objective in publishing time-tested classical statements of democratic theory in principal foreign languages is indeed an admirable one. I am wholeheartedly in favor of such a proposal.

However, the mere translation and publication of these documents offers no assurance these papers will be read. Is it not necessary to include in your proposal some method of inducing these people to actually read the manuscripts?

Some method whereby people as well as books could be sent to these countries to discuss, lecture and debate, if necessary, some of the democratic principles outlined in these very same books.

I am quite aware that publishing these documents is the first step but I would feel more enthusiastic if I knew subsequent steps were taken to keep the interest of these people always alive.

Very truly yours,

SIDNEY DRY,
President National Steel Container Corp., Director, NAM.

DEAR MR. O'HARA: In reply to your letter of December 12, 1955, regarding your plan to push legislation directed toward the publication of a small library of basic statements of democratic political philosophy, I have some thoughts on the subject.

First of all, I think it is a most worthwhile endeavor and one which should give ample repayment for the small expenditures involved.

In regard to the suggested authors and works, the selection of those books which I have read is very good. There are, of course, some that I have not read. I can still remember the strong impressions I received from Bryce, Emerson, Locke, Mill, and Rousseau during the study of political theory in college.

I think, however, that some more modern books should be included in this list, particularly some that can explain the present American democracy, and thus relate it to the theories of the earlier writers.

An excellent book on the United States Constitution and interpretation of it by Professor Corwin might well be added to this list. Unfortunately, I am unable to find my copy of the book so as to give you the complete title, but Professor Corwin, retired professor of political philosophy at Princeton University, is well enough known so that I'm certain his book can be found.

I would also like to recommend for consideration Faith and Freedom, by Senator WALLACE F. BENNETT. This book was published in 1950 by Charles Scribners Sons, New York. It seems to me also that something sound on the American free-enterprise system properly should and could be included. I call to your attention the very excellent book by Mr. Clarence B. Randall, entitled "A Creed for Free Enterprise," which was published in August 1952 by the Constitution and Free Enterprise Foundation, 210 East 43d Street, New York 17, N. Y.

I'm sure there are other good books on the subject which could be included.

I strongly urge that some basic discussion of the free-enterprise system be included.

I do hope you will have success with your proposal, since the objectives you have cannot be solved by the "mail a Sears-Roebuck catalog" school of thought.

Sincerely,

F. G. SHERMAN,
President, Elgin National Watch Co., and Director, NAM.

The Largest Corporation in the World

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Monday, January 23, 1956

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I made before the Baltimore Life Underwriters' Association, Inc., and the Maryland State Association of Life Underwriters, at their annual convention held in Baltimore on October 14, 1955.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE LARGEST CORPORATION IN THE WORLD

(Address by JOHN J. WILLIAMS, United States Senator, of Delaware, before the Baltimore Life Underwriters' Association, Inc., and the Maryland State Association of Life Underwriters, October 14, 1955)

The Government of the United States represents the largest business corporation in the world.

The President and members of his cabinet are comparable to the president and executive management of a major corporation. The Members of Congress represent the board of directors, while the 165,000,000 Americans are the stockholders. Whenever the Government's revenues exceed its expenditures, the directors can declare a dividend—or tax reduction.

Next year as we approach the question of a tax reduction—or dividend—it is important that we first examine the financial background of this organization.

We find that in 22 of the past 25 years our Government has operated with an unbalanced budget—or red ink. Furthermore, when we subtract the surpluses in the 3 years in which we did have a balanced budget from the accumulated deficits of the other 22 years, we have a net total deficit for this period of $250 billion.

This means that during the past 25 years our Government has averaged spending in excess of its income $10 billion per year, $800 million per month, $26 million per day, or slightly over $1 million per hour for every hour during the past quarter of a century.

This $250 billion accumulated 25-year deficit has been added to the national debt or charged against the future generations, and today we are still operating with an unbalanced budget.

It is with this background that the Congress next year will approach the question of: Should we again reduce taxes?

In view of the financial record and huge debt of our Government, should our 165 million Americans — stockholders — expect their President and executive committee—the Cabinet—to recommend to the directors—Members of Congress—the payment of any dividend by a tax reduction until the balancing of the Federal budget is assured, even then should not some provision be made for paying at least a portion of the Federal debt?

There are only three methods by which a tax reduction of any description could be financed at this time.

First, would be to reduce Government expenditures to the point where there would be a surplus sufficient to finance the proposed tax cuts.

Second, would be to keep on spending, but cut taxes in the low-income groups, and transfer the load to the so-called high-income groups.

The third alternative, assuming Government spending continues, would be to borrow the money, further increase our national debt and charge the cost against the future generations.

First, I make it clear that in my opinion Government expenditures can and should be cut if the Congress and the American people only have the will to do it and it is this proposal that I shall now discuss.

On this question I am confident that the overwhelming majority of the American people would enthusiastically endorse the suggestion that Government expenditures be reduced sufficiently to balance the budget and to cut taxes. If we were to conduct a poll of the American citizens asking the question as to whether or not we should eliminate or reduce Government subsidies, I think that the overwhelming response would be in the affirmative. Yet I wonder if we are not overlooking the fact that during the recent years this principle of Government subsidies has expanded until it has

become an accepted if not a fixed part of our economic system.

The question is often raised as to whether or not, in a showdown, the American people would back up their Representatives in Congress for an abolishment of this principle. Sure, everybody would agree that all Government subsidy or support programs should be reduced or repealed—all, that is, except those which directly affect them.

The most of the criticism against Government subsidies is leveled against the Government farm-support program. The reason for this is that the Government's support of agricultural products directly affects not only the American farmer but also the budget of the millions of American housewives.

This, however, is only one of the many forms of subsidies now being financed by the Federal Government and in many instances those who are most vocal in their criticism of the farm-support program are themselves recipients of some form of Government subsidies.

For instance, the owners and officials of the airlines in this country would no doubt agree that the principle of Government subsidies is vicious; yet they are perfectly willing to accept subsidies from the Government amounting to many millions of dollars annually—subsidies which in effect guarantee their operations against loss.

Our American railroads were built and developed years ago under the principle of Government subsidies. Large grants of land were given to the promoters in the early stages of development. Today these same railroad lines are still accepting their subsidies for carrying the mail.

Our American newspaper system has been rather critical of the principle of Government subsidies in general, particularly the subsidy as related to the farm-support program. Yet I recall few instances where the members of the press have objected to their subsidies in the form of low postage rates, nor have they objected to the special earmarking of over $100 million of the ECA funds to be used to subsidize the distribution of American newspapers and magazines in continental Europe.

If we were to conduct a poll of the leading corporations in this country—a group which surely believes in the principle of free enterprise—I venture to say that almost without exception they would express opposition to the principle of Government support prices. Still we find that a large number of this same group have enthusiastically endorsed a plan to let the American taxpayers guarantee the investments of the American industries in foreign countries.

Likewise, we find that our merchant marine, another division of our free-enterprise system, is perfectly willing to have the Government continue underwriting a large percentage of the cost of the construction of its ships, nor do they object to the Government's annual contribution of several million dollars to subsidize the operations of these same vessels.

We hear a lot of discussion among prominent men, many of whom are identified with our State and local governments, expressing grave concern over the encroachment of the Federal Government upon the rights of the individual States; yet in many instances we find that these same officials are clamoring for more and more Federal aid for the construction of our State highways, our public schools and our hospitals, and for Federal aid in many other fields which were formerly recognized as inherent State functions.

Our western mining industry has been successful during the past years in having legislation passed whereby the Government will support the price of the products—oftimes at rates far in excess of the prevailing market prices. This subsidy, amounting to several million dollars annually, is also at the expense of the taxpayers.

Even our children, from the day they enter the public schools, become recipients of Government subsidies by virtue of the fact that our Federal Government makes annual contributions of several millions to the school-lunch programs.

One of the most conservative groups in this country is the American bankers; yet they had no objection to the policy of the Government guaranteeing a support at par under all Government bonds, thereby protecting their huge investments.

These are not all, but I cite them as examples to emphasize the extent to which this principle of Government subsidy has become a fixed part of our economic system. Again at the next session of Congress, instead of reducing these subsidies, the majority of the proposals which will be before the 84th Congress will be to increase them further.

My opinion is that the time is long overdue when we should start a systematic reduction of all subsidies, but until such time as Congress and the American people demonstrate their intention to do this we must recognize the fact that Government expenditures will not be reduced, nor will the budget be balanced whereby we can have a sufficient surplus to make a reasonable payment on the national debt with enough left over to finance a tax reduction.

Now, let us discuss the second proposal—that we can keep on spending, still cut taxes in the low-income group, but make up the loss in revenue by increasing the revenue rates in the upper brackets.

To explode this suggestion I point out the following statistics:

1. To raise the personal exemptions by $100 (or from $600 to $700) would result in a loss in revenue of $2,500,000,000. To make up this loss by increasing the rates in the upper brackets would necessitate a 100 percent tax rate (or complete confiscation) of every personal income in excess of $20,000.

2. To increase personal exemptions by $200 (or from $600 to $800) as was proposed at the last session of Congress, would result in a loss in revenue of $4,500,000,000 and to offset this loss it would necessitate a 100 percent tax rate (or complete confiscation) of every income in excess of $10,000.

Certainly no one in America would suggest such drastic action.

That brings us to the third alternative and one which can only be justified in the name of political expediency; and that is, to keep on spending, cut taxes, and borrow the money to make up the difference, thereby increasing our tremendous national debt and passing the responsibility of this debt on to the future generations.

This is the most politically popular proposal and the most dangerous. If we as a government cannot live within our income today during a period when we are enjoying the highest level of prosperity in the history of our country then when can we ever expect a balanced budget! And to accept the theory of permanent deficits is an open invitation to uncontrolled inflation.

Inflation resulting from the past deficits has already cut the value of the American dollar by one-half. That means that one-half the value of every savings account, every Government bond, pension account, and life insurance policy has been eaten away by the past inflationary financing policies of the Federal Government.

To illustrate this we have only to point out that 10 years ago the Federal Government sold a bond upon the basis that if we put up $3, in 10 years we would receive $4 However, the $4 which is being received today in payment of the $3 investment will not buy any more than 2 of the originally invested dollars. Actually one-third of that which they originally invested has been taken away through inflation.

A continuation of this unsound policy of planned deficit financing will only further depreciate the value of the America dollar and thereby further destroy the life savings of millions of Americans.

The most unfortunate result of this inflationary spending and deficit financing policies of the past 25 years has been the pauperizing of many of our aged and retired people. Many individuals who retired a few years ago on pensions, life insurance, or savings accounts, which they then considered to be adequate, have as a result of the depreciated dollar—or increased cost of living—found themselves in the embarrassing position where their incomes will not provide the actual necessities of life, and they are now being forced to appeal to the public for charity.

As a Member of the United States Senate and as a member of the Senate Finance Committee, I am opposed to a further continuation of these unsound and inflationary deficit spending policies. I am opposed to any form of tax reduction under such circumstances. Government expenditures can and should be reduced, but until such time as the reductions have actually been authorized by the Congress and until such time as the budget is actually balanced and a reasonable payment made on our national debt, no form of tax reduction should even be considered.

My time today has permitted me to call attention to only a few of the contributing factors, domestic subsidies, which are responsible for the overwhelming debt that today threatens the solvency of our largest business organization in the world—the Government of the United States.

Other factors are foreign subsidies, unnecessary and extravagant expenditures, corruption, and inefficiency which for too long a time has prevailed in the management of this greatest corporation. A continuation of these practices will speedily bankrupt our Government and destroy our republic.

If we wish to preserve our American form of Government we must now begin to set our house in order and make America strong financially, physically, mentally, and morally, never forgetting the wise advice expressed by Thomas Jefferson:

"I place economy among the first and most important virtues and public debt as the greatest of dangers to pursue our independence. * * * The same prudence which in private life would forbid our paying our money for unexplained projects, forbids it in the disposition of public money."

Bernard DeVoto

EXTENSION OF REMARKS

OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1956

Mr. METCALF. Mr. Speaker, a westerner who knew and loved the West with an intensity and devotion exceeded by none has left in his death a void that never will be filled. This westerner was Bernard DeVoto. His death was a loss to all America. It was particularly a loss to my State of Montana. Bernard DeVoto knew and loved my native Bitterroot Valley and all the mountains and valleys of western Montana and Idaho.

His great book, the Course of Empire, tells of the exploits of Meriwether Lewis

and William Clark, those intrepid explorers whose westward march took them through Montana.

In the State capitol at Helena a painting by the great western artist, Charles Russell, depicts Lewis and Clark's arrival in the region 151 years ago. It is a source of pride for all Montanans.

Up the Missouri to Three Forks, across the Continental Divide to the Lemhi, up the great Bitterroot Valley, where their Shoshone guide, Sacajawea, met members of her tribe, and then across the rugged Lolo trail and on to the Pacific—this was the western course set by the explorers.

Bernard DeVoto knew that trail. He had traveled it; he had written about it—in his intense way he had relived Lewis and Clark's journey and taken thousands of readers with him. He wrote:

Whenever I go back to the Bitterroots I realize afresh that they are my country—Traveler's Rest to Lolo Pass, to Crooked Fork, to the Lochsa, and on down the works of the Clearwater. To everyone his own desire in mountains, mountain meadows, and mountain streams, but for me the best of the West is the Lochsa country. If working journalists are rewarded on the far shore, I will sometime get a long summer within a few miles of the Powell ranger station.

This region of great beauty is my region, too; my home. In words far better than those which I might summon, Bernard DeVoto described my feelings about this part of the West. His loss is a personal one for me, a personal one for many Montanans.

On January 9 I placed into the RECORD a number of editorials in praise of Bernard DeVoto and another great American author whose death was a blow to our Nation, Robert E. Sherwood. Since then my attention has been called to an article from Mr. DeVoto's home State and hometown, Ogden, Utah. In addition to this article from the Utah Historical Quarterly, I also wish to add other articles and radio scripts in praise of Bernard DeVoto:

BERNARD A. DEVOTO—RECOLLECTION AND APPRECIATION

(By Darrel J. Greenwell [1])

Because our daughter, Barbara, lives with her husband and two young sons on a beautiful ranch on the Lemhi River, 30 miles from Salmon, Idaho, my wife and I, on each annual visit to the ranch, are steeped anew in Lewis and Clark history. The reason is plain to every person who has visited the region.

Not far from the ranch is a monument marking the place where Lewis and Clark encountered the Lemhi and rejoiced over meeting, at last, waters flowing toward the Pacific Ocean. Also not far from the ranch is another monument proclaiming that Idaho's national heroine, Sacajawea, who helped guide the explorers, was born in the locality.

On leaving the Lemhi by way of the Missoula highway, one follows the route the explorers took toward the Lolo Trail. In traveling toward Butte and Helena on the one hand, and toward Bozeman on the other, one is reminded, by the well written bulletins along the highways, of Lewis and Clark associations in the magnificent headwater Missouri River country.

Even persons of little imagination are bound to be stimulated by reading the descriptions of exploration episodes, and it is not surprising if the mind's eye envisions the expedition laboriously making its way westward by river valley and mountain pass. What does surprise me, however, is that in my own vision I not only see Lewis and Clark but also none other than Bernard A. DeVoto, notebook in hand, tramping along with the others. My explanation for experiencing such an amazing vision is that DeVoto's writings and conversations about Lewis and Clark impressed me so much with their realism, attention to detail and intimacy, that I have been charmed into believing the narrator traveled with the party to provide me with a first-hand account, told with the rare are of the born story-teller.

I am indebted to Bernard DeVoto because he made frontier and pioneer figures appear to me as the very real down-to-earth men they had to be, and undoubtedly were. Accordingly, their contributions seem the greater to me because they were the accomplishments of men and not of mere fabled figures.

My enthusiasm for DeVoto's literary works was slow in its development; yet, thanks to my acquantance with him, I read him consistently from the beginning of his career.

Bernard became one of the best known pupils in Ogden High School immediately after he entered as a freshman in 1910, because he was a brash youngster who frequently debated with his teachers. He had a lot to say, and said it at some length. He had read far more books than any of his teachers or his companions. He could talk about what he read and he loved to do it.

In the year DeVoto was a freshman I was a senior and editor of the school paper. Bernard talked to me occasionally about articles for the paper, but I recall receiving only one piece which was published. After I left school, I encountered him occasionally in a book store where he worked as a part-time clerk. I recall pleasant conversations with him in the summer of 1914 in the press box at the Union League Baseball Park in Ogden when I was writing baseball, among other things, for the Salt Lake Herald-Republican, and he was a temporary reporter for the Ogden Standard. Our paths crossed again in Ogden in 1920 when he seemed to be in some doubt as to what he intended to do as a career. Our contacts were interrupted for years, and then in the depression years I talked with him on two occasions in Washington, D. C. I was in the capital on business connected with the Work Projects Administration in which I was the Utah administrator, and he was a consultant giving aid and comfort to the Writers' Project. In recent years, I enjoyed two splendid visits with him in Ogden when his writing assignments brought him back to the old hometown.

In view of school day and later associations, it was natural that I should read with some eagerness the first DeVoto novel, The Crooked Mile, which came out in 1924, but I was disappointed. The plot, I thought, lacked interest, and the characters didn't talk or act like real people. His later fiction, including his Saturday Evening Post stories, didn't satisfy me. I thought the output made difficult reading. I had about lost interest in DeVoto as a literary figure, but my attitude changed immediately upon reading his Mark Twain's America. Here, I felt, was a fresh approach to some aspects of American history and the development of our country.

My admiration for DeVoto, the historian, grew with my reading of Year of Decision which filled in so many low spots of my education about my own country and region that I shall always be grateful. Needless to say, Across the Wide Missouri and Course of Empire increased my appreciation as they improved my education.

The vast amount of work DeVoto did to provide so much fascinating information in those three classic volumes reflects his devotion to his art and testifies to his industry, thanks to which many of us who are far from being scholars benefit.

Many persons believe that DeVoto was most influential in his 20 years of writing for the Easy Chair department of Harper's, and I agree. As an editorial writer, I pay my respects to his readability and influence.

One aspect of the DeVoto career must not be neglected if this essay is to be realistic. Bernard possessed an ability to make enemies and to cause hurts. It was unfortunate, for the sake of the home town pride the communities like to have in the native sons and daughters who achieve fame in the great world, that some of those whose feelings he hurt were Utahans—offended because of his suggestions that their painting, music, literature, and general culture were not as magnificient as most believed them to be. More recently he was assailed by Utahans for taking sides with those opposed to the construction of the Echo Park Dam in Dinosaur National Monument.

I am among those who say that some of DeVoto's early comments about his home State were needlessly made to sting and to offend. And I personally took issue with him on his Echo Park Dam position. Yet we can't praise DeVoto for his courageous article promoting conservation of natural resources, and then criticize him when the identical enthusiasm for conservation, which inspired the articles we like, led him to resist any desecration (as he thought) of a national monument.

As we measure and assay the entire DeVoto, we discover that the elements of greatness and goodness far outweigh the faults which some of our fellow Utahans continue to see in his life and works. These should be forgotten or forgiven as we contemplate his influence on American life and thought, recall his pride in his country and in its people, and wonder at his admiration of our region, the history of which he has enriched with his writings.

[From the National Parks Magazine of January–March 1956]

IN MEMORY OF BERNARD AUGUSTINE DEVOTO

On November 13, America lost a uniquely eloquent scholar, historian, and conservationist, when Bernard DeVoto died at the age of 58. He was author of many outstanding books on the history of America, especially of the Civil War and the West. He won the Pulitzer Prize for History in 1948, for his brilliant Across the Wide Missouri. As a journalist and editor of The Easy Chair in Harper's, he expressed forcefully and effectively his trenchant Americanism.

Few men knew the patterns of the culture of the West as did Mr. DeVoto; he insisted that the West, and the Nation, could survive only if our western resources were guarded from exploitation and saved and used wisely as national necessities. When rapacious livestockmen sought to wrest unregulated control and ownership of all Federal rangelands, DeVoto warned of the national catastrophe that would follow if they succeeded, and his article The West Against Itself aroused the Nation to defeat this notorious landgrab.

He knew and loved the national parks. Believing they are essential to the welfare of the people he brought his tremendous knowledge and perception to their service as a member of the National Parks Advisory Board and of the board of trustees of the National Parks Association, to which he belonged. When the national park system was endangered by proposals that would undermine its security, his pen was ready in its defense. His article, Shall We Let Them Ruin Our National Parks?, published in the July 22, 1950, issue of the Saturday Evening

[1] Mr. Greenwell is associate editor of the Ogden Standard-Examiner. He was a lifelong friend and fellow townsman of Bernard DeVoto.

Post, was one of the first to appear during the 6-year struggle in defense of Dinosaur National Monument.

A native of Utah, De Voto received his first degree from Harvard University, and subsequent degrees from the University of Colorado, Northeastern University, Middlebury College, and Kenyon College. He taught and lectured at Harvard and Northeastern, where his alert intelligence and ready wit endeared him to his students. In addition to the Pulitzer Prize, he was awarded the Bancroft Award in 1948, and the National Book Award in 1953. He belonged to many conservation organizations, through which he spread his influence.

ROBERT E. SHERWOOD AND BERNARD DEVOTO

(By Eric Sevareid from a broadcast over CBS Radio)

Robert E. Sherwood is dead at 59 of a heart attack. Bernard DeVoto is dead at 58 of a heart attack. The horizon looks emptier to all American writers, and especially to those whose writings grow out of their times and are designed to influence their times in the large undertakings of first principles, human brotherhood, and the freedom of the eternal individual.

They were of the true professionals, these two writers. They were writers by instinct, by severe discipline, by habit, conviction, and the love of it; seat-of-the-pants and sweat-of-the-brow writers who knew writing for what it is—the hardest work in the world—and who worked and produced prodigiously. Any one of their successes would have satisfied lesser writers, but they had the habit of success because habitually they had something to say.

Sherwood and DeVoto were intensely American writers. They were in love with their country, its long story, and its long meaning. Rather they were in love with the best America, its natural and its fashioned beauties, the grandeur of its vistas and its ideas, with its generosity, its power, and its kindliness. With the worst America—its commercial rapacity and ugliness, its tolerance of bunkum and claptrap, its dreary uniformities, its petty tyrants and its preposterous little publicity saints—with these they were at war. No writer can fight that war and not make enemies.

Both Sherwood and DeVoto must have rejoiced at times in the enemies they made. For these were both tough men in the best sense of that adulterated word. They were perfectly willing to choose their side and take what consequences there might be. They started that way. Each was a combat soldier in the First World War—Sherwood was badly wounded—and they ended that way.

DeVoto, indeed, might be described as downright pugnacious. He not only tolerated conflict, he seemed to enjoy it, to invite it. Certainly he was pugnacious on at least one matter: conservation of the natural beauties, the open spaces, and the wildlife of the American West from which he had sprung. Lose all this, he felt, mar it, cramp it, commercialize it, and America will lose something precious never to be found again. Americans themselves would never be quite the same again. Nor did DeVoto confine this special passion to God's gift across his wide Missouri. The last public fight this passion brewed concerned the rockribbed coast of Maine. He called it a "jerry-built, neon-lighted, overpopulated slum," and in Down East officialdom there was much flying of the official fur.

The only outspoken men who applaud the recent and current attempts to restrict the speaking out of other men of other persuasions are those who haven't read the books. Sherwood and DeVoto had read the books and knew the eternal lesson therein, that he who tolerates suppression of others long enough will probably be suppressed himself. They knew that suppression comes of fear; and fear was as alien to them as a lifetime habit of facing the truth could make it.

There was spaciousness in their minds. So DeVoto responded to the sweep and spaciousness he saw in the West; so Sherwood responded to the sweep and spaciousness he saw in men like Roosevelt and Churchill. Well, Sherwood and DeVoto are dead—too early—and the American space seems a little more cramped because of this.

THE VITALITY OF DEVOTO

(From the news broadcast of WGBH-TV-FM by Louis Lyons, November 14, 1955)

Bernard DeVoto was our friend and neighbor. He went to New York Sunday, as he had to do very often, and appeared on the CBS television program, "Adventure," seen everywhere except in Boston. This was at 3:30. He suffered a heart attack soon after and died at 8:30 last night. The New York Times and Herald Tribune went to press too early to chronicle his death today. So I give these details for their readers. He was only 58.

Only last week I talked of Bernard DeVoto on the publishing date of his last book, The Easy Chair. As it turned out, this was his valedictory to his host of readers—selections from his work over 20 years as the Easy Chair editor of Harper's.

I need not now repeat my recent appreciation of the many-sided genius of DeVoto as historian, writer, crusader, and especially of his superb qualities as a journalist. For a last word, I would speak of the vitality of DeVoto. He fought for his causes. He put all of himself into his work, and worked and reworked it. Whatever he produced was always his best. This was a high compliment to his readers. Benny DeVoto never believed the cliche that readers were operating on a 12-year-old level. And his readers were not. He had the great quality of getting excited about the issues and events he explored and wrote about. And he put his excitement into them so that his product was exciting. You had to share his conviction that this was important and worth getting excited about.

To very many people the world of events and the periodical discussion of it will for a long time be less exciting because it will not be seen through the penetrating eyes and blunt pen of Bernard DeVoto. He was always himself, a thorny, salty personality, always a fighter, a very human man, a warm friend. He leaves a big jagged hole in our times that will not be readily filled.

A postscript, suggested by a listener who called me this evening, on one of Mr. DeVoto's earnest long-time projects. Born in Utah, his heart was with the causes of the West—across the wide Missouri. He fought as a conservationist against putting a dam in Echo Park in the Dinosaur National Monument on the Colorado-Utah line. It would have destroyed some of the finest canyon scenery in the public domain. But it had the support of the administration and of the politicians of the region as part of the Upper Colorado development.

Only Sunday, yesterday, in the New York Times, John B. Oakes reports that the governors and Congressmen of the Mountain States met last week and decided to drop Echo Park Dam as politically unfeasible.

This was the last fight DeVoto won, and in this very definite, tangible, conclusive form. This heartening news may easily have been the last thing he read yesterday.

A man could live a long time and achieve less satisfaction.

This station has just disclosed to me a surprise they had planned for November 25, when Mr. DeVoto was to appear with me on Backgrounds. Harper's editors had arranged with WGBH to have me present him with a bound and inscribed copy of the current (November) Harper's, which observed the 20th aniversary of his occupancy of the Easy Chair.

The inscription:

"To Bernard DeVoto, seasoned practitioner of the journalistic craft, widely ranging in competence and punctual in deadlines, as resolute in his approvals as in his dislikes, partisan of sound sense and adversary of cant, friend of the public lands and enemy of the lukewarm martini, who in the 20 years he has occupied the Easy Chair has never learned to write a dull sentence.—The Editors of Harper's."

[From the Washington Post and Times Herald of November 15, 1955]

BERNARD DEVOTO

Bernard DeVoto never allowed his reputation as a scholar to inhibit his vigor as a journalist. There were few who knew more than he about the great westward movement of settlers and civilization across the North American continent, and none wrote about it with more color and excitement. But he will be remembered equally, we surmise, for his contentious contributions to magazines and especially for his conduct of the department in Harper's known as the Easy Chair. No. 241 of the Easy Chair appearing in the November Harper's is at once a self-appraisal and an obituary.

It was as a journalist that DeVoto preferred to think of himself. Most of what he wrote was strongly opinionated. But if he was sometimes arrogant, he was never pretentious; and his convictions were bolstered by research and understanding. He was a crusader for preservation of the public lands, for reclamation and conservation. A great range of subjects evoked his indignant comment, however—the importunities of advertising, the amenities of martini-making, the pretensions of politicians, the callowness of some aspects of American culture.

"Some battles cannot be fought after the fact," he said, "and in journalism a writer runs into some he does not care to be above." Some years ago, DeVoto had the temerity to write an Easy Chair article sharply critical of the Federal Bureau of Investigation. This blasphemy produced a good deal of denunciation. But even among those who disagreed with what he said, there must have been many who respected his doughtiness. He was never above the battle.

[From the Portland Oregonian of November 15, 1955]

UNEASY CHAIR

"The Easy Chair" corner in Harper's magazine will probably never again have so uneasy an occupant as Bernard DeVoto, who died suddenly Sunday. Mr. DeVoto was a writer's writer, a professional to the core. He spent long and regular hours at his desk and in research, and few contemporary American authors could match his work in quality, quantity or range.

Fortunately, however, he was not "professional" in a sense implying personal indifference. He was well and affectionately known in Portland and elsewhere as the "terrible tempered" Mr. DeVoto. His well-executed phrases were hurled angrily and with stinging impact against a variety of targets. He ridiculed literary sophists, badgered careless historians, railed at wayside chefs who over-lard fried potatoes and hammered rentlessly at anything he took to be spoliation of the wilderness areas of his native West. And all the while he went about building up a shelf of historical works of such solid scholarship that there was little room for retaliation by other critics.

Mr. DeVoto's editorial voice was piercing, but it was not blatant. It will be sorely missed. It is depressing to reflect that his latest book, a collection of pieces from "The

Easy Chair" just come from the publisher, has become a memorial volume at a time when its author's service was ascendant.

[From the Salt Lake Tribune of November 15, 1955]

WEST'S LITERARY ROCKET

He disliked being called controversial. But even his last words were controversial. On a television program Sunday featuring Mesa Verde National Park in Colorado, he spoke pessimistically about the future of the West which, he said, was chronically plagued by "violence." A short time later, Bernard DeVoto, one of the West's all-time greats in literature, history and criticism, was seized by a fatal heart attack.

A native of Ogden, he taught for a time in Ogden Junior High School and later at Northwestern and Harvard. It was in the fields of literature and history that he won international eminence. The author of some 20 books under his own name and considerable fiction (for grocery money) under the name of John August, he was possessor of Pulitzer and Bancroft prizes and numerous other awards.

He did not specialize in history while a student at the University of Utah and Harvard, but he made academic historians sit up and take notice with his monumental story of the American frontier, told in The Course of Empire, Across the Wide Missouri and The Year of Decision, the trilogy being written in reverse order. Mark Twain was another of his preoccupations and he served with distinction as "literary executor of the Mark Twain estate." As editor of "The Easy Chair" department in Harper's magazine, he kept the professionals in a score of fields near boiling point.

Bernard DeVoto had little academic education in botany and forestry, but he became one of the country's most vigorous and influential conservation advocates. He reported quite accurately recently that no other publication had covered the subject any where near as adequately as had Harper's with him as author. Outspoken and sometimes intemperate in his writing and lecturing, he nevertheless succeeded in stimulating conservationist-minded people throughout the country into acting to protect the public land. His "West Against Itself" theme infuriated some Westerners but it also caused many to take a second look at policies involving the region and he made complacency about parks and forests impossible.

He pulled no punches, and none were pulled when he was the target. He was described variously as "Chief Thunder on the Mountain," "a literary volcano," a "castigator of follies" and a "man who makes his points with both fists and both feet." Charles Poore, of the New York Times, wrote once that "Mr. DeVoto's normal prose style often sounds rather like that of a man who is making a speech before a crowd of ill-informed hecklers. This gives it a perspiring sort of vitality."

Harper's editors revealed the man behind the blustering exterior this month, however, when they said, "Mr. DeVoto is a sentimentalist, with a cornary melting point 14 degrees lower than maple sugar. He is incapable of saying no to anybody who sounds either needy or put-upon; so he collects underdogs the way a blue serge suit collects lint. As a consequence he spends a large chunk of his time helping people to find a job, a publisher, a sound whisky, an elusive fact, a comfortable motel, a sense of prose style, justice, or a reliable psychiatrist—all the while emitting roars of exasperation."

Prophetically, Mr. DeVoto's 20th anniversary Easy Chair column was a kind of swan song, a summing up. In it was an epitaph worthy of the great and courageous writer that he was: "I hope that what I have said has been said gracefully and that sometimes it has been amusing, or informative, or useful. No one has got me to say anything I did not want to say and no one has prevented me from saying anything I wanted to."

[From the Eugene (Oreg.) Register-Guard of November 15, 1955]

TWO DISTINGUISHED MEN OF LETTERS

Two of America's most distinguished literary figures died this weekend. Robert E. Sherwood, playwright and biographer, and Bernard DeVoto, essayist, critic, conservationist, historian, editor, teacher, and wonderful guy, died within a few hours of each other. Each gave something distinctive to American life and letters.

Mr. Sherwood, a playwright of renown, turned to biography to do his monumental study of Roosevelt and Hopkins, thus earning a Pulitzer Prize, 1 of 4 he claimed. His plays Abe Lincoln in Illinois, There Shall Be No Night, and Idiot's Delight are outstanding examples of modern American drama.

In the death of Benny DeVoto, we feel a personal loss. A number of delightful hours spent in his company and a correspondence reaching over nearly 4 years established him in our hearts as one of those people who can never be replaced. In thinking about him we have wondered how he will be remembered. Will he be thought of as the historian who did such a superb job on the Lewis and Clark Journals? Will he be remembered as the critic who turned out the literary criticism on the Book of Mormons? Or will it be his vast knowledge of Mark Twain that keeps his name alive? Conservation was his passion. Will that be his niche in history?

All these things will count. But more important, he was a masterful prose stylist and a great human being. He believed in human dignity and wrote of it in powerful terms. Was somebody, anybody, getting pushed round? Benny would charge to his defense with the instincts, as an associate observed last month, of a mother bear protecting her cubs. Is there in the land an unskilled chemist who tips the vermouth bottle too heavily when mixing a martini? Benny had sharp words for him, growling that the proper proportions were 3.7 to 1. This growl was just Benny's way. Actually he was a friendly cuss who could not say "no" to a sad story. As John Fischer, the editor of Harper's, observed, the growl was a protective device like the quills on the well-meaning porcupine or the armor plate on the defenseless armadillo.

The versatility of the man was amazing. It was best illustrated in "The Easy Chair," the column he had conducted for Harper's for 20 years. All culture was his province—the FBI, the martini, the powerdam, the politician, the cheap motel, the unzoned strip of highway, the juke box, the undisturbed spot in the woods, the western movie. Nothing was out of place in The Easy Chair.

Oddly enough in the current Harper's, he all but wrote his own obituary. Celebrating his 20th year as the conductor of the oldest column in American journalism, he wrote at length of his beliefs and faiths and dislikes. A book of two dozen "Easy Chair" essays is newly published.

Born in Utah, he continued to travel often "across the wide Missouri." Although he lived a stone's throw from Harvard Square in Cambridge, Mass., he thought of himself as a Westerner. His western friends thought of him that way, too.

Few living writers can equal him as a prose stylist. His stuff was simple and powerful and appealing. It was so easy to read—and so hard for him to write. He fought an uphill battle as he worked on returning the essay to its place in American letters. Only if Americans are very lucky, will his kind be seen again in our time.

Dulles and the "Verge of War"

EXTENSION OF REMARKS

OF

HON. EUGENE J. McCARTHY

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1956

Mr. McCARTHY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Joseph C. Harsch:

STATE OF THE NATIONS

(By Joseph C. Harsch)

DULLES AND THE "VERGE OF WAR"

WASHINGTON.—For those puzzled by the controversy over Secretary of State John Foster Dulles' "verge of war" doctrine certain quotations from the past are relevant.

On January 15, 1953, the Foreign Relations Committee of the United States Senate held a hearing on the prospective nomination of Mr. Dulles to the Secretaryship of State.

During that hearing Mr. Dulles was asked to reconcile passages from his campaign and from the Republican platform's foreign-policy plank (largely written by Mr. Dulles) which seemed to be in some conflict with other things he had said on other less political occasions.

The following passages occur in the Dulles response:

"Under our constitutional system we have a general election every 4 years, and at that time, under our system, as I believe it to be, there is argument presented to the American people.

"One side presents its case and the other side presents the other case, as two lawyers do when they go into court. At that sage the two parties are not judges and they are not judicial. * * *

"I admit in the campaign words are used that are somewhat more extravagant than those used in a period of judicial contemplation."

A glance at the calendar is sufficient to determine the fact that under the Dulles 4-year rule the time has come around again for expression of opinions which "are not judicial," couched in words "somewhat more extravagant" than would be desirable "in a period of judicial contemplation."

When Mr. Dulles is quoted as saying that "the ability to get to the verge of war without getting into the war is a necessary art," he was of course, being extravagant. He let himself seem to imply that he regards the technique of military blackmail as a suitable instrument of United States foreign policy.

If we strip the rehetorical verbiage away from the Dulles' words, however, we come down to a foreign-policy theory which has been evolved from bitter experience and is generally accepted in Washington. The theory is that some wars can be avoided if a country accurately defines in advance what it will do under specific circumstances.

This is based on the real possibility that Germany might never have started either World Wars I or II had it known in advance that the United States might do what it actually did do. This is the background of the postwar, bipartisan willingness of Washington to contract under its alliances to do what it knows it would do anyway without the contract. Only in Dulles rhetoric is it a brink of war technique in reality, it is the technique of knowing and saying in advance what you really intend to do.

When Mr. Dulles sponsors a theory that he three times saved the United States from war by his own words, he is being not judicial. For, as a lawyer, and an extremely able one, he well understands the judicial rule

that post hoc and propter hoc are different things. He would make mincemeat of any legal opponent who attempted to use in court against himself the type of legal argument employed in the thesis of the triple victory.

The contention, in essence, is that in the cases of the Korean war, Indochina, and the offshore islands he threatened to do certain things, after which there was no war. By implication the absence of war was the product of the threats.

This might follow if the threats had been the only factors involved. In no case were the threats the only factors, as he himself subsequently recognized.

One example suffices. In the case of the offshore islands there was the Formosa resolution followed by the dispatch of the United States 7th Fleet to the Tachen Islands. The Chinese Communists did not interfere with the evacuation of the Tachens.

But, and a very important "but," Mr. Dulles not only threatened use of United States force in event of interference. He also urgently and meticulously informed Peking through London, Moscow, and New Delhi that the movement of the 7th Fleet was strictly and exclusively for the purpose of withdrawing the Chinese Nationalist garrison from the Tachens.

Were the Chinese deterred by the threat, or did they sensibly refrain from disturbing a situation which was evolving to their advantage? Obviously, the latter.

The whole "brink of war" episode leaves behind it a rather serious question as to whether the Dulles-presumed obligation to indulge in "not judicial" partisan advocacy every fourth year should apply to a Secretary or State. Most United States Secretaries of State have regarded themselves as exempt from this obligation, in fact have tried to be nonpartisan even in campaign years.

Understanding the South

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1956

Mr. SMITH of Mississippi. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the New York Times of Sunday, January 22, 1956:

UNDERSTANDING THE SOUTH—FORBEARANCE IS ASKED IN JUDGING ATTITUDE ON RACIAL PROBLEMS

(EDITOR'S NOTE.—The writer of the following letter, formerly professor of international law at Princeton, has held numerous diplomatic posts.)

To the EDITOR OF THE NEW YORK TIMES:

As a Northerner who has been privileged for several years to enjoy the courtesy and hospitality of Southerners, I regret the inability of many Northerners to understand the point of view of intelligent and high-minded Southerners concerning the racial problem. This point of view has been ably and temperately presented in the January issue of Harper's magazine by the able and conscientious editor of the Charleston News and Courier, Thomas R. Waring.

The heart of the racial problem, as I have studied it at close hand, lies in the honest conviction that local governments, under the Constitution of the United States, have the right to solve their social and economic problems in their own way. This point of view, known historically as States rights, is still of deep significance for all Americans.

The intense opposition felt in this politically Democratic section of the country to the policy of aggrandizement of power in the National Government by the New and Fair Deals was very genuine. It was shared by millions of Northerners.

The racial issue was not created by the present generation. It is a thorny bequest of several centuries. It cannot easily be solved, not even by a fiat of the Supreme Court. It requires wisdom, patience and forbearance by all concerned, including Northerners and colored folks in general.

The North has the greater need of forbearance when it sadly acknowledges its grave responsibilities for the lamentable condition of the colored people who migrated to New York and Chicago.

What I am pleading for is simple courtesy by outsiders in judging the attitude of generous-minded Southerners in their agonizing task of working out a just solution of the racial issue. They have the most concern for the welfare of the colored people, who, in last analysis, must share the responsibility for the creation of a prosperous and happier Southland.

PHILIP M. BROWN.

CHARLESTON, S. C., *January 12, 1956.*

Tom Mulrane Now Heads 78th Division Association

EXTENSION OF REMARKS
OF
HON. ALFRED D. SIEMINSKI
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1956

Mr. SIEMINSKI. Mr. Speaker, one of the most active veterans' organizations in the United States is the 78th Division Veterans Association. The elected president for the new year is Thomas J. Mulrane, of Jersey City, N. J.

Tom Mulrane is well known in veterans' organizations in New Jersey. He has been a conscientious and diligent worker on behalf of all veterans. His friendly manner and ever-ready smile is a familiar sight in northern New Jersey. I think the membership of the 78th Division could not have picked a better man.

I want to take this opportunity of congratulating Tom and wishing him every success in his future endeavors on behalf of the veterans, and his leadership of the 78th Division Veterans Association.

I enclose an article that appeared in the Hudson County Dispatch relating to Mr. Mulrane's election:

MULRANE TO PRESIDE OVER 78TH DIVISION VETERANS—JERSEY CITY RESIDENT ART SUPERVISOR IN DUMONT

Thomas J. Mulrane, supervisor of art in Dumont school system, recently elected to head 78th Division Veterans Association, will preside at the organization's meeting next Wednesday in Saldarini Post, VFW, headquarters, 522 38th Street, Union City.

Mulrane, who replaces outgoing President Seymour Cohen, of Springfield, served with the AEF in France during World War I as private first class, attached to Company F, 310th Infantry Regiment.

Born in New York City, Mulrane graduated from Dickinson High School and Cooper Union Institute of Fine Arts, Sculpture, Commercial Art and Design, New York. He received his master's degree in art at New York University and did further postgraduate study at Manhattan University, College of the City of New York, and Stevens Institute of Technology, Hoboken, where he studied naval architecture.

A veteran of 28 years in the teaching profession, Mulrane previously taught at Cooper Union College, New York City; Snyder High and Dickinson Evening High School, Jersey City; and State Teachers College, Jersey City. He was a civil engineer for North Bergen from 1929 to 1932.

Mulrane and his wife, the former Grace McGuire, live at 615 Palisade Avenue, Jersey City. Their daughter, Mrs. June Murphy, teaches a second-grade class in Dumont.

Overheard

EXTENSION OF REMARKS
OF
HON. ALFRED D. SIEMINSKI
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1956

Mr. SIEMINSKI. Overheard in the Library of Congress the other day was the following:

"They talk about the discrimination of man against man, why don't they talk about the discrimination of nature against man?"

"Like what?"

"We should have 4 seasons on each of the 5 continents."

"How are we going to get it?"

"Adjust the earth on its axis. Archimedes said that with a fulcrum he could move the world."

"So you think a pressure chamber with jet fission, like a sling, could circle the globe and more it?"

"If not, then maybe we'll be able to locate the pituitary gland in the mechanism of the universe that might enable us to adjust the earth to the convenience of man like we adjust the hands on a watch.

"Then maybe with 4 seasons on each continent, or with our ability to adjust the earth's line of spin we'll have fewer wars, fewer depressions and far less havoc wrought by nature's discrimination against man?"

"Yes, that should mean for each of us longer life with less pain; a life lived more creatively with less waste"—

So it went, Mr. Speaker. The conversationalists were evidently trying to make proper use of the modern world and all of its opportunities. Or were they waiting for the man with a butterfly net?

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Appendix

Albert Gallatin

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1956

Mr. WILLIAMS of New Jersey. Mr. Speaker, history records that the cabinet of our third President, Thomas Jefferson, was a most harmonious one because, in appointing its members, he had taken into account the lessons learned as Washington's Secretary of State. Therefore, while he selected wise and strong personalities, they were chosen for their complementary qualities as well as for their specific abilities in the arts of war and peace. Because they believed in small "d" democracy as did their leader, the cabinet members were able to work effectively in concert. There was no upstaging; there was discussion and agreement. As a result, at the conclusion of the two Jefferson administrations, the national debt had been reduced, trade was flourishing and taxes were lowered.

No single member of the Presidential Cabinet was more responsible for this happy state of affairs than the Swiss-born Albert Gallatin who had deported himself excellently as a Member of Congress before his appointment as Secretary of State in 1801. This talented immigrant, who had come to America at the age of 19 from Geneva where he was born on January 29, 1761, brought not only his notable fiscal talents to the service of his adopted land but his deep-seated belief in the rights of the people as well.

Since he was so concerned with distributing the benefits of his wise commercial and financial policies among all the people and because he was born abroad, Gallatin had a rough road to travel, for both these factors earned him the active ill will of the Hamiltonian forces with their pro-British and aristocratic orientation. Because he was French-speaking and democratic, his enemies—the Federalists—were quick to link him with the French revolution whose excesses, along with Jefferson he deplored, but whose basic democratic concepts he favored.

Gallatin, as a Member of the House, had already established the Ways and Means Committee to approve Government's disbursement of the people's money. As Treasurer, he worked to liquidate the public debt and lower taxes. Rigid economy and extended trade he held the best ways to progress and prosperity. Consequently, he was an opponent of commercial and military wars.

The Jeffersonians, less interested in diplomatic representation than commercial representation in foreign countries, had a staunch supporter in Gallatin who was to negotiate a number of advantageous trade agreements when, after leaving the Treasury, he was to represent his country abroad. The War of 1812 had only shortly ended when he put through a pact eliminating excessive English duties on American goods; and, in London in 1818, he worked successfully for a commercial convention.

In commemorating his birthday, I have pointed up his trade achievements purposely; for, in America's dealings with the land of Gallatin's birth, this country has departed from the trade precepts he proved so sound.

A tariff barrier must be hurdled, not by one side but by both; and in imposing restrictions on Swiss watch imports, not only the Swiss but the Americans are being hurt. United States importers and assemblers who make their livelihoods by buying goods abroad are penalized; United States exporters who ship their farm and manufactured good are hurt for the foreign nation affected tends to buy less because it can earn fewer dollars; the consumer has to pay more for the imported product.

In rescinding tariff curbs against the Swiss watch industry, we stand to gain in many ways: First, Switzerland and other foreign friends will know that we mean it when we say, "trade, not aid," is the best policy; second, goods will flow more freely between the two countries to the benefit of both their economies; and third, the people of both lands will be able to get the products each wants at fair and profitable prices.

Man of Courage

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1956

Mr. OSTERTAG. Mr. Speaker, the Secretary of Agriculture, Ezra Taft Benson, recently attended a meeting of the New York State Horticultural Society in the city of Rochester. New York farmers are no happier than farmers elsewhere over our farm problems. Indeed, their troubles are compounded, because many of them raise unsupported crops, while paying out of one pocket or another for the support program. So Secretary Benson was the cynosure of attention. The men who live by, and on, the soil had some tough, stubborn questions which they expected the Secretary to answer. They were not disappointed. Speaking out of his own vast experience, both as a farmer and administrator, Secretary Benson abjured slick, political explanations, and addressed himself with courage and candor to fundamental problems and remedies which his audience understood.

As the Rochester Times Union noted, in an editorial on January 18:

Those who heard him had an opportunity to savor the quality of the man, his sincerity, his profound knowledge of the overall farm problem, and his capacity to find and direct every remedy that government properly can use to restore agriculture to its rightful place. The impression was of a man of courage.

Under leave to extend my remarks, Mr. Speaker, I include in the RECORD the full text of the Times Union editorial:

BENSON CONVINCING ON FARM NEEDS

Secretary of Agriculture Benson answered most of the questions New York farmers have been asking about President Eisenhower's nine-point farm program in addressing the New York State Horticultural Society at the Community War Memorial last night.

Perhaps more important than what he said was the impression he left. Fruit growers and visitors, it seemed to us, had a better understanding of why the President and those who work with him stick to Ezra Taft Benson when the political wolves set up a howl.

For those who heard him had an opportunity to savor the quality of the man, his sincerity, his profound knowledge of the overall farm problem and his capacity to find and direct every remedy that government properly can use to restore agriculture to its rightful place.

The impression was of a man of courage, confronted with problems never so baffling before, scorning cheap political trickery, rejecting quickie measures, trying with the help of Congress to build a solid agriculture not only for farmers today but for the future.

The enormity of the error of continuing wartime production stimulants too long was never clearer. The surpluses generated by these mistaken measures—$7.7 billion worth—stagger the imagination. But that farm prices last year would have been 20 percent higher without them can be easily understood.

Most important to New York farmers was that the very measures designed to prop the position of basic farmers have become a threat to all. For acres diverted from wheat and cotton shift to other crops, livestock, dairying—or orchards—and surpluses mushroom.

"The surplus problem can spread like wildfire," Benson said. "Unless we deal with it adequately now, no farmer, no matter what crops he produces can rest assured that his crop will not be the next on the surplus list."

Dairymen know that well. So do vegetable growers. Fruit growers may be next.

Getting out of the mess created by politicians' farming of the farmers will not be easy and it will not be quick. But get out we must. The courageous leadership of Benson is the best augury visible.

Inaugural Address of Gov. James P. Coleman, of Mississippi

EXTENSION OF REMARKS
OF
HON. THOMAS G. ABERNETHY
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1956

Mr. ABERNETHY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Gov. J. P. Coleman:

Mr. President, Mr. Speaker, members of the joint assembly, my friends, and fellow Mississippians, the solemn oath of office which I have just taken in your presence as the duly elected chief executive of more than two million people was sworn without mental reservation. This being my ninth time to have taken an official oath, I consider it appropriate to tell you that my mother's bible was open at the 3d and 4th verses of the 24th Psalm, which reads as follows:

"Who shall ascend into the hill of the Lord? or who shall stand in His holy place?

"He that hath clean hands, and a pure heart; who hath not lifted up his soul unto vanity, nor sworn deceitfully."

Humbly grateful to my dear friends, the people of Mississippi, that they should have trusted me for these next 4 years with the great responsibilities of the governorship, I give them my solemn pledge that this administration will be kept absolutely free of those things which both defame and degrade.

SEEKS COOPERATION

I congratulate you, the members of the legislature, upon your selection to serve in the senate and in the house of representatives. From the meetings held with you immediately after our election, as well as your performance since the assumption of your duties, I have, without exception, gained an abiding faith in your patriotism, in the purity of your motives, and in the sincerity of your desire to be of unselfish service to our State in these perilous times. I know the people expect it of us that we shall at all times cooperate with each other and work together in harmony for the common good. I know you do not expect to disappoint them in this hope. That much good shall come of our work together is my fondest hope and my most earnest prayer.

It is a fact proven by political history that governors and legislators sometimes go out of office personally and politically less popular than when they went in. Possibly this fate may await us. In any event, I want to say here and now that I shall at no time, under any circumstances, play politics with the high duties conferred upon me by the will of the people of Mississippi. Regardless of all consequences, and regardless of what may hereafter be said, it is my sincere desire that the governor and the legislature during this 4-year period may lay aside all selfishness, all possible ulterior motives, and accomplish much for the general welfare of our State.

Demosthenes described the cause of Greece's downfall in these undying words: "What has ruined Greece? Envy when a man received a bribe; laughter when he confessed it; mercy to the convicted, and hatred to those who denounced the crime; all the usual accompaniments of corruption."

TIME OF CRISIS

So I say to you, the members of this joint assembly, that probably more than at any other time since 1876, the people need you; they realize they need you. Justice and good government need you. In this, I know you will not fail. Let us remember that the man who tries to do something and fails is infinitely better than he who tries to do nothing and succeeds.

Under our constitution, the Governor is the commander in chief of the armed forces of the State; he may require information in writing from the officers of the executive departments on any subject related to the duties of the respective offices; he shall, from time to time, give the legislature information of the state of the government, and he shall recommend for consideration such measures as may be deemed proper and expedient.

LAW ENFORCEMENT

In addition to the foregoing duties and powers of the Governor, section 123 of the constitution provides:

"The Governor shall see that the laws are faithfully executed."

It is interesting to note that this constitutional requirement of the Governor was included in our first constitutional requirement of the constitution of 1817. It was repeated in the constitution of 1832 and even the carpetbaggers and scalawags did not dare omit it from the constitution of 1869. It has continuously been part of the supreme law of our State from its birth to the present hour. I do not interpret this to mean that the Governor should attempt to take over in matters of purely local concern; at the same time it is clearly the solemn oath of the Governor to see to it that crime and criminals shall not oppress the God-fearing Christian people of Mississippi. My views and my past record on this subject are too well known to require emphasis here. Suffice it to say, those views and this record will unswervingly be adhered to in the next 4 years to come. Criminals and their sympathizers may as well take notice, and this notice will hold good until the day I shall go out of office.

I shall at the first appropriate opportunity deliver a special message to the legislature on the necessity of strengthening and improving all phases of our law enforcement machinery.

In view of the prompt and almost unanimous action on the recall bill, I want to congratulate the people of Mississippi for having elected a legislature which already has proven its ability to go immediately to work and act promptly upon matters which are of the greatest importance. I am deeply gratified, and I believe the people are also, that this legislature and its chosen leadership have manifested their firm intention not only to be a working legislature but to put into effect those things which the people approved at the polls last August. I thank you from the bottom of my heart for the attitude which you have taken and for the action already accomplished.

EXECUTIVE CLEMENCY

One of the great responsibilities vested in the governor is that of granting or withholding suspensions of sentence and pardons to those convicted of crime. Because of the 16 years of my life which have been devoted to the enforcement of the law and the protection of the public, I feel very deeply the importance of this subject. Our people are overwhelmingly law abiding, yet great pressures are brought to bear in behalf of pardons and suspensions for those who have not obeyed the law. It will only be in the rarest cases that executive clemency will be extended. Certainly, to prevent miscarriages of justice, I shall exercise the power of suspension and pardon. In all other cases, I hope the people kindly will not press me for something which my conscience will not permit me to do.

I shall deliver a special message at a later date on the matter of paroles, but in the meantime I want to urge this legislature to give serious consideration to the establishment of a system of adult probation. This was one of the planks in my gubernatorial platform, and legislation for this purpose has already been introduced. It was my sad duty a number of times while I was serving as circuit judge to be compelled to send men to the penitentiary whom I believed could have been thoroughly reformed and rehabilitated without being sent to the penitentiary. Again, I urge the legislature to give this subject its most serious consideration.

PUBLIC UTILITIES

In October 1954, I became the first of the candidates for governor to advocate effective State regulation of all public utilities, including electric power companies, natural gas companies, and telephone companies. All of the candidates for governor took a similar position, and I think there is no question that the overwhelming majority of both houses of this legislature keenly feel the pressing need for action in this field.

Mississippi is the only State in the Union which, to date, has made no effort from the State level to regulate electric power companies and natural gas companies. For lack of the necessary accountants, rate experts, and valuation engineers, our efforts at telephone rate regulation have been almost worthless. Under the decisions of the United States Supreme Court the legislature has no way to prevent these utilities from appealing ratemaking decisions to the courts. The only remedy for the situation, and one which is readily available to us, is to have a regulatory body so well staffed and so well trained that the rates, when fixed, will stand the test of reasonableness in the courts. If this legislature should adjourn without taking these necessary steps in behalf of the people of Mississippi, and leaving the consumer in that same attitude he has been forced to occupy in all past years, it would, in my judgment, be one of the greatest failures of your service here. From meetings and discussions already had with you on this important subject, I have no doubt that you will deal successfully with this problem.

AGRICULTURE AND INDUSTRY

One of the great goals of this administration must be to lead the people of our State upward to higher levels of income. This will require a most critical examination by this legislature of agricultural and industrial conditions in our State. Being myself a farmer, and being one whose people have never followed any other occupation, I am greatly distressed over the condition of our agricultural economy at this present time. Everybody in Mississippi knows that during the last few years our people have been leaving the farm by the thousands. They have not left because they did not love the land nor because they did not prefer to farm, but because it became absolutely impossible for them to make a respectable living for themselves and their families. The continuous increase in the cost of everything the farmer must buy and the continuous decline in the prices of what the farmer has to sell are rapidly approaching the disaster point. Our cotton acreage in Mississippi is now below what it was in the year 1879. We are met face to face with a most serious threat to the economy of our State. Farm prices are now the lowest since the prewar year of 1941. Yet, production costs are 30 percent above what they were in 1947. Since 1947, farm mortgage debt has doubled. The farmer today is like the man standing with one foot in a bucket of ice and the other foot in a tub of hot coals—the average temperature may be fine but there can be no doubt of his painful situation.

Since Mississippi is predominantly an agricultural State, the situation which I have described is not only a stern warning with reference to our entire economy but puts us on notice that we must practice the greatest economy and conservatism in the expenditures of the State government.

IMPROVE ECONOMY

We must devote every ounce of our skill and energy toward improving the economic position of the farmers of our State.

We must likewise leave no stone unturned in our efforts to improve the industrial position of Mississippi. Great work has been done by our BAWI Board. Economically speaking, I tremble to think of where Mississippi might have been at this time, had it not been for this splendid program and the wonderful work it has caused to be done. Despite the most excellent work of the BAWI Board, according to the figures of our State Employment Service, Mississippi in the last 2 years has suffered a decrease of 1,000 in the number of nonfarm workers in our State.

So, despite the splendid efforts of the past, Mississippi is faced with terrific decline in farm income and some decline in the number of nonfarm workers employed in our State.

What can the Governor and the legislature do to improve this situation? I strongly recommend the following:

First, that both the House and the Senate, as speedily as possible, set up special committees of their membership to deal with the economic welfare of our State, and thorough consideration to the economic conditions confronting both agriculture and industry in Mississippi.

Second, that the agricultural and industrial board, for better concentration upon the problems at hand, be divided into two separate agencies, one an agricultural board, the other an industrial commission.

EMPLOY EXPERTS

Third, that when this reorganization shall have been effected the governor and these agencies be granted sufficient funds and be authorized to employ the best experts available, whether or not they are now residents of Mississippi.

Fourth, that the agricultural board and the industrial commission be directed to make an all-out drive toward improving agriculture and attracting every possible worthwhile industry to our borders.

Fifth, that the governor, the legislature, and all responsible officials of our State conduct our government on such a high plane of service, economy, and stability as to leave no doubt in the minds of the capitalists and industrialists of the Nation that Mississippi is an outstanding, safe place in which to locate and operate, and where they will receive fair and equitable treatement under fair and just laws.

Sixth, that the education of our younger people be so encouraged and improved as to make us more capable of progress in all fields of economic employment.

We have made indescribable progress in this short quarter of a century. The challenge now is to take advantage of the infinitely greater opportunities of the next quarter of a century to come.

EDUCATION

In the recent campaign for governor I made it very plain to the people of Mississippi that I thoroughly endorsed the public-school program recently established in our State. As one who had to work and obtain his formal education in depression days, and thus knowing the true value of education, I hope I assume the governorship with the unlimited faith and confidence of the educators, the parents, and the schoolchildren of Mississippi. The progress which we are making in the education of our children should be a source of unfailing pride to all progressive Mississippians. It is likewise a complete answer to agitators who would criticize or detract from our efforts to rid ourselves of illiteracy and its consequences. Because of the interest, the sacrifice, and the support of the people of this State, I believe we can point to a record of educational progress second to none. That record of progress has been made; it cannot be challenged.

I would particularly like to direct the attention of our own Negro citizens and those outside Mississippi to the following figures:

The average salary of our white teachers has increased from $710 in 1940 to $2,447 in 1954. The average salary of Negro teachers has increased from $224 in 1940 to $1,814 in 1954, an increase of 800 percent within 14 short years. We now have over 3,000 licensed white teachers and nearly 7,000 licensed Negro school teachers in Mississippi. This year we are paying $13 million in salaries to the Negro school teachers and $19 million in salaries to the white school teachers. Moreover, where Mississippi provided transportation for no Negro children in 1939, this year we have transported Negro students in all-steel buses at a cost of almost $2 million. All children have been furnished free text books.

Insofar as lies within the power of the Governor, I am happy here and now to pledge the full resources of this administration to support, maintain, and improve our school program.

Like support will enthusiastically and devotedly be given our junior and senior colleges.

INSURANCE

Heretofore, the State of Mississippi has had no major problems insofar as insurance was concerned. Even now our problems are only with a segment of the insurance industry and my remarks and recommendations are not to be construed as an indictment against the insurance industry as a whole. On the contrary, I would like to compliment our fine Mississippi companies in the great work they are doing. Mississippi agents are among the finest in the Nation. The vast majority of foreign companies as well as their representatives operating in Mississippi are above criticism, and their business operations are indeed conducted upon a high plane.

There are other insurance companies, however, which have cast a blight on the entire industry and have wrought chaos in their own State as well as other States in which they do business. Minimum requirements have enabled speculators to organize so-called insurance companies with little or no assets, and inadequate supervisory authority has allowed them to run rampant to the detriment of the insurance-buying public. While we have had only one insurance company failure in Mississippi, I can say with pride that not one single policyholder has suffered by reason of the failure of a company domiciled in this State. Even now, however, the insurance department of a neighboring State has been forced to call an immediate examination of all home companies which, by reason of their low organizational requirements, number in the hundreds. Even now speculators from other States are considering Mississippi as their next hunting ground, depending upon the low organizational requirements of this State to enable them to organize so-called Mississippi companies with their money and under their management. I am recommending to the legislature that they carefully consider the enactment of laws that will raise the requirements of the organization of all types of insurance companies in Mississippi to a degree that will guarantee both sufficient capital and surplus so necessary for the successful operation of any business.

The greatest problem with which we are confronted is the deluge of mailed advertising from mail-order insurance companies not licensed in Mississippi. Multiplied thousands of dollars go out each month to these fly-by-night companies over which neither the State insurance department nor the State courts has jurisdiction. It would be futile to recommend State legislation to curb their activities since only the National Congress has control over their mail-order operations. My only recommendation in this instance is not to the legislature, but to the people against buying such insurance. I shall likewise recommend to our friends in the National Congress that they do everything in their power to enact Federal legislation that will give us relief from so-called fly-by-night insurance companies over which we in Mississippi have no jurisdiction.

A review and renovation of our insurance code is practically mandatory.

MY PROGRAM

The program upon which the people elected me governor was thoroughly discussed in the campaign and is well known to the members of the joint assembly. The limitations of time prevent a full disoussion of every point here. I shall have printed copies of that program placed on the desks of the individual members of the legislature; and I know you will read them.

I must take advantage of this opportunity, however, to remind you that I advocated, and I still advocate, repeal of the black-market tax, a constitutional amendment forever guaranteeing our homestead exemption program, assistance to the aged to the full extent of our financial ability, strict economy in government, the promotion of rural electrification, fair legislation toward labor and management, and a constitutional amendment limiting special sessions of the legislature to 30 days.

I must especially urge upon you the necessity for a permanent program of financial aid to our municipalities, and I know this most important problem will have your full sympathetic attention.

For reasons well known to all informed Mississippians, I most earnestly urge the necessity of repealing our absent voter laws except as to members of our Armed Forces and employees of common carriers engaged upon a scheduled run.

SEGREGATION

My friends, I come now to a discussion of that governmental question which continuously for months has been uppermost in the minds of the people of Mississippi, and which no doubt is destined greatly to vex and harass us in the years immediately ahead. I refer to maintaining the continued separation of the white and Negro races in accordance with those customs which the experience of 90 years has taught us all, white and colored alike, to be for the welfare of all concerned.

As I launch into this discussion, I address a message not only to you, my fellow laborers in the legislature, but I am also speaking directly to the white and Negro people in Mississippi. I am likewise speaking to our fellow citizens in the other 47 States of our Nation. Not only is the future well-being of every white and Negro citizen of our State bound up in what I am now about to say, but we are entitled to the sympathetic understanding of our friends in the remainder of the country. I am moved, therefore, by a deep realization of the gravity of this message.

My own personal and official attitude toward this question is well known to all Mississippians. In the gubernatorial campaign of 1955, I said in my official platform:

"There will be no necessity to abolish public schools, nor will there be any mixing of the races in any of the State operated educational institutions. I already have a record on this subject. This is no task for the amateur or the hothead."

This position was given the overwhelming support of the people of Mississippi at the ballot boxes last August.

I further told the people that if elected governor, with the cooperation of a good legislature, we would maintain the separation of the races without at the same time keeping our State, its economy, its customs, and its practices, in a daily uproar of confusion and uncertainty. I say to this audience and to those who are listening by radio and television that I have not the slightest fear that 4 years hence when my successor stands on this same spot to assume

his official oath, the separation of the races in Mississippi will be left intact and will still be in full force and effect in exactly the same manner and form as we know it today.

TIME FOR CALMNESS

I want to say to the members of the joint assembly that our services here will not be judged by those minor skirmishes which can contribute nothing to the permanent preservation of our rights. If the rules of racial separation are intact when we leave office, our place in history will be secure. If we should fail, there is nothing which will excuse that failure in the eyes of the people of Mississippi. Let us then exercise all possible soundness of judgment, sincerity of purpose, and calmness of mind, to the end that we shall not fail.

You may be called upon to consider the adoption of resolutions dealing with this problem. In the immediate future, I shall deliver a special message to the legislature on this subject; it cannot be adequately handled here. In the meantime, I am keeping in almost daily contact with the governors of the other southern States in the hope that whatever resolutions you may adopt will harmonize with those of our sister States. Unity must be preserved at all costs, and I urge the assistance and cooperation of all persons and groups to the end that we may present a united front in this all important cause.

In his message to the South Carolina legislature, delivered on last Thursday, Governor Timmerman said:

"I think it advisable that we give consideration to joining, if possible, our sister States at an appropriate time in a lawful and formal protest against the effort to destroy our form of government, but I would caution against premature action."

We have plenty of time, you will be kept fully informed of all developments, so I respectfully request that all action of this kind be withheld until you shall have heard my special message.

With the indulgence of those present, I should like now to address a word to the remainder of the Nation. I want to tell you that during the next 4 years the full weight of the government will unfailingly be used to the end that Mississippi will be a State of law and not of violence. I want to remind you that for 90 years the white and the Negro people of Mississippi have lived side by side in peace and harmony. I would like you, our friends outside Mississippi, to know that the great overwhelming majority of the white people of Mississippi are not now guilty and never intended to be guilty of any murder, violence, or any other wrongdoing toward anyone. History shows that the first white man ever to be legally hanged in Mississippi was executed for the murder of a Negro slave. I repeat that while we, the people of Mississippi, are unalterably determined as a matter of right and justice that the necessary rules of society shall be maintained, we do not any more approve of violence and lawlessness than you do.

PROBLEM ACUTE HERE

We ask you to remember that by reason of the numbers involved, this problem is more acute here than in any other State in the Union. It is not something which can be viewed with complacency or ignored, and if you lived in Mississippi and knew the full situation you would look upon it as we do.

Despite all the propaganda which has been fired at us, the country can be assured that the white people of Mississippi are not a race of Negro killers. Official statistics for the State of Mississippi for 1954 show that in that year, the last for which we have figures available, 8 white people were killed by Negroes and only 6 Negroes were killed by whites, while 182 Negroes were killed by members of their own race. In other words, there were 30 times as many Negroes killed by members of their own race as by members of the white race.

Now, for a word to those loyal Negro citizens of Mississippi who love their State and who are unwilling to be made the victims of propaganda from professional agitators.

I must remind you that when one searches the entire history of all nations, peoples, governments, and minority populations there will be found examples of extinctions, enslavements, torture, and exile, but there cannot be found one single instance where a government has forced one race against its will to integrate with another. With all due respect to the mighty power of the United States Government, it will never be able to force racial integration in Mississippi nor in any other State where the people are unwilling to have it done.

What have integrated schools in other sections been worth to the Negro? Have you ever thought about the fact that a Negro can attend a mixed school in most of those States, but few of those States will hire him as a teacher? The State of Connecticut does not have 25 Negro teachers. The city of Albany, the capital of New York, the home of Harlem, employs only 3 Negro teachers. The city of Newark employs 2,200 school teachers, but only 70 of them are Negroes, and none is a principal.

SYMPATHY FOR NEGROES

I am pledged to the maintenance of the separation of the races at all costs, but I want to say this further word to the Negroes of Mississippi. As Governor, I shall always give sympathetic consideration to any of your problems which deserve the assistance of the State government. If you accept this opportunity, it will mean better days for all of us. If you reject it, the responsibility must be yours.

Now for a word to our white citizens. When I formally opened my campaign at Ackerman on May 10 of last year, I said that "those who propose to mix the races in our public schools had might as well try to dip the Atlantic dry with a teaspooon."

I am just as confident of the correctness of this statement now as I was then. We must keep cool heads and calm judgment in the face of all the provocation which is being hurled upon us from almost every direction. The obvious intention of this propaganda is to frighten us, to throw us into panic, to destroy our judgment, and to render us incapable of defending ourselves. How devoutly it is to be hoped that a people who have had the strength, the courage, and the vision to surmount the terrifying trials of the past will not now allow themselves to fall victims to these tactics of today. The sentiment of Mississippi is unanimous—so we have nothing to fear unless it be "fear itself."

UNSPECIFIC RULING

To the few who have unjustifiably substituted fear for confidence, please let me remind them that even the United States Supreme Court did not undertake to say how or when its decision of May 17, 1954, could or would be enforced.

Let me remind them that in all the Southern States, including South Carolina and Virginia, there is not a single Negro child going to school with white children as the result of the compulsion of any court order. A few Negro children are going to school with white children in the South, but only in those miserably few districts where local authorities voluntarily allowed it to be placed into effect—no court order was involved. Even in the very cases which were heard in the United States Supreme Court itself, no mixing in the public schools in those districts has yet been accomplished, nor is there any actual prospect of it.

Our pupil assignment law, which has been on the statute books since 1954, and which has not yet been challenged, is, in my opinion, within itself, a complete remedy at the present time. We shall not be found without that resourcefulness necessary to any future remedies which may be required. I know, and you know that while there is no magic remedy for the Supreme Court decision there are multiplied means and methods, all perfectly legal, by which we can and will defeat integration of the races in our State.

The time has come for us to invoke the great principle enunciated by Thomas Jefferson when he said:

"Never let us do wrong, because our opponents did so. Let us, rather, by doing right, show them what they ought to have done, and establish as a rule the dictates of reason and conscience, rather than of angry passions."

As for myself, I face this problem, like all other problems, in the assurance given us in chapter 1, verse 7, of II Timothy:

"For God has not given us the spirit of fear, but of power, and of love, and of sound mind."

NO NEED FOR FEAR

We the people of Mississippi are of sound mind; there is no occasion for the excitement of fear, and we are confident of our power.

Since May 17, 1954, the plans, approach, and legal action maintained by our State government have been completely successful. We have not begun to exhaust the resources at our command, so let us, with supreme confidence, take a leaf from the book of that great man, Elbert Hubbard, who said:

"Go as far as you can see, and when you get there you'll see farther."

As for myself, I face the future, not with fear but with confidence, not in panic, but in calmness born of the strength of our position and the weight of our power. I hope the people without surrendering any part of their alertness, will join me in this feeling.

May God, in his inexhaustible wisdom and mercy, guide us as we move forward together toward a better day in our beloved Mississippi.

The 38th Anniversary of Lithuanian Independence

EXTENSION OF REMARKS

OF

HON. ANTONI N. SADLAK

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1956

Mr. SADLAK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an invitation extended to me by Col. Leo Z. Mazotas, president of the Lithuanian-American Citizens Club at 227 Lawrence Street, Hartford, Conn., to join in exercises commemorating the 38th anniversary of Lithuanian Independence Day, in Hartford on February 12, 1956.

The invitation, however, is really an earnest plea for more than sympathy, it seeks help for the wonderful Lithuanian nation and its neighbors who want again to enjoy freedoms that were promised in their independence of February 16, 1918; they seek from us, hope and encouragement that they might further persevere, awaiting the day when they can observe the restoration of all of

those sacred things that we treasure and guard, since they are God-given rights, the exercise of which have been denied by an atheist government temporarily in control.

But, Mr. Speaker, the letter speaks more eloquently than I can, and I submit it for the reading and consideration of every one of my colleagues and urge that they think of some way or means to hasten the day of real freedom and independence for Lithuania and all of the surrounding nations now under Communist enslavement.

The letter follows:

JANUARY 19, 1956.

The Honorable ANTONI N. SADLAK,
Congressman at Large, Connecticut,
Washington, D. C.

DEAR SIR: At 3 p. m. on Sunday, February 12, 1956, the Lithuanians of the Greater Hartford vicinity are commemorating the 38th anniversary of Lithuanian Independence Day, which date is actually February 16, 1918. Exercises will be held at the Lithuanian-American Citizens Club at 227 Lawrence Street, Hartford, Conn.

As you know the Lithuanian nation lost its independence again in June of 1940 when Lithuania and its neighbors Latvia and Estonia were occupied by Soviet forces despite all solemn promises to the contrary; despite existing friendship and nonaggression pacts between the Baltic States and Soviet Russia.

Since that time Lithuania and its neighbors have been the victims of Soviet Social Engineering (planned periodical annihilation of the peoples of Lithuania, Latvia, and Estonia). Literally hundreds of thousands of innocent victims, men, women, and children have been brutally deported into Soviet Union slave labor camps. It is estimated that since the beginning of the annihilation program on June 13–14, 1941, the population of Lithuania has been depleted from over 3 million to 1,500,000 to 2 million. Her neighbor nations have suffered a like fate. Where in the history of the world can there be found a more vivid example of inhumanity and brutality? Where can there be found a more vivid warning of the goal of a totalitarian, avaricious force such as the communism of Soviet Russia was, is and always will be? For other examples and warnings we need only to point to the fate of Poland, China, Manchuria, Northern Korea, and Indochina. When will the free peoples of the world become convinced? Will it be too late? Let's hope not.

Lithuanians, and people of Lithuanian extraction need no further examples or warnings of Soviet communistic intentions. They, and their neighbor nationalists know only too well the result of apathy, ignorance, and inaction in the face of the communistic menace. Lithuanians will never cease their unending fight to regain their lost freedom and independence. They will never cease to endeavor to point out to the free world the ever existing menace of Soviet communism. They will never cease to urge all free peoples to become informed regarding the great threat to world freedom, to realize that the materialisitc philosophy of Soviet communism has and always will have only one unwavering goal—world revolution and the ultimate enslavement of all mankind.

Lithuanians will always set aside the period around February 16, their indepndence day, as the one period during which special emphasis will be made to keep the free peoples of the world ever reminded of the inhumane wrongs perpetrated by the Soviet Union upon Lithuanians and all the other victims. This, Lithuanians have dedicated themselves to do until Lithuania and the other enslaved nations have been restored to positions of dignity and freedom in the world and the threat of the scourge of communism has been destroyed.

Therefore, on behalf of the Lithuanian-American organizations of the Hartford area, I take great pelasure in extending to you an invitation to join with us in the February 12 exercises at the Lithuanian-American Citizens Club hall on Lawrence Street.

We would also appreciate it very much if you would follow your established precedent and read something into the CONGRESSIONAL RECORD or of offering some kind of a resolution designating February 18 as Lithuanian Independence Day, whichever you deem most appropriate.

Sincerely,

LEO C. MAZOTAS.

Cleaning Up the Doorway to America

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1956

Mr. OSTERTAG. Mr. Speaker, as our country expands in population and industry, immense new burdens are laid upon our limited supplies of surface waters. The demand for water constantly increases. The supply is constant, however; and the supply of clean, usable water is decreasing. This is a situation which we shall ignore to our peril. There is an old saying that you never miss the water till the well runs dry. Our national water resources are not inexhaustible, however, and unless we mobilize to keep them clean and useful, the well will run dry. That is a job for the individual; for the communities; for industry; for the States, and for the Federal Government. No one can escape responsibility. Efforts to keep our surface waters clean and usuable must be constant and unremitting.

The States have a particularly large stake in this matter. One of the first questions that industry's scouts ask, when they look for new sites, is: How is the water supply? Is it adequate? Is it useful? Will it last?

Mr. Speaker, I have been actively interested in the preservation of our surface waters for many years, first as chairman of New York's Joint Committee on Interstate Cooperation, and now as a member of this body. It is a tribute to the vision of New York's citizens that they supported the enactment of a statewide water pollution control program some years ago.

Moreover, they have also supported the creation of interstate pollution control agencies, so that today, New York has cooperative interstate arrangements with every one of the States on its border, to control the pollution of its surface waters.

Among the oldest and most successful of those interstate agencies is the Interstate Sanitation Commission, comprised of representatives of the States of New York, New Jersey, and Connecticut. The Commission is now marking its 20th year of operation. When it was established, the waters around New York, the doorway to America, were swiftly deteriorating under an overload of filth. Today, through the unrelenting efforts of this tri-State agency, the never-ending battle against pollution is being won.

President Eisenhower has taken note of this significant battle in a telegram to the Commission. It is included in its 20-year report, which was released today. Calling it "the first of many interstate bodies created by the States to deal with such problems," the President has expressed the hope that its report will receive widespread attention among American citizens. "For the problem of the pollution of our waters," he points out, "is of concern to all of us."

Mr. Speaker, the work of the Interstate Sanitation Commission is important to every State in the Union, and to the District of Columbia, for it proves that the States, working together, can deal effectively with the problem of pollution control if they have the will and the determination.

At this time, there is pending before Congress legislation to strengthen and extend a program of Federal-State cooperation in the control of water pollution. The Interstate Sanitation Commission's report provides effective guidelines for such cooperation in conformance with administration's policy of keeping as much government as possible close to the people who live under it and pay for it.

Under leave to extend my remarks, Mr. Speaker, I include some excerpts from the Interstate Sanitation Commission's report, and I commend the entire report to the attention of the Members of this House:

CLEANING UP THE DOORWAY TO AMERICA—TWENTY YEARS OF PROGRESS IN POLLUTION CONTROL, 1936–56—INTERSTATE SANITATION COMMISSION—NEW JERSEY, NEW YORK, CONNECTICUT

Text of telegram from President Dwight D. Eisenhower to the Commission on the occasion of its 20th anniversary:

THE WHITE HOUSE,
Washington, D. C.

Dr. WILLIAM C. COPE,
Chairman, the Interstate
Sanitation Commission:

Twenty years ago, the interstate compact between New York, New Jersey, and Connecticut was signed, with the approval of the Congress. It provided for their partnership in combating the growing pollution of the interstate waters around New York Harbor.

The first of many interstate bodies created by the States to deal with such problems, it has been a pioneering organization. I am therefore glad to learn of the Commission's plans for issuing a progress report. I hope it will receive widespread attention among American citizens, for the problem of the pollution of our waters is of concern to all of us.

DWIGHT D. EISENHOWER.

In the overview the commission's job is to protect the rights of the public in its varied legitimate uses of the waters of the district, by releasing the waters from their bondage of carrying waste.

Although the uses appear incompatible at first, it has long been recognized that waters serve many purposes, providing there is judicious control. This control starts with the commission's classification by desired use, (the A and B classification). These classifications were set up after public hearings, so that all interested could be heard.

Once the classifications were set up, then standards of treatment established in the compact became effective.

No treatment of wastes is perfect, and all effluent brings some pollution to the waters. But the waters have recuperative powers themselves with the action of tides, currents, sun, wind, and benevolent bacteria.

The commission's effort has been to keep the pollution low enough so that the natural recuperative powers could keep the waters in good shape.

This phase of the program is related to the directive of the compact to abate present and "control future pollution."

We measure this in terms of people served. Here is the record.

In 1936 the sewage of 7,200,000 people was being discharged untreated into the waters of the district.

Today sewage from 9,500,000 is receiving treatment. This is more than the total contributing pollution 20 years ago.

Pollution existing in 1936 has been abated.

COSTS

This program, like any other improvement, has cost money. First let us clearly state that the administrative cost of the commission is small compared to the cost of construction of sewage treatment plants and appurtenances, which total to date $300 million. The construction costs are carried by local bond issues and taxes, and the commission's job is to assure each municipality that all other municipalities will construct plants to equal the standards set, and to synchronize the program so that no municipality is unduly penalized for its efforts.

Notwithstanding the accomplishment over the 20-year period the costs of constructing these treatment plants averages about $1 per year per person served.

INDUSTRY

The importance of the waters of the area to the industry cannot be overrated. Some industries which are large employers and taxpayers in the area, utilize waters in the millions of gallons per day.

To the knowledge of the commission, no industry has left the area because of the quality of the waters for which the commission is responsible, and no undue hardships in treatment of water have been imposed.

RECREATION

Health is always first.

Despite the dysentery epidemic in Chicago from sewage pollution in the thirties, and the catastrophe of 1,100 cases of gastroenteritis following harbor water entering water mains on the west coast a few years back, the commission will not guarantee that drinking or swimming in polluted water, or eating polluted shellfish will kill you. It might, but no guarantee.

The chief engineer puts the story of polluted water in this comparison:

"Fill your bathtub with clean, warm water. Take a dipper and dip out one quart from the used but unflushed toilet bowl. Dump it in the tub. That is the equivalent of some of the bathing waters when the commission started 20 years ago."

You can bathe in that bathtub but people consider it an unpleasant idea and not up to American standards.

Today in the A areas the picture is different—like a well-known soap—99 percent plus of all discharge into the bathing area is treated and sterilized with chlorine.

In fishing and shellfishing, the commission's program of treatment has produced a gradual improvement in the waters of the district despite the fact that 2 million more people have moved into the area. This is reflected in the fact that there is now fishing in Jamaica Bay, where one doubts that were many fish 20 years ago. There have been changes in opening and closing shellfish areas. Shellfish are reported being cultured in the Hudson for transfer elsewhere for growth. The Harlem River, once a black, fetid stream, is now much improved. And so it goes down a long list of waters of the area.

THE ROAD AHEAD

As has been indicated there is a job ahead to:

1. Complete the remaining work now under way to bring treatment up to present standards.

2. Maintain an equitable use of the waters of the area through the changing years ahead.

3. Revise the standards as the purity of the waters increases, to meet new needs as populations increase, to cope with new industries and new types of pollution.

Not only are there such new problems as radioactive and chemical wastes, but the Legislatures of New York and New Jersey have delegated to the commission the task of studying whether air pollution is an interstate problem, in the New York metropolitan area, and to recommend means of control. Connecticut has enacted legislation giving its consent to the study, subject to the approval of the Congress of the United States.

This will bring a new kind of problem to the commission to study, in a new field, under an extension of the interstate compact.

The joint legislative committee on interstate cooperation regarded the work of the interstate sanitation commission "as one of the outstanding examples in the United States of an effective pollution abatement program. The success of this interstate compact demonstrates the great potentialities of interstate cooperation and the compact method in solution of interstate problems."

Anniversary of Ukrainian Independence

EXTENSION OF REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1956

Mr. SADLAK. Mr. Speaker, on Sunday, January 22, Americans from all parts of the Nation celebrated the 38th anniversary of the independence of the Ukraine.

Geographically, the Ukraine is part of the Union of Soviet Socialist Republics, but historically has stood as one of the primary bulwarks against Soviet imperilism, throughout the centuries. This unconquerable desire for national freedom is still imbued in the hearts of Ukrainian patriots whose sufferings at the hands of Communists dates back to the destruction of its churches and the Red sponsored famine of 1932–33.

The German invasion of World War II brought short lived hope for these freedom loving Ukrainians, who soon were persecuted and dominated by another imperialism. But even now, the Ukrainian Resistance Army continues to fight against Soviet attempts to destroy the peoples' burning desire for independent freedom. Brutal purges and deportations ordered by Moscow have liquidated countless numbers of Ukrainian leaders, but the spiritual and moral resources of the people produce immediate substitutes.

Ukrainian culture, centered in the capital city of Kiev, continues to flourish, and historically has been the moving force behind the nationalistic spirit of the people. Its centuries of traditions and customs represent the indefatigable struggles of a country destined to possess the same freedom enjoyed by Americans in the United States.

With over 40 million people, the Ukraine is the largest non-Russian nation behind the Iron Curtain, and should the Communists ever attempt actual aggression, Ukrainians can be counted as our most important and natural allies, in defeating Russian imperialism.

The struggle and goals of this freedom loving nation, like that of our forefathers should not be ignored. The continual free existence of the United States and other independent sovereignties, is contingent upon the establishment of those liberties throughout the family of nations. The Ukrainians have proven their right and demonstrated their ability to express their own free, independent voice in our family of nations.

The Best Defense, Dollar for Dollar, in Recent Times

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1956

Mr. OSTERTAG. Mr. Speaker, among our other blessings today, we may count the fact that we have a President and Secretary of Defense who are shaping our military policies to meet the needs of today and tomorrow rather than yesterday.

The military have often been criticized for preparing for the last war, rather than the next one, and history has often proved the charge correct. There is some evidence that certain of our military leaders or former leaders today are suffering from that occupational hazard. Fortunately, the President and his advisers are not. They are not planning for any war. Indeed, they are making herculean efforts to build and strengthen peace. But they are meanwhile strengthening the country's defenses so that no one will misconstrue our pursuit of peace as a confession of weakness. And they are doing it with hardheaded respect for the citizen who maintains our Government and supplies the money to sustain it.

As the Buffalo Evening News pointed out, in an editorial on January 18, the military program now before Congress offers the best defense, dollar for dollar, in recent times.

Under leave to extend my remarks, I include that editorial.

MORE FOR THE DEFENSE DOLLAR

Our military program for the long haul is clearly outlined in President Eisenhower's budget message. Gearing of defense preparations to a long period of uncertainty rather than getting panicked by temporary crises and lulled by smiles without deeds is reemphasized. No longer will our defense be directed toward assumed dates of maximum

danger, but will be aimed at maintaining continuously the largest and best-armed ready forces in our peacetime history.

The budget defense calls for defense funds in 1957 totalling $35.5 billion, about $972 million more than provided for this year. The distribution of the new funds reflects the reorientation of defense planning to make use of the increasing availability of new weapons of unprecedented strategic and tactical importance. This refers to the increased use of atomic power for naval craft—both surface and submarine—and the continued production and activating of the latest type strategic jet bombers, interceptors, and atomic-guided missiles.

Much more than the nearly $1 billion of increased funds will go into the guided-missile and strategic aircraft program. The ammunition and vehicle stockpiling for land forces has reached a saturation point where funds that formerly went into conventional arms can be diverted to the Air Force and Navy. Maximum use of scientific and technological advances and their application to modern weapons is permitting the Armed Forces to be leveled off at a strength of 2,900,000—somewhat below the present ceiling. Meanwhile, the ready reserve is expected to reach 1,250,000 by 1957.

The President's reference to panic planning hits bluntly at those critics of the defense program who less than a year ago were demanding a crash program for the new B–52 jet bombers because of information that Russia had a similar strategic bomber. The conversion of B–36 wings to B–52 has been under way for some time and more than $6 billion in the new budget is allotted to continuation of the B–52 program and to Air Force and Navy procurement of supersonic jet interceptors.

In the major distribution of the defense budget, the Air Force is scheduled to get $15.4 billion, the Navy $10 billion, and the Army $7.7 billion. This, as well as anything, indicates the new emphasis. While the Army and Navy budgets are about the same as 1955, the Air Force is jumped $3 billion for both 1956 and 1957. The leveling off of funds for the older services and the new high for the Air Force in 1956 and 1957 set the pattern of the long haul. If Congress does not upset it too much, the program may provide the best defense—dollar for dollar—in recent times.

No Need for Apologizing

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1956

Mr. AUCHINCLOSS. Mr. Speaker, I am very pleased to receive permission to extend my remarks in the Appendix of the CONGRESSIONAL RECORD and include an editorial from the Asbury Park Evening Press, Asbury Park, N. J., entitled "No Need for Apologizing." This editorial, which refers to the controversy over the interview with Secretary of State Dulles recently published in Life magazine, expresses my sentiments in the matter, and I feel confident that the American public understands what he was driving at and approves of his attitude. I think the Asbury Park Press is to be highly commended for its straightforward editorial, which follows:

NO NEED FOR APOLOGIZING

It is regrettable that a few Republican leaders have been frightened into semi-apologetic explanations of the vigorous foreign policy ascribed to Secretary of State Dulles in a recent magazine article. Perhaps it was to have been expected that such ambitious Democrats as Adlai Stevenson would search for grounds upon which to criticize Mr. Dulles' strategy. But this strategy has been so successful in avoiding war while refusing to yield before the Communists that Republicans should confine themselves to the applause it deserves.

In a needless effort to defend Mr. Dulles' enlightened policy a few Republicans have announced that former President Truman followed a similar policy. That is paying Mr. Truman an undeserved compliment. For Mr. Truman permitted his Secretary of State, Dean Acheson to indicate that this country would not defend Korea. The Communists, quite naturally, accepted this as an invitation and marched in. Then the Truman administration reversed itself and sent American troops to defend South Korea in what proved to be one of the costliest wars in our history.

Mr. Dulles' policy calls for giving advanced notice of our intention to tackle any aggressor that thrusts itself beyond a given line. Naturally such a policy can carry us to "the brink" of war. But it is the only policy that can avoid war without subjecting this country to the dishonor of retreating and indicating a degree of weakness that will tempt the aggressor in continuing to trespass on our interests until war becomes inevitable.

The Dulles program is sound in concept and it has been effective in practice. Those Democrats who have assailed it are obviously groping for an issue where there is no room for an issue. Those Republicans who apologetically explain Mr. Dulles' program in terms that modify it are political rabbits that have been frightened by the pop-gun that Mr. Stevenson has aimed at the Secretary of State.

The Distressing Situation in the Near East

EXTENSION OF REMARKS
OF
HON. ROSS BASS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1956

Mr. BASS of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from M. H. Pilsk, of Nashville, Tenn.:

NASHVILLE, TENN., *January 4, 1956.*

The Honorable ROSS BASS,
The House of Representatives,
Washington, D. C.

DEAR ROSS: I am deeply disturbed at the distressing situation in the Near East, namely, Israel vis-a-vis the Arab States, and the support of the Arabs by Russia and their satellites. I think it is obvious that Israel is the only democratic, westernized group in that area and is of necessity, if nothing else, an ally of our United States. It is very discouraging to note that our State Department has made no constructive moves in the direction of peace and stability, to the contrary, we seem to be condoning some of English and French colonialism and oil power politics.

Many of our friends in Nashville and middle Tennessee hope our representatives in Washington will carefully examine the facts, and without prejudice make the decision which would do the greatest good for our United States and friends. I cannot conceive that we can ever rely on the friendship of most of the Arab States, since their leadership has always been for sale and their loyalty changes with the winds. To the contrary, the leaders of these feudal states in that area have no idea of becoming democratic and there is no possible way for us to get the message of democracy to their people. I do believe that the vast majority of their population has no bone to pick with Israel and it is their leadership that has a fanatic, selfish interest in keeping the area disturbed, as well as giving themselves the best bargaining position between East and West.

A case in point, is the so-called refugee problem. This is not as much a refugee situation as it has become a tool for world sympathy at the expense of the wretched people. I would be the last person to deny these political exiles the right to a good standard of living, but many of the inhabitants of all of these surrounding states live in about the same abject poverty. It is the fact that this particular group, who left because of the mistaken idea that they would be on the winning side by leaving, and having suffered the fortunes of war, find themselves exiles.

The U. N. certainly made very sizable contributions, much of which has not reached the needy. You will find this to be pretty much the fact if you have the opportunity to investigate.

Now, I would deem it a favor personally and for the good of the western democracy that you use your best offices with the State Department to encourage the strongest possible assistance, morally and financially, and with military supplies, if needed, to the beleagured State of Israel to the effect that stability and peace may be secured in that troubled area.

With my very best wishes for a happy, healthful, and successful year for you and yours, I remain

Cordially,

M. H. PILSK.

Defeat Via Taxation

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1956

Mr. SMITH of Kansas. Mr. Speaker, here is appended an editorial from a small county editor out in my district. He probably states in this editorial an accurate appraisal of public sentiment on the all-important subject of taxation. The people back home are beginning to wonder about this "charity" idea of American tax dollars in foreign countries. Mr. Huycke presents the plight of the average middle-class American and what high taxes mean to him. I commend this, his editorial:

[From the Ellsworth Reporter]

DEFEAT VIA TAXATION

Is the United States defeating itself and helping our enemies win the cold war through the taxation route? Every time Congress and State legislature meet they add another burden of taxes upon the already sagging shoulders of the average American citizen; and with the convening of Congress this term it is no different—and the Kansas

Legislature is already mapping plans whereby they can bleed another dollar out of the poor, tired, despondent wage earner, who is at the point of desperation of how he is going to meet all the emergency financial obligations in a respectable manner.

By the time he meets the bill on his Federal income tax, State income tax, real-estate tax, personal property, sales taxes, car-license plates, driver's license, gas tax, and the multitude of hidden taxes on only the bare necessities, he has very little left to save for that rainy day when he may be unable to earn. Because of the greed of taxes, the American citizen is forced to take refuge in all the insurances which have been "cooked up" for his so-called protection, each of which is only a further drain on his already depleted earnings, and an added worry, how is he going to meet all his tax obligations?

Time was when a man dared hope that somewhere along the ancestral line there might be hidden a rich uncle who someday would remember him in his will and help to meet the financial burden; but if any man is fortunate in this day and age to realize that dream, Uncle Sam is there with his eager hands extended for such a huge share of the gift that very little is left to perpetuate the joy of receiving the moneyed blessing.

The older generation will well remember how terribly sorry we felt for the defeated enemies after the First World War because their governments demanded such enormous sums of money from their people to pay taxes that many of the farmers had to haul the deflated currency in farm wagons to the collectors. We aren't in that position yet, but should the value of our currency take a nosedive, we would be exactly in that predicament.

But, despite all this, the American citizen would more cheerfully carry the huge tax burden if the money was wisely spent by those in authority to use the tax funds; but when we see such sinful, needless waste in the name of charity to foreign countries which are using this same money to build up the industries in their countries to such a high level that they are crowding us out of the world-trade market, isn't it a defeat for the United States? We're the last ones who would deny a hungry man the necessities of life; but aren't we rather forcing this charity on a lot of people in the world who have existed ages before our country was born, and who in all probability will be existing long after we have perished from the family of nations?

Our American way of life is wonderful for the United States, due to many reasons; but can we transplant these reasons to other lands and bring happiness to its natives? We have been trying to do this very thing since World War II, but so far have yet to reap the gratitude of any of the receivers. It seems to us that people of other lands are as intelligent as we Americans and definitely ought to work out their own destiny in their own way, and it would be far wiser for us to stand by, like a good friend should, ready to help when called upon, and then in such a way as will make the recipient appreciative of that help, instead of winning their almost near hatred because of our arrogant attitude in trying to win their friendship by offering them hard cold cash instead of understanding.

And the poor tired American taxpayer is the brunt of all this generosity of the men whom we send to Washington. Why not, for a change, stop playing the role of Atlas in carrying the whole world on our shoulders and, instead, ease the gigantic tax burden of our own people and, at least, make the people of one nation happy via the money route?

Please, Uncle Sam, hear the plea and supplication of your tired tax-overburdened middle-class subjects, have mercy on their tired souls, and, please, don't add that last straw to their backs which will break their already nearly broken courage, after which the way would be open for our enemy to move in and conquer so easily. Do ease our tax burden, Uncle Sam.

Grassroots Endorsement of Secretary Dulles' Foreign Policies

EXTENSION OF REMARKS
OF
HON. WILLIAM K. VAN PELT
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1956

Mr. VAN PELT. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include herewith an editorial endorsing the foreign policies of Secretary of State Dulles which appeared in a recent issue of the Fond Du Lac (Wis.) Commonwealth Reporter:

There appears to be very little wrong with Secretary of State Dulles that a good editor couldn't cure.

He really lives two lives. In one his is the man of action, and here his accomplishments are many. In the other he is the man of verbal statement, and in this he finds himself again and again in hot water.

One of his principal troubles seems to be that he permits too flashy a lead to be put on what he says. An example is his latest difficulty, an article in Life magazine which quotes him liberally on how the United States has met specific crises in Korea, Indochina, and Matsu-Quemoy in the last 3 years.

According to Dulles, this country three times went to the brink of war but was saved from it by threats of stern action, including atomic retaliation.

Democrats have assailed these declarations and accused Dulles not only of historical inaccuracy but of contradicting his own secret testimony before a congressional committee.

British and French diplomats likewise have questioned his accuracy, and have announced their shock that he would talk glibly of seeing the United States go to the brink of war.

The matter of Dulles' accuracy can only be settled by recourse to the documents, a process which will require days and weeks. What evidently disturbs his critics most, however, is the brink of war philosophy ascribed to him in the article.

Said Dulles: "The ability to get to the verge of war without getting into the war, is the necessary art. If you cannot master it, you inevitably get into war. If you try to run away from it, if you are scared to go to the brink, you are lost. * * * We walked to the brink and we looked it in the face."

In the European view, no man or nation should walk that close to all-out war in this atomic age. Yet it is very likely that, as he has often done before, Dulles has overstated his case in trying to make his point. That's where the good editing ought to come in.

Nevertheless, he has a point that is fundamentally sound: Clear willingness to use force if pushed too far is a deterrent against aggression. Had we evidenced that willingness in early 1950, the Communists never would have attacked South Korea. They thought we would not fight to save it.

Furthermore, the show of force deterrent is an age-old device of European diplomacy. Britain and France did not hesitate to use it when they held power. Today we, not they, have the power and are looked to for preservation of the peace. Europe's reported shock at hearing we have employed the weapon of deterrence seems something less than a realistic response.

In standing behind Dulles as the best Secretary of State he has ever known, President Eisenhower pinned his defense on policy grounds, not Dulles' words. He stressed that America must stand firm in its program for waging peace with justice. If that be interpreted as standing at the brink, he said, then that is because other nations are creating the circumstances that produce the perilous situation.

After all, Dulles did not create the crises in Korea, Indochina, and Matsu-Quemoy. He did not lead us to the brink just to see how close we could get to war. He was concerned to avoid it, but he was convinced the way to do that was to let the enemy know exactly what he could expect from us.

It is not what Dulles has done but what he said that has brought him fresh difficulty. His choice of language has alarmed a good many. But his policy of deterrence should shock no friend of freedom. It has worked where negotiation, or silence, has failed and let us into war.

Dulles' Policy Doesn't Faze Reds

EXTENSION OF REMARKS
OF
HON. JAMES G. POLK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1956

Mr. POLK. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I wish to call public attention to the following article appearing in the Washington Merry-Go-Round by Drew Pearson:

[From the Washington Post and Times Herald of January 24, 1956]

DULLES' POLICY DOESN'T FAZE REDS

Most important question raised by all the hullabaloo over the John Foster Dulles brink-of-war statement is whether the United States is drifting into war, or can keep the peace.

All other questions are unimportant. The political feuding between Democrats and Republicans aroused by the Life magazine article doesn't amount to a hill of beans. Only important is the question of war and peace.

So let's take a careful look at the Dulles-Eisenhower score.

Before doing so, however, it might be well to recall that during the Hoover administration, when the world first started its downhill drift toward war, an internationally minded Republican Secretary of State, Henry L. Stimson, did his best to warn the United States and his own President that aggressors were on the march in Asia and that this might lead toward war.

Stimson saw the landing of the Japanese Army in Manchuria September 18, 1931, as the first sign of eventual world war and he tried to do exactly what Dulles says he's doing now—take a firm stand which would prevent war. Stimson wanted the fleet mobilized, approached the Canadian, Mexican, and Chilean Governments for use of bases along their coast, was ready to use the threat of force to stop the Japanese warlords.

But his President, Herbert Hoover, was opposed. So were strong isolationist elements within the Republican Party.

FIRMNESS ESSENTIAL

History showed that Stimson was right, just as Dulles is right in his basic theory that

war can be prevented if the United States takes a firm position and makes that position clearly known in advance.

However, the position must be so clear as to be completely unequivocal. There can be no vacillation.

When it came to Indochina, the Eisenhower administration vacillated all over the place, which was why we lost Indochina. It was not a "save," as Life magazine and Dulles so glibly put it. It was a tragic loss—largely because Vice President NIXON said we would use troops, Mr. Eisenhower said we would not use troops. Dulles said one thing one week and another the next, and no one could get together. Result: The Chinese Reds, knowing how confused we were, kept right on advancing.

That, however, is history. Let's look at the future.

Life magazine and Dulles also claim that war was avoided against Quemoy and Matsu as a result of the Dulles policy of boldness.

WAS DULLES BOLD?

However, it happens the Red Chinese have been building air strips and massing troops opposite Quemoy and Matsu for some time and, despite Dulles' boldness, war certainly has not yet been avoided. On the contrary, three high United States officials have just visited this area, obviously worried about war—Secretary of the Air Force Donald A. Quarles, Chairman of the Joint Chiefs of Staff Adm. Arthur W. Radford, and Air Chief of Staff Nathan F. Twining.

Now just what is the reason for the apparent Chinese disdain for Dulles' policy of boldness?

The answer is the same as in the case of Indochina: United States indecision and vacillation.

Here, despite the Life interview, are the inside facts as to what really happened.

On September 12, 1954, the National Security Council flew to Denver for an unprecedented meeting with the President in which it urged that a definite policy of boldness be adopted toward Quemoy and Matsu, and that authorization be given to bomb the Chinese mainland in case the Red Chinese attacked.

President Eisenhower, however, refused to buy this policy.

Dulles, referring to the policy of risking war around Formosa and Korea, stated in Life: "It took a lot more courage for the President than for me. His was the ultimate decision. * * * The President never flinched for a minute on any of these decisions. He came up taut."

That, however, was not what happened. Weeks passed, then months. No decision came from the White House. Meanwhile the National Security Council kept Quemoy-Matsu up in the air. Eventually this indecision was noted in the American press, the first exclusive facts being published by Chalmers Roberts of the Washington Post and Times Herald on November 8, 1954.

REDS KNEW SCORE

Long before this, however, our indecision had leaked to the Chinese Reds as a result of the many high United States officials forced to fly to Formosa to break the bad news and try to pacify Chiang Kai-shek.

Dulles himself at one time flew to Formosa to try to persuade Chiang to withdraw from the difficult-to-defend Quemoy-Matsu Islands. But he did not mention this in his Life interview.

However, the Chinese Reds knew about his attempt, for on Formosa information leaks like a sieve. So the Reds kept right on building airstrips and concentrating troops opposite Quemoy and Matsu regardless of the alleged Dulles policy of boldness.

Three months later, January 1955, Mr. Eisenhower asked for a special resolution from Congress giving him power to retaliate on the Chinese mainland, even with atomic bombs, if the Red Chinese attacked "Formosa and the Pescadores * * * this authority to include the securing and protection of such related positions and territories of that area now in friendly hands."

But even here, there was no clear-cut decision regarding Quemoy and Matsu. Dulles himself drafted the resolution which the Congress adopted. And, despite his policy of boldness, he left the resolution vague. He did not mention Quemoy and Matsu.

Perhaps that's why the Red Chinese have gone on building bases and hauling up artillery opposite Quemoy and Matsu. Obviously, they intend to test out the Dulles' policy.

And the inescapable fact about the Dulles' policy is that it will not work unless it's clear and unequivocal. It will work when it's really bold. But it won't work when backed up by vacillation, indecision, and phony boldness.

Unfortunately the present indecision over Quemoy-Matsu could plunge us into war.

For on the United States commanders who flash back first news of a Quemoy-Matsu attack will depend whether the United States unleashes the atomic bomb on the Chinese mainland, a bomb which in any event would turn millions of Asians against us and which could touch off world war III.

Jack Carley

EXTENSION OF REMARKS
OF
HON. CLIFFORD DAVIS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1956

Mr. DAVIS of Tennessee. Mr. Speaker, Jack Carley has been a member of the editorial staff of the Commercial Appeal since 1923.

Prior to that he had worked on newspapers in Winnipeg, Montreal, Los Angeles, and Chicago.

His service on the Commercial Appeal has included that of police reporter, night city editor, city editor, managing editor and editorial writer—a post he has held since 1939.

Mr. Carley's chief interests as a newspaperman have been in the fields of flood control which is so essential to this particular area, and to the national security in all phases but especially that of internal safety and law enforcement.

He has been a visiting instructor at the Federal Bureau of Investigation's National Academy at Washington since 1942 and in 1940 was given one of that agency's extremely rare certificates of appreciation for helpful assistance to the FBI.

His civic activities include membership on the Memphis and Shelby County Port Commission which is supervising development of a gigantic harbor project.

His editorials advocating a two-ocean navy, compulsory military service, and strategic outlying bases in 1939 led to national award to the Commercial Appeal of the American Legion's Stephen F. Chadwick trophy.

In 1947, Memphis Post, No. 1, of the American Legion designated him as the first recipient of the James W. Bodley memorial award. It was given to Mr. Carley because of a series of informative editorials on communism published in the Commercial Appeal in 1946 and subsequently published in a pamphlet called Listen Closely.

In 1954 the Department of the Army gave him a certificate of appreciation for patriotic civilian service. The accompanying citation set out that the award was made for (a) more than a quarter of a century of untiring efforts in the furtherance of flood control and navigational improvements on the Mississippi River; (b) assistance to the Army and its Corps of Engineers during Mississippi River floods; (c) service as a special assistant to the War Department at Washington in 1946; (d) support and service to Army Ground Forces, at home and abroad, during World War II; (e) splendid cooperation in connection with the atomic bomb project and the interest shown in the maintenance of security prior to the use of the bomb; (f) assistance as a special civilian aide to Lt. Gen. Lewis A. Pick, Chief of Engineers at Omaha during the disastrous Missouri Basin flood of 1952; (g) work in behalf of a unified authority in the Military Establishment.

On November last before a large audience of veterans of all wars and their friends which overflowed the banquet room of the Peabody Hotel in Memphis, Mr. Carley delivered a most profound address.

Under leave to extend my remarks I have the honor to include it in the RECORD.

The address follows:

A DAY OF REMEMBRANCE

Veterans Day—this anniversary which we once knew as Armistice Day—is essentially one for dear and sacred remembrance. If less than that, its real significance has been lost and it becomes meaningless.

It is a day of remembrance on which we recall the valor and the sacrifices of other years and great trials—of national tribulation and the tremendous striving of our country's men and women at arms.

It is a day when the dead of our wars become a little dearer and nearer to us—when they march with us—aye, when they speak to us again—admonishing—warning—inspiring.

Admonishing us not to let slip from memory, the ineffable quality of their devotion; warning us not to be misled and deceived by the blandishments and the guile of our enemy; inspiring us to rededicate ourselves to the causes of human freedom and man's dignity for which they died.

Theirs is a mighty, triumphant voice—this one in which they speak to us—adjuring us to be strong as they were strong—brave as they were brave—determined as they were determined that the assaults which were made against the soul of man and the fortresses of his freedom should not succeed.

This is no mean and sad occasion which brings us here. Rather is this day of remembrance a glorious day—a day of reassociation—of recollection—of story telling between old comrades—almost a shouting day of evangelical reaffirmation of our Father's faith. That, at least, is the way that I hope we who are here, together for a little while, can see it.

Those who are with us in the spirit are many. Their ranks reach from the Concord Road and Lexington to the beaches of the Pacific and the rugged, bloodstained hills of Korea. There are nearly 1 million of them—the dead of our wars. It is they who speak to us—77,000 of the Revolutionary War's first American Armed Forces; 30,000 of the War of 1812; 14,445 of the War with Mexico; 359,528

Federal dead of the Civil War, and 129,159 Confederate dead; 6,472 of the War with Spain; 173,374 of World War I; 406,828 of World War II; 33,417 of the Korean war.

There are others—the hundreds of others who died in the Indian Wars—the thousands who have died in service from one cause or another on the long road stretching from the Republic's birth to the present.

I have made no distinction between the battle dead and those who died from other causes while wearing the uniforms of their country's Armed Forces. No man or woman is mean or less significant than another if death comes honorably while he or she is so clad.

Nor is mention of them here a thing macabre or melancholy. These were the keepers of the faith. These were our comrades and it is of the faith they kept that I would speak a little. We have need of it.

There are certain beliefs which are fundamental to this Nation and a way of life which, God willing, we will not only protect but improve that we may deliver it into the hands of our children an even greater and more precious heritage.

The desire for justice has been defined as the eternal rock from which a righteous social order is erected. From the desire for justice comes law and from law comes order and social and economic progress.

It was the desire for justice and in pursuance of man's greatest aspiration, that of being free, which caused the members of the Mayflower Company to seek sanctuary in a wilderness.

It was they who laid the cornerstone in this citadel of freedom—the cornerstone of the Nation which was to be and is, and will, please God, forever be so long as men continue to cherish freedom.

When those Pilgrim seekers for freedom were nearing what was to become New England, they drew up an agreement through which majority rule was to prevail. The first words they wrote into that document were:

"IN THE NAME OF GOD, AMEN"

That was the keystone of this Nation—of this way of life which the atheistic and criminal conspiracy of communism and its handmaiden, secularism—materialism—threaten.

All of us remember this:

"When in the course of human events it becomes necessary for one people * * * to assume the separate and equal station to which the laws of Nature and Nature's God entitle them."

There again is acknowledgement of Divine authority. At another time—when the Constitutional Convention at Philadelphia threatened to break up in a brawl, one delegate suggested that the convention pray. Another objected on the ground that this would inject "outside influence."

Benjamin Franklin got to his feet with this rejoiner:

"I have lived, sir, a long time, and the longer I live the more convincing proofs I see of this truth—that God governs in the affairs of men. And if a sparrow cannot fall to the ground without His notice, is it possible that an empire can rise without His aid?"

Thereupon Washington led the convention prayer and when he had finished, turned quietly to the delegates and said "The event is in the hand of God."

And out of the hand of God came the greatest and best pattern for the governing of a decent society—the Constitution of the United States.

Soon after the event which this day originally commemorated, members of our Armed Forces met in a convention at Paris and designed the veterans organization which we know as the American Legion. And why did they associate themselves: They said it very simply:

"FOR GOD AND COUNTRY"

I do not mention the Legion to the exclusion of all other fine veterans organizations. Far be it because the same spirit motivates them. Why are we here this noon? As Americans need we be—are we ashamed to say the words:

"For God and country"?

I have emphasized the two deliberately for both are under terrible, continuing assault. All that you have fought for, all that those we remember, died for, is under sinister, insidious attack from without and within.

The God we acknowledge is defied and His name defiled.

The Constitution of the United States is being distorted and used as a cloak of protection by our infiltrating and subverting internal enemies and their pseudoliberal friends.

In the name of civil liberties and through the distortions of civil rights we deny to our security agencies legal use of scientific instruments upon which the enemy within, the subverter, the spy and the saboteur rely to carry on their treasonable and destructive activities.

It is wrong, say the legal experts, for the FBI to take stolen secret documents out of the handbag of a traitorous Judith Coplon when it lacks a search warrant's right of entry but it isn't wrong, say other legal experts, to plant a secret microphone in a room where a Federal trial jury is deliberating and then use the results publicly as was recently, shockingly done.

It is wrong for the FBI to tap the wires into a grief-stricken home from which a Bobby Greenlease has been taken and murdered but the same wires are used by the kidnaper-murderer to make his loathsome ransom demand of the parent.

You must not get proof that a Communist conspiracy exists or that Communists, subverters and espionage agents are plotting if you intend to do it with listening devices and try to go into court with your recorded proof.

Every effort of Attorneys General of the United States to obtain passage of a wiretapping statute which would permit use of wiretapped evidence in cases of crimes against the Nation and that of kidnaping has been blocked by groups either naive or deliberately obstructive.

"Don't give the security agencies a break—give it to the internal enemies and the criminals." That almost seems to be a philosophy and a slogan with those carrying an oversized, preposterous banner of self-interpreted civil rights.

Now they are using a new avenue of attack—deny to the Government—to the FBI, the CIA and the Intelligence Services of the Armed Forces, right to use the services of loyal, patriotic Americans.

On these they pin the bitter name of "informant" and they would classify all alike—the patriot and the criminal informant we know—as the "stool pigeon."

Build a wall of pseudo civil rights around the traitors and their fellow travelling friends—deny to the Government information which can come only from honest, loyal citizens and what is there left to protect us?

What are the security agencies expected to use—crystal balls, soothsayers and fortune tellers?

How stupid are we going to be?

No wonder Communism can swap a frown for a smile, no wonder a false dawn envelopes the earth. All that communism has to do is wait—wait for the termites to cut the foundations of our citadel away with the very tools which are supposed to be our strength.

The Communist Party actually has a brief before the United States Supreme Court in which it is argued that the Internal Security Act of 1950 should be held invalid because it violates their Constitutional rights. The Communists are supported by a petition of a large group of American ministers, eduactors and writers.

For pure gall that would be hard to beat.

I said that communism can afford to adopt its present sweetness and light pose. I want to read you three excerpts. The first is this:

"The Communist International has declared war upon the whole bourgeois world * * *" (capitalist.)

"Every party wishing to belong to the Communist International is obligated to offer unqualified support to every Soviet republic in its struggle against the counter-revolutionary forces. The Communist parties must carry on a cleancut propaganda for the hindering of the transportation of munitions of war to the enemies of the Soviet Republic; and, furthermore, they must use all means, legal or illegal, to carry propaganda, etc., among the troops sent to throttle the workers' republic." The third and final excerpt is this:

"The duty of spreading Communist ideas includes the special obligation to carry on a vigorous and systematic propaganda in the army. Where this agitation is forbidden by laws of exception it is to be carried on illegally. Renunciation of such activities would be the same as treason to revolutionary duty and would be incompatible with membership in the third international."

The Communist Party of the United States—the same party which dares go into the Supreme Court and ask that the country's chief security statute be set aside as violative of Communist civil rights subscribed to the quoted conditions I have just read to you.

Those are taken from the theses and statutes of the third international and are communism's basic law. They were adopted in 1920.

They were reaffirmed just this week.

They explain why, back in 1928, this sentence was written into the platform of the Communist Party: "Not a man, not a gun, not a cent for the imperialist army and navy." Of course, today they would include the air force.

"Let's be a little careful, all of us here, how we use the word "brass" in ridicule; how we join in the clamor against Armed Forces spending, how we lend our support to agitation for reductions in strength.

Sure taxes are high. Nothing ever worth having ever came easily or cheaply.

And we've got freedom, haven't we? Personally, I prefer freedom to a slave-labor camp. I went into Dachau behind the 42d and 45th Divisions and I saw Nordhausen and Landsberg with General Lear. No thank you. I'll pay the taxes and be glad to have the privilege.

At the beginning I told you of the Mayflower Compact and of those who came "in the name of God" to lay the foundation stone of our liberties. I told you that theirs was a compact whereby the minority agreed to abide by the will of the majority.

Sometimes I wonder if the reverse hasn't become true—that the majority are submitting to the capricious wills of pressure minorities.

Our trained manpower situation is a case in point. Three times within 33 years the United States had to resort to hasty and unsatisfactory draft processes because of refusal by successive Congresses to adopt a compulsory military training program even though equally successive public opinion polls showed the majority of the people to be in favor of it.

We are only a little further ahead now than we were when we had to meet the manpower demands of World Wars I and II and the Korean war.

Instead of compulsory Armed Forces training we now have the expediency of a makeshift Reserve program. It is better than nothing but far short of what every veterans' organization and all of the Armed Forces have been advocating.

Russia has compulsory training. Britain has it and so do France and Switzerland and most other alert nations. And they dare look reality in the face. They dare call it what it is—conscription.

It boils down to this—trained manpower means the difference between the quick and the dead—just that—for the individual and the Nation alike.

But the pressure minority which has succeeded in defeating every universal military training recommendation won't be found among the fighting dead—not if it can help it.

Indeed, is this a day of remembrance—of remembering more than 35 years of futile striving for that which commonsense dictates we should have—a great pool of trained manpower in being rather than in a general staff's plans cabinet.

No; we do not have universal military training and we do have a national crime picture which is a shocking national disgrace. Serious crimes have increased 62.7 percent while the population has increased only 21.3 percent. The FBI estimates that the next decade will witness a 22 percent increase in crime over present levels. Last year, more than 2 million major crimes were committed, while there were 18½ million lesser offenses.

Last year an estimated 519,000 children, aged 10 through 17 were arrested, or 1 out of every 38 boys and girls in this age group. Commenting on this terrifying picture, FBI Director Hoover says:

"The juvenile jungle has resulted from insufficient spiritual and moral training. Until youth learns to know, respect, and obey the teachings of Almighty God, we can never expect them to obey civil law or the laws of society. The crime problem is essentially a youth problem. Law enforcement and the entire community must concentrate more and more on the problem of the juvenile."

No; we do not have universal military training but we do have the world's worst crime rate and nearly 1 million juvenile delinquents. We do not claim that universal military training would be a cure-all because it wouldn't but it would provide the element of discipline so essential to a progressive, prosperous society. And all of us here know that there is no greater refining agent in the world than that represented by the Armed Forces wherein the men are separated from the boys and the gold and the dross revealed.

Lest you get the idea that I am melancholy and doleful, let me say emphatically that I am not. I believe in the goodness of God. I believe in the greatness of the American people and I believe that this Nation has a God-given destiny. It is just that I wish we would choose to follow the commonsense highways to that destiny and so be spared the agonies of repetitious crucifixions born of our unpreparedness, our forgetfulness, and our downright apathy.

Far from being fearful or doleful I believe with all my heart that if we seek our destiny with unity, courage, and morality we shall survive, come all the world or all the evils of darkness against us.

Fearing is completely out of national character. Lets have none of it.

Look back a little way on this day of remembrance. Look back only a little way to the empire builders who wrote a compact on the *Mayflower* and to those who came after.

Their tools were simple—the axe and the hammer.

With them they cleared the forests, bridged the streams, built cabins and churches and schools, worked hard, played hard, fought hard.

They stuck a primer in their back pocket, put a Bible under one arm and a rifle under the other.

With those tools they transformed a wilderness into this paradise of freedom.

Sometimes it seems almost that we into whose hands the task of guarding the national heritage has passed have forgotten both God and the rifle.

We need both.

And we need to recapture our Fathers' tremendous, dynamic faith. Faith in God's all-encompassing goodness—faith in the dignity of man—faith in this Nation so truly blessed—faith in our own ability to preserve our way of life for those who come after.

All of us were very little boys and girls once. I wonder if your mother taught you, as mine did me, a little bedtime prayer that went—

"Now I lay me down to sleep, I pray Thee
Lord my soul to keep.
If I should die before I wake, I pray Thee
Lord my soul to take."

During the Battle of Britain, a friend of mine, the late Dr. Merrick Fiefield McCarthy, a poet-professor of medicine at the University of Cincinnati rewrote it, called it the British Childrens' Prayer. It went like this—a most proper expression, I believe, of our determination to keep faith with those we have remembered today—the silent ones who are round about us:

"'Now I lay me down to sleep,
I pray Thee Lord my soul to keep!"
If this night's sleep should end in rest
That is forever, keep me blest
Within Thy mercy! May I be
Child of Thy kingdom, safe and free.

"If I should wake within the night
To see the sky all red with light—
And hear the rooftops of the town
With our own walls come tumbling down—
May I not fear, O Lord, to die.

"'If I should die before I wake
I pray Thee, Lord, my soul to take!'
But should I live the long night through,
When I arise my work to do,
May I with courage seek to be
Not safe, O Lord, not safe
But free!"

Ten Years of the Polish "People's" Republic

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following pamphlet written by Dr. Richard F. Staar, professor of political science, Harding College, Searcy, Ark., in which he discusses what has been going on in Poland under the Communist regime over the past 10 years:

TEN YEARS OF THE POLISH "PEOPLE'S" REPUBLIC

(By Richard F. Staar)

No more chillingly clear picture of the Soviet pattern for gaining control of a country is available than that of Poland—a country which has been transformed, in the space of 10 years, from a vigorously free nation to a completely Communist-controlled satellite. This transformation has been carried out in two stages which can be roughly designated as (1) the period, 1944–48, when pretended support of nationalistic ambitions covered the gradual elimination of all opponents of Communist power, and (2) the period up to the present, in which the foundatitons of socialism were carefully laid.

Communist control over Poland is openly avowed, with the theory of people's democracy merely a convenient rationalization for the masses. The political structure of the country is actually based upon the U. S. S. R. prototype, while the limited retention of certain traditional terminology serves as a semantic smokescreen.

The Soviet pattern was perhaps most tangibly portrayed through the adoption of a Stalinist-type constitution which very closely resembles the 1936 basic law of the U. S. S. R. This similarly extends to the incorporation of whole passages from the latter into the Polish constitution. The 1952 basic law of Poland comprises merely a balance sheet of achievements thus far registered by that country's people's democracy and is essentially a description of the political, social, and economic structure of the state. It does not, however, elucidate the goals which the Communists expect to attain in the future. As such, the present constitution will most probably be replaced by another document, when and if socialism is officially proclaimed to have been achieved in Poland. This will certainly be done without the benefit of a national referendum or any other device for consulting the population.

In the two times that they have officially consulted public opinion to date, the Polish Communists have consistently refused to permit any freedom of expression—a freedom that was guaranteed by the Big Three at Yalta and subsequently reaffirmed at Potsdam. Since their nationwide campaign of terror and intimidation apparently could not produce desired results, the Communists resorted to falsification of the 1947 balloting for Deputies to the Polish Parliament. They also succeeded in destroying, by the end of that same year, the only legal and effectively organized political opposition—the Polish Peasant Party. Western democratic forms were discarded as no longer necessary in 1952, and the electorate was provided with no alternative to the single list of candidates offered by the Communist-dominated people's front.

Having provided themselves with a rubber-stamp parliament, the Communists have been able increasingly to implement their national policies with little regard for public opinion since Peasant Party leader Stanislaw Mikolajczyk fled Poland, in late 1947. The initial agricultural program of fostering small private farms (and the distribution of 7 million hectares of land to poor peasants) has given way to a progressively intensified collectivization drive. Despite a combination of considerable pressure and various inducements on the part of the regime, approximately only 250,000 of the three-million-odd peasant proprietors have joined collective farms over the past 6 years. (This is the official Communist figure.) It would thus seem that many more years will pass before total collectivization can be achieved in Poland at this rate.

Industry, on the other hand, has been completely nationalized on the medium- and large-scale levels. Commencing with the end of World War II, this process of nationalization has almost totally encompassed the small entrepreneur after 10 years. Capital investment is being allocated priority over consumer production, and financial assistance from the U. S. S. R. is relied upon for a successful conclusion of the current 6-year economic plan. Substantial increases in the production of all commodities and raw materials are expected by the end of 1955. The planned economy of Poland has also involved currency manipulations, which have so far twice wiped out the savings of the population.

Although the Communist program in the sphere of social work has officially equal-

ized the status of women with that of men, the former are expected to work in factories as well as to bear children for the state. By the end of the Six Year Plan (1950–55), it is expected that almost two million women will be employed in industry. Regimentation of labor in general has been introduced through the medium of the state-controlled trade union organization and by means of a series of laws. Communist-directed mass organizations have as their task the influencing of the remaining population. Most of these social groups are linked in one way or another with similar movements in other orbit countries and also with world-wide Communist organizations.

In the field of foreign affairs, Poland can hardly claim to have a policy of its own. The regime in Warsaw is a puppet of the Kremlin and, as such, loyally supports the latter. Apart from acting as a mouthpiece for the Soviets in world affairs, the Polish Communists may possibly exercise a small degree of independence in their relations with other satellite states in Eastern Europe and the Balkans. The economic aspects of these relations, however, are controlled by the Soviet-sponsored Council of Mutual Economic Assistance. On the political side, a similar role may be played by the Communist Information Bureau (Cominform). The puppets in Warsaw most probably realize that their position can be maintained only with U. S. S. R. support. A series of strategic treaties binds all satellites separately to one another and each state individually to Moscow.

Apart from these treaty obligations, Poland's defense policies are controlled by Soviet officers who fill all key positions in that country's military establishment. Here again, regulations for the armed forces are copied verbatim from the U. S. S. R., and an intensive program of Communist political education follows Soviet lines with regard to officers and enlisted men alike. This training is probably aimed at producing a military establishment that can eventually be integrated with the Soviet Army. Whether Polish troops would fight loyally on the side of their Soviet and satellite allies, in case of a war with the West, is open to question.

For all practical purposes, there is only one political party in the Poland of 1955. This Communist group is called the Polish United Workers' Party (PZPR) and is organized along the same lines as its counterpart, the Communist Party of the Soviet Union. The rapid growth in size of the Polish Communist movement during the postwar period is actually one of the PZPR's principal weaknesses. It indicates that at the most 1.5 percent of the membership is relatively trustworthy, having belonged to the Communist movement before 1944 when the party was illegal. Apparently aware of this, PZPR authorities purged almost 400,000 members between January 1949 and June 1952.

Another weakness is presented by the party's social composition. Despite a widely publicized drive to improve the latter, the number of industrial workers has been constantly decreasing since the end of 1948. On the other hand, the ranks of mental workers (intellectuals) within the PZPR were steadily growing until the latter part of 1950. A decrease, similar to that for industrial workers, has also been noticeable with reference to the peasantry. Over two-thirds of the latter, who hold membership in the party, have been recruited from the middle and rich—indicating the relatively weak support of communism by the poor peasants. It is also significant that only a little over one-half of the peasant Communists, living in the vicinity of collective farms in early 1953, were actually members of these "kolkhozes."

Yet another deficiency of the Polish United Workers' Party is to be found in the fact that most of its officials in the primary party organizations are intellectuals or industrial workers not engaged in production. In such capacities, they are unable to influence effectively the output of mines or factories.

Party operations consequently suffer from what is known as "bureaucratic formalism." Some of these deficiencies may be offset, to a certain extent, by the activities of the party's auxiliary youth movements.

The principal one among these is the voluntary Union of Polish Youth (ZMP), patterned after the "Komsomol" organization in the Soviet Union. Representing a key to higher education, professional advancement, better paying positions, etc., the ZMP has been able to enlist within its ranks only less than one-fourth of all eligible youth. The Union of Polish Youth itself in turn provides the leadership for a different youth organization, operated by the Communist government.

This other youth movement is organized along paramilitary lines and is known as the "Service to Poland" (SP). Membership here is compulsory for all boys and girls between the ages of 16 and 21. It has been admitted by the organization's chief commandant that ideological indoctrination of SP trainees is much more important than the auxiliary labor force which they provide. The political education of all youth through the SP would indeed seem to represent the principal objective of the Warsaw regime, since the Union of Polish Youth embraces only a fraction of that age group.

Besides the youth movements, the Polish United Workers' Party also directs two quasi-political organizations which were established for definite social segments of the adult population. These are the United Peasant and the Democratic Parties. Both have representation in the Parliament and in the Government, but it is disproportionately small in comparison with the strata of society whose interests they allegedly protect.

Directed by the Communists, these two parties have received specific assignments in the regime's drive to collectivize the peasantry and to socialize all remaining private enterprise, respectively. When these objectives will have been attained, or perhaps even prior to that time, it is probable that these two subsidiary political groupings will pass resolutions dissolving themselves. Strictly controlled, as they have been over the past few years, these parties present no danger to the Communist power position.

Actually, the only organization in the Poland of 1955 which could successfully compete with the regime for the allegiance of the population is the Roman Catholic Church. In order to eliminate any such potential threat, the Polish Communists have been employing a variety of means—with some success—to destroy the prestige of the church and to transform that body into a Government-directed group, sensitive to Communist orders.

The church itself, although its nominal adherents number almost 98 percent of the total population, is far from the tightly organized center of resistance to communization that it could have become at one time in the recent past. The maneuverings of the Communist regime have placed the church increasingly on the defensive. As the result of a Government decree on filling ecclesiastical positions, the Communists now have, in effect, a veto power over all church appointments.

At the time of this writing (early 1955), the Roman Catholic Church is making a concerted attempt to convince the Communist authorities that the latter should abide by the terms of their previous, more conciliatory church-state agreement (April 1950). On the basis of past performance, there would seem to be little hope that the regime will honor the obligations it entered into at that time.

Gain or Loss?—What Can We Expect From the New Session of Congress?

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1956

Mrs. ST. GEORGE. Mr. Speaker, the following article, appearing in the Independent Woman of January 1956, explains why so many thinking, progressive women are opposed to a lower retirement age for women than for men.

As one who has long fought for equality, and who has opposed special privileges, I am especially pleased that the Federation of Business and Professional Women are standing firmly for progress and equality.

The article is as follows:

GAIN OR LOSS?—WHAT CAN WE EXPECT FROM THE NEW SESSION OF CONGRESS?

(By Isabella J. Jones)

As it looks now, the problems most likely to obtain legislative action during the 2d session of the 84th Congress, convening January 3, 1956, are disarmament, education, health and medical research, highways, housing, and Social Security Act amendments.

As business and professional women we have a major interest in each of these areas and should watch closely to see that our national interests, and our interests as women, are furthered and safeguarded by any legislation proposed and passed in these fields. Although there is frequent newspaper and other speculation on possibilities of various tax reductions during the 1956 session of Congress, this remains speculation.

We must, however, take a long, hard look at the very real possibility that the Senate will concur with the House to pass a bill amending the Social Security Act to lower the retirement age for women only. H. R. 7225, passed by the House in July 1955, which would lower the retirement age for women to 62, passed by a majority of 372 to 31. And it must be remembered that many of our staunchest advocates of the equal-rights amendment in the House of Representatives voted for the passage of this bill.

To have voted against it would have been to vote also against many provisions within the same bill that each of these Representatives believed desirable and even urgent.

How then, can we, as a federation, best make our position clear on a uniform retirement age for men and women to those Senators who will be studying the House-passed bill, and other similar bills, and later voting upon such legislation?

First, we must clearly understand, ourselves, why a uniform retirement age is important—important to us as women seeking the simple justice of legal equality—important to us as breadwinners, as homemakers, providers.

We simply cannot afford not to think this proposed age difference through to what it actually means to us.

If women may be expected to retire at an earlier age than men, they will be at a disadvantage in seeking employment or promotion, especially in their later years when their skills and experience will be discounted in favor of men who may be counted upon to stay longer at their posts. Recently, a high administration official, who is backing the bill generally, pointed out that lowering the retirement age for women only would be a reversal of the present trend toward extending employment to older women.

A difference in the legal retirement age for men and women negates the principle of

equality for women, both in law, and in custom. Such a difference would hold us back, perhaps for years, until this legislation was revoked, from obtaining either equal rights or equal pay. It would not only hold us back; it would set us back for years—wiping out many of the hard-won gains of our long, upward climb.

On June 27, 1955, as national chairman of legislation, I filed a letter in behalf of the federation with the chairmen of both the House Ways and Means, and the Senate Committees, expressing blanket opposition of the federation to any legislation lowering the retirement age for women only. Many such bills were before the committee at that time, and H. R. 7225 had not yet passed the House.

This stand is the only one compatible with our philosophy in regard to, and our legislative endorsement of, the equal rights amendment. We stand for actual, equal legal rights, without the so-called protective laws or special privileges, which are, in fact, special drawbacks, especially affecting and injuring us in times of unemployment, or when women are proposed for equal consideration with men for promotion in their jobs, or appointment or election to positions of high responsibility.

It is well known that a discrimination or difference that first gains acceptance on a voluntary basis quickly becomes in custom and in fact an arbitrary and binding straitjacket. There is no advantage that we can gain from any retirement age difference by sex; there is only great and accumulative disadvantage. Lowering of retirement age, for reasons of hardship, regardless of sex, and many other desirable amendments to the Social Security Act retirement provisions may be among the many proposals to be studied by the Senate Finance Committee, which has this legislation under its jurisdiction.

I sincerely hope that all our membership will give immediate study to this very immediate problem. We must make it clear to our Senators and Congressmen through letters and personal contacts that we are opposed to a difference in retirement age for men and women; we are not opposed to lowering of the retirement age of both men and women.

I hope to give you within the near future an encouraging report on the 1956 status of the equal rights amendment, and the outlook for the federation-approved equal pay bills.

Some Reflections on the Subject of Leadership

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1956

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Gen. Maxwell D. Taylor, Chief of Staff, United States Army, before The Citadel, Charleston, S. C., January 21, 1956.

SOME REFLECTIONS ON THE SUBJECT OF LEADERSHIP

(Address by Gen. Maxwell D. Taylor, Chief of Staff, U. S. Army, before The Citadel, Charleston, S. C., January 21, 1956)

In appearing before the student body of The Citadel, with its long military tradition, I have had no reluctance in choosing a military subject for discussion. I recognize in The Citadel a cradle of the military traditions of South Carolina—indeed, of the entire South. It is an honor for me to appear before you to discuss a subject which has always been dear to my heart, the subject of military leadership.

I think that most of us have acquired from our studies of history a great interest in the distinguished military names that appear on its pages. How many of us have looked on a portrait of General Lee and wondered about the qualities which he possessed, and speculated on the reasons for his great hold on his soldiers and his success in leading them on the battlefield? Similarly, the many legends clustered about the name of Napoleon create in most of us a deep curiosity over the nature of the man and the attributes which account for his success.

Leadership in the abstract is difficult to analyze and to define. Like electricity, it can be explained by its effects more easily than by a determination of its essential nature. The results of good military leadership can be assessed in terms of victories won, of the enemy destroyed, and of missions achieved. However, it is another matter to dissect the character of the leader responsible for these effects and to extract for inspection those characteristics which explain the results he achieved.

In my talk this morning, I am going to consider only American military leaders. There was a time when we looked only abroad for examples of military leadership, when the great captains worthy of study included few, if any, of our countrymen. American military leaders, somewhat like American tenors, have been slow to gain recognition at home.

However, since the Civil War, the world-wide reputation of American soldiers has steadily increased. Oddly enough, here at home we have been the last, perhaps, to recognize the worldwide reputation of American arms. Although we are quick to boast of the highest waterfalls, of the deepest canyons, of the most automobiles, and of the tallest skyscrapers, very few of us ever extend our chests and boast of the quality of American military leadership.

Yet the facts remain that American military leaders have far excelled the military feats of the greatest of foreign leaders. General Eisenhower liberated more territory than Caesar conquered. General Clark led to victory the troops of more foreign nations than Hannibal whom past history has recorded as the master of coalition warfare. Fourteen American generals in World War II had more troops under their command than were ever under the banners of Napoleon. The United States as a nation in World War II participated in campaigns which freed areas vaster in size and more widely dispersed than the conquests of any other nation in the world's history.

Are not the men who led these campaigns worthy of the attention previously lavished on foreign models? I would say yes, that we are justified in turning to American examples for case studies in military leadership. There is the added advantage that at the same time we will be studying American troops, and probing the military characteristics of our own people.

There are a great many fallacies expressed about leadership. For example, it is said that military leaders are born and not made. I do not believe that for a moment. Our entire Army school system is a testimonial to our belief that leadership can be taught, and the success of its officer graduates testifies to the fact that it has been taught. This school system begins at West Point, extends through the many service schools teaching the techniques of the arms and services, and culminates in the Army War College and the National War College, designed to cultivate the minds of the future senior leaders of the military service. It was this school system which developed our leaders during the lean years between World Wars I and II, when the Army had few units to command and little opportunity to gain tactical experience in leadership.

Another fallacy which one encounters is that leadership expresses itself in some mysterious way through flashes of genius. One hears of the intuitive genius of Napoleon which led to the concept of the maneuver of Austerlitz. One hears of the marvelous insight of Wellington in picking the moment to order, "Up guards, and at them" for the decisive counterattack of Waterloo. I believe that a careful analysis of such situations will reveal no stroke of revelation. The good general does not await a bright light, like that which appeared to Saul on the way to Damascus, to obtain a vision of the road to victory. If he has not behind him a lifetime of professional study, if he has not brought to this campaign diligent preparation, careful anticipation of all possibilities, and a body of men believing in him as their leader, it is most improbable that he will receive a stroke of genius to bail him out in a crisis.

We hear sometimes that special gadgets or special formations—tricks, as it were—are responsible for successful leadership in battle. One reads of the magic of the double envelopment at Cannae as explaining the great success of Hannibal in annihilating the Romans. The military as well as laymen are taken in. The German strategists adopted the cult of the double envelopment before World War I and made it a fetish of their military doctrine. Similarly, the Theban phalanx of Epaminondas or the oblique order of attack of Frederick the Great are sometimes cited as examples of military formations with an intrinsic capability of assuring success. I believe that an analysis of these examples would reveal that success depended on different and more important things.

Putting aside these fallacies and related considerations of what leadership is not, let us take a positive approach and see if it is possible to agree on certain attributes which appear present in men who have evinced good leadership. If I were asked what were the most important characteristics of the great military leaders whom I have known, or have studied, I would be inclined to respond that these commanders all have had at least three characteristics in common. First, they had the gift of human understanding. Next, they were men outstanding for their obvious professional competence. And, finally, they were men of strong and independent character. Now, let me talk about each one of these characteristics in turn.

I would remind you that the American leader has rarely had the opportunity to command professional soldiers in time of war. If you look back on our history, you will see that Washington, Lee, Pershing, Eisenhower all built their armies from citizen soldiers. It has been the problem of providing leadership for the citizen soldier that has confronted every great leader in every one of our wars. Perhaps we should consider some of the characteristics of this civilian who in time of war must be converted into a soldier.

In the first place, he usually joins the Army either reluctantly or with considerable trepidation. He knows little about military life and what he has heard isn't good. Once in uniform he finds himself in a strange environment. He misses his family and his friends and feels alone among strangers. Surrounded by strange institutions and customs, he feels vaguely threatened by the unfamiliar present and even more by the uncertain future. His conception of war and battle has been distorted by misleading literature—in modern times, abetted by Hollywood. At such a troubled time, the citizen soldier needs someone in whom he can have confidence, someone who will build up the feeling that he is a protected human entity. That someone should be his military leader. If his commander does not have the capacity to fill this need, he will never get

the most from the recruit. I believe that, if you will read the pages of our history carefully, you will find that no American commander ever rose to greatness who did not have this capacity. They convinced their citizen soldiers that they put them first and prized them above all else. In other words, they have the gift of human understanding.

Few leaders in all history have had the wholehearted support of their men to the extent that the Army of Northern Virginia was devoted to their commander, Robert E. Lee. While much of this support can be attributed to the professional qualities of General Lee, a large measure of his success was due to the fact that the Army knew that General Lee did his best to provide for their welfare. He was loyal to them, and they were loyal to him. When he ordered them to dig entrenchments—work which all soldiers hate—they knew that the work was necessary and was done to protect their lives. They knew when he ordered them into battle that he had wisely planned so that they could succeed with minimum losses. Soldiers were not "cannon fodder" to General Lee. They were comrades associated in the common enterprise of defeating the enemy and serving a cause to which they were all devoted. Furthermore, his soldiers knew that this comradeship was no mere lip service, for General Lee lived just as simply as they. His table was no better their theirs and often worse. The gifts of food which he received from friends, General Lee would send to the hospitals for the wounded. The devotion which his conduct engendered in his men accounts more for his success, I believe, than the brilliance of his tactical maneuvers. General Lee enjoyed the gift of human understanding.

Our successful American leaders, through their gifts of understanding people, have demonstrated the art of welding individuals into units, where their separate strengths are multiplied as parts of a greater whole. From the time the citizen-soldier joins a unit, he must be made to feel that the unit is his home, that his fellow-soldiers are his comrades. This work of indoctrination must start from the first day of a man's service. That is the moment the alert commander will seize to convince the recruit that he is in the best outfit in the Army. He will learn its history and quickly come to feel that it is a great honor to belong to such an outfit. He will hear daily the theme: "You, the recruit, are joining a proved outfit which is glad to have you. It will look after you, but you must look after its reputation. Its past history has been paid for by the blood of the killed and wounded. It is up to you, the recruit, to live up to the record of these men who have made history."

Propaganda without substance will, of course, fail. The recruit must be able to verify in his daily living that the unit is as good as he has been told. The commander must show by his behavior that the "Old Man" is always on the job, that he sees that the rations come up in time, that the mail is never delivered late, and that he is always looking for better conditions so as to improve the lot of his men. If on all sides there is this common tie of service—of the commander serving his men, of the men serving the commander—this will be a unit truly formidable in battle.

After World War II, many studies were made to determine why men fight. Although many reasons were discovered, the outstanding one was simply this: A man fought and refused to run away because of his own self-respect and the attendant desire to retain the consideration of his comrades. Although I commanded a very proud division, the 101st Airborne, I always discovered in my conversations with my men that it was not the division's reputation particularly which stirred them to action. It was rather Baker Company, or Charlie Company, of some particular regiment, and the nexus of personal relationships between the men of the squad, of the platoon, and of the company.

I always talked to my recruits who joined this division, particularly anxious to discover why they had volunteered for parachute duty. I would go along the line talking to each man and asking why he had volunteered. Usually I got some chesty kind of reply, but on one occasion I received one which truly appealed to me. I asked this young parachutist did he like to jump out of airplanes. He came back quickly, "No, sir." Surprised, I asked, "Well, then, why did you volunteer to jump out of airplanes?" He said, "Sir, I like to be with men who do like to jump out of airplanes." I shook hands with him and said, "Soldier, that makes two of us." That response is a good answer to the question of why men fight. Men fight, not because they would not prefer to run away, but because they prefer even more the association of men who do like to fight.

A clinching evidence of the possession of human understanding on the part of a successful leader is his ability to treat men as individuals and not as Army serial numbers. American troops, in particular, resent any suggestion that they are without individuality, that they are ciphers, and not people. They want to be known for themselves and will resist any efforts to mold them into an anonymous pattern.

Every great soldier has succeeded in convincing his men that he knows and respects them as individuals. To accomplish this end he goes among his men, freely mingling with them and giving the soldiers a chance to look him over and size him up. An officer who barricades himself behind his rank is properly suspected of having weaknesses to conceal—probably more than he really has. The successful commander claims no infallibility and is not afraid to expose himself to close view. Instead, he is often seen among his men. He learns their surnames and calls them by name at every opportunity. It is said of Caesar that he never lacked a pleasant word for his soldiers. He remembered the face of anyone who had done a gallant deed and, when not in the presence of the enemy, joined his men in soldier games. Such human acts as these inspired his legionnaires with a devotion that went far to account for his success as a great captain.

A commander shows understanding of the kind we are discussing if he goes out of his way to explain the need of his orders and the reason for the actions required of his men. During the last war, most successful generals went to great pains in explaining their detailed plans in advance of asking troops to execute them. In our American landings in North Africa, Sicily, at Salerno, and in Normandy, commanders were most careful to brief their men thoroughly on what to expect and why. They remembered the words of General Von Steuben, who wrote back to Germany from America during the Revolution. "The genius of this American Nation is not the least to be compared with that of the Prussians, Austrians, or French. You say to your soldier, 'Do this' and he doeth it. But I am obliged to say, 'This is the reason why you ought to do that' and then he does it." This explaining of "why" to the troops goes beyond the need for an explanation of individual battles or campaigns. It should cover the entire question of, "Why we fight." Nothing keeps a man going in war like a strong belief in his cause. We need only recall the fervor which sustained the Southern States in the Civil War. It was the Confederate soldier's love of his cause that kept him going for 4 long years, when he was poorly equipped, seldom fed, and nearly always fighting against great odds. It was only when a similar spirit became common among the armies of the North that the tide of victory turned.

I think that this discussion of the need for human understanding as an element of successful leadership can be summed up by saying that it is the exercise of common sense in human relations. There are times to be stern; there are times to be lenient; there are times to be exacting; and there are times to be tolerant. This feeling for the right course of action to be taken with men appears, sometimes, to be instinctive in some leaders and often lacking in others. But it can be cultivated and developed by all.

The second of the trio of virtues of the successful leader is personal professional competence. The leader must know his business and the men must know that he knows. War is a terribly serious matter and our citizen-soldiers want their lives protected by experts. There may be the tendency to belittle the professional soldier in time of peace; but when war comes, our citizens want to feel that their destiny is in the hands of professionals. To become this professional, an officer must devote his life to constant study and self-improvement. He will need to prepare himself by study, by actual command of small units and, most importantly, by unending reflection on the exacting requirements of professional leadership in future war.

At West Point, I often tried to determine a relationship between cadet records and subsequent success in the Army. I would like to report that scholarship—that is, high class standing—accounts for success in the Army. I must report in all honesty that the record proves no such thing. An examination of the standing of successful World War II generals indicates that it is only a slight advantage to graduate in the upper half of the class rather than in the lower half. Even the very tail of the class—the immortal goats, as we call them—have contributed their part to American generalship. In Civil War times, George Custer and George Pickett were both last in their classes at West Point. Several of our most successful generals in World War II were in the lowest academic 10 percent. It took George Patton 5 years to complete the 4-year course.

I would say, however, that in examining the records of these outstanding individuals who had done poorly as cadets, there seems always to have been a factor present which, perhaps, accounts for their subsequent records. In most of the cases which I personally know, these officers were slow in starting but sure and steady in progress. They were men who never ceased to grow and expand. Their minds were constantly reaching out as their experience increased. I believe that the capacity and will to grow is a most important factor in postgraduate success and one difficult to evaluate in undergraduate days. Hence, it is dangerous to conclude too soon that a man has no aptitude for the military service. He may be a slow starter but one who gradually accelerates in moving toward his goal.

Even with the gifts of human understanding and of professional competence arising from careful training, our military leader will not be complete without the third attribute of greatness; namely, character—character which reflects inner strength and justified confidence in oneself. To give an impression of strength, a leader must consider his personal appearance, his physical condition, his tone of voice, his method of life—all of those things which give an impression of his character to those who follow him. This does not mean the development of an artificial personality. All of us have certain basic traits which are given us at birth. We all have a core of personality which cannot be tampered with but which

can be constantly developed. A facade of sham will not serve. If you would have your troops believe that you are strong, you must be strong. If you would teach them to be rugged, you must avoid the soft life yourself. If you would have your men be brave, you must yourself set an example of valor.

To bring the full force of his character to bear effectively upon his men, a leader must resort to every device of personal leadership. I have heard it said that the day is past in modern war when the leader can place himself in front of his men and inspire them to action in the tradition of the Civil War brigadiers who charged on foot or on horseback at the head of their men. I do not believe this for a moment. Personal leadership is still possible within limits, and within those limits it is the duty of the commander to supply it. General Doolittle electrified a discouraged allied world by his personal leadership when he flew his B–25 off the flight deck of the *Hornet* in the first retaliatory air attack on Japan. General Patton was a model to his officers and men by his personal intervention on the battlefield; there was no point on the front where he, an Army commander, did not go and show himself to his troops. Your own president, General Clark, was equally conspicuous in his personal intervention in battle and his appearance at the most perilous spot of the action.

Where a Patton impressed his character by dash and flamboyant gallantry, a Bradley was equally impressive in an entirely different way. I always remember General Bradleys final conference with his generals at Bristol in England before the takeoff for Normandy. He reviewed our plans for the campaign, conducted the tactical discussions himself, and displayed a surprisingly intimate knowledge of the proposed actions of the smallest units of his army. He gave a suggestion here and offered help there, and showed the entire gathering the extent of his personal competence as a high commander. When the meeting came to a close, he obviously felt that some words were needed to launch the greatest military enterprise in history. But General Bradley, great man that he is, is not an orator. He stood up before the gathering, clasped his hands behind his back, looked the group over, and gulped his adams apple. His eyes got a little damp as he looked about him; and then he said quietly, "Goodbye. Good luck." That was all. But his commanders went off determined to win a victory for Bradley in Normandy.

I have now discussed at some length the three qualities which I think all successful leaders have had and must have: human understanding, professional competence, and strength of character. What can the leader accomplish who develops all these attributes in felicitous combination

First and foremost, he can expect to get the best out of his troops. And American troops at their best are without equal. No foreign army can compare with ours when the latter is properly led. American soldiers have courage, physical vigor, initiative, and dash. All of these are rich talents which they bring and place at the disposal of the commander who knows how to unify them with the catalyst of true discipline. The discipline I mean is that which binds in fellowship—the kind which produces the willing and cheerful subordination of the individual to the success of the team. Do not confuse this kind of discipline with the external appearances of conventional discipline, the salute, the knock on the orderly room door, or the formula of deference to superiors—in short, military courtesy as it is prescribed in our field manuals. The latter has its place, particularly in a peacetime army. But they are not the indices of the discipline which really counts. The Army of northern Virginia would have rated very low in military discipline in this restricted sense. It would never have won a first line at a Citadel parade; but by its spirit, it won a place among the great fighting units of all times—alongside of Xenophon's Ten Thousand, Caesar's Tenth Legion, and Napoleon's Old Guard. American troops with their natural qualities, plus such discipline, are irresistible.

I would close this discussion by asking a question. Are the requirements of military leadership becoming more difficult in this changing period of warfare? And I would answer by saying: the requirements for character and human understanding have been with military leaders of every age and remain relatively constant. On the other hand, the requirements of professional competence become greater as our weapons systems become more complicated and as the possible combinations of military force become more greatly diversified.

With new advances in technology our leaders must learn more of the language of science. With a wider distribution of Army forces and interests about the world they must speak also the language of politics and diplomacy—never forgetting that they are soldiers. Thus, the attainment of professional competence is an ever-widening requirement. Hence it is that I look to civilian schools and colleges like the Citadel in the expectation that they will supplement our military-school system in providing the future leaders which the Nation will require. The Army of the future has a place for all talents, for those of the artisan, the businessman, the scientist, the scholar—yes, for the genius.

It is for this reason that I urge the adoption of a slogan reflecting the need for constantly improved military leadership. If we are to survive as a nation, we can afford only an Army which is an Army second to none, with leaders second to none. That is why I say our national slogan should be, "Let us put the best heads of America into the Army caps of tomorrow." I hope that some of these best heads in this audience of the Citadel will some day find themselves in the cap of the United States Army.

Thank you.

Acadian Bicentennial Year

EXTENSION OF REMARKS

OF

HON. EDWIN E. WILLIS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1956

Mr. WILLIS. Mr. Speaker, we of Louisiana feel very proud of the Acadian bicentennial celebration staged so successfully in our State during 1955. This year-long observance opened with special events at the New Orleans Sugar Bowl on New Year's Day and was climaxed with a brilliant finale in Longfellow-Evangeline State Park, certainly one of the most beautiful public parks in the country, at St. Martinville, my hometown. Here the talents of several hundred of their descendents were utilized in honoring the 200th anniversary of the migration of the Acadians to Louisiana from Nova Scotia, and large numbers of the State's outstanding musicians and dancers joined in the presentation of a most colorful folk festival.

The bicentennial year included a visit to Louisiana by a delegation from French Canada, a pilgrimage to the Mother Church of the Acadians at St. Martinville, and a reciprocal goodwill trip to Nova Scotia by a large party of prominent Louisianians.

Other events added to the great interest shared in the observance by thousands of visitors from throughout the United States and from abroad, who helped to make this the greatest statewide celebration in Louisiana's history.

We are grateful for the recognition given the bicentennial by Congress in adopting a concurrent resolution which I had the privilege of introducing in the House and which was sponsored in the Senate by United States Senators ALLEN J. ELLENDER and RUSSELL B. LONG, of Louisiana. A similar measure was offered in the House by Representative T. A. THOMPSON.

The concurrent resolution stated that "the Congress of the United States joins the people of Louisiana in commemorating the bicentennial anniversary of the migration of the Acadians from Nova Scotia to Louisiana and other areas, and pays tribute to their spirit of courage, perseverence, and loyalty that has inspired the Nation."

Appreciation to all who had a part in the program has been expressed by Dr. Thomas J. Arceneaux, president of the Acadian Bicentennial Celebration Association. In behalf of the executive committee and himself, Dr. Arceneaux, dean of the College of Agriculture at Southwestern Louisiana Institute, Lafayette, a State college which is doing much to preserve the French language and picturesque Acadian customs in that section, points out that national attention has been centered on the State and fitting honor has been paid to a people who have contributed so much to Louisiana.

Realists of the VFW

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1956

Mr. McCORMACK. Mr. Speaker, the commander in chief of the Veterans of Foreign Wars of the United States, Timothy J. Murphy, is one of our outstanding citizens and a valued friend of mine of years. He is serving this great American veterans' organization with great ability and outstanding tact, as well as courage.

I include with pleasure in my extension, an editorial relating to National Commander Murphy, Realists of the VFW, appearing in the Boston Post, of September 6, 1955.

REALISTS OF THE VFW

It isn't always possible to agree with all the resolutions the Veterans of Foreign Wars adopt in convention, but no American citizen can fail to admire the courage, the outspokenness, and the air of honest patriotism in which they are expressed.

These men, all of whom risked their lives to defend this country, are real believers in

the essential American system. They understand its fundamental meanings and freedoms which it insures. Having lived and fought under the iron discipline necessary in war, they appreciate the liberty which Americans exercise in peacetime.

They do not take this precious freedom for granted, either. They are alert to any threats, from within or without. And when there is even a hint of danger, they speak up boldly and with a loud voice. Because of their numbers and because of their background, they are heard with respect not only by the public but also by public officials. And there is no reason to doubt that their pronouncements are studied with care and respect in the Kremlin.

Their new national commander, Timothy J. Murphy of Milton, summed up for them in his inauguration address at the Boston convention. He promised that the VFW will remain alert, in the national interest, that they "will not be lulled by the present sweetness-and-light policy of international communism."

Mr. Murphy asked a question, in the course of the same speech. "Do you know," he asked his fellow veterans, "of any top Communist who has ever denied that the mission of communism is to destroy capitalism and achieve world conquest?"

That question has been asked before, of course. But it needs to be asked again and again. For most of the world is so desperately eager to have peace that we are apt to forget that the answer is still "No."

Because of the Russians' present "soft" policy, there is an unfortunate tendency to speak altogether too softly, as though perhaps bold honesty might do some damage. The time is now to discourage that kind of weakness.

The time is now for courageous realism in face of the Reds. The Veterans of Foreign Wars have always been courageous and realistic, too. Their organization is a great peacetime sentinel of Americanism.

Address by Hon. Leverett Saltonstall, of Massachusetts, at Salute-to-Eisenhower Banquet in Philadelphia

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 24, 1956

Mr. MARTIN of Pennsylvania. Mr. President, on last Friday evening, our very distinguished and able colleague from Massachusetts [Mr. SALTONSTALL] delivered an address at Philadelphia. I believe the address should be carefully read by all Members of the Senate. Therefore, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Philadelphia holds many happy memories for me—of friendships and hospitable homes, of winning 2 college-crew races in 1 day on the Schuylkill—but by far the most pleasant of all is my friendship and daily contact with your two fine Senators—ED. MARTIN and JIM DUFF. Serving first as a governor with ED MARTIN, I have worked with him over the years in Washington. Later JIM DUFF and I became friends when he was your governor. That friendship and respect for him have increased in Washington. You have two conscientious, hard-working men of integrity and experience in Government representing you in the United States Senate.

This is a great week for Boston and Philadelphia. First we celebrate the 250th anniversary of Benjamin Franklin's birth and now I have the pleasure of joining you in your salute to our great President—Dwight Eisenhower.

Boston was the birthplace of Benjamin Franklin; Philadelphia became his chosen place of home and business. I suppose, when every true American thinks of Philadelphia, he hears the Liberty Bell. How symbolic is that bell in the history of our country.

Back in Massachusetts there is a story that in the latter years of Benjamin Franklin's life, not long after the town of Franklin, Mass., was incorporated, its people wrote to your great citizen and said they were building a steeple for their townhall. They told him they would be honored if he would contribute the bell to be hung in that steeple. Franklin, who was abroad at the time, replied characteristically: "Sense is better than sound," he wrote. "I am sending you a gift of books from London."

I tell this little story not to minimize the proclamation of "liberty throughout the land and unto all its inhabitants thereof" that was made by the Liberty Bell, but, being a Massachusetts man, I take some pride in the fact that Benjamin Franklin, born in our city of Boston, placed sense—good Yankee commonsense—above the ringing sounds of a fine bell.

Tonight we are gathered together to salute another great American, as great in his day as Benjamin Franklin was in that vital period of our history between 1750 and 1800. We are gathered to pay our tribute to a man of action, of great commonsense, a man of character, integrity, and patriotism.

There is perhaps no citizen within our memory who, as a civilian and as a soldier, has served our country more faithfully or with greater effect. It has been the good fortune of few to equal his career as a soldier, a diplomatic administrator, and a statesman. It is the good fortune of few to qualify as his equal in the highest office of our land.

As a soldier he was the leader of the combined free forces in fighting Hitlerism. As a soldier and as a diplomat, he was the first Commander in Chief of NATO, organized to preserve the peace that had been won at such great sacrifice and to build up a greater security against a future world war.

Now as the President of our country, he has the responsibility not only of being the Chief Executive of the United States, but also of being the head of the country recognized as the leader of the forces of freedom as they seek greater peace in the world. Truly, today, as the President of the United States, chosen by the people, Dwight Eisenhower has proved himself a political leader of enormous ability and personal appeal.

So, tonight we render him our salute. In so doing we rededicate ourselves to the task of maintaining peace in the world, achieving greater prosperity and more happiness for the people of our country. With pride we believe that he is a man fit to walk beside Benjamin Franklin and those other defenders of our freedom and our future, whose names and public serivce are engraved on our history.

Recently Mrs. Saltonstall and I completed a trip that took us into many countries as we went around the world. In almost every one of those places I saw their leaders and each time the first question that was asked of me was, "How is your great President? We hope he is getting well rapidly. We need him in his sincere effort to strengthen our security and the peace of the world. We need him as do you."

Let's look at the record as the late Governor Smith, a Democrat, used to say. But let us look at the Eisenhower record. Let us recall for a moment those objectives which persuaded Eisenhower to make himself available as a candidate for the Presidency.

The most appealing issue of the campaign of 1952 was to end the war in Korea. Eisenhower promised to do his best to do that. It has been ended.

He declared his firm intention to rout Communists out of our Government and out of our industrial life. That routing of the Reds has gone forward actively, relentlessly, and generally successfully.

Corruption in public service has been stopped. That record speaks emphatically for itself.

As a candidate Ike resolved to eliminate economic controls and thereby unshackle our economy, which he was convinced could realize undreamed-of potentials.

The year 1955 with its many new records proves the wisdom and success of that policy. Nineteen fifty-five shows a gross national product of almost $387 billions, 6 percent above 1953's, the all-time high. The average weekly wage is running as high as $76, with 63 million people employed. Just think of it. We built 7,250,000 new automobiles and installed some 7,600,000 new TV sets in 1955.

Candidate Eisenhower, as he promised faithfully to do, has established a climate in labor relations in which our industrial effort has reached these unparalleled successes because there were fewer major labor disputes and greater progress and achievement by both management and labor than has been recorded in several decades.

He pledged himself to reduce the Federal payroll, to balance the budget, and to reduce, if possible, high taxes, and thus increase the ability of men and women everywhere to have more to spend for their needs. Taxes were reduced, and we look to a balanced budget and to an ever-increasing efficiency in government.

You and I supported the President in his campaign because we believed in a restoration to the States and to the individual communities of those rights and authority properly due them. The events of every passing day give witness to this respect for local decision and local control of affairs in every area of government where the best decision is the decision made by men and women close to home.

In this era where the free peoples must be constantly alert and where strength, firmness, and unity are the foundation upon which we must build greater security and enduring peace, Candidate Eisenhower pledged a reordering of our defensive posture. As Commander in Chief, he has built, and is continuing to build, a defensive force on the ground, in the air, and on the sea that has the ability to meet the challenges of the nuclear age in which we live, and yet at the same time achieve that posture with a due respect for the health of the economy over the long pull. That is the only way upon which the foundations of our military security can be maintained.

The Air Force program—to reach 137 wings at the end of fiscal year 1957—is a little ahead of schedule, and we will have 131 wings at the end of the present fiscal year. All medium bomber wings of the Strategic Air Command are now equipped with six-jet B–47's. These B–47's, together with a very large fleet of KC–97 tankers and an extensive overseas base complex, constitute our principal ready striking force. Our forces today represent a deadly deterrent for any country considering an attack on us because of their strength, their modern equipment, and their ability to retaliate promptly with devastating effect.

Truly, Korea, communism, corruption, and change were the issues of the campaign of 1952. These issues brought pledges of action—pledges that have been kept.

What everyone of us wants in government is confidence in the integrity, admiration of the character, and reliance upon the word of those whom we vote into high office. Three

years have proved that President Eisenhower and the men whom he has chosen to work with him have kept his campaign promises to a remarkable degree—not an easy thing to do at any time, and even more difficult in these days, when crises loom suddenly at home or abroad in the East or in the West.

Now, as men and women who love our homes, are proud of the places in which we live and work, we face the challenging job ahead. We face our responsibilities determined to see it that we have a government in which we have confidence, one in which we can take real pride.

On such an occasion as this, when we salute our great President—Dwight Eisenhower—it is fitting and proper that we take a close look and a long look at that job ahead.

It is right that we ask ourselves why it is we want to maintain strongly the ideals and the policies of Ike's administration. It is timely that we rededicate ourselves right now to this program which has as its heart the maintaining of peace in the world and the creation of greater prosperity and progress for all in this great country of ours.

To maintain our security and to win greater opportunities for peace in the world is our primary objective for the future. Our success in that endeavor depends upon two great fundamentals. First, the effective enunciation of, and the persistent endeavor to carry forward, an imaginative, sound, sensible, long-range foreign policy—not to react any more than is absolutely necessary to day-to-day crises that may occur, but, rather, to sustain the confidence of the free peoples of the world in what we are trying to accomplish over the years. This requires careful planning at home and effective action on those plans in everyone of our embassies and consulates throughout the world.

I was impressed as I went around the world by the high caliber of the men and women working for us everywhere, sometimes under very difficult conditions. I was equally impressed by the knowleige that the people in these countries, as well as their leaders, have of us. They look to us for leadership. They admire us, they respect us, they envy us, and, naturally, they are going to try to get from us all that they think they can.

We on our part must give them confidence that we are going to stay with them in their efforts to gain real freedom and a better life. At the same time we must never let ourselves forget that the cornerstone upon which our foreign policy is laid is that action which will provide greater security and a better opportunity for ourselves here at home. That is the aim, I know, of the Eisenhower administration.

To back up that long-range policy, we must be strong in a military sense. Our forces must be equipped with the most modern weapons available. There must be sufficient young men efficiently trained so that they can carry out their duties with the least possible danger to themselves and for the maximum defense of this Nation. This goal requires constant research and experiment, efficient production, and an ever-increasing expense as weapons become more complicated and destructive.

In this time of tension, in this atomic age, we can no longer plan, as did the great Confederate general, Nathaniel Bedford Forrest, just to "git thar fustest with the mostest." Ours is the tougher job of "gittin thar fustest with the mostest of the bestest," if any aggressor takes the field.

Manpower alone will not prevail in modern warfare. Nuclear weapons alone will not achieve victory. What is required is a shrewd, skillful, sensible balancing of the two in such a way as to make most effective use of our Armed Forces in order that they in turn may offer the greatest possible deterrent power, whenever and wherever required. No one realizes this more clearly, no one is more determined to see that this military stature is maintained effectively than is the man in the White House today.

These are the facets of the administration concerning security and peace that play upon us at home and concern many, many peoples in many sections of the world today.

But, basic also to our own future, is the progressive and honest administration of those obligations of government which we have determined over the years to be those responsibilities that we believe government can bear better for us than we can for ourselves at home, in our towns, or in our States.

Time does not permit me, nor would you desire me to discuss these questions 1 by 1. Let us remember that the President, as a good administrator and as a loving father and grandfather, understands these problems as does every man and woman in his own home. I think they are best expressed by the statement that the President made to the 48 Republican national committeemen on September 10, 1953, in Denver, Colo., when he said: "If we are for the people, which means for the individual as such, we go first to the 10 first amendments of the Constitution—the Bill of Rights. That was written for the people. That Bill of Rights does not guarantee to each of us a profitable living. It guarantees to each of us an equal opportunity with all others to earn our living for ourselves and for our families, and to protect our future.

"We could discuss further what we mean by 'for the people,' but I refer to another quotation of Lincoln's which was generally to this effect, 'The function of government is to do for the people what the individual cannot do at all, or do so well for himself, and in all those things which the individual can do for himself, the government ought not to interfere.' "

What I have had to say about our national defense, our foreign policy, our sound economy, applies to these words of the President. There is equal application of those words to be found in the vigorous attack which this administration is making on the problem of school construction and of highway construction, in the fields of health, education, and welfare, with most immediate stress placed upon amendments to our social-security laws in order that more Americans may be included within their benefits.

It is to be found, inspiringly, in the historic, unprecedented progress that has been made in the winning of civil rights for ever more Americans. It is revealed, dramatically, in this administration's blueprinting of further campaigns of conscience against those restrictions and discriminations which have been anything but American.

When we salute President Eisenhower tonight, we salute one who believes in our history and our traditions and in our continuing progress and growth, who thinks not of himself but of what he, as long as he is in the White House, can do to better the life of each and every one of us. When we salute our President, we salute a man who has great understanding of world problems and a unique experience in dealing with the leaders of the world. He wants peace. He wants progress and he will do everything in his power to continue to work for that peace and that progress.

His epochal speech to the General Assembly of the United Nations in December 1953 radiated that confidence and his sincere determination to work toward these objectives among the peoples of the world, whatever their racial origin, wherever they may live.

Truly, we can go home tonight firm in the realization that this administration is determined to achieve peace with honor, peace with security, peace with prosperity, peace with progress, and a leadership of our affairs at home that will offer greater opportunities for every American.

This dinner is of and by itself a salute to a great American. It represents also a gathering of patriotic citizens who recognize that still more is required of each of us—in our hearts, in our minds, and in our daily devotion to duty as we tackle the job ahead under the leadership of this man we salute tonight. That job can be done and will be done.

Let me conclude with the words of that great man who was born in our Boston 250 years ago this week and became your great Philadelphian:

"It is undoubtedly the duty of all persons to serve the country they live in, according to their abilities. Let it suffice, that I now take up a resolution, to do for the future all that lies in my way for the service of my countrymen."

Dwight D. Eisenhower fulfills admirably today that patriotic sentiment of Benjamin Franklin's spoken over 200 years ago.

The Aerotrain

EXTENSION OF REMARKS

OF

HON. JAMES H. DUFF

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 24, 1956

Mr. DUFF. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the remarks of Mr. J. M. Symes, president, the Pennsylvania Railroad Co., at the aerotrain dinner in Philadelphia, Pa., on January 5, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Friends of the Pennsylvania Railroad, we are indeed happy to have you as our guests this evening.

I am sure that the General Motors officers who are with us tonight join us of the Pennsylvania Railroad in congratulating their new train on the distinguished clientele which it drew for its inaugural run. We are flattered, and I am sure they are, by the interest you have shown, the questions you have asked—and for the time you have given to make this first trip a memorable one.

As I look around this room I see many people that I have talked to at various times about the railroad business. On occasion, as some of you know, I have come armed for those talks with statistics—and charts—and pages of presentation. Let me assure you that I am not going to talk about the railroads at any great length tonight. Although I will say, as an aside, that there is certainly a temptation—before this particular audience—to get in some licks on some of the things that should be done about some of our problems. I feel a little bit like being loose at Fort Knox with directions that I must not touch anything.

One thing I do want to do is to praise General Motors for the courage, skill, and cooperation which has characterized their research and which has brought so many benefits to the railroad industry—to the American economy generally—and which promise to continue to the mutual advantage of all concerned.

We have witnessed today their latest contribution—a low-cost, lightweight train—and it is a very significant contribution.

No one knows what is going to be the final solution for the equipment side of the railroad passenger problem. No one knows yet what the final answers will be—either in engineering, comfort, or convenience. I am

sure you all know that the train we rode today is not a final product. In building it General Motors have already learned two or three things which, if they were doing it again, they could change and improve. But in this initial development they have contributed significantly—both on the engineering side and on the economic side—toward finding a way to build railroad passenger coaches which will help us meet the service and economic conditions of the future.

Without going into details about the problem railroads face in the future of their passenger service, I will simply mention a few of the facts with which a railroad must live if it is to be successful in operating passenger service at a profit in the future:

1. The speed of the airplane.
2. The price of bus transportation.
3. The convenience of the private automobile—which also has an immediate low-cost appeal in that a large part of its total operating costs have already been incurred before a decision is made to take any particular trip.
4. The taxes on railroad stations and other passenger facilities—as opposed to publicly owned and operated terminals.
5. The tax on railroad tickets—notwithstanding the huge operating deficit from passenger service.
6. The fluctuating demand for rail-passenger transportation from season to season, day to day, and hour to hour.
7. The standby nature of the service—to protect the deficiencies as a result of weather.

And last, but not least by any means, the prospect of still higher wages as the standard of living and economic progress of the Nation continues to go up through the years ahead.

None of these represents a little problem—and in combination they have discouraged many people, inside and outside of the railroad industry, from making an all-out attempt to find the kind of train equipment—type of service—pricing, and the kind of merchandising and advertising—which will meet all the engineering, economic, and competitive conditions at a profit.

It doesn't look easy. Yet on the other hand the rewards for finding the right answers are great—and the penalty, not only to the railroad industry but to the Nation generally, for failing to find them is even greater.

With this train General Motors is helping the railroad industry to find the answers. We have worked with the General Motors engineers almost continuously since this train was just a gleam in Dezendorf's eye. But, in saying that, let me emphasize that this is entirely their train. They made all of the decisions, all of the experiments, all of the tests—and incidentally and importantly—they put up all of the money.

Certainly they are to be commended for that kind of private enterprise—and the progress it produces.

Personally, I am optimistic that we are going to find some, if not all, of the answers we are looking for—and I am also quite certain that the contribution General Motors has made in producing this Aerotrain is going to help substantially in finding some of the answers of engineering and economics. As you all know, there are several other new types of trains in the shops at the moment—and later on this year you will see some of them introduced into revenue service. All of them will permit new types of testing—both engineering and economic—which have not been available before. I am sure that each will contribute something to the knowledge we need to get the right answers about the equipment part of our passenger problem.

One more brief thought and I am finished—on the surface it may appear that our only motive in this experimental program is to help ourselves as a business. That is certainly our immediate motive. But you must remember that helping ourselves means helping a good many millions of people. It means making our railroads better able to provide good livelihoods for our million or so of direct railroad employees—and the millions of employees of other businesses who earn at least part of their living supplying us with everything from rock ballast and spikes to dining-car food—and to the still more millions of employees in farming, mining, and manufacturing generally whose welfare depends in part on low-cost rail transportation. This is apart from the job we do in getting millions of people to and from work every day, or whom we transport for business or pleasure trips. That is work we want to keep doing, but to do so, we have to find the answers I've mentioned—or else we shall imperil our very existence as a self-supporting, tax-paying, job-and-business-generating industry.

I wish to thank the officers of General Motors for the help they have provided in the past—and for building their new-type passenger train which we rode for the first time today—and which eventually will be a great success—as have their many other developments.

I would like to ask Cy Osborne to accept those thanks on behalf of his great company.

Christian Amendment to Constitution

EXTENSION OF REMARKS
OF
HON. RALPH E. FLANDERS
OF VERMONT
IN THE SENATE OF THE UNITED STATES
Tuesday, January 24, 1956

Mr. FLANDERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement with regard to what has come to be called the Christian amendment, written by the Reverend A. J. McFarland, of Sterling, Kans.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE CHRISTIAN AMENDMENT FLYER

(Rev. A. J. McFarland, Sterling, Kans.)

There is a movement in our Nation to place in the Constitution of the United States an acknowledgment of the Lord Jesus Christ as our Nation's Savior and King, that this Nation under God might have a new birth of freedom. The headquarters of the movement are at 804 Penn Avenue, Pittsburgh 21, Pa.

The proposed amendment is as follows:

"SECTION 1. This Nation devoutly recognizes the authority and law of Jesus Christ, Savior and ruler of nations, through whom are bestowed the blessings of Almighty God.

"SEC. 2. This amendment shall not be interpreted so as to result in the establishment of any particular ecclesiastical organization, or in the abridgment of the rights of religious freedom or freedom of speech or press, or of peaceful assemblage.

"SEC. 3. Congress shall have power, in such cases as it may deem proper, to provide a suitable oath or affirmation for citizens whose religious scruples prevent them from giving unqualified allegiance to the Constitution as herein amended."

SECTION 1

Section 1 is the amendment proper. In considering this section let us note the real value to be gained by having such an amendment.

1. It will bring our Government into line with the moral law of God

According to Holy Scripture civil government is an ordinance of God for the enforcement of justice in human society. (Roman 13: 1–6.) All legitimate governmental authority is derived from Almighty God, through the divine human mediator, the Lord Jesus Christ, who has supreme authority over the entire universe. (Psalm 2: 6–12; Matthew 28: 18–20.)

Inasmuch as Christ's supremacy over the universe is absolute and complete, no area of existence can claim exemption from His authority. Therefore, the Government of the United States is bound to make proper recognition and carry on its functions subject to that authority. For a nation to refuse to do so is to be guilty of rebellion against God. To be in rebellion against God, by refusing to obey His revealed will, is to violate the first commandment, thereby violating the whole moral law of God (James 2: 10). To continue violating the moral law of God will result inevitably in incurring the wrath and judgment of God.

The corporate life of the Nation must be distinguished from the life of the individual citizen. The Nation is an organism, a personality. It is capable of acts and attitudes for which no individual can be held entirely responsible. The Nation owes an allegiance to Christ in its own right.

Abraham Lincoln in his proclamation of March 30, 1863, said:

"It is the duty of nations, as well as individuals, to own their dependence upon the overruling power of God, to confess their sins in humble sorrow, and to recognize the sublime truth announced in Holy Scripture and proven in all history that those nations only are blessed whose God is the Lord."

2. It will recognize Christ's claim upon America

The late Dr. Peter Marshall, former Chaplain of the Senate of the United States, preached a sermon on the need of Christ in our Government. On July 10, 1947, this sermon was placed in the CONGRESSIONAL RECORD. A few sentences from the sermon follow:

"It is strange, and I believe tragic, that the Constitution makes no reference to God. * * * Public criticism * * * forced the Congress to make constitutional provision for the rights of man, but no amendment has yet acknowledged the rights of God. * * *

"Forty-three of our States have already written into their constitutions vague religious acknowledgments. All make some reference to a higher power, but not one State honors Jesus Christ.

"Christ said, 'All authority hath been given Me, both in heaven and on earth.' He said again, 'He that honoreth not the Son honoreth not the Father which hath sent Him.' God can be honored only through His Son, the Lord Jesus Christ. All pious, vague affirmations about God as the Supreme Being, etc., are vain unless supreme honor is specifically given to Jesus Christ."

The late Frances E. Willard, first international president of the WCTU, said:

"The organization over which I preside has one organic thought, one absorbing purpose, one underlying enthusiasm—that Christ shall be the world's King—of its camps and its commerce—of its colleges and its cloisters; King of its courts and constitution; Christ and His law the basis of all true government and the supreme authority in individual and national life."

3. It will bring our written Constitution into line with our unwritten constitution

Th Supreme Court in 1892, in the case of *The Church of the Holy Trinity* v. *The United States* (143 U. S. 457, 471), ruled that this is a Christian Nation. The following is part of what was said:

"If we examine the constitutions of the various States, we find in them a constant recognition of religious obligations. Every constitution of every 1 of the 44 States contains language which either directly or by clear implication recognizes a profound reverence for religion, and an assumption that its influence in all human affairs is essential to the well-being of the community.

"There is no dissonance in these declarations, there is a universal language pervading them all, having one meaning; they affirm and reaffirm that this is a religious Nation. These are not individual sayings, nor declarations of private persons; they are the utterances of organic bodies, they speak the voice of the entire people.

"If we pass beyond these matters to view American life as expressed by its laws, its business, its customs, its society, we find everywhere a clear recognition of the same truth. * * * These and many other matters which might be noticed add a volume of unofficial declarations to the mass of organic utterances to show that this is a Christian Nation."

This being true, let us say so in our written Constitution.

4. It will help to counteract the danger we face in not having such an acknowledgment in our written Constitution

On February 15, 1871, the Honorable William Strong, Associate Justice of the Supreme Court of the United States said (Christian Statesman, February 1871, p. 82):

"There is no political document so all important to the American statesman and the American citizen as the Constitution of the United States. All customs, laws, and all forms of administration are shaped by it. Our statesmen, our whole people, are learning their Americanism as to its letter and spirit from that great instrument. That is as it should be. This was intended from the beginning.

"But at the same time it is a serious matter if that Constitution should be found wanting in any principle or matter of fact. Error in the Constitution will work as powerfully as truth, and what is left out of it may one day be formally declared un-American. And one such serious matter there is; one unnecessary and most unfortunate omission. God and Christianity are not once alluded to although the Constitution is itself the product of a Christian civilization and purports to represent the mind of a Christian people. * * * Hence it is that all laws of this country in favor of a Christian morality are enacted outside the Constitution. They rest only on the basis of what is called common law. * * * And as matters seem to be going it will soon be discovered and decreed that common law is only another name for custom which has no binding force. And then where are we? In atheism, corruption, and anarchy."

5. It will prepare our Nation for meeting the present world situation

William Penn said many years ago, "Men will be governed by God, or they will be ruled by tyrants." The present world tragedy has come upon us because the nations of the world have separated God from government. When the Nazi leaders repudiated Christ and Christianity it was easy then for Hitler to move into the moral vacuum created in that government. But we face the same danger. Our Government acknowledges no higher authority than "we, the people" and we cannot lift ourselves by our own bootstraps.

Many nations have learned the hard way that it is God who ruleth in the kingdom of men and giveth it to whomsoever He will. Recent events have shown that nations which reject God tend to make gods of themselves and become inhuman tyrants. If Christ were put at the foundation of our Government it would be the greatest thing that has happened in our Nation since the Constitution was written. "Other foundation can no man lay than that is laid, which is Jesus Christ." (I Corinthian 3: 11.)

The Marxian program presents a unified self-confident philosophy of life, a complete world view, but it is godless. How much stronger would be our position if we presented, in opposition, the splendid realities of a God-made, a God-governed, and a God-redeemed world. Let America lead the nations, as nations, to look to Christ as the only way of forgiveness for their sins, and as Lord over all. Then we can with confidence look to Him for deliverance from the enemy within and without.

SECTION 2

The chief purpose of section 2 is to make certain that church and state shall remain separate when this amendment is adopted. The first sentence in this section reads:

"This amendment shall not be interpreted so as to result in the establishment of any particular ecclesiastical organization."

In the constitution of the Christian Amendment Movement there is a section entitled "Basic Principles." The first two points under these basic principles are as follows:

"In the light of Holy Scripture and history, we hold these principles to be true: (a) That church and state, having their origin from God, are both divine institutions; (b) that church and state are distinct and separate in their appropriate and divinely prescribed powers, and therefore control of the state by the church, or control of the church by the state, is contrary to divine design."

1. The meaning of the first amendment to the United States Constitution

The first amendment of the Constitution reads thus:

"Congress shall make no law respecting the establishment of religion or prohibiting the free exercise thereof."

The first amendment is designed to prohibit the control of Government by any religious organization as the State religion of this country, and also to remove from Government the power to discriminate against persons or institutions on the grounds of their religious belief. It does not mean that the State is to be irreligious; nor that it is to be indifferent to the religious practices of its people. It does not mean to infer that the State is a purely secular institution, utterly removed from the sanctions of moral law and order.

If we can conceive of our Government as a human institution only, we will approach the situation where the supreme authority in our Government will be the ability of the majority to enforce its will, even to the infringement of the basic rights of the minority.

In the 32d and 33d Congresses, a strong effort was made to abolish the office of Chaplain in the Army, the Navy, and the two Houses of Congress, on the ground that they constituted an infringement of the principle of separation of church and State. The effort failed.

The following is taken from the report of the committee to which the petition was referred—report of the Committee on the Judiciary on Chaplains in Congress and in the Army and Navy, House of Representatives (33d Cong., 1st sess., March 27, 1854, Doc. 124):

"Had the people, during the Revolution, had a suspicion of any attempt to war against Christianity, that revolution would have been strangled in the cradle. At the time of the adoption of the Constitution and the amendments, the universal sentiment was that Christianity should be encouraged—not any sect.

"Any attempt to level or discard all religion would have been viewed with universal indignation. * * *

"Your committee concede that the ecclesiastical and civil powers have been and should continue to be entirely divorced from each other. But we beg leave to secure ourselves from the interpretation of asserting religion is not needed to the safety of civil society. It must be considered as the foundation on which the whole structure rests. Laws will not have permanence or power without the sanction of religious sentiment—without the firm belief that there is a power above us that will reward our virtues and punish our sins. In this age there can be no substitute for Christianity. * * *

"That was the religion of the founders of the Republic, and they expected it to remain the religion of their descendants."

2. Christ in government is not the same as church in government

To unite church and state would be a corruption of both. Union of church and state in other countries has warned us of this. Where union exists three things usually result: (a) ownership of church property by the state; (b) employees of church paid out of taxes; (c) administrations of the two organizations are more or less fused.

But this is not involved in any way in the proposed amendment. There would be no support of any denomination by taxation, no fusing of the government of any church with our Federal Government. We acknowledge the Supreme Being in almost all of our State constitutions, and this does not unite any church with any of those States.

No church would tell the state what to do if we had this Christian amendment. Officials would rule as statesmen, not as churchmen. They might be of many religious denominations, but their business as statesmen would be to know what God would have a Christian state to do, and act accordingly. There would be no more union of church and state than right now.

3. Church and state must cooperate in overcoming evil

If Christ were at the head of our Government, and our statesmen looked to Him for guidance and settled all moral problems as He would have them settled, then great things would happen in our Nation. When our institutions become Christian, then the people will be lifted. But when Government, business, the scholastic world, the press and the amusement world are of the earth, earthy, and know little or nothing of Christ, then a good share of the work of the church is canceled. The church and the state must cooperate in combating evils. The church has tried valiantly to lift the people of this Nation into the light that is Christ, but it needs the help of the state.

The thumb and forefinger with which you hold this paper both come out of the hand, both draw their power from the hand, both obey the hand. The church and the state draw their power from Christ, not from one another; both should acknowledge and obey Him. They should cooperate with each other on all moral matters, but neither should rule the other.

SECTION 3

Section 3 protects the rights of minorities.

There is no thought of taking away liberty by this amendment, but only to put it on a firm foundation. The rights of the non-Christian are to be respected. Freedom of speech, press, and worship will be even more secure. This section provides a suitable oath or affirmation for citizens whose religious scruples prevent them from giving unquali-

fied allegiance to the Constitution as herein amended.

It has been said that the adoption of this amendment will make non-Christians second-class citizens. On the other hand, where is the sincere Christian placed when Christ is left out? Christ isn't a mere citizen. He is King of kings, the Saviour of the world, the Prince of peace, the governor among the nations, the Prince of the kings of the earth, the one upon whose shoulder the governments of the world rest. (Isiah 9: 6, 7.) He is the one to whom God has given all authority. Suppose the Government should ask the Christian to do something that he feels is in conflict wih Christ's commands, would he be a second-class citizen if he asked for a modification of the Government's request? Since all authority is given to Christ, what class of citizen would a Christian citizen be in Christ's eyes, if he did nothing about having that authority recognized in the Federal Constitution?

Sections 2 and 3 of the proposed amendment show how carefully the religious scruples of the non-Christian would be respected under a Christian government. But respect for the rights of men must never be made an excuse for ignoring the rights of God.

Three representatives of the Christian amendment group went to call upon the leaders of the American Jewish Committee in New York City. These leaders were told by the representatives that they came as Christians representing a Christian organization and that there was no anti-Semitism in the organization they represented. Dr. Moses Jung, one of the leaders of the American Jewish Committee, stopped the men and said, "Gentlemen, no true Christian can be anti-Semitic." How true. And just as truly no Christian nation can be anti-Semitic.

The Honorable BROOKS HAYS, one of our esteemed Congressmen, stated in a speech recently that he was visiting with a distinguished American rabbi, who told Congressman HAYS of a question he was asked by one of the youth leaders at their meeting in Oslo in 1947. This leader asked the rabbi: "Do you have any message for the Christian youth of today?" The rabbi replied:

"Yes, tell your friends to go home from this conference determined to build a Christian world. If the world in which Hitler lived had been a Christian world, 6 million of my people would not have been done to death."

CALL FOR IMMEDIATE ACTION

An individual doesn't wait until he is perfect before he makes a public profession of faith in Christ; neither is a nation to wait until everyone is Christian before it makes its Christian profession. It isn't hypocritical to have laws against murder on our statute books, even though thousands of murders are committed each year. If someone from outside were to force this Christian amendment upon us, it might be hypocritical, but since it would be the voluntary act of a free people, expressing ourselves collectively, there would be no hypocrisy. It would have to be by a legislative process, of course, since that is the only means a nation has of expressing itself.

CONCLUSION

When Queen Victoria was crowned Queen of the British Empire, the great choir was to sing Handel's Messiah in the coronation ceremony. It was the custom of the British audience to rise when the choir came to the Hallelujah Chorus, but the ladies in waiting, who were preparing the young Queen for her part in the ceremony, told her that being Queen, it would not be proper for her to rise; she should remain seated.

So when the choir began to sing that great chorus, the audience arose but the Queen remained seated; but when they came to that great burst of song, "King of kings and Lord of lords," the Queen quietly arose and bowed her crowned head in expression of the fact that she, as Queen of that mighty empire, was a humble and obedient servant of the King of kings.

Surely America needs to give like obeisance if she is to live and continue as the great leader of the nations of the world.

Report of United States-Israel Relations—Part II

EXTENSION OF REMARKS
OF

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, January 24, 1956

Mr. IVES. Mr. President, on pages A659, A660, and A661 in the Appendix of the CONGRESSIONAL RECORD of January 23, 1956, appears part I of the Report on United States-Israel Relations, by Attorney General Jacob K. Javits, of the State of New York, who is a former Member of the House of Representatives. This first part deals with the economic and financial situation.

I now ask unanimous consent to have printed in the Appendix of the RECORD part II, which pertains to Israel's international position.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

REPORT ON UNITED STATES-ISRAEL RELATIONS—PART II

(By Attorney General Jacob K. Javits, of New York)

INTERNATIONAL POSITION—PROGRESS TOWARD SECURITY

Present emergency

There is grim realization in Israel that the unrestricted sale of arms by the Communists to Egypt is a grave menace to national survival. Israel recognizes that the border between Israel and Egypt, the Gaza strip, has now become a crucial sector in the anti-Communist front. The country is apprehensive of the danger of another Korea, unless the Government and people are ready and prepared to resist aggressive action. Finally, the Israel political climate is dominated by wide acceptance of the proposition that Israel's orientation in international relations is irrevocably with the United States and the free world.

The Israelis seem to be convinced that they are confronted by total Arab intransigence and that there is no real hope of any negotiations which would affect the immediate situation. Accordingly, they are alarmed by our tendency to credit reports of imminent "negotiations" and the possibility of securing agreements prior to a decision on our part as to how we will answer the current challenge of unrestricted arms sales to Egypt. For, while the Israelis have confidence in the fact that the United States has no desire to let them down, they fear that wishful speculation about agreements may immobilize us and dangerously delay help from the United States which, they feel, they must have immediately if they are to survive. I believe that acts of military reprisal by Israel which have been on occasion severely criticized abroad and by the U. N., have been the product of the frustration of almost continuous Arab harassment and infiltration as well as a feeling that Israel was being made to stand too much alone.

Israelis ask us to compare our view of the hope of agreement with the Japanese right after Pearl Harbor with what they think now of Arab intransigeance toward seeking peace.

I found no desire on the part of Israel to seek territorial expansion. Indeed, it is not indicated by Israel population expectations which can be amply served by the irrigation and development of the Negev, and I found no real or substantial desire for any preventive war because of the wide recognition that any kind of war is disastrous for them, preventive or otherwise. What American opinion should understand, however, is that the people of Israel are unanimous in the fear that the present issue is one of survival. We should realize that for the first time since the 1948–49 war with the Arab States, the people are gravely alarmed. They feel directy threatened by the Communists' unrestricted arms sales to Egypt, by Great Britain's arms shipments to Egypt, and by Israel's own inability up to now to get arms for legitimate self-defense from the United States.

The tripartite declaration of May 1950 of the United States, United Kingdom and France guaranteeing the inviolability of the Israel-Arab armistice lines is appreciated in Israel. But it is pointed out that should Egypt become an aggressor with its newfound modern weapons, small Israel could be overrun in hours or days before the tripartite undertaking could be implemented.

Israel takes an emphatically negative view of the so-called British peace initiative, which is regarded as a British gesture of appeasement at Israel's expense in another vain effort by Britain to ingratiate herself with the Arab States who have so often rebuffed her in the last two decades.

The Israelis contend that the British offer them nothing but the proposition that they give up valuable rights in territory absolutely indispensable to their future without the remotest assurance that such a costly sacrifice would secure a settlement.

The Israelis see that British proposals that Israel cede territory to the Arabs as the price for peace have not seemed to abate Arab intransigence, on the contrary, they seem to tend to encourage the Arabs to believe that the deal with the Communists may pay off—even at the expense of Israel's future.

Military strength, a major fact in any assessment of the current Near East situation, is Israel's defense potential. Israel is estimated to have an integrated ground and air force with some navy complement of 200,000 to 250,000 fully mobilizable within 30 days. Her armed forces are tough, well trained and have battle seasoning. Military service is compulsory, both for young men, and young women. There are liberal exemptions to women for marital status, etc., but practically no exemptions for men. The armed forces teach not only military skills but also citizenship orientation. They continue to be the greatest medium for integrating the inmigrants into Israel and they turn out good soldiers and citizens. Israel's armed services command is more oriented to United States training, ideas and equipment than ever. Many Israel officers are studying in United States military schools and this is entirely in accord with Israel policy. The regular armed forces are backed up by a very high order of civilian morale, a very extensive reserve complement built on 10 years of intensive military training for very large sections of the population and by an excellent industrial workshop.

Military circles appear to be impressed with the fact that the Israelis must get the means to defend themselves if they are to survive. The estimate of time when Egypt and other Arab States may be able to use their newly acquired Communist arms against Israel is considered to be very short. Israel circles estimate it to be 6 to 9 months. It is stated that the jet aircraft, submarines, tanks and other weapons which are being

obtained from the Communists by Egypt (and centurion tanks from Britain) are so greatly superior to conventional weapons with which the Israel military forces are supplied that, even if badly operated, their superiority will still be immediate and manifest.

Infrastructure

It seemed very clear to me that, should the United States be interested in any infrastructure arrangement in Israel for the construction of roads, airfields, ports and other installations, these facilities would be available to the United States in the event of any threat to free-world security in that area of the world. Furthermore, these installations would be backed up by the best industrial workshop in the whole Near East. Also, I am convinced that this policy would be accepted politically as a fact without challenge by political groups of all shades of opinion except the Communists (who represent less than 5 percent of the vote and have only 5 members in Knesset, 4 of whom are Arabs).

The Israel forces appear to be quite ready and able to undertake any mission to assure security for free-world military installations in Israel and also appear to be fully prepared for integration into any appropriate regional security organization.

Palestine-Arab refugees

The resettlement of the Palestine-Arab refugees, heretofore considered to be the most nettling problem in the area, is now of necessity taking second place in view of the acute tension along the borders which has from time to time flared up in guerrilla as well as organized military action. So too, is the economic bridge—about which our President feels so deeply—which we are endeavoring to build between Israel and the Arab States through the outstanding activities of Ambassador Eric Johnston, the President's personal representative, on the Jordan River water plan. These areas of activity remain just as valid today as they did yesterday but, for the moment, are overshadowed by the security crisis.

It is indeed essential that the immediate emergency be dispelled, if at all possible, so that we may get back to the effort to bring about settlement of what are as much world issues as issues between the Arab States and Israel and to the pacification and stabilization of the whole area.

Indeed, if we are to do anything about the Palestine-Arab refugees now it must be done on a plan analogous to the way the DP's were handled after World War II by resettlement under general free world leadership. U. N. agencies have already spent $208,414,859 on this problem from December 1948 to June 30, 1955, of which the United States has contributed $141,150,000 and other nations the balance. But only 10 percent of this sum, $21,950,988, has been spent for rehabilitation and resettlement, to which the United States has pledged an additional $30 million.

With respect to the Palestine-Arab refugees, it is pointed out that the Arab States have not followed through on the resettlement projects which looked so promising; notably, the project in the Sinai Desert to resettle 50,000 to which Egypt had in effect committed herself and the project related to the Jordan River waters to resettle 200,000 on which the Arab States have held back after the negotiations had been practically completed by President Eisenhower and Ambassador Johnston.

Israelis point out that they have received about 400,000 Jews from Moslem countries in Asia and Africa who were ejected by the Arab States, or whose continuance in the Arab States was made impossible by conditions there. Many of these Jews were stripped of all their property but have been fully resettled in Israel while the 600,000 Arabs who left the territory of Israel continue a dead-end existence in the refugee camps (in which there are now 900,000), and are dependent on the international community.

The example which Israel is setting by making the stony and inhospitable land of the Near East, after centuries of neglect, productive again and by showing how to develop industrialization and organize a modern state constitutes a revolutionary demonstration project for the Arab lands and Arab peoples. It is a ferment which can neither be hidden nor explained away and it is bound ultimately to have a permanent and a decisively beneficial effect for the free world.

CONCLUSIONS

1. By virtue of the unrestricted sales of arms by the Communists to Egypt, the United States is faced with a new situation which requires a decisive revision in United States-Near East policy on the highest priority to include:

(a) Israel's inclusion in a regional security arrangement to which the United States is a party or in a mutual defense agreement with the United States, and the same parallel opportunity to the Arab States;

(b) A commitment for the supply of arms for legitimate self-defense to Israel through such arrangement or agreement;

(c) Arrangements for establishing road, airfields, ports or other installations (infrastructure) within Israel to be available to the free world in the event of a threat to free world security;

(d) Suitable consideration for stock-pilinb of strategic reserves in Israel.

2. Efforts to resettle the Palestine-Arab refugees should be made as an international responsibility not confined to resettlement in the Near East alone.

3. Economic and technical assistance to the Arab States and Israel should be continued, including efforts to effectuate the Jordan River water plan, to bring about construction of the Aswan Dam in Egypt and to carry on major projects in land reclamation and irrigation in Arab lands and to bring about major improvements in health and education.

4. The tripartite declaration of May 1950 by the United States, United Kingdom and France against aggression over the Arab-Israel armistice lines should be reaffirmed and the United States should express its determination to implement the declaration and should invite the other parties to the declaration and the U. N. to do the same as an effective means to prevent war.

The Constitutional Conventions of New Hampshire

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, January 23, 1956

Mr. MARTIN of Pennsylvania. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very interesting address on the subject The constitutional conventions of New Hampshire, which was delivered by our former colleague, Hon. Robert W. Upton, of New Hampshire, who is president of the 13th constitutional convention of New Hampshire. The address was delivered before the New Hampshire Legislature on July 14, 1955.

I am informed by the Public Printer that the cost of printing the address will be $187. Nevertheless, I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE CONSTITUTIONAL CONVENTIONS OF NEW HAMPSHIRE

(Address by Robert W. Upton, president of the 13th constitutional convention, delivered before the New Hampshire Legislature on July 14, 1955)

Mr. Speaker, members of the honorable senate and house of representatives, I thank you, Mr. Speaker, for your generous introduction, which went far beyond my deserts. I am happy to have the opportunity to appear before the members of the honorable senate and the house in joint session, to talk about the constitutional convention. You, Mr. Speaker, have the privilege of presiding over the largest legislative body of any State of the United States. It is a matter for mutual congratulations that over the years the large house and relatively small senate have worked together to give our State good laws. We have been hearing much in recent weeks about meetings at the summit. This meeting, Mr. Speaker, lacks the characteristics of a summit meeting, but it does permit me to bring greetings to you and to the members of the legislature from the 13th constitutional convention. This convention is not in session but it is in being, as it adjourned subject to the call of the president. The large number of delegates before me suggests the presence of a quorum, but I have no thought of reconvening the convention. I take this opportunity, Mr. Speaker, to congratulate you upon the fairness, skill, and ability with which you have performed the duties of your important office.

The 13th constitutional convention was held pursuant to the provisions of the constitution, which provide that the sense of the legally qualified voters shall be taken every 7 years on the need for a revision of the constitution. If it shall appear that a majority of the qualified voters present and voting are of the opinion that a revision of the constitution is necessary, then the general court is directed to call a convention. The general court has observed this mandate with the result that 13 constitutional conventions have now been held and a call has issued for the 14th convention to be held next year. The constitutional convention is the only public agency or body authorized to propose amendments to the State constitution, and no amendment is effective unless ratified by a two-thirds vote of the qualified voters who vote on the amendment.

The 13th constitutional convention was convened on May 12 and adjourned on June 4, 1948. The report of the committee on credentials disclosed 453 members, which made it the largest body of its kind to be convened in the United States. The convention was organized on a nonpartisan basis without caucuses or other political machinery. The principal officers, president, secretary, and assistant secretary, were chosen on nominations made from the floor, but it was more than a coincidence that a Republican was chosen to be president and a Democrat to be secretary. The organization of the convention was perfected through a committee on credentials, a committee on permanent organization, and a committee on rules, each consisting of 24 members. The committee on permanent organization had the duty of nominating the remaining officers and attachés of the convention, and in performing this duty the committee chose its nominees largely from the experienced

staff of the house and senate. The committee on rules recommended the adoption of the rules of procedure of the previous convention with minor changes. We enlarged the number of standing committees from 9 to 10 and the members of each committee from 24 to 30, so that as many delegates as possible might have special assignments in the work of the convention. In all some 372 delegates were assigned to committees and others given special assignments during the session, but not all could receive the recognition their due.

Within the time fixed by the rules, a total of 62 resolutions to amend the constitution were introduced and referred to committees. A hearing was held on each resolution by the committee to which referred, and final action was taken upon all resolutions by the convention before adjournment. In all, 11 amendments were agreed to by the convention, which were divided into two classes for submission to the voters for ratification. The first group, consisting of six amendments making vital changes in the constitution, was submitted to the voters at the biennial election of 1948 through specific questions printed on the ballot, directly referring to the amendments. The other group consisting of five amendments striking out obsolete provisions of the constitution were submitted 2 years later at the biennial election of 1950. The amendments submitted in 1948 were rejected with the exception of an amendment increasing the period over which either the house or senate may adjourn, from 2 to 5 days. Why this amendment was ratified and the others rejected I do not pretend to know. Of the 5 amendments rejected 3 related to the taxing power, 1 would have made changes in procedure for calling constitutional conventions, and the other would have authorized a representative for every town and ward without increasing the total number of representatives.

The five amendments striking out obsolete provisions of the Constitution fared no better, as only the amendment striking out the reference to pounds and shillings was ratified. There was no public discussion of these amendments for they were noncontroversial and the voters evidently formed their judgment on the amendments from the questions appearing on the ballot. The convention might have submitted these amendments together with a simple statement of their purposes to be printed on the ballot, but for this there was no precedent and the need for such statement was not realized by the delegates. It may be hoped that the next convention will profit by our experience and submit similar amendments with an explanatory statement of their purpose. The work of this like other Conventions was not necessarily wasted, even though the principal amendments were rejected, as the Convention served to direct the attention of the people to the constitution and its significance in their daily life.

New Hampshire was the first among the colonies to adopt a written constitution. On the eve of the conflict with Great Britain the Colonial House of Representatives on May 28, 1774 created a Committee on Correspondence ostensibly to communicate with other similar committees but actually to organize resistance to British oppression. This committee, formed over the protest of Governor Wentworth, issued the call for the First Provincial Congress, which met at Exeter on July 21, 1774. Due to the urgency of the times the Second and Third Congresses followed in quick succession and gradually assumed full legislative powers. The Fourth Congress met on May 17, 1775 and, before adjournment, created a Committee on Safety and delegated to it the powers of the Congress when not in session. The Fifth Provincial Congress met at Exeter on December 21, 1775, pursuant to a call which, among other things, stated that the delegates would consider the establishment of a form of government for the duration of the struggle with Great Britain. The Congress, accordingly, appointed a committee to draft a new constitution and thus became the first constitutional convention. The constitution submitted by the committee was adopted on January 5, 1776, and provided a simple frame of government in which executive and legislative powers were vested in the legislature consisting of a council of 12 members chosen from the counties and a house of representatives chosen from the towns and parishes. The council was empowered to choose a president from among its own members, who by virtue of his position was the head of the government. The members of the council and of the house were chosen annually at elections held throughout the State. When the legislature was not in session the powers of the government were delegated to the committee on safety. For more than 8 years and until the adoption of the present constitution this government not only prosecuted the war but enacted the large volume of legislation made necessary by the times.

Matthew Thornton was the president of the first constitutional convention, but is known best as a patriot and a signer of the Declaration of Independence. He was a successful physician but early entered public life. He presided over the important fourth and fifth provincial congresses, was a delegate to the Continental Congress, and ended his public career as a judge of the superior court, serving from 1776 to 1782. He was not devoid of wit, as indicated by an incident which occurred while he was presiding with an associate over a jury trial. During the closing arguments, counsel addressing the jury noted that the presiding justice was reading from a book and that his associate was sleeping. He turned to the jury and with emphasis remarked, "Gentlemen, my client has no hope but in your attention since the court in their wisdom will not condescend to hear his case." Judge Thornton looked up from his book and remarked, "When you have anything to offer which is pertinent to the case on trial the court will be happy to hear you. In the meantime, I may as well resume my reading." In spite of his lack of legal training, his administration as judge is reputed to have been impartial and satisfactory.

The need for a permanent constitution resulted in a second convention being held at Concord in June 1778, pursuant to a call issued by the legislature, which provided that any constitution adopted by the convention be submitted to the people for ratification by a three-fourths vote. Meshech Weare, although not a delegate, was chosen to preside over this convention. He was then president of the council, a member of the committee on safety, and chief justice of the superior court, and in these high offices exercised legislative, judicial, and executive powers. These high offices, however, are not the full measure of his public service. He held other positions of trust and confidence, including Speaker of the Colonial House of Representatives. On his retirement from the bench, he was elected governor, then-styled president, in 1784 and became the first to serve under our present Constitution. His notable career still awaits a competent biographer.

The constitution adopted by the convention over which he presided failed of ratification and the third constitutional convention was convened in 1781. This convention submitted two constitutions which were rejected but a third constitution, submitted in 1783, was ratified by the people and went into effect in June 1784. This Constitution provided the form of government which we have today. The amendments have been numerous, but have not changed its essential features.

The fourth convention, convened in 1791, undertook a general revision under the leadership of William Plumer, submitting 72 amendments for ratification. When the convention was reconvened to canvass the vote it was found that 46 amendments had been ratified and 26 rejected. Many of the amendments rejected were so related to the amendments ratified that neither could be effective without the other. The convention accordingly decided to resubmit these amendments in bloc, and in this form they were finally ratified. The amendments did not change the basic principles of the constitution.

It may be observed that from the beginning a small senate and a large house found favor in this State. The size of the senate was originally fixed at 12 members chosen by districts. The representatives were apportioned among the towns and parishes on the basis of rate or taxpayers, and the first house of representatives had 91 members.

The constitution had the approval of the people, as shown by the rejection of proposals for the holding of a convention for more than 50 years. However, the referendum in 1848 resulted in a decisive vote for a convention, and so the fifth constitutional convention was convened in 1850. Franklin Pierce was elected president, and Thomas J. Whipple secretary of this convention, both veterans of the Mexican War. Mr. Pierce 2 years later was elected President of the United States and Mr. Whipple had a distinguished record during the Civil War, finally serving as colonel of the Fourth New Hampshire Regiment. The convention agreed to many changes in the Constitution, and the proposed amendments were submitted to the people by 15 questions, all of which were rejected. The convention on reassembling to canvass the vote decided to resubmit three of the amendments which had been rejected. These amendments would have stricken from the constitution the religious and property tests as qualifications for elective offices and would have empowered the legislature to submit for ratification amendments to the constitution adopted at two successive sessions. Of these three amendments, only the amendment abolishing the property test was ratified.

The sixth constitutional convention was held in 1876. This convention submitted 13 amendments for ratification, making notable changes in the constitution, all but 2 being ratified. The more important of these amendments substituted biennial elections for annual elections, enlarged the senate from 12 to 24 members, reduced the size of the house of representatives by changing the method of apportionment, and struck from the constitution the religious test as a qualification for public office.

The seventh constitutional convention was held in 1889 and submitted seven amendments for ratification, of which five were ratified. One of these amendments changed the time for the meeting of the legislature from June to January and made a like change in the commencement of the terms of the governor and other elective officers. Another amendment provided that towns not having the requisite population to elect a representative be allowed representation in the house of representatives a proportionate part of the time during each apportionment instead of being classed together or united for the purpose of providing the population necessary to elect a representative regularly as had been the practice under the constitution.

We have now reviewed two periods in the development of our constitutional system of government. The formative years were covered by the four conventions which were held during the last quarter of the 18th century and resulted in the constitution under which we live. The three conventions held during the 19th century were devoted to the revision of the constitution to bring the government closer to the people by abolishing

the property and religious tests as qualifications for elective office and by the substitution of population for rate or taxpayers in the apportionment of representatives. These seven conventions were held over a period of 125 years. In contrast, during the present century 6 conventions have been held in less than 50 years. The first convention held in 1902 was characterized by a critical and studied survey of the constitution, but the later conventions have largely been given over to problems peculiar to the times.

The important matters likely to command the attention of the next convention are indicated by the proceedings of the previous conventions. The size of the house of representatives and the apportionment of its members has occupied a commanding place in every constitutional convention. From the beginning of constitutional government in the State, representation in the house has been based upon the towns and wards or parishes, but the rule for apportionment has varied, although a pattern is discernible even here. The constitution of 1784 required for the first representative 150 tax or rate payers, and for each additional representative, 300 rate payers. The legislature was empowered to class together or unite towns having less than the requisite number of taxpayers so as to obtain he number necessary to elect a representative. Under this system of apportionment the first house of representatives, as we have seen, had 91 members. No change in apportionment was made until the convention of 1876, when the house had grown to 393 members. The amendment adopted by this convention made population the basis for apportionment, and provided that for the first representative a town or ward must have 600 inhabitants and for each additional representative, 1,200 inhabitants. This amendment was ratified and reduced the size of the house to approximately 280 members. The convention of 1889 adopted an amendment providing that a town having less than the minimum number of inhabitants required for a representative might be represented a proportionate part of the time during the period covered by an apportionment instead of being classed or united with another town for the election of a representative. This amendment was ratified by the people and has not been changed.

However, the membership of the house continued to increase with the growth in population and by 1900 it had again reached approximately 400. The first four conventions held since the turn of the century adopted five amendments reducing the size of the house, all of which failed of ratification, possibly because these amendments, with a single exception, would have made the reduction at the expense of the cities and larger towns. The convention of 1938 at its first session proposed no amendment reducing the size of the house presumably because the amendments proposed by the four preceding conventions had been rejected. But the census of 1940 disclosed another substantial increase in population with the result that the apportionment made by the legislature of 1941 provided for a house of approximately 450 members. The president of the convention, the late George H. Moses, advised the legislature that he would reconvene the convention for the purpose of reducing the size of the house, if the necessary appropriation was made to cover the costs. As a result the convention was reconvened in September 1941 and adopted an amendment which provided that the house consist of not less than 375 nor more than 400 members and that the number of inhabitants necessary to entitle a town or ward to representative additional to the first shall for each additional representative be twice the number required for the first representative. The convention also proposed two other amendments authorizing absentee voting and the special assessment of standing wood and timber. All three amendments were ratified by the people.

It will be observed that from the beginning the rule or formula for the apportionment of representatives among the towns and wards has been weighted in favor of the smaller towns. In general the same relation between first and additional representatives has been maintained, although the formula has been twice changed. In each of the rules for apportionment twice as many rate payers or inhabitants have been required for an additional representative as for the first. The record indicates that any amendment reducing the size of the house which departs materially from this rule is not likely to be ratified.

The representation of towns having less than the population necessary for a representative has been continued on a proportionate or part-time basis. Apportionments are made by the legislature every 10 years and cover 5 sessions of the legislature. Under the present apportionment, there are more than 100 towns which send representatives a proportionate number of the sessions and of these approximately 50 towns send representatives to only 2 of the 5 sessions. Many of these towns are contiguous and without hardship two or more could be classed together to provide the minimum population necessary for a representative, thus giving continuous representation to the inhabitants of such towns. The next convention presumably will have before it amendments to empower the legislature to unite these towns for the purpose of choosing a representative where it can be done without hardship.

The heavy burden of taxation will undoubtedly result in a determined effort to revise the constitution to confer greater authority on the legislature in the levy and assessment of taxes. This ought not to be necessary as the provisions of the constitution are sufficiently broad to confer all needed power upon the legislature. The constitution was drafted when New Hampshire was an independent State bound to the other States only by the loose ties of the Confederation. The framers of the constitution conferred upon the legislative and the executive departments ample powers for war and peace. For nearly 50 years following the adoption of the constitution, the legislature levied a great variety of taxes and assessments including excises, and placed a practical construction upon the provisions of the constitution relating to taxation, sufficiently broad to meet the requirements of our highly complex society. However, in a series of cases beginning with *Railroad* v. *State* (60 N. H. 87), decided in 1880, the Supreme Court adopted a strict construction of the constitution which practically excluded all forms of taxation except the general property tax. The constitutional amendment of 1902 opened the way for the levy of taxes on inheritances, franchises, and other classes of property, including property passing by sale and property received as income. However, the rule enunciated in *Railroad* v. *State* that all property must be assessed at a uniform valuation and a uniform rate within the taxing district excludes graduated taxes and leaves in doubt the authority of the legislature to classify property according to kind or use for the purpose of taxation. While the legislature now clearly has broad power in the field of taxation, as indicated by the recent decisions and advisory opinions of the Supreme Court, amendments to confer greater authority, including the power to levy graduated taxes on incomes and inheritances, will undoubtedly be among the important measures considered by the next convention.

Since 1900, six conventions have been held and the seventh is to be convened next May. The great majority of the amendments proposed by these conventions have been rejected. Some of the conventions have been held when there was no clearly defined interest in constitutional revision. This has been due to the peculiar provisions of the constitution providing that the sense of the people shall be taken every 7 years on the need for revision of the constitution, and since 1900 the vote has been unfailingly for a convention. Thomas Jefferson strongly favored the holding of frequent conventions, claiming that a constitution ought to be rewritten by each generation. However, our experience indicates that the period between referendums might be increased from 7 to 10 years, or even more, consistently with the public good. Governor Dwinell has proposed that the legislature be empowered to adopt amendments to the constitution to be effective upon ratification by the people. The great majority of State constitutions provide that amendments may be adopted either by the legislature or by constitutional conventions subject to ratification. In those States, the constitutional convention is usually convened only when a general revision of the constitution is deemed necessary. The mode of amending the constitution will be among the important issues before the next convention.

In this outline of amendments likely to be brought before the next convention I have touched upon those of general public interest. In the light of the record of recent conventions, we may assume that other important amendments will be proposed requiring studied consideration. The record of these conventions also discloses that amendments which encounter strong opposition within the convention, if finally submitted to the people, commonly fail to receive the two-thirds vote necessary for ratification.

The constitution of our State is rightly regarded as a priceless heritage. The framers of this constitution met in convention while the war for independence was still undecided, but they viewed the future with confidence. In drafting the constitution, they sought to establish a strong government while preserving to the individual those rights which they deemed inalienable. In keeping with this purpose they finally drafted a constitution providing for a government of limited powers. To prevent abuse in their exercise, the essential powers, legislative, executive and judicial, were delegated to three departments, with the injunction that they "be kept as separate from and independent of each other as the nature of a free government will admit." This delegation of powers was preceded by a bill of rights which, with much particularity, guarantees to the individual, natural and unalienable rights even as against his own government. Among these rights are freedom of conscience, freedom of the press, the right of assembly, the right to acquire and hold property, and the right to trial by jury in both civil and criminal proceedings. In criminal proceedings, the bill of rights assures to the accused the right to have the charges against him stated fully and substantially, the right to be confronted by the witnesses against him, and the right not to be placed twice in jeopardy for the same crime or offense. He is also accorded the privilege against self-incrimination in terms as broad as the fifth amendment to the Federal Constitution. I have referred to these rights and privileges to indicate the broad guarantee of personal rights embodied in the bill of rights, but not to define them. It may suffice to say that these broad guarantees of personal rights constitute a secure foundation for free government by free men.

In this time of trouble characterized by the rule of dictators over much of the world, our constitution takes on a new significance. The government founded thereon has main-

tained order, established justice, insured the general welfare and preserved the freedom of our people. The constitution comes to us from the historic past, but it derives its force as law from the living present. It provides for a government of laws, but it depends for its implementation and validity upon each generation. We thus have the high privilege to maintain our constitutional form of government and, in so doing, to assure freedom under law to those who come after us.

Role of Civil Affairs Military Government Branch

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, January 24, 1956

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the January 7 issue of the Army Times, entitled "Growing Pains Prove CAMG Branch Is a Hefty Offspring." This article, written by Col. Steve Tillman, points up the vital role being played by the newly established Civil Affairs Military Government branch of our armed services in our national defense system.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GROWING PAINS PROVE CAMG BRANCH IS A HEFTY OFFSPRING

(By Steve Tillman)

WASHINGTON.—Like any infant, the Army's latest baby is going through growing pains, but is adding weight and lung power. I refer to the new Civil Affairs Military Government branch. Launched last August, the branch is primarily for Reserve officers not on active duty.

Before the growing job can be completed there is a tremendous administrative job to be done by Maj. Gen. C. K. Gailey, chief of CAMG, and his staff. Each Reserve officer now with military government units must file an application for transfer to the branch. All MG assignments in the past have been on a branch-immaterial basis.

Army Regulations 140–108 say that these officers will be continued in such assignments if they do not transfer, but that all future assignments will require that the individual be a CAMG officer. The belief of top level leaders in the CAMG field, however, is that all should be members of the corps.

Their feeling is that any new branch or corps of the Army needs the fullest support from its members. Only through this positive type of approach can CAMG truly be made effective, they say.

CAMG has its own school at Camp Gordon, Ga. The first school came into being in 1942 at the University of Virginia and was followed by 12 additional schools at other universities. The school at Camp Gordon became active in 1951, when a CAMG department was established at the Provost Marshal General's school.

Functional activities of CAMG cover such fields as labor, public education, public welfare, public finance, public works and utilities, communications, economics, public safety, etc.

Outstanding public and academic officials with these backgrounds now make up most of the MG officer personnel. One such officer—and the highest ranking one—is Brig. Gen. STROM THURMOND, United States Army Reserve, former governor of South Carolina, and now United States Senator from that State. Another, Col. Charles H. Kraus, of Washington, D. C., another officer, is an authority on international law.

Colonel Kraus, who commands 1 of the 3 highest type units in CAMG—a military government area headquarters—tells me that the organization can be compared to that of a State political body—the headquarters commander as a governor, his chief of labor as a State commissioner of labor, etc.

The inactive duty training of his unit is carried out at Georgetown University here in Washington. Training subjects cover geopolitics, international relations, alien ideologies and economics, comparative government, and studies of foreign countries. Using a meet-the-press technique, the unit had instructors during 1955 who included top level representatives of many foreign embassies.

Military government units range from separate platoons and companies on up to the three area headquarters. The latter are for theater function and would take over occupied territory as the combat area moves on.

The philosophy of our Government is that we do not fight the people of an enemy country, but rather the ideology of the enemy country. But if the occupied area should not be governed by our forces the war could be lost. Hence MG takes over and operates with wide latitude, on American ideologies.

Considerable discussion has taken place among CAMG Reserve officers over the need for greater recognition, in the overall pattern of the Army organization, for their units. This is especially true of the three area headquarters unit. The feeling among informed Reservists is that these units should have brigadier generals rather than colonels, as commanders. They point to the fact that Army has quite a few logistical commands commanded by general-grade officers, rather than colonels.

Early recognition of such a proposal is bound to have a healthy influence on the growing pains of CAMG and place the three units in their rightful sphere, these leaders tell me. There is much to what they contend.

The only Reserve brigadier general now in CAMG is assigned for mobilization purposes to the office of the chief of CAMG as the deputy. With the acceptance of the proposal to give the area headquarters a brigadier general in 1956, CAMG would then have four Reserve general-grade officers.

While the President Convalesces, Bitter Factions Fight for Control of Republican Party

EXTENSION OF REMARKS
OF
HON. MATTHEW M. NEELY
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Tuesday, January 24, 1956

Mr. NEELY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in the January 1956 issue of the Democratic Digest, entitled "While the President Convalesces, Bitter Factions Fight for Control of Republican Party."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHILE THE PRESIDENT CONVALESCES, BITTER FACTIONS FIGHT FOR CONTROL OF REPUBLICAN PARTY

Fourteen days before President Eisenhower suffered his heart attack, he spoke to Republican Party leaders at a Denver breakfast which has assumed increasing meaning in the light of subsequent events. It was, as a matter of fact, the last time in 1955 when the illusion of Republican Party unity seemed to have some foundation.

To many observers, Mr. Eisenhower's half-hour speech to the 48 Republican State chairmen on that occasion carried overtones of a farewell address. Warning his party against excessive reliance on any indispensable man, he said:

"* * * Humans are frail—and they are mortal. * * * You never pin your flag so tightly to one mast that if a ship sinks you cannot rip it off and nail it to another. It is sometimes good to remember that."

The President's earnest discourse on this theme brought a sobering, if not a chilling shift from the light note on which the meeting had begun. Republican National Chairman Leonard W. Hall, in introducing the President, had alluded to a question often asked him as to what Republicans would do if Mr. Eisenhower did not run for reelection in 1956. Mr. Hall quoted one State chairman, whom he did not name, as providing this answer:

"When I come to that bridge, I'll jump off it."

Mr. Eisenhower joined in the laughter provoked by that quip, but the presidential address which followed was throughout a solemn message—an urgent warning to his party that it faced deep trouble if it must depend on one individual to hold it together.

"If a political party is not held together by a common faith, a common conviction, in certain fundamentals," the President said, "it is not a true political party, but is merely a conspiracy to gain power."

Now, 100 days and innumerable Republican conflicts later, it is abundantly clear that the GO has "jumped off the bridge" into the churning waters of factional warfare.

Despite the restraint on political activity which the President's illness has decreed, the weeks since Mr. Eisenhower was stricken September 24 have been filled with evidences of political maneuvering by leaders of rival GOP groups. Headlines in the daily press record a revival of the quarrels which rocked the party before General Eisenhower's nomination and during the first 2 years of his administration.

For example:

"GOP right wing is stirring again." (New York Times, November 6, 1955.)

"Knowland coalition plan is revealed." (Washington Daily News, November 15, 1955.)

"Ike would be unfair to run, MCCARTHY says." (Washington Daily News, November 15, 1955.)

"Rumblings within the GOP." (Washington Evening Star, November 15.)

"Drift of GOP wings apparent in capital." (Christian Science Monitor, November 14, 1955.)

"GOP leader slaps at Ike—'not Republican.'" (Milwaukee Journal, November 16, 1955.)

The feud between California's Gov. Goodwin Knight and Vice President Nixon, and the rivalry between Nixon and Senator William F. Knowland, of California, are but two of the Republican splits which have widened perceptibly in the anxious days while the Chief Executive has been immobilized.

Presidential Assistant Sherman Adams and Attorney General Brownell have also taken hands in the game of restraining ambitious

Mr. NIXON. They put a quick damper on any move to define Presidential powers which the Vice President might assume during the period of the President's incapacity. Adams' skill in keeping a rein on the Vice President, and, in fact, running the President's office from Mr. Eisenhower's bedside, has considerably advanced his own cause as a major contender in the final GOP showdown over the 1956 nomination prize.

The Adams or White House strategy in playing a "waiting game" on Eisenhower—keeping the country and the politicians guessing as to Mr. Eisenhower's final decision on the 1956 race—has to some degree backfired. While it has had the effect of imposing a prolonged mark time on the Eisenhower wing, it has placed no such inhibition on the rival GOP faction. The swift reactivation of the Old Guard is recorded in press accounts of the new Knowland coalition plan revolving around such rightwing stalwarts as Senate Minority Leader KNOWLAND; Senator BRICKER, of Ohio; Senator DIRKSEN, of Illinois; Senator MCCARTHY, of Wisconsin; and Senator BRIDGES, of New Hampshire, chairman of the Senate Republican policy committee.

According to the new rightwing publication, the National Review, the coalition's goal is to tie up 250 delegates to the San Francisco convention in August through a drive in presidential-primary States where the Old Guard still is dominant.

As William S. White reports in the New York Times, the conservatives are confident they have the power to shape if not actually control the 1956 convention, even if the President should designate a White House choice. At the very worst, they would expect to get NIXON, the all-America opportunist. Mr. NIXON now appears to be last on the Old Guard's list of favorite sons, but he still has one foot far enough in the right-wing camp to make all genuine moderates exceedingly unhappy.

Meanwhile, Senator KNOWLAND has been promoting himself vigorously as the white hope of the ultra-conservatives—the designated heir of the Taft following. He is again restating foreign policy views which have brought him into frequent conflict with Mr. Eisenhower. Calling for redemption of the GOP's 1952 liberation policy plank, he recently declared. "I believed then and still believe that this platform pledge was a solemn covenant with the American people, not mere campaign oratory."

At the same time that he reminds his party of his devotion to Old Guard shibboleths, Senator KNOWLAND takes potshots in passing at his great rival from California—NIXON. At an early stage of Mr. Eisenhower's illness, when the press was speculating whether the President would give NIXON the nod as his successor, Senator KNOWLAND remarked that he didn't regard "a Pepsodent smile, a ready quip, an actor's perfection in lines, nor an ability to avoid issues, as a qualification for high office." He has coupled that with insistence that there must be a "wide-open primary" and that the President should announce before January 1 whether or not he would run again.

There are strong indications that Thomas E. Dewey will return to the political battles.

The animosity between Taft and Dewey wings, which produied the famous brawl at the 1952 GOP convention, has not been diluted by the Eisenhower mildness. While this old factional cleavage continues, Republican differences are spreading in other areas.

One of the chief bones of Republican contention is the Eisenhower farm program. Republican varsity members Brownell, Stassen and Summerfield recently were identified in the press as the prime factors in a Cabinet move to dump Agriculture Secretary Benson—an uprising that reportedly was curbed only by Presidential intervention.

However, the anti-Benson pressure continued to mount, prompting the White House to take more energetic measures in an an effort to squelch the insurrection. On November 21, the White House issued a statement that the President "has never entertained at any time any suggestion whatsoever that the Secretary of Agriculture be replaced."

Meanwhile, congressional Republicans in the Midwest and Republican governors in the Farm Belt trumpet their unhappiness over Benson and the administration's lowered price-support program. The Republican National Committee publication, Straight From the Shoulder, recently assailed the Senate Agriculture Committee's nationwide hearings on farm legislation as a political vehicle. That charge drew a quick repudiation from GOP Senators YOUNG, of North Dakota; THYE, of Minnesota; and SCHOEPPEL, of Kansas.

Republican division over labor policy also is crackling. The rightwing led off with an attack on union leaders by Senator BARRY GOLDWATER, of Arizona, chairman of the Republican Senatorial Campaign Committee. As many observers have noted, he is reviving the divide-and-conquer strategy used by the late Senator Taft. His offensive drew quick support from Senator KNOWLAND and National GOP Chairman Hall.

On the other hand, a number of prominent Eisenhower Republicans—among them Labor Secretary Mitchell, White House aid Howard Pyle, Maryland's Governor McKeldin, and Kansas' Gov. Fred Hall—have spoken out sharply against these antilabor utterances. Declaring that Senator GOLDWATER is not expressing administration policy, Labor Secretary Mitchell indicates he will take the dispute direct to the President.

Even the budget balancing effort is producing new turmoil in Ike's team. On one side is Treasury Secretary Humphrey, Under Secretary of State Herbert Hoover, Jr., and International Cooperation Director John Hollister, all reported holding out for reduced foreign-aid programs at a time when the Soviet Union is reaching boldly for the initiative in this field. Against them, according to Drew Pearson, is Harold Stassen, Mr. Eisenhower's new "Secretary of Peace," and many State Department officials.

Another difference develops over the administration's attempt to formulate a program for aiding distressed communities and industries in this country. Washington columnist Robert S. Allen reports Labor Secretary Mitchell and Commerce Secretary Sinclair Weeks are divided on important details of the proposed program. Meanwhile, the wide difference between Weeks and Mitchell on administration labor policy remains unresolved.

Sharpening of the administration's conflict over labor policy is reflected further in the abrupt dropping of Lothair Teetor from his post as Assistant Secretary of Commerce. His antiunion bias had made him a target of wide criticism. Before Weeks brought him to Washington, Teetor was head of the Perfect Circle Corp., a company which has waged a bitter struggle against unions in its Indiana plants.

The area of Republican squabbles was widened again just the other day when Attorney General Brownell accused the Small Business Administration of operating in an "indirect and haphazard" manner, and failing to place enough curbs on possible monopolies. Capitol reporters were unable to recall another instance since the administration took office when one Federal agency has officially rebuked another. Observers of what is happening in Washington wonder more and more what basis there is for the frequent Republican boasts that the team is running everything beautifully while the President regains his strength.

An internal struggle over the administration's discredited Federal employees security system boiled to a new high point late in November when Attorney General Brownell formally asked the Subversive Activities Control Board to consider bias and prejudice charges against an Eisenhower appointee to the Board, Harry P. Cain. Cain, a former GOP Senator from Washington State, earlier got unshirted hell from Presidential Assistant Sherman Adams over his outspoken criticism of the system. Cain told a reporter "I tried to explain the merits of my criticism of the security program, but he [Adams] snorted: 'To hell with the merits * * * this is a team, and you are expected to play on it.'"

Senator MCCARTHY is pumping hard again on the anti-Eisenhower bellows. His recent broadcasting of Communist infiltration charges against the Eisenhower National Labor Relations Board opens a new run of the smear bucket brigade. MCCARTHY's recent declaration that the President would be unfair to both himself and the American people if he runs again sets the undisputed low for rude gratuitous advice to the ailing Chief Executive.

Other Republican extremists are unable to repress their eagerness to retire Ike. "Eisenhower is no more a Republican than Stalin," declared Edgar C. Bundy, of Chicago, president of the Abraham Lincoln National Republican Club, in a mid-November address to the Milwaukee branch of his organization. Members of his audience cheered as he praised the late Senator Taft, Gen. Douglas MacArthur and Gov. J. Bracken Lee of Utah. They booed at mention of Thomas E. Dewey, Harold E. Stassen, Sherman Adamas and Senator Alexander Wiley of Wisconsin.

Utah's Governor Lee, who apparently wants to repeal the entire 20th century, feels encouraged these days to make fresh exhibitions of his disaproval of Eisenhower's Washington. In view of the way things now are turning in his party, he has some right to feel that he was a reliable prophet last February when he touched off the revolt against Eisenhower at the Chicago rally of the Old Guard.

The Bracken Lees and the Bundys of the party get comfort in their intemperate line from some of the highest Republican circles in Washington. They cannot fail to note that a statement from GOP Senators welcoming the President back to Washington from Fitzsimons Army Hospital, Denver, carried the signatures of only 29 of the 47 Republican Members of the Upper Chamber.

From Gov. Fred Hall, of Kansas, Mr. Eisenhower's home State, comes the only spirited protest which an important GOP leader has uttered to date against Republican disloyalty to the President. Speaking November 16 at a dinner of the National Republican Club, New York City, Governor Hall said that a basic Republican difficulty today is that so many Republicans are out of step with the President, and with the people who voted for him in 1952.

"At a time when we can ill afford the loss of a vote we are alienating the support of millions of Americans, particularly those of labor and agriculture," he added. "We are fighting with the farmers. We are fighting with labor."

His defense of the President drew angry retorts from conservative Republican organs like the Chicago Tribune and the New York Daily News. Hall's isolated position in the family quarrel is but another manifestation of the Eisenhower wing's virtual eclipse—a phenomenon which columnist Doris Fleeson terms "one of the political mysteries of the last 3 years." Mr. Eisenhower's own stature and wide public acceptance have tended to obscure the "failure of the Eisenhower wing to assert itself more strongly than it has," she observes. But, she adds, it is a fact that

the President himself "and a few people close to him have been the Eisenhower bloc so far as power and purpose are concerned."

Only now, as the Republican contest for succession to the supreme authority quickens, is the country beginning to perceive how remarkably light an impression the Eisenhower image actually has made on his party. While fresh incidents of Republican discord on the national level remind us daily that the GOP has not accepted the moderate philosophy which Mr. Eisenhower has sought to exemplify, there are multiplying signs that the GOP disunity extends to the farthest reaches of the organization.

One of the more acute Republican internal disorders rages in the Western State—California—which has produced three of the principal figures in the national contention for the Eisenhower succession. Another agitated Republican State is Kansas. Governor Hall's fight to put some fire in the Eisenhower crusade is seriously complicated by his bitter struggle back home with the faction headed by Republican National Committeeeman Harry Darby and Senator FRANK CARLSON. In Wisconsin, the McCarthyites are aiming to unhorse Senator WILEY for his support of President Eisenhower. New Jersey, New York, Pennsylvania, Connecticut—the list of sore spots runs long.

Republican awareness of their party's wasting internal sickness has now become intense, as a result of the President's illness, and their panic accounts for the mounting pressure on Mr. Eisenhower to run again at all costs. Their mood is accurately described by the Kansas City Star's publisher-editor, Roy A. Roberts, who writes that the Republican Party "is apt to be sicker than the President himself" if he doesn't run again.

Whatever Mr. Eisenhower decides, the record shows that the Republican Party never wanted to follow the Eisenhower moderate course, and still doesn't. Moreover, the record shows that even Mr. Eisenhower's great magnetism is not strong enough to unite his dissident party, nor potent enough to bring the GOP old guard into the 20th century. For the first 2 years of his term, he meekly accepted interference, harassment, embarrassment from the right wing. The result was chaos, and drift in the National Government, and the Republican Party's badgering of its own President did not come to a halt until the people elected a Democratic Congress, which proceeded to restore the constitutional balance in Washington.

The national peril growing out of the anarchic state in the Republican Party was discussed by Walter Lippmann in an article that appeared some 2 months before the President fell ill. He observed that Democratic control of Congress had enabled President Eisenhower to act like the President, and warned of what would happen if the GOP extremists returned to power.

"If Mr. Eisenhower decides to run again, one of his big headaches will come from the fact that as party leader he must work for a Republican Congress and frown upon the Democrats," Mr. Lippmann wrote. "Yet as President he needs a Democratic Congress. I know it is looking very far into the unknown future to say this. But it looks to me that in a second term Mr. Eisenhower would need a Democratic Congress as much, perhaps even more, than he needs it today."

As Mr. Lippmann noted, if the Republicans were to ride Ike's coattails back to control of Congress, the power on Capitol Hill would return to the same willful band which made a nightmare of Mr. Eisenhower's first 2 years. And, because of the 2-term Presidential limitation which the GOP invented, they would feel under even less compulsion to respect the White House than they did in 1953 and 1954. With the impairment of Mr. Eisenhower's health which has since come about, the chances for compounding a national tragedy with a great personal tragedy obviously are enormous in the circumstances.

Whether or not Mr. Eisenhower had a premonition at Denver last September 10 when he warned the 48 GOP State chairmen that a President is a frail mortal, this fact is clear: He had, as of that date, come to the end of the road with the Republican Party—a party which has shown that it cannot or will not heed his advice that it must have a common faith, a common conviction in certain fundamentals. It now is paying the penalty reserved for all parties which have degenerated into a mere conspiracy to gain power.

Facts About Gas

EXTENSION OF REMARKS
OF
HON. EVERETT M. DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES

Tuesday, January 24, 1956

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Facts About Gas," which appeared in the Chicago Daily Sun-Times of January 23, 1956. The Chicago Daily Sun-Times is a very well-edited, liberal, independent paper, and the editorial, two full columns in length, discusses the Harris-Fulbright bill. It is a very well reasoned editorial and is, I think, of general interest.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FACTS ABOUT GAS

Chicago householders who heat their homes with gas and the 125,000 families on the waiting list for such service should have a special interest in the gas debate now going on in the United States Senate.

The debate centers on the Harris-Fulbright bill. It would exempt producers of natural gas—the owners of gas wells—from Federal regulation as public utilities. It would restore a condition that existed prior to June 1954, when a Supreme Court decision forced the Government to take over regulation of the wells.

Opponents of the bill, who want the Government to set strict price controls on gas at the wellhead, argue that if the Harris-Fullbright bill passes, the price of gas to homeowners will be raised unconscionably. Supporters of the bill deny this and point out that from 1938 to 1953, during a period when there was no Federal control, prices rose only 7 percent while the cost of living generally went up 90 percent. Today gas is the best heating buy on the market—and that's why there's such a waiting list for gas service. Only 10 percent of the consumer's bill goes to the gas well owner. The rest goes to pipelines and local gas companies.

A careful examination of the issues has convinced us that the best interests of producers and consumers will be served if the Senate approves the bill and the President signs it. The House has already passed it.

Public utility price controls over gas producers are, in our opinion, both unfair and unworkable. This Nation never has put such controls on natural gas until the Supreme Court decision of 1954.

It must be understood the Supreme Court did not pass judgment on the arguments for or against Federal control. It simply decided that the wording of a 1938 act of Congress showed Congress intended that there should be such control. In 1950, Congress passed a bill saying it intended no such thing, but President Truman vetoed it. The issue is up again this week.

One of the arguments for controls goes like this: The consumer's furnace actually is connected with the gas well. The price the consumer pays the gas company is regulated (because the gas company is a monopoly); the price the company pays the pipeline is regulated by the Federal Power Commission, so the price the pipeline pays the producer should be regulated.

Your electric lights are tied to a coal mine, too, but no one is advocating putting coal under Federal price control because it is hauled by a regulated railroad to a regulated electric company to be burned to produce electricity for your lights.

The rates charged by the electric, gas, and telephone companies are set by State commissions because they are monopolies. They are granted monopolies because it would be nonsensical to have several competing companies tearing up the streets. The rate generally set is cost plus 6-percent profit. Telephone rates are regulated too. But no one (except an outright Socialist) would argue that copper prices should be regulated because telephone wires are made of copper.

Gas producers—like coal and copper producers—are in a different category. They are entrepreneurs. They invest their money in searching for gas wells. One such entrepreneur might spend $2 million on 20 wells before hitting a producer. Another might sink one well and strike gas. The well might produce both gas and oil. How could the cost-plus-6-percent formula be set fairly in these cases?

The Harris-Fulbright bill does protect the consumer by retaining a degree of Federal control over the price paid to the producer. It requires the power commission to place a ceiling of a reasonable market price on the amount pipelines may pay. This will prevent unconscionable gouging.

This is a concession and a compromise to those who fear gas producers might try to raise their prices to the point where they would get as much for their product as coal operators get for theirs. The reasonable price compromise would allow contracts that were frozen by the Supreme Court order in 1954 to go back into effect.

To insure continued supplies to homeowners who have invested in gas heating equipment, gas line companies must, by law, have 20-year contracts with gas producers. Some of these contracts contain an escalator clause to protect the producer against increases in costs, just as many union labor contracts protect workers against cost-of-living changes.

In some cases, gas producers, to meet competition and begin cashing in quickly on their investments, set thier prices very low for the first few years of the contract. The Supreme Court freeze has forced them to continue these prices and prevented them from getting the fair over-all return they had bargained for.

Rather than operate under such conditions many of the producers have decided to restrict their sales to gas users within their own States. Such sales have no price regulations. As a consequence, gas that normally might be flowing to Chicago householders now is being used in factories or in electric powerplants in Oklahoma.

John E. Swearington, Standard Oil Co. (Ind.) vice chairman, last week revealed that controls have caused the cancellation of many new pipeline projects. One, he said, would have brought to Chicago 150 million cubic feet of gas a day, enough to take care of the 125,000 Chicagoans on the waiting list.

Government price-fixing, therefore, already is making Chicago more gas-starved than it ought to be. Increasing use and volume sales have kept prices in line. If such

expansion does not continue it is likely the cost of gas to the consumer will go up despite Government controls.

If the controls are lifted by passage of the Harris-Fulbright bill, how much would costs go up under the working of the free enterprise system? One opponent of the bill estimated producers would raise their prices 5 cents per 1,000 cubic feet. That would amount to $11.65 a year for the average home heated with gas. This is only slightly more than the new city tax on gas recently voted by the city council.

So, we might have to pay a little more for gas if the bill passes. But if it doesn't we will have to pay a good deal more—in Government principles as well as dollars.

Problem of the Aged

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Tuesday, January 24, 1956

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a most interesting and informative article which appeared in the Daily News of Miami, Fla., on January 3, 1956. The article was written by Mr. Walter Locke.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A PROBLEM OF THE AGED: THE OLD, OLD QUESTION

(By Walter Locke)

Bliss was it in that dawn to be alive,
But to be young was very heaven.

Old question for the new year: Suppose you are old and poor and allowed no work to do. What bliss to be alive on any day?

The famous American, Joseph Choate, said 50 years ago: People were their happiest after 70 years. He urged us to hurry to reach that golden age. He himself went on to the bliss of 85.

Another wise man, Robert Browning, had Rabbi Ben Ezra saying: Grow old along with me; the best is yet to be; the last of life for which the first was made.

Since the days of Robert Browning and Joseph Choate, times have greatly changed. Old age isn't what it used to be.

The world is now less hospitable to age. There are more old to wrestle with a less friendly world.

NO CHORES TO KEEP BUSY

The last census found 13 million people among us aged 65 or more, an increase of 50 percent since the census of 10 years before.

Science keeps us alive to a far greater age than we managed, 50 years ago, to reach. One-third of all who are above the age of 65 are 75 or more. We keep the old longer alive only to torture them?

This was still, when Joseph Choate spoke, a rural society. Old folks on farms and in villages can putter around according to their strength, do chores, and so keep happily busy and earn their keep. Now hardly a fifth of the old folk live in rural homes. They are in cities, with no chores to do.

Thirty-six percent of the people over 65 have now no means at all. Why did they not save for their old age?

Old folk now 75 have twice seen their savings swallowed up in depressions, with their bank failures and bankruptcies. Thrice their savings have been cut in half, as after each World War, by inflation. Their savings failed them.

IN OUR SPEEDING LIFE

Anyway, with or without reason or excuse, here are our 13 million old folks, more than one-third of them penniless, and will rich America let them suffer from hunger or from fear?

Our free enterprise denies them jobs. Aged musicles and slowed hands cannot keep pace with our new machinery. In fact, now that wealth is produced in torrents by machines, with men merely pushing buttons, should the oldsers need to work to have the means to live?

The city invades the countryside. One who happens to own the land in its path finds himself of a sudden, by unearned increment, a millionaire. Now he, nor his children, nor his children's children, will never need work more. If some can live without work, why not others? One who has worked three score years, should he need, in order to eat, to work at all?

The old folk who work have been for half a century diminishing. They do not work because, in our speeding life, there are no jobs for them. We will not let them work. What then?

The aged, with their less money, have the more need of it. Our sicknesses increase with age. The old have twice the disabling diseases of those under 65.

The aged sick need the hospital. But only 2 out of 5 of them in the hospital have money to pay for their care. About as many as go to the hospitals stay away, when sick, for lack of funds for the service of the hospital.

VICTIMS OF INFLATION

Thirty-six percent of the aged, 65 or more, have no income at all. The means of as many more are less than $1,000 a year. Only 1 in 7 of the aged has as much as $2,000 on which to support themselves and family.

The old rule: The children should care for the old folks. That is the oldest way. In the modern world that doesn't seem to work. The problem remains: To let age be still the happy time proclaimed by a Browning, a Choate (they were both wealthy men).

A happy age means age with self-respect, age without fear. With age denied this boon there can be no self-respect even for youth, no escape from our own fear.

We have let inflation halve the blessing of social security. Only one-third of our aged receive Government or private retirement funds. Still the aged increase. Still the problem presses, grows. Till the problem is solved, what a cynical pretense is our boasted prosperity.

A New Executive Secrecy

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1956

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very excellent article by Clark R. Mollenhoff of the Washington bureau of the Des Moines Register and Tribune and the Minneapolis Star and Tribune, entitled "A New Executive Secrecy." This brings to our attention an article that is important to all of us, and I recommend it for further study by my colleagues.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A NEW EXECUTIVE SECRECY—EISENHOWER LETTER TO SECRETARY WILSON FORBIDDING JOHN G. ADAMS FROM TESTIFYING IN ARMY-MCCARTHY HEARINGS PROVIDES DANGEROUS PRECEDENTS—COULD SHUT OFF CONGRESS AND PRESS FROM INFORMATION—MIGHT HIDE SCANDALS EVEN FROM THE PRESIDENT HIMSELF

(By Clark R. Mollenhoff)

Within the last 2 years a precedent has been established which I believe constitutes one of the greatest threats to freedom of the press in the United States in our time.

I speak of the May 17, 1954, letter written by President Eisenhower to Defense Secretary Charles E. Wilson. It was written during the Army-McCarthy hearings to prevent Army Counsel John G. Adams from testifying as to conversations with Deputy Attorney General William P. Rogers and Sherman Adams, assistant to the President.

The letter was only a broad statement on the rights of the executive branch of the Government to keep certain things confidential and out of the scope of congressional inquiry. It was the broad statement on confidential records that made the precedent dangerous. The application of this letter by a number of agency heads clearly shows why the press should be concerned.

BEHIND THE DIXON-YATES CONTRACT

Budget Director Rowland Hughes refused to allow certain witnesses to be questioned and certain papers produced in connection with the handling of the Dixon-Yates contract. Hughes declared that under the May 17, 1954, letter it was his opinion that Congress was entitled to the decisions of the agency, but could not go behind those decisions since papers and conversations involved in formulating policy were confidential.

Normally, the ability of the press to penetrate executive agencies is pretty much contingent on the power of congressional committees to penetrate those agencies.

Fortunately most agency heads have too great an appreciation of their public responsibility to use this precedent. However, enough have used it to make it completely clear how great is the potential danger.

Dozens of times, witnesses before congressional committees have commented: "We consider that information to be confidential under the President's May 17, 1954, letter to Defense Secretary Wilson."

Congress, newspaper reporters and the public they both serve should be able to go behind the decisions of Government agencies to find the specific actions and motives that went into these decisions.

"THREAT TO THE PRESS"

The precedent of the presidential letter is shifting the burden of proof on access to Government records. Under this precedent, the Government need not prove why information is confidential. You must prove why information is not confidential.

This is not an effort to paint this Administration as any worse than past administrations. It is difficult to generalize about whether one administration had a better or worse information policy. My own experience indicates that some agencies are better, and some are worse.

The fact that you can get as much, or even more information from some Government agency today makes the precedent no less a threat to the press. As long as the precedent remains, the press can be closed out at any time on the whim of the agency head.

The Dixon-Yates hearings provided example after example of the Atomic Energy Commission, the Bureau of the Budget, and the Securities Exchange Commission arbitrarily declaring information beyond the bounds of congressional committees.

Senator MCCLELLAN's special Senate investigating subcommittee has run into the same roadblock. A similar experience has

been had by the House Government Operations Subcommittee investigating the Interior Department's power policy.

These agencies did not plead that security of the Nation was involved. They did not plead that loyalty files, diplomatic papers or raw investigative files were involved. They arbitrarily drew the line beyond which it was contended Congress could not go.

WHAT THE LETTER DID NOT SAY

We should consistently take the position that Congress is entitled to the maximum information unless clear reasons are shown why public policy dictates that the information should not be available.

I would not propose to allow Congress to interfere with the operation of the Government by the executive branch of the Government. However, when the executive agency has made its decisions, the Congress and the press should be entitled to know what factors went into those decisions. If we are ever barred from going behind decisions, the door is open for the fixers.

The open-record policy can save executive agencies from betrayal from within.

I was disturbed by the Eisenhower-Wilson letter, not because of any argument with what it said. My complaint was with the inference left by what that letter did not say.

No specific reason was given for the refusal to let Mr. Adams testify. There was only the generalized reason that certain things in the executive department were confidential. It seemed to me that this would allow each agency head to decide what records or conversations could be hidden from Congress as "confidential."

POSSIBLE COVERUP FOR SCANDALS

It seemed that this was an extension of the confidential orbit to a degree that it would be possible to block nearly any congressional inquiry before it got started.

If John G. Adams could refuse to testify as to his conversations, Cabinet members and others could seek the same refuge of confidential communication when they wanted to cover mistakes or even crimes. The Teapot Dome scandals of the Harding and the tax scandals of the Truman administrations could have been buried under such a policy.

I had assumed that the members of the press would react sharply to such a precedent. I was surprised to pick up well-known and respected newspapers and read editorials lauding the President's letter for its doctrine of separation of powers.

The press was helping to solidify a policy that could throttle the press if the Government ever fell into evil hands.

Some "Impartial Reporting" Depends on What Political Party Is in Power

EXTENSION OF REMARKS
OF
HON. HARLEY M. KILGORE
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Tuesday, January 24, 1956

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Charleston Gazette, Charleston, W. Va., of January 21, 1956, entitled "Some 'Impartial Reporting' Depends on What Political Party Is in Power."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SOME "IPMARTIAL REPORTING" DEPENDS ON WHAT POLITICAL PARTY IS IN POWER

Time magazine long has boasted of its objective, impartial reporting of significant happenings.

To many, however, it is felt that the objectiveness and impartiality to which Time so often refers depends in no small degree upon which candidate or which political party it currently is supporting.

An indication of this editorializing in its news columns can be found simply by checking the treatment given certain issues and certain personalities over a period of years. Thus, it was on October 16, 1950 in discussing George E. Allen, a Government official in the Truman administration, that Time said:

"For 18 years, roly-poly George E. Allen bobbed around Washington like a pneumatic rubber hose."

Or going back further to August 12, 1946, the magazine commented: "George is all the more remarkable because, to the naked eye, he is a clown."

But in the December 14, 1954 edition a slight change is noted: "Last week * * * the President (Eisenhower) chatted quietly with * * * golfing companion George E. Allen, Washington lawyer and friend of Presidents."

One of Time's more sparkling editorial crusades in its news columns over the years concerned the Fair Deal under the Democrats:

"In this best of all Democratic worlds he (Truman) had something for everybody. For the businessman, he had his new program of Government insurance and other aids to small business. For the farmer and consumer, he had the Brannan plan. For everyone else, there was a whole grab-bag of social and economic promises."

Under President Eisenhower fair dealism is handled like this: "Through the departmentalized details of his (Eisenhower's) proposals runs a clear consistent thread, joining each fact and each measure with all the others. The thread is the general good. He has not thrown together a hodgepodge of group interests. Every proposal seems to be tested by the standard of the whole Nation's interest."

Yet another controversial aspect of national importance is the income tax due every spring. Under Truman the income tax to the average American, a fellow whom Time is able to describe with amazing knowledge and to whom it constantly alludes, comes out so:

"This week once again, the American taxpayer * * * was working over his income-tax return. He did not do the job happily * * * The blow, in full and crushing measure, now lands each March 15 on the chin of a fellow named John Q."

Three years later under Eisenhower, the same person goes about the task in this manner: "* * * 60 million Americans have by this week signed their 1954 income-tax forms. * * * They did this, wonderful to tell, without riots or protest. * * * It has become more and more unfashionable to criticize the income-tax level."

The economic health of the Nation has received startlingly different interpretations in the magazine's efforts to be impartial and objective. The April 2, 1951 (Democrats in power) Time said: "Never in United States history had the cost of living been so high. Between January 15 and February 15 the consumer's price index jumped 1.3 percent to 183.8."

On July 4, 1955 (Republicans in control and the consumer price index at 192.3) Time commented: "After a considerable shift in domestic economic policy, the United States is more prosperous than ever before."

From these examples it would appear that Time's marshaling of facts into objective, impartial reports is a matter, as its title, suggests, of time.

Gabriel G. Kajeckas

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a 5-minute speech delivered by Gabriel G. Kajeckas, a 16-year-old honor student of Gonzaga High School in Washington, D. C., in the school elimination in which he took top honors in the I Speak for Democracy contest, sponsored by the United States Junior Chamber of Commerce, the National Association of Radio and Television Broadcasters, and the Radio-Electronics-Television Manufacturers Association.

In the District of Columbia elimination this young student was again successful in representing Gonzaga High School, entitling him to compete in the national contest.

As a result of the contest he was selected as one of the 12 semifinalists of winners from 47 States, the District of Columbia, and Hawaii. The top 4 winners have not been selected as yet, but announcement is due momentarily. He is the son of Mr. and Mrs. Joseph Kajeckas. His father is counselor for the Free Lithuanian Legation. Gabriel was born in Koenigsberg, Germany, and came to this country as an infant with his parents. He attended Sacred Heart School before entering Gonzaga. He hopes to attend Holy Cross College in Worcester, Mass., this fall.

THE ETERNAL ENGRAVING

(By Gabriel G. Kajeckas, age 16, Gonzaga High School, Washington, D. C.)

"Democracy cannot be defined." How many times have we heard this statement, and how many times have we agreed? Yet, we find that such is not the case; for democracy can be defined—here in my hand I hold its definition. It is small and insignificant, and yet it represents America, it symbolizes our way of life, it speaks for democracy.

What is it, you ask, that can be held in my hand, and yet represent the unlimitedness of America? The answer is simple, but so often overlooked. The answer is a mere coin—a penny.

But how can a penny define democracy? How can something we take so much for granted—how can it speak for democracy? Because engraved on this little copper coin is the definition of democracy. Look at it, and you will understand.

On it, the first thing we see is the strong, determined profile of a great man—the man who made all men in this country free and equal, and without whom we would never have been one and indivisible—Abraham Lincoln.

Then we see the word "liberty" engraved on the metallic surface—liberty, that gives my father the right to operate a restaurant if he so chooses—that gives your brother the right to be a printer—that gives each and every one of us the right to worship as we please, vote as we choose, and live as we wish. Indeed, this is more than just the word "liberty" engraved on a small coin—this is a way of life for the American people.

Next, we turn our gaze to the words "E Pluribus Unum"—an ancient phrase, brought to life in our lives, meaning "one from many"—existing as a country of diverse interests, and yet a country of one in unity. But how can a country be unified in which there is a fruit stand next to a jewelry store, where 160 million people of different nationalities, races, and creeds are intermingled—where 9 million of these people can exist in a concrete maze of tall buildings and winding streets—where a general and a rail-splitter can become President—where a youth can address an adult audience with his own thoughts and can be heard with attention? This is a gigantic dream come true, a living miracle. And this, my friends, is the miracle of America. And the reason for this miracle—why we are the United States—is also stamped on this small copper penny. The reason for this miracle is God. Therefore, "In God We Trust"—and it is in this trust that we are one, that we are free, that we have life, that we have the miracle that is America. These are the ideas generated by a small coin—a coin that we pass through our hands daily. These are the ideas that add up to our definition of democracy; our democracy of freedom, equality, unity, and trust in God.

Democracy, my friends, is an old idea. But having been betrayed by so many ancient lands, it was brought to a new land—a land of red men and virgin forests, a land of peaceful rivers and fruitful plains inhabited only by the buffalo. And in this land, through the tearful sufferings of Valley Forge and the sweat and blood of Bunker Hill, this spirit was fanned into a roaring fire of freedom which became—our democracy.

This spirit that has made our country the greatest Nation on earth is as old as the human race. But the forces of hate, lust, and greed are also as old as the human race, and from time immemorial have opposed all honor, justice, and law in the world.

And so, my friends, these representations of justice, honor, and law on this little coin are not enough to preserve our way of life. We, as the inheritors of this coin and its defined freedom—we must take these words from the coin and inscribe them on our hearts, and in our spirit—and then, through the common usage of a small coin, realizing its value as representative of our way of life—we can continue this flaming spirit of democracy.

And then, this little coin alone won't speak for democracy—then, we will speak for democracy, and if we speak for democracy, then the eternal engraving of the American people will read:

"There will always be a democracy—
And there will always be an America."

Flood Control Protection for Worcester, Mass.

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1956

Mr. DONOHUE. Mr. Speaker, I should like to include at this time the statement I presented last Thursday to the Public Works Subcommittee of the House Appropriations Committee at their hearing on the supplemental appropriations bill.

The statement follows:

Mr. Chairman and members of the committee, I am very grateful for the opportunity to appear even briefly before you today.

Mindful of your tremendous committee schedule and burdens, together with your personal office duties, I have no intention of entering upon any long, extended discussion or recitation of figures on general flood control projects with which we are all concerned. I realize full well that statistical facts and figures are available to you from our efficient Corps of Army Engineers. Also, my most able and distinguished friend and colleague, from my neighboring district, Representative PHILBIN, is here to speak on behalf of the Massachusetts State Flood Control Committee, and no one can explain our overall flood control problems better than he.

I would, therefore, like to confine my remarks at the moment to the particular project, commonly described as the Worcester Diversionary Tunnel, so vitally necessary to the life, safety, and property protection of the citizens of my native city and for which, as you all know, there has been included a sum of $60,000 in this bill to enable the Army engineers to complete a resurvey of the area and planning involved.

Very briefly, the project, in essence, provides for an intake structure for flood water to enter and then a tunnel and channel, with a total length of slightly less than 3 miles. Its purpose will be to conduct part of the flood water flow that normally passes through the city of Worcester directly into the Blackstone River lying south of Worcester. As I have said, the specific technical facts and figures are before you in the reports.

Now, while it is true that Federal participation in this project was authorized in 1944, it is not so true to have the impression casually conveyed and casually accepted that our city refused or turned the Federal authorization down. No official city action of that nature was ever taken. It is more completely the truth to realize that the intention of the city was to hold the project in abeyance because of the imminence and impact of staggering war costs. Also, no one then, including the Army engineers or our best weather experts, could foresee that by 1955 our fair city and area would be adjudged by our professional weather people to stand in the "path of hurricanes." It is indeed idle to currently speculate on what could have been past done, and it would be a punishment beyond the fault, if any there was, to reproach a people for the order in which they listed local problems for solution, when the threat of repetitive natural disasters could not be then scientifically known or suspected. Those of you who come from areas that have been unfortunately visited by these floods and other natural disasters are, I am sure, well aware of the practicalities of human nature which often impractically delay decisions, and in the light of the terrible tragedies and damage that descended upon us through our floods of August 1955, and the widespread destruction and ruin similarly wrought upon so many other sections of the country in most recent months and years, will, I am confident, be sympathetic toward any community in the Nation seeking to sensibly protect themselves from any additional sudden catastrophe from the changing weather, winds, and patterns.

The city of Worcester governing body has already taken the official action required for municipal participation in cooperation with the Federal Government. The State legislature is at this moment attempting to expedite the enactment of the necessary legislative approval of which you must be assured. No one knows better than we do that the legislative machinery sometimes may grind with exceeding slowness and irritation. I am informed that the particular measure includes all of the projects proposed for the State of Massachusetts and some in cooperation with neighboring States and its comprehensiveness further enables us to understand a reasonably lengthy consideration of an inevitably cumbersome measure. However, I am also informed that the Governor himself and the leaders of the legislative branches are doing all in their power to speed the action and if absolutely necessary, to formulate and approve a special bill for our particular Worcester project. May I, therefore, pray your patience on this score, with the assurance that the requirements of the law and this committee will be met at the earliest possible moment.

The essentiality of this project to the continuing welfare of Worcester is undoubted by anyone. Prayerfully remembering the personal sorrow and human tragedy which cannot be materially valued, it has been reliably but conservatively estimated that the presence of this tunnel during our most recent flood disaster would have prevented approximately $15 million of the property damage that was done. The Army Corps of Engineers has repeatedly and authoritatively stated that the tunnel is a vitally needed protection and it will do the job within reason. They have also testified that the project is well justified economically, inasmuch as the benefits that will derive are far greater than the cost and that the ratio of annual benefit to annual cost is exceedingly good. The President has included and requested the funds for this flood control work, and in order to initiate the resurvey that must be accomplished before actual construction is started, which is planned for 1957, there remains only the approval of this committee; without your approval, the whole project could encounter tragic disruption.

I most sincerely urge that you give this item, the only one in our area for which funds are here allotted, your very sympathetic consideration, and if your precedents and policies demand, you will approve it with the proviso that the resurvey not begin until the assurances required are of record, and they will, I pledge, be presented for your official technical record within the very reasonable future.

May I thank you, Mr. Chairman and committee members, for your courtesy and attention.

Airliner Bars Deplored in Editorials

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an article which appeared in the Christian Science Monitor, Boston, Mass., December 14, 1955, by Godfrey Sperling, Jr., a staff correspondent. I have introduced in the House H. R. 7922, which would prohibit the serving of alcoholic beverages to passengers on aircraft in flight.

AIRLINER BARS DEPLORED IN EDITORIALS

(By Godfrey Sperling, Jr.)

CHICAGO.—Some measure of the success being registered in the campaign against the serving of liquor on airlines is now available in the editorial columns of the press.

Newspapers from coast to coast each day are adding new voices to the protest against airborne bars.

Says the Philadelphia Inquirer: "It would be better if the American air carriers would recognize that this is not a situation calling for half measures. They are certainly aware of the legislation pending in Congress * * * banning all serving of liquor on com-

mercial flights. That seems to be the sensible answer to the problem."

The Montgomery (Ala.) Advertiser makes it plain that it feels the problem is no little one. "We can easily see why stewards and stewardesses are upset," it states. "But, instead of enacting rules applying only to upper air, why not simply equip passenger planes with parachutes marked 'For Bouncing Use Only?' "

"When a passenger gets a snoot full and makes a nuisance of himself, buckle on a bounce chute and give him the air."

The Post-Tribune in Gary, Ind., sees no problem in banning liquor on planes—even from the viewpoint of airline executives. "The ban would add at least somewhat to the air safety factor," the paper asserts, "and it's worthwhile for that reason. We doubt any great uproar from the public if liquor is outlawed on the planes, or any loss of business for the airlines. There are more substantial reasons for flying than the opportunity to patronize an aerial bar."

From the South, the Robesonia of Lumberton, N. C., offers a suggestion for the liquor industry: "It looks as though the liquor industry would do itself a favor by stepping into the situation with a demand for drying up the airlines.

"For every now and then an airliner crashes and kills everybody aboard, without any apparent reason for the mishap. Whenever it is known that liquor is served on such a plane, there is a tendency to wonder if this may have had something to do with the accident."

And some advice for the drinkers, themselves, from the Bridgeton, (N. J.) News: "Plain commonsense would dictate the enactment of such a law. Even drinkers themselves should favor such a law as a safety move to preserve their own lives."

On the subject of liquor regulation versus prohibition, aloft, the Spokane (Wash.) Chronicle is most eloquent: "it is strange to what lengths some officials would go to regulate liquor traffic aloft when the problem could be solved by a single expedient—banning it altogether.

"If the men and women who operate airplanes and care for the passengers' well-being think that liquor has no place on planes, that itself should be enough to settle it."

The Herald-Review, Grand Rapids, Minn., focuses its attention on the behavior of the airlines executives: "This is not a necessary service. It adds nothing to the pleasure of plane travel to the great part of the people who do not wish to drink in the air. Its introduction has been a sad commentary upon the leadership of the airlines and indicates a lack of sense and character both so essential to safety in the sky."

The problem of the one who indulges is given some attention in the comments of the Jackson (Miss.) News: "Refraining from a martini during the relatively short time they travel by air should be no ordeal for the average man. He can take a drink at his destination if he feels he must have one."

In somewhat the same vein, the Sioux City, Iowa, Journal-Tribune notes: "Giving the service every benefit of every doubt, it still seems rather unnecessary. If a man is too parched to go along a few hours without a drink, he is in need of a good deal more than an airplane flight."

The Republican-Press, Salamanca, N. Y., is primarily interested in the safety factor involved: "The public on whose patronage the airlines depend has a right—and duty—to insist that all reasonable safety measures be taken for the protection of passengers on commercial planes.

"Allegations by the stewards and stewardesses on these planes that drunkenness on planes is a menace cannot be dismissed lightly. More than consideration is needed; there should be action."

From the Salem, Ohio, News: "The passengers and crew members on a commercial flight share the hazard wth confidence because they have faith in discipline—the discipline of pilots, crews, weather observers, and their fellow passengers. Confidence vanishes when discipline is broken. It is hard to think of a quicker way to undermine discipline among fellow passengers than to expose them to the behaviorisms of intoxicated persons in airplanes."

The Rockford, Ill., Star: "The serving of liquor on airlines is hazardous as well as an affront to a great many passengers. Airline service does not call for barroom operations. They should be stopped."

And from the Columbia, S. C., State: "We can see no reason to turn a plane into a bar or a cocktail lounge. At best the quarters are limited, and the possibility of an unruly passenger is always present if liquor is served. * * * There are enough potential dangers in flying without adding the possibility of the complications of the obnoxious drunk."

Loss of High Dam at Hells Canyon Will Weaken Flood-Control Program in Pacific Northwest

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, January 23, 1956

Mr. NEUBERGER. Mr. President, the need for increased flood-control activity in the Columbia River Basin has been tragically illustrated in Oregon by events of recent weeks. Storm conditions, coupled with a decline in the moisture-retaining capacity of major watersheds, has again focused attention on problems of sound natural resource development.

It is ironic that, as floodwaters recede in many parts of Oregon, work proceeds on an Idaho Power Co. project in Hells Canyon which will slash nearly 3 million acre-feet of storage capacity from the Corps of Army Engineers main control plan for Columbia River watershed floods. There are ominous indications that the frequency and extent of flood damage is on the increase in the Pacific Northwest. Yet, in the face of this danger, the administration yields to private interests the benefits of such great sites as Hells Canyon, and the plans for obtaining needed flood-control storage in Canada remain snarled in international negotiations. What is the hope for obtaining the flood prevention needed in the Columbia Basin, if such policies continue to prevail?

Mr. President, an analysis of the advantages gained from Federal construction of a high dam at Hells Canyon was recently prepared by Mr. Ron Ross, managing editor of the magazine, Public Power. The facts contained therein, especially in the accompanying table, illustrate the contrasting multiple-purpose results of Federal and private plans for Hells Canyon development. I ask unanimous consent to include in the Appendix of the RECORD, the article by Mr. Ross which appeared in the January 1956 issue of Public Power.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HELLS CANYON DECISION FACES CONGRESS—FPC HAS APPROVED LOW DAMS, BUT CONGRESS OR COURTS COULD SAVE PROJECT

(By Ron Ross)

Although overshadowed in advance speculation, legislation on Hells Canyon could be one of the most significant actions in the 2d session of the 84th Congress which convened this month.

Bills to authorize a high Federal dam at Hells Canyon were approved by subcommittees in both the Senate and House last year. Meanwhile, the Federal Power Commission has issued a license to the Idaho Power Co. for a series of three smaller dams in the Hells Canyon reach of the Snake River between Oregon and Idaho. This decision has been appealed to the courts.

Stakes in the battle to control the raging waters of the Snake River as they race through the deepest gorge on the continent are high. Unless the courts reverse FPC's decision or Congress authorizes Hells Canyon Dam:

A block of power equivalent to the prime power output of Bonneville Dam will be lost to the power-short Pacific Northwest.

The comprehensive plan for development of the water resources of the Columbia Basin will be seriously and perhaps irreparably breached.

A pattern will be set for piecemeal private exploitation of the Nation's untapped hydroelectric resources, a block of power greater than the country's entire installed capacity as recently as 1951.

The issue at Hells Canyon has been tragically—albeit at times intentionally—misstated. Hells Canyon is not basically a private versus public or Federal versus private power problem. The fundamental question at Hells Canyon is not who? but what?

High Hells Canyon Dam was planned as an important element of the comprehensive development of the vast water resources of the Columbia Basin. As the largest project on the largest tributary of the Columbia, Hells Canyon Dam would make a major contribution to the region's power, flood control, and navigation program, providing not only a large block of power at the dam site but adding power and other benefits downstream.

As a poor substitute for the high dam, Idaho Power Co. has proposed building three smaller dams in the same stretch of the Snake. These dams would provide less total power in the aggregate than the high dam at the site and provide only minimal benefits downstream.

HISTORIC POLICY HIT

Idaho Power's plan for staking out a section of a great river basin for its own private exploitation would reverse a trend begun nearly half a century ago when President Theodore Roosevelt and his chief forester, Gifford Pinchot, expounded the policy of comprehensive development of our water resources.

In his first message to Congress, Theodore Roosevelt declared, "Great storage works are necessary to equalize the flow of streams and to save the floodwaters. Their construction has been conclusively shown to be an undertaking too vast for private effort." The validity of this conclusion has been reaffirmed. One of the best known private utility engineers testified at the Federal Power Commission hearings, "No investor-financed company would undertake Hells Canyon."

The case for comprehensive basinwide development of the Nation's rivers was stated in the President's Water Resources Policy Commission report of 1950 which concluded, "This Commission is convinced that the next step forward must be the application of unified responsibility to the planning of multiple-purpose basinwide developments."

The Commission's first recommendation on hydroelectric power was, "Full development of the Nation's undeveloped water power resources, as an integral part of comprehensive basin programs, should be considered a major Federal responsibility, to be exercised in such a way as to assure ample supplies of hydroelectric energy well in advance of expanding regional and national needs."

This points up the gravest peril of the piece-meal, partial plan Idaho Power is proposing for the Hells Canyon reach of the Snake. The Federal Power Commission's estimates indicate that the United States has upwards of 80 million kilowatts of undeveloped hydroelectric capacity. While it is conceded that some of this total may never be realized, it is no less true that great blocks of hydro in every region of the country could be expected from comprehensive basin-wide water resource programs.

Much of this capacity will never come on the line if the pattern of Idaho Power's Hells Canyon plan is followed.

Uncoordinated, partial projects such as Idaho Power offers at Hells Canyon will fragmentize comprehensive plans and effectively block the large-scale development of our rivers' hydro potential. Private power companies will be able to frustrate any major Federal hydro program with lesser single-purpose projects.

Nor is this reversal of 50 years' policy and experience an idle threat. Private power companies already are lined up at the FPC. A combine of four private power companies in the Northwest—Pacific Northwest Power Co.—has applied for licenses for projects at the Mountain Sheep and Pleasant Valley sites downstream from Hells Canyon. These projects would block construction of the proposed Federal high Nez Perce Dam just as effectively as Idaho Power would preclude high Hells Canyon, and the results in terms of power production and other benefits would be similar.

If the FPC's Hells Canyon decision is upheld, it is difficult to see how these other applications will be rejected. What is not difficult to see is an emerging pattern by which private power companies in all parts of the country will be able to block virtually all future Federal multiple-purpose projects providing hydroelectric power by substituting smaller single-purpose power plants.

HIGH VERSUS LOW BENEFITS

Rising 722 feet from the floor of the deepest gorge on the continent, high Hells Canyon Dam would be the second highest dam in the world, a bare 4 feet under Hoover Dam. The reservoir, stretching 93 miles upstream past the sites of two of Idaho Power's proposed low dams, would store 4,400,000 acre-feet of water, of which 3,880,000 acre-feet is listed as usable storage.

In sharp contrast, Idaho Power proposes a lower, run-of-the-river dam at the Hells Canyon site and two other low dams. Oxbow and Brownlee, upstream at sites which would be flooded in the reservoir of the proposed high dam. Brownlee would have a useful storage of approximately 1 million acre-feet.

There is a striking parallel between these proposals and the situation 30 years ago when Washington Water Power Co. proposed to construct a dam at the Kettle Falls site on the Columbia. The company applied for an FPC license for Kettle Falls in 1925, and the application was finally rejected by the Commission in 1933. Today the Kettle Falls site happily lies submerged beneath the reservoir created by Grand Coulee Dam, despite the claims of power company spokesmen that jackrabbits would provide the only market for Grand Coulee's power output.

The installed capacity of the 3 lower dams would total 783,400 kilowatts, only 16,600 kilowatts less than the initial installed capacity of 800,000 kilowatts for high Hells Canyon. But these figures are misleading in comparing the power benefits. The test of their power production is in prime power, the firm power capacity available at all times including the lowest water levels of record. The high dam would provide 688,000 kilowatts of prime power at the site, plus adding 436,000 kilowatts of prime power at downstream Federal dams existing or authorized. Against this total prime power capacity of 1,124,000 kilowatts which would be added to the Columbia hydroelectric system, the private dams would provide 577,000 kilowatts at site and 103,000 kilowatts to dams downstream, a total of only 680,000 kilowatts of prime power.

The high dam would add 444,000 kilowatts more of prime power than the company projects, a block of power roughly equivalent to the prime power capacity of Bonneville Dam.

More shocking than the loss of the equivalent of Bonneville Dam's prime power output would be the price of power from the company's plan.

Power could be produced at high Hells Canyon for about 2.7 mills per kilowatt-hour. The staff of the Federal Power Commission has estimated that the cost of power from Idaho Power's three dams will be 6.69 mills per kilowatt-hour, more than double the cost of energy from the high dam. Power from Brownlee, largest of the three dams would cost 7.6 mills per kilowatt-hour.

ATOMIC POWER COMPETITION?

Speaking in Washington May 24, 1954, Francis K. McCune, a vice president of General Electric Co., said that a 300,000-kilowatt atomic steam reactor similar to one General Electric was then developing, could produce energy at a cost of 6.7 mills per kilowatt-hour. This 19-month-old estimate for atomic power was only one one-hundredth of a mill per kilowatt-hour less than the FPC staff figure for Idaho Power's three small dams and nine-tenths of a mill per kilowatt-hour under the cost of power from Brownlee.

Thus, it would appear that Idaho Power could save well over $1 million per year by constructing an atomic powerplant instead of Brownlee Dam.

The tragedy of the high power costs of the low dams will be felt most directly by Idaho Power consumers. Large blocks of power from high Hells Canyon Dam could be sold to Idaho Power for Bonneville Power Administration's wholesale rate of 2.34 mills per kilowatt-hour, only a little more than a third the cost of power from the company's own proposed dams.

Although it now foresees a power pinch in the next few years if it does not add new capacity, Idaho Power in the past has boasted that no power shortage has existed in its area, while shortages have plagued nearby Washington and Oregon which depend on the great Federal dams on the Columbia for large blocks of their electric energy. Cost of power, of course, is one reason why Idaho Power has had no shortages—and is unlikely to, if it is permitted to construct its high-power-cost dams.

A residential consumer in Boise, the largest city served by Idaho Power, pays a monthly bill of $6.95 for only 250 kilowatt-hours. In Spokane, Wash., also served by a private power company but located in the area where low-cost Federal hydro has been available, the same residential user would pay $6.36, 59 cents less, for 500 kilowatt-hours, twice as much power. And residential consumers served by the municipal systems on Puget Sound pay even less—$5.14 for 500 kilowatt-hours in Seattle and $5.42 in Tacoma.

Low-cost power means far more to an area than smaller light bills, as the development of the aluminum industry in Washington has demonstrated. Abundant, low-cost power means jobs and wealth. In Idaho, the failure to develop potential low-cost power sources would not only retard local development but would forestall the production of urgently needed, low-cost fertilizer. This is because approximately 60 percent of the Nation's reserves of phosphate rock lie in and around southeastern Idaho. These deposits are largely undeveloped while alarm is growing at the problem of supplying farmers with their mounting needs for phosphate fertilizer.

Most of these deposts cannot be economically developed without low-cost electric energy. Farmers in the Midwest as well as in the Mountain States and the Far West could enjoy lower costs for fertilizer if low-cost electric energy were available from high Hells Canyon for phosphate production. With the lower dams, power costs will continue to be prohibitive.

Although power from the three lower dams would cost more than twice as much to produce as from the high dam, the estimates of costs for the company projects are based on a surprisingly low construction bid. An official of Morrison-Knudsen Construction Co. testified at the FPC hearings that his firm would construct the company's 3 dams for $132,643,553. Bureau of Reclamation engineers estimated that the three dams would cost more than twice as much.

COST DISPUTE CONTINUES

Last month the cost argument was renewed when Representative A. L. MILLER (Republican, Nebraska), released comments he had received from Reclamation engineers to questions he had raised after the FPC decision was announced in August. L. G. Puls, C. I. Hoisington and J. C. Riter said they believe that the Morrison-Knudsen bid may be comparable to the successful bid submitted by the firm in conjunction with other contractors for construction of the Bureau's Hungry Horse Dam. That bid was for $43,413,000, but the final cost estimate for the project, now virtually completed, is $101,660,000.

On this basis, the Bureau engineers suggested that the $132,643,553 bid on the 3 Idaho Power dams would indicate a total cost to the company of $311,220,000. This suggestion was protested by counsel for Idaho Power, who described the contractor's bid as a "turnkey" contract for "complete and going plants."

At the same time, the Reclamation engineers said that on the basis of experience at Hungry Horse, they would reduce their cost estimate for high Hells Canyon from $383,600,000 to $331,607,000.

These latest estimates would widen the already broad gap in power costs between the company project and the Federal dam, increasing the power cost of the company dams and lowering the power cost for the high dam.

The company plan would not only produce far less power at far higher cost, but also would provide a minimum of other benefits—notably water storage to control floods.

Hells Canyon is an ideal flood-control site. Unlike most major flood control projects, the high dam's large reservoir would flood little if any useful land in a gorge 2,000 feet deeper than the Grand Canyon of the Colorado. High Hells Canyon's 3,880,000 acre-feet of useful storage represents about one-seventh of the water storage planned for the C–2 (1960–70) phase of the master control plan for the Columbia Basin.

Since Idaho Power's Brownlee project would store only 1 million acre-feet, the company and advocates of its plan have argued that the difference of 2,680,000 acre-feet of storage could be supplied at some other site. One scheme for making up this storage deficiency resulting from the Idaho power plan already has collapsed. Late in 1953, investigations were begun to determine if a major storage project could be constructed at the Mountain Sheep site downstream from Hells Canyon. High Mountain Sheep fell under the blows of a geologist's hammer. ("Even the apparently sound blocks are so weakened * * * that they break apart under light hammer blows,"

it was reported.) The report concluded that the cliffs would not support a high dam at the Mountain Sheep site and proposed a low dam, for which a permit now is being requested by a group of private power companies.

A more drastic alternative to flood control at high Hells Canyon was proposed at the FPC hearings by E. Robert de Luccia, vice president of Pacific Power & Light Co. Mr. de Luccia suggested that payments to victims of floods would be cheaper than building high dams. When asked about paying for the fatalities in the 1948 floods on the Columbia, he denied any lives had been lost. Mr. de Luccia's failure to remember the deaths of 36 persons in the 1948 floods may have been due to the fact that he was not located in the region at the time, as he was then the chief of the FPC's Bureau of Power.

Navigation on the lower reaches of the Columbia and Snake Rivers also will depend on the controlled storage of water upstream at sites such as Hells Canyon. Loss of 2,880,000 acre-feet of storage at Hells Canyon jeopardizes the development of the 500-mile inland navigation system contemplated in the comprehensive plan for the Columbia Basin.

Although Hells Canyon would not provide water for irrigation, power revenues from the high dam could finance the opening of important new areas for irrigation. "The irrigation aspect alone of the Hells Canyon proposal would justify a Commission recommendation for Federal development," declared the intervener's brief filed with FPC by advocates of the high dam.

As the second highest dam in the world, high Hells Canyon would attract some 650,000 visitors a year, according to estimates of the Park Service. These visitors—far more each year than the population of the entire State of Idaho—would spend large sums in the area for food, shelter, gasoline, etc.

A measure of the relative recreational benefits from the rival plans is provided by the fact that the Federal project includes $1 million for initial recreational facilities, while the company proposes only $95,000 for its entire recreational development.

Idaho Power's "little plan for a big river" would produce less power, flood control, navigation, irrigation, and recreational benefits than the proposed Federal project, but the supreme irony is the likelihood that the Federal Government might help finance the company's low dams. Idaho Power has applied for certificates of necessity for rapid amortization for tax purposes on Brownlee and Oxbow. If these certificates are granted, as seems probable under present policies, the company may be expected to make an application for its low Hells Canyon Dam as well.

These certificates would permit the company to write off, for tax purposes, large portions of the costs of the dams within 5 years. The effect has been described by FPC as that of interest-free loans by the Government. It makes available sums to the company over the life of the project, and the benefits may exceed the total cost of the project.

Thus, while the American people are deprived of the benefits of full development of a great natural resource, they may also be placed in a position of subsidizing exploitation by a private power company.

Hells Canyon boxscore

	Federal Hells Canyon high dam	Idaho Power Co., 3 dams
Initial installed capacity, kilowatts	800,000	783,400
Prime power at site, kilowatts	688,000	577,000
Prime power at other sites, kilowatts	436,000	103,000
Total prime power, kilowatts	1,124,000	680,000
Cost of power per kilowatt-hour, mills	2.71	6.69

George M. Humphrey, the Star of Ike's Team

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 24, 1956

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in a recent issue of Look magazine, entitled "George M. Humphrey, the Star of Ike's Team."

While I have differed with the Secretary of the Treasury in some matters of policy, I regard him as one of the ablest men in prominent Government position during my service in the Senate, and a man of high patriotic purpose.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GEORGE M. HUMPHREY, THE STAR OF IKE'S TEAM

(By Fletcher Knebel)

At one of President Eisenhower's White House stag dinners, the businessmen guests were discussing a recent presidential nomination.

"That's your best appointment, Mr. President, except one," volunteered one of the guests.

"Who's the exception?" asked Ike.

"George Humphrey," was the reply.

"I agree," said Ike. He grinned. "Humphrey was my best."

Many Republicans take a similar view of George Magoffin Humphrey, the rugged Secretary of the Treasury, who manages to look a decade younger than his 65 years. Senator PRESCOTT BUSH (Republican, of Connecticut), has voiced the widespread GOP feeling: "If we had our choice of any man in the United States for Secretary of the Treasury, we could not improve on George Humphrey."

Democrats are inclined to agree on the magnitude of Humphrey's star, even though they see it from a radically different angle. One day, in Senate debate, Senator PAUL H. DOUGLAS (Democrat, of Illinois), posed this question:

"Is it not true that the Secretary of the Treasury, with his real abilities, and they are real, tends to have a restricted view of the welfare of the people of the Nation? He looks at the wealthy and judges the prosperity of the Nation by the condition of the wealthy."

Another Democratic Senator, HUBERT H. HUMPHREY, of Minnesota, says that George Humphrey is the administration's chief advocate of the "trickle-down" economic theory, where benefits reaped by the rich trickle down to the less affluent. "He's Trickle-Down George," says Senator HUMPHREY. "I'm Percolate-Up HUBERT."

Each of these estimates of George Humphrey underlines the growing Washington belief that the man who guards your dollar has become the most powerful man in the capital, the strong man of the Cabinet. His influence has been felt in realms far removed from the traditional debt-and-deficit bailiwick of the Treasury. His voice is potent in decisions of defense, foreign policy, economics and politics.

"One of Humphrey's conditions when he accepted the job from President Eisenhower," said a close friend, "was that he be consulted on decisions where a price tag is involved. And what activity of government does not involve a price tag?"

The reasons for Humphrey's vast influence are not hard to find. He owns one of the warmest and most expansive personalities in Washington. His brain is as cold as the steel produced by the M. A. Hanna Co., a titan of iron ore, coal, steel and plastics, which Humphrey's business genius raised to power and riches.

"If you get all the facts," Humphrey is fond of saying, "it's easy to see what you ought to do."

His ardor for facts and his contempt for Government double-talk frightened some young Treasury lawyers before they got to know him. "Frankly, I don't get what you're talking about," he'd say. "I want simple facts."

"Don't start using those big words," he warned more than once. "I don't understand them."

President Eisenhower is given credit for asking that knotty Government problems be condensed for him on one page. Actually, the real passion for brevity is Humphrey's.

"One page, hell," says an associate. "Humphrey wants it in one paragraph."

Humphrey never philosophizes, seldom generalizes. "What's the problem before us?" is his motto. This enthusiasm for quick decisions delights the businessmen who flocked to Washington to help Ike run the Government, but even they are slightly appalled now and then. "George wants to do it right now," says one assistant, "and you've got to restrain him at times. You can't always do it right now in government."

Two years ago, Ike expressed high admiration for Humphrey. He hasn't changed his mind. If anything, the two men have grown closer. The Eisenhower comradeship with Humphrey seems to have replaced the budding one with Robert A. Taft that was nipped by the Ohio Senator's death.

HUMPHREY BRUSHED UP ON HIS BRIDGE

Ike has twice visited the Humphrey farm, Milestone, near Thomasville, Ga., to shoot quail. Once, he accompanied Humphrey for duck hunting to the exclusive Cedar Point Club (10 members, 10 beds, 10 lockers) in the Lake Erie marshes near Toledo.

Humphrey, until Ike became ill, often went to the White House after dinner to make a fourth at bridge. This in itself was a token of the high esteem in which the President holds Humphrey, for he was not renowned as a bridge player back in Cleveland and Ike usually frets at mediocre bridge. "But George," according to Ike, "has learned to play pretty well since he came to Washington."

The Cabinet strong man is a husky fellow. He's five feet 10½ inches tall and weighs 190 pounds. He was a football player in high school and he always has been an ardent horseman. At various times in almost 60 years of riding, he has broken both arms, both legs, his collar bone and sundry ribs. "He ought to be grounded," said his son, Gilbert W. Humphrey, a vice president of Hanna.

A talent for persuading people to follow his leadership—the real essence of successful politics—has been the No. 1 Humphrey quality. Not since the days of Andrew Mellon has the Secretary of the Treasury been a power in Washington. The Roosevelt and Truman Treasury chiefs contented themselves with the job of borrowing enough money to pay the bills of the Federal spending colossus. Humphrey, on the other hand—at Eisenhower's special invitation—sits with the National Security Council, which blueprints American global policy. There, he gives his horsesense opinions, not as Secretary of the Treasury, but as George Humphrey.

Toward the close of 1953, the Eisenhower team reached general agreement to trim the ground forces, cut defense spending and emphasize air and atomic weapons. But early

in December, Humphrey learned that the military budget proposed the same Army-manpower levels. For a week, he shuttled between the White House and Pentagon, working to get the previous agreement bolted down in budget figures. Then he flew to a NATO meeting in Paris. "If the decision blows up," he said, "I'll take the first plane back." The decision stood firm. The defense budget was cut $3.8 billion, and ground forces—along with Navy manpower—were trimmed by almost 400,000 men.

It was Humphrey, again, who threw his weight behind the previously agreed program for further cuts in the ground forces last winter. The military suggested an increase in defense spending. Humphrey sided with his old friend, Secretary of Defense Charles E. Wilson, for continuing the program to cut the ground forces. Gen. Matthew Ridgway, then Army Chief of Staff, objected strenuously. But President Eisenhower ordered continuation of the program, which meant a cut of 200,000 men in the land forces and held overall Pentagon spending to $34 billion.

Humphrey received his first major policy setback this fall, after Ike's heart attack, when Wilson declined to cut defense spending by another $1 billion to balance the budget. But Humphrey will try other avenues. He's determined to cut outgo down to match income.

More than any other man in the Cabinet, Humphrey was responsible for the Eisenhower team's refusal to go into Government pump priming during the 1954 recession. Democrats were clamoring for emergency Government spending to relieve unemployment. Even some Eisenhower advisers urged Government action.

Humphrey stood rocklike in opposition. "If we go into some type of New Deal project," he warned his colleagues, "we'll lose the confidence of the country overnight. It was tried for years and never did succeed in making any real jobs until war broke out."

In the spring of 1954, he telephoned leading businessmen around the country, became convinced that an upturn was in sight. "The quickest and surest way to recovery is to stick to sound policies and wait it out," he advised Cabinet colleagues. Wait it out, they did. Business not only picked up. It boomed.

* * * * *

No item is too small for Humphrey. At one meeting, an official asked Humphrey's view on a project. "Of course, it only costs $200,000," he said. Humphrey asked him to eliminate the word "only." "If it's going to cost anything at all," said the manager of the taxpayer's dollar, "we ought to discuss it."

The Washington story that Humphrey is a novice in politics is a myth. He kept in close touch with the Capital's inside maneuvers for almost two decades. As early as the midthirties, he was raising big money for Ohio Republicans. He drummed up cash among industrialists for Taft's first Senate campaign and helped raise funds for Harold H. Burton, now Associate Justice of the United States Supreme Court, when Burton ran succesfully for mayor of Cleveland. Humphrey, a wizard at the political cash box, once raised $200,000 for the Republicans in a single day of telephone calls to about 100 businessmen around Ohio.

This is all very much in the Hanna tradition. The Hanna empire has always been deep in politics. Of the Hannas who were in business in Ohio, Marcus Alonzo Hanna became the most famous politician of his day. He put President William McKinley in the White House in 1897, served as Republican National Chairman, appeared in cartoons throughout the country as "Boss Hanna" in a vest sprinkled with dollar signs, and wound up his career in the United States Senate.

HE TANGLED WITH OHIO'S GOVERNOR

While George Humphrey stayed out of political headlines, his company once got into a battle royal with Gov. Frank J. Lausche, of Ohio. Hanna had gone into the profitable strip-mining business. In 1944, the company mined 6 million tons of open-pit coal in the Cadiz-St. Clairsville area of Ohio. It left raw, ugly scars as though some angry monster had tried to claw the land to death. Lausche made a political issue out of a fight to control strip mining and make the companies restore the land. Hanna fought the bills, helped finance an Ohio coal producers' lobby in Columbus run by Robert E. Scott. Scott kept open house for legislators in a Columbus hotel suite. There were food and whisky for the asking, even a free hotel room should a legislator care for one.

After a long battle, Hanna and other coal companies compromised, agreed to restore the land they had gnawed away. Humphrey's company lived up to its bargain, and, in 1952, Lausche praised Hanna for its restoration progress in Harrison County. Humphrey frankly admits today that Hanna's fight against strip-mine control was a mistake. Humphrey is not one to waste time today trying to prove himself right yesterday.

The Eisenhower administration hasn't balanced the budget yet, but Humphrey has been a key figure in keeping deficits within hailing distance of the break-even point. His policies have helped keep the dollar stable. Within a fraction of 1 percent, the dollar will buy as much for you now as on the day the Eisenhower administration took office. The cost of living has stopped going up.

Humphrey and his Treasury aids worked with Representative DAN REED, Republican, of New York, to evolve the first major revision of the tax laws in 75 years. Democrats decried the 1954 revision bill as a boon for the wealthy. It is true that it cut taxes for those who receive dividends and gave a variety of tax breaks to business, but it also brought advantages to low-income groups by easing tax hardships for millions.

Humphrey worked hard for the tax-revision bill because, among other reasons, he believes that the more incentives there are for business and industry, the more jobs and earning power there will be for the mass of Americans. He also believes that our competitive production system operates best when there is a minimum of interference from the Government.

Democrats, lampooning this as the trickle-down theory, contend that the best way to get the economy roaring is to put money into the hands of the workers themselves, using the power of the Government to do so if necessary. There is a fundamental cleavage in economic creed. Perhaps it is the only major difference between the modern Democratic and Republican Parties.

Humphrey thrives on attacks. He refuses to be shaken in his belief that Americans want a strong defense, a solvent government, and a profit-motive, competitive production system that makes jobs. Here's what he says on these three points:

Defense: "We will need real strength for a long time. Nobody pays much attention to the fellow who comes around with his hat in his hand."

Solvent government: "We must have a dollar that will buy at least at much 10 years from now as it did, yesterday."

Business and jobs: "Productive jobs that pay good wages and create new and better goods for better living are made by industry, big and small, and not by the Government. The Government can't do much to help, except to create a proper climate in which jobs are made. But it can do a lot to hinder."

To pursue his objectives, Humphrey sets his alarm clock for 7 a. m. weekdays in his rented Washington mansion; it's at 1800 Foxhall Road, on a tree-shaded hill with a fine view of the city. Built in 1780, Uplands was once owned by Mrs. Borden Harriman, was rented before the Humphreys by Perle Mesta, Democratic party-giver, and Averell Harriman, Democratic Governor of New York.

Walls and tables of the Uplands living room hold a homey clutter of family pictures and trinkets, including the portraits of 40 people, 14 horses, 4 dogs, and 2 elephants. In one photograph, Humphrey sits astride his hunter, Richmond. A blue cushion displays a red-embroidered slogan: "Never complain, never explain."

HE IS A QUICK STARTER

Humphrey breakfasts with his wife, Pam, on prunes, oatmeal, and an occasional egg. "He hasn't varied that breakfast in 40 years," says Mrs. Humphrey. The Secretary drives his own 1952 Buick down to the Treasury Department. There, he faces a day of more than 100 letters and memos, as many as 50 phone calls—including some on the direct White House line—and a series of talks with his associates. He never worries about work at home, but his mind starts clicking early. By 9 a. m., he has a scratch pad filled with notes on action he wants taken that day.

Humphrey scorns regular staff conferences. (He thinks they waste time by encouraging people to talk about projects they ought to be acting on.) He lunches daily with Treasury officials, however, and invites Congressmen, Senators, and administration officials as guests. Humphrey and aids split the costs, about $1 per man a lunch.

The Secretary scatters notes all over Washington, scrawled with a cheap ball-point pen. He signs them: "G. M. H." Frequently, before Ike's illness, he sent letters over to the President that indicated how folks were thinking about the administration. Humphrey wrote a little note on these and signed them, "George."

Except for Secretary of the Interior Douglas McKay, and Secretary of Health, Education and Welfare Marion B. Folsom, Humphrey is the only Eisenhower Cabinet officer to list his telephone number in the Washington directory. If he's home, he answers the phone, just as he used to do in his Hanna office in Cleveland.

One night, a high-school boy called up and asked the meaning of the pyramid and the eye on the back of the dollar bill. Mrs. Humphrey caught the opening of the conservation on another phone.

"Don't you dare tell that boy you don't know," she called to her husband. "The first Republican Secretary of the Treasury in 20 years is supposed to know everything about money."

Humphrey promised to call back, kept after minor Treasury officials that night until he got the answer for his young caller. The pyramid, he told him, represents strength, the eye represents the all-seeing Deity, and the unfinished condition of the pyramid indicates the belief of the Founding Fathers that American still had much work to do.

Like most men of great energy, Humphrey has his own methods of keeping fit. He doesn't smoke. He quit suddenly many years ago when he couldn't find a match. With one of those swift Humphrey decisions, he announced to his wife that smoking was a waste of time. He rarely drinks; whiskey makes him sneeze.

On their nights at home, the Humphreys play scrabble or gin rummy. They don't bother to bet. "He always wins anyway," says Mrs. Humphrey. The Secretary doesn't read much for pleasure. He prefers books on horse breeding.

Humphrey may well be the richest man in the Eisenhower "millionnaire" Cabinet. He owns a 3,000-acre estate at Thomasville, Ga., a country home at Kirtland Hills near Cleveland, 10 brood mares, 4 yearlings, and an interest in the champion stallion Heliopolis, which gets a $5,000 stud fee.

He has stock in the M. A. Hanna Co., the Hanna Coal & Ore Corp., the National Steel Corp., and the Pittsburgh Consolidation Coal Co., all of which he helped to build. His salaries and bonuses before he came to Wash-

ington were in excess of $300,000 a year, now replaced by the $22,500 salary of the Secretary of the Treasury. He also receives dividends in excess of $300,000 a year.

Estimates of the Humphrey family fortune range up to many millions. Whatever the exact total, it is clear that, aside from representing business success, a fortune, to Humphrey's mind, is something that permits a man to have bird dogs and riding horses on an estate in southern Georgia.

At Milestone, his Georgia preserve, Humphrey has a farmhouse, which he calls the administration building, and 3 surrounding cottages, 1 for each of his children and their offspring. Milestone is staffed by a maid, a cook and Rufus Davis, the dog handler for quail shooting. Milestone specializes in informality. Dog handler Davis bid goodby to President Eisenhower after his first visit there by saying he was "sure proud to have had the chance to handle you for 2 days."

In World War II, Humphrey teamed up with the Hollinger interests of Canada to exploit huge iron-ore deposits in Labrador, 300-odd miles north of the Gulf of St. Lawrence. Humphrey raised $261 million from steel companies and insurance firms, under the Hanna banner, for this giant undertaking. A railroad was built over incredible terrain, a town was constructed and iron mines were opened. After more than a decade of hard labor, the first load of ore came to Sept Iles (Seven Islands), at the mouth of the St. Lawrence, in the summer of 1954. By 1957, 10 million tons of ore will be coming out of the mine every year.

Humphrey flew up to Canada to see the first ore emerge, and then hurried back to Washington for another round in the battle of the $60 billion budget and another day in his hard-bottom chair in the Treasury Department.

"I always preferred hard-bottom chairs," he said, "visitor's don't stay in them so long."

Massive Retaliation Policy

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, January 24, 1956

Mr. HUMPHREY. Mr. President, the latest in a series of careful analytical examinations of our policy of so-called massive retaliation has been the celebrated article by Mr. Paul H. Nitze. Mr. Nitze was formerly the Director of the Policy Planning Staff of the State Department from 1950 to 1953, and is now president of the Foreign Services Education Foundation.

His article concludes on a note that could not be more pertinent to the statements attributed today to Mr. Dulles:

The more we can bring our action policy and our declaratory policy into line with each other the more effective both become.

I ask unanimous consent to have this outstanding article, slightly condensed, printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ATOMS, STRATEGY, AND POLICY
(By Paul H. Nitze)

After much use in political debate, words tend to become leathery and pliable in the meanings they suggest. Perhaps they gain something in richness of implication but they lose in precision. For example, the word "policy" is used in two related but different senses. In one sense, the action sense, it refers to the general guidelines which we believe should and will in fact govern our actions in various contingencies. In the other sense, the declaratory sense, it refers to policy statements which have as their aim political and psychological effects.

Much of the discussion of recent months concerning Western atomic policy has been on the issue of massive retaliation versus graduated deterrence. The phrase "massive retaliation" has been used by Secretary Dulles to describe a policy of relying for our security "primarily upon a great capacity to retaliate, instantly, by means and at places of our choosing." The phrase "graduated deterrence" has been used to describe a policy of "limiting wars (in weapons, targets, area, and time) to the minimum force necessary to deter and repel aggression." The main point at issue between the two concepts is the reliance which should be placed upon the capacity to bomb centers of population and industry with nuclear weapons.

The discussion of the two concepts would attain greater clarity if a distinction were maintained between the two meanings of the word "policy."

Our action policy has been, is, and, I believe, will continue to be one of graduated deterrence. We do not wish or intend to use means beyond those which are necessary for the achievement of any given objective. It is obviously to the interest of the West that war, and especially atomic war in any form, be avoided if that is possible without submitting to even greater evils. Furthermore, it is to the West's interest, if atomic war becomes unavoidable, that atomic weapons of the smallest sizes be used in the smallest areas and against the most restricted target systems possible, while still achieving for the West the particular objective which is at issue. * * * Our basic action policy must therefore be one of graduated deterrence.

But how about our declaratory policy—the statements of policy which we make for political effect? There may have been very good reason for leaving the Soviet leaders in no doubt that we do not propose to be nibbled to death; that they cannot blithely choose areas and means of aggression as they see fit without running very real risks that we will be forced to expand the means or area of action as may be necessary to redress the aggression. The difficulty with the massive-retaliation statement, however, was that to many people on our side it suggested that we would no longer take the measures necessary to contain local aggression with graduated means but would choose unlimited city-to-city atomic retaliation the moment we were given an excuse. Some people, in reaction to the massive-retaliation statement, are urging that we declare our firm intention not to use hydrogen weapons except in retaliation for their prior use by an enemy. Some are suggesting other forms of self-limiting declaration. Others are persuaded that while we maintain a stiff upper lip and give the Russians no reason to believe we would lack the will to meet a crisis they will never test that will.

The difficulty with declaratory policy is that it tends to be ineffective in its political and psychological consequences if it deviates too far from action policy. To be clear as to the wisdom of a declaratory policy, one must be sure first that the action policy it suggests is one which is, and will continue to be, in conformity with our interests and with basic realities, and secondly that the political and psychological consequences of the declaration will in fact be favorable.

Let us go back, therefore, and examine some of the developments in the weapons field and their impacts on both military and political strategy to see whether this throws any light on the type of action policy we can live with. Later we can look at the problem of what it might be wise to declare about it.

II

Many writers have suggested that an atomic stalemate has developed or is about to develop. The thought seems to be that as the Russian stockpile of atomic weapons grows both sides will realize that in an all-out nuclear war neither side can win and that therefore atomic peace (aside from some irrational action) is assured. I would suggest that the situation is more complex

In the first place the growth of the Russian atomic stockpile and delivery systems (the bases, planes, missiles, crews, radars, etc., necessary to deliver them on target) does not tend to inhibit action by the Soviets. It merely inhibits the possibility of action by ourselves. If the western monopoly was for many years a force for peace it is hard to see how the loss of that monopoly can, by itself, be a force for stability. It would seem much more plausible to look to the other development which has been proceeding concurrently with growth of the Russian stockpile—that is, to the great general advance in atomic-weapon systems technology—for those forces in the weapons field which may be tending toward increasing stability.

During the past 5 years the power of individual weapons, the number of weapons available, and the variety and flexibility of means for their delivery have expanded more rapidly than anyone at the beginning of that period thought possible. * * * It is this change in the order of magnitude of offensive potential which increasingly raises the question as to whether anyone can win an all-out nuclear war.

But the word win is another of our leathery words which can stand reexamination for precision of meaning. In one connotation the word win is used to suggest a comparison of the immediate postwar position of a country with its prewar position. In this sense none of the initial contestants won in the First World War or in the Second World War. It is probable that no one could win a third world war, in the sense of being richer, happier, or better off after such a war than before it, even if no atomic weapons were used. If atomic weapons were used in all-out, city-to-city attack by both sides the conclusion is certain.

In another connotation the word "win" is used to suggest a comparison of the postwar position of one of the adversaries with the postwar position of the other adversary. In this sense it is quite possible that in a general nuclear war one side or the other could win decisively. Even a small initial imbalance in relative capabilities, other things being equal, could grow rapidly into a decisive imbalance as the war progressed.

* * * * *

Some have argued that the destruction in an all-out nuclear war would be so great that nothing would remain, that life on this planet would be impossible, and that there would be no one left to win, even in the second sense of the word. This is technically conceivable. The number of high-yield thermonuclear weapons which can be exploded in a short space of time without producing general lethal contamination of the atmosphere is finite. But it is a large number, one not likely to be reached unless the war is fought in an entirely irrational way.

If the above line of reasoning is correct, then in a nuclear war fought with some degree of reason one side may very well win in this second comparative sense and the other side lose. The victor will be in a position to issue orders to the loser and the loser will have to obey them or face complete chaos or extinction. The victor will then go on to organize what remains of the world as best he can. Certainly he will try to see to it that there is never again a possibility that the loser possesses nuclear weapons.

These two meanings of the word "win" epitomize the two main lines of considerations which flow from the present state of atomic technology. The first meaning brings out the horror and destruction which both sides in the contest, and mankind as a whole, would face in an all-out nuclear war—horror and destruction having as its upper limit the destruction of all life on this planet and as its lower limit such great losses even for the victor as to make any meaningful comparison with his prewar status impossible. It is this meaning of the word which brings out the reasons why it is of the utmost importance that nuclear war should not occur. We could not possibly win in this first sense. And we hope the enemy also realizes that he could not win in this sense either. The second meaning of the word "win," the comparison between the postwar position of the victor and the defeated, brings out why it is also of the utmost importance that the West maintain a sufficient margin of superior capability so that if general war were to occur, we could win in the second sense. The greater that margin (and the more clearly the Communists understand that we have a margin) the less likely it is that nuclear war will ever occur. The greater that margin the greater are our chances of seeing to it that nuclear war, if it does come, is fought rationally and that the resulting destruction is kept to the lowest levels feasible.

III

Now is it possible for the West to maintain a position of sufficient superiority so that it could "win" in the second sense if the necessity arose? The answer would seem to be in the affirmative provided we take the necessary measures. This would be so even if we assume that technology, both in nuclear processes and in delivery systems, will tend in the long run to equality between East and West.

As the number of weapons possessed by the Soviet Union increases, the importance of mere superiority in numbers diminishes. As the significance of superiority in numbers diminishes, the importance of superiority in delivery systems increases. As the Soviets approach closer to equality in delivery systems, the significance of superiority in this factor also decreases. But if one assumes the existence of roughly equivalent capabilities in delivery systems, the significance of the geographic factor increases.

The United States is vulnerable to direct attack only from bases on the Eurasian land mass and from submarines. The U. S. S. R. is vulnerable to attack not only from North American bases but also from bases closer in on the periphery of the Eurasian land mass itself and from seas controlled by the navies of the West. Given anything approaching equality in numbers and quality of planes, missiles and the other elements of modern delivery systems, the geographic factor should give the West the possibility of a continuing and decisive margin of superiority. The very important emphasis which the Soviets are placing on this factor both in their diplomacy and in their propaganda indicates that they also recognize its importance.

On this line of reasoning, the controlling question is whether the West's geographic advantage can in fact be preserved in peace and asserted in the event of war. Can the West maintain, even in the face of smiling Russian tactics or renewed Soviet pressure and threats, sufficient cohesion in its alliances to make the geographic factor really count? The land bases ringing the U. S. S. R., close in, are subject to the sovereign control not of the United States but of the countries on whose territory they are located. A military policy which contributes to neutralism in those countries may rob the West of that geographic advantage which is potentially its greatest strength.

IV

The full significance of the geographic factor becomes evident only if one also bears in mind two other sets of considerations. One of these concerns the probable target systems in the initial period of a nuclear war. The other concerns the element of surprise.

A strong case can be made that no rational body of men would initiate a general atomic war unless they believed that the power of their initial atomic attack and its immediate effects on the enemy would be so great as to assure that the subsequent phases of the war would be substantially one-sided. In order to achieve such a one-sided result, the attacking side (either Russia in an initial attack, or the West in response to an aggression by Russia or China which could be met only by general war) would logically concentrate the full power of its initial atomic attack on the military—primarily the retaliatory—capabilities of the other side. The attacker's object would be to destroy, in the initial blow, a large proportion of the base structure from which the defender must launch his retaliatory action (including the planes or missiles on the bases and the submarines and carriers which might support the main retaliatory action). The attacker would attempt to destroy a sufficient large proportion of this base structure to reduce the power of the defender's retaliatory action to a level which the attacker's own defense system could contain. If he should succeed in this attempt he will have assured that the remaining phases of the war will be substantially one-sided. Once he has gained effective control of the intercontinental air space, then his adversary's entire country, including cities, industries, means of communication and remaining military capabilities, will lie open to his will. He will presumably have much in mind the postwar problem of building a world which he can control and manage. He will want destruction of that world to be held within reasonable limits. He will wish his own country to be spared as far as possible. He will also want to destroy only as much of the enemy territory as is necessary for him to impose his will and get on with the job of making of the world what he wants and can make of it.

The side which has lost effective control of the intercontinental airspaces will face a truly agonizing decision. It may still have the capability of destroying a few of the enemy's cities. But the damage it could inflict would be indecisive and out of all proportion to the annihilation which its own cities could expect to receive in return.

Whether one side or the other could hope to achieve substantial control of the air during the initial phase of the war depends further on a number of factors additional to those already mentioned. One of these is base dispersal—the number and geographic distribution of air, missile, and supporting bases. Another is air defense capability.

If the bases from which a Western strike can be mounted are 30 in number, the enemy will have a far easier task in establishing air control than if those bases are 300 or 3,000 in number and if they are geographically well dispersed and varied in character.

Of equal importance is the factor of air defense. If the Western early warning, radar, interceptor, and defensive missile system is such that it can contain a coordinated Soviet surprise attack of 1,000 planes, that is quite a different thing than if it can contain a coordinated attack of only 100 planes. The point is that the technology of defense has also been making strides in recent years. From the technological standpoint, it is quite possible to conceive air defense systems which will have a very high probability of destroying all, or nearly all, planes of a small-scale attack. The problem is to design one that could stop a very high percentage of a large coordinated attack. This problem may not be insoluble. It is possible to foresee defenses even against intercontinental ballistic missiles, as Secretary of the Air Force Quarles recently announced.

This brings us to a discussion of the element of surprise and the advantage accruing to the side which strikes the first blow. If side A's base structure consists of a small number of bases and if side B's air defense system is able to contain a fairly substantial enemy retaliatory attack, then the advantage to side B of striking the first blow may be very great indeed. For the West to permit such a situation to develop in favor of the U. S. S. R. would be to encourage a dangerous instability in the air-atomic situation.

Sheer geographical extent is one of the elements necessary both for adequate base dispersal and for a comprehensive air defense system. This would seem to reenforce the point made earlier that the West has every prospect of being able to maintain a superior position in the nuclear attack-defense equations, but only if its available geographic advantages can be maintained as a vital element.

* * * * *

Col. George A. Lincoln of the West Point faculty makes the further point that whether or not atomic weapons are ever again used in warfare, the very fact of their existence, the possibility that they could be used, will affect all future wars. In this sense Korea was an atomic war even though no atomic weapons were used. In this sense even the cold war is an atomic cold war. The situation is analogous to a game of chess. The atomic queens may never be brought into play; they may never actually take one of the opponent's pieces. But the position of the atomic queens may still have a decisive bearing on which side can safely advance a limited-war bishop or even a cold-war pawn. The advance of a cold-war pawn may even disclose a check of the opponent's king by a well-positioned atomic queen.

V

What action policy do these considerations suggest for the United States? To me they suggest the following:

(a) It is important that the West maintain indefinitely a position of nuclear attack-defense superiority versus the Soviet Union and its satellites.

(b) It is within the reasonable limits of what is physically possible for the West to maintain such a position indefinitely.

(c) To do so, the West will need to maintain at least equality, and if possible superiority, in atomic and weapons technology. It will need to maintain at least equality, and if possible superiority, in the manifold elements of effective atomic offensive and defensive weapons systems.

(d) In order to maintain a sufficient margin of superiority, so that even a surprise attack would give the enemy no prospect of achieving a one-sided result, the West must realize its geographic potential. Three corollaries flow from this proposition. We should develop an air defense system which makes full use of the West's geographic advantages. We should develop that widely dispersed base system which the West's geographic situation makes possible. But, above all, we must maintain in full working order the system of alliances and those working relations with our allies without which the West will have no geographic advantage at all.

(e) In order to maintain the western system of alliances we must, among many other things, develop a policy with respect to the conditions under which we would use atomic weapons in war—an action policy which we really intend to follow—which is consistent both with our own interests and those of our allies.

What might be the important elements of such a use policy, consistent with both our own interests and those of our allies? Its starting point would be our common interest in collective security. An attack on one ally must be considered an attack on all. We must not permit any ally who actively resists aggression to be overrun. We must have developed and be willing to use the strength necessary to restore the situation in the event of aggression. The elements of a common policy governing our use of atomic weapons might be the following:

(a) We should endeavor to meet aggression and restore the situation without the use of atomic weapons wherever this is possible.

(b) We should extend hostilities to other areas only if there is no other way effectively to restore the situation.

(c) Even if it becomes necessary to engage the U. S. S. R. in atomic warfare, we should limit ourselves to military objectives, primarily to those which are necessary to achieve control of the air. We should not initiate the bombing of industrial or population centers.

(d) We should attempt to build nonatomic elements of strength and to encourage our allies to do likewise so that the residual reliance which must be placed upon atomic weapons for our common security is reduced as far as may be feasible.

VI

Let us now discuss a few of the objections which might be raised to such an action policy.

Would we have any assurance that the enemy would not attack the cities of the West first? Obviously we would have no absolute assurance on this point. But assuming a maintenance of Western nuclear attack-defense superiority, it would seem wholly irrational for the enemy to do so. Every weapon he wasted on a city would be a weapon he could not use against our dispersed retaliatory base structure and a further contribution to the overwhelming destruction of his own cities which his attack would have invited.

Could we be sure that during the period that it took us to gain effective air control, and before the enemy had accepted defeat, he would not lash out to do what damage he could to our cities? Obviously we could not be sure. But the more thoroughly we had concentrated on his air-atomic capabilities, the greater the prospect that his attack would be disorganized and reduced to a scale which our air defense system could contain.

Is it possible to draw a distinction between industrial and population centers and air-atomic bases? Such a distinction presents real difficulties, but the importance of overcoming them is so great that it should be possible to do so. There is no reason why we, and the enemy as well, cannot locate military air bases more than a given distance, say 20 miles, from major population centers. There is no reason why high-yield thermonuclear weapons need to be used against base targets. Certainly, smaller population centers might be destroyed by near misses or other accidents. But is this not wholly different from the purposeful mass destruction of the urban populations of the world?

Would it not be expensive to create and maintain the military establishment required for air-atomic superiority in this sense? Certainly it would be expensive, but it would not be more expensive than we should and can afford. Today the West's expenditures for defense and gross capital formation are under 25 percent of gross national product. The Soviet expenditures for these categories are over 40 percent. Certainly the West could afford to allocate an additional 2 to 5 percent of its gross national products to defense if this is essential to survival. An effort short of what is adequate may obtain no useful results at all. The last 10 to 20 percent of the resources expended may be the ones that really count and validate the entire investment.

Would it not be even more expensive for us and our allies to carry, in addition, the costs of nonatomic defenses required to reduce the pressure on our atomic defenses? It would be. Europe, for instance, probably cannot carry the full costs of both atomic and nonatomic defenses.

In order for Europe to acquire an adequate defensive posture within its means it will probably have to rely on the help that tactical atomic firepower gives to the defense as well as on the backing of the strategic airpower of the United States. But if we expect NATO to continue as a vital organization we should lose no time in spreading the air-defense system to Europe. Nike batteries would offer substantial protection now, and later technological developments should improve it. And, above all, Europe must understand that war is not synonymous with Armageddon. We should make it clear that, if we all stick togeher, war is unlikely—that city-to-city air attacks are not part of our policy—and that, even in the event of atomic war, Soviet attacks on metropolitan centers would be only a final act of desperation and irrationality against which as effective defenses as are technologically possible will have been provided.

Would an action policy as described above serve to defend Asia and the Middle East? If we were clear in our minds that there is no easy way of defending Asia and the Middle East merely by statements threatening "massive retaliation," we might find it easier to address ourselves to the realistic actions which would in fact strengthen those areas. But when all is said and done, we probably must continue to rely in part on our nuclear attack-defense superiority. The Soviets must be left in no doubt that if there were to be an outbreak of massive military aggression in either area, and if the situation could not be restored by mobilization of the nonatomic strengths available, rather than accept defeat without fighting, we will fight and from a superior nuclear attack-defense position.

VII

If some such action policy is one with which we could live, what should our declaratory policy be? This question should be decided only after we had taken the necessary measures to make our action policy operable and had fully consulted with our allies. It is quite possible that taking the actions necessary to implement such a policy would be more impressive to the Russians than any declaration we might make. The more we can bring our action policy and our declaratory policy into line with each other the more effective both become.

A Well-Deserved Tribute to Our Great President

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1956

Mr. REED of New York. Mr. Speaker, Secretary of the Treasury George M. Humphrey, a great American statesman, has paid a perfect tribute to another great American statesman, President Dwight David Eisenhower.

Under leave to extend, heretofore granted, Mr. Speaker, I am inserting in the RECORD the address of the Secretary of the Treasury George M. Humphrey delivered at the New York-New Jersey Salute to Eisenhower dinner at Madison Square Garden, January 20, 1956:

We are here tonight to salute the greatest American of our time—Dwight David Eisenhower.

History may ultimately record him as the greatest man of many times, but it is clearly evident at the moment that he is beyond doubt the outstanding figure in the world today.

Never before in history have the hopes of so many millions of people throughout the world been centered on the shoulders of one man. Never before in history has a man stricken with illness had the fervent prayers for his recovery from so many millions of people all over the world.

One reason for this great attachment of so many millions to our President is the fact that he has become a symbol for peace. A military man for most of his life, President Eisenhower has fought valiantly for peace and against war during the past three decades.

His military service in the Philippines and later in Africa and in Europe brought him into intimate contact with the people of many nations. His warm personality, remarkable good will, great wisdom, enormous patience, and devotion to duty have become well known to both the leaders and the ordinary citizens of many countries on a close personal basis.

IN WORLD WAR II HE WAS THE CONQUERING HERO

In World War II he was the conquering hero who led the forces which repelled the armies of the dictators and eventually won peace and freedom for the overrun nations. He returned to Europe to head the drive for a NATO structure again to protect the free world from another threat to peace and freedom.

During the last 3 years as President of this great land, President Eisenhower has become increasingly in the eyes of the world the great hope for a just and lasting peace. He has become the embodiment of the fervent hopes of millions of the world's people for the eventual day of just peace among nations.

So, I am humbly proud, and I know that you too are proud, to be among the vast numbers of American citizens who tonight are saluting President Eisenhower.

His character is reflected in the objectives he has held and worked for during his term of office and the depth of his sincerity has imbued his associates with those same objectives and enthusiasm for their accomplishment. His objectives are few and simple. They can be characterized with but a single word—progress—steady, insistent, persistent progress in three fundamental directions.

Toward a just and lasting peace throughout the world.

Toward a widespread and continuing prosperity.

Toward greater freedom for the individual in his pursuit of happiness and protection from the ravages of adversity for all mankind.

SEES HIS IDEALS ROOTED IN PRACTICABILITY

His high ideals are firmly rooted on the solid foundation of practicability. He is no idle dreamer. He wants and works for his dreams to come true. How far he has succeeded is history, but it is worth reviewing for just a few moments tonight.

His accomplishments toward peace have recently been described at length in the state of the Union message to the Congress. The problems are enormous. The broad highway to accomplishment is not clear and it is beset with frustrations and difficulties at every turn, but the bare fact remains that within a few months after he took office the shooting stopped in Korea and no American mothers have had to worry about their sons and daughters since then in a shooting war.

Crises continually beset us and will continue to do so but we can all rest assured that we have a wise, cool head directing a firm hand on the tiller to steer our ship of state as carefully as it can be done between the rocks and shoals of war and aggression, but forward—always forward, pressing forward toward a just and lasting peace.

His accomplishments toward a widespread and continuing prosperity are here before our eyes to see on almost every hand. Only a part of our farm population is still suffering from the burdensome surpluses accumulated under past laws ill devised to bring on anything but the very burdens which are now bearing so heavily on farm crops, production, and prices in some fields. Practical, workable relief in that area is of first concern, and no problem is receiving greater attention. But it is the result of an accumulation of years of bad practice and cannot be soundly corrected all at once.

Everywhere else on almost every side we are having the greatest employment, the most jobs, the best pay, the lowest percentage of people unemployed, the highest earnings, and the best times, by any measure, that this country has ever seen with new high records in almost every line.

It is no accident that this great economic achievement has come about under the leadership of President Eisenhower. We have achieved prosperity without the bloody cost of war, and without the false promise of inflation. The American people today enjoy not only a record economy but a sound one. This achievement in economic integrity is no surprise to anyone who knows the President. It reflects the integrity of the man.

It is a subject, next to peace, that is closest to his heart, and closest to your welfare.

I am asked many times why we in the Eisenhower administration have given such very great importance to balancing the budget and stopping inflation.

Balancing the budget in prosperous times is the prime requisite of financial integrity.

We have made financial integrity and stability in the cost of living, one of our foremost goals.

We have not done this out of any academic concern. It isn't just a matter of accounting or bookkeeping or businessman's fetish.

Money has no value except as it affects people. We are so concerned about the value of the dollar because it is the people's money we are collecting, spending—and defending, and because stability in the cost of living so vitally affects each of us.

WE ARE DETERMINED TO AVOID INFLATION

We are determined to avoid inflation, as well as to prevent deflation. Either can jeopardize the happiness, the hopes, and the well-being of all the 167 million people of this great Nation.

Inflation can steal away your savings, your pension, and the value of your wages.

Deflation can endanger millions of jobs.

The integrity—the staying power—of the value of the dollar is of primary importance to each and every one of us no matter what our condition. Rich or poor—old or young—on a salary or a daily wage, or living on a pension or an insurance policy, we are all concerned, not only as it affects our current cost of living but our very jobs are at stake.

A job is the most important thing in America.

Whether you are working for yourself, in a profession or in a factory, in a mine, in transportation, in some form of service, or on a farm, it is all the same.

To have a job you must have tools, power and machines to work with, and someone must save and invest to supply them. We have a rapidly growing population and over a million new jobs must be created every year to supply our needs. That means new tools—new factories—new mines—new trucks and trains, and all kinds of things to work with.

That means more and more investment to buy them; and who will invest if the value of their money is uncertain? Who will buy the big bond issues? Who will make the mortgage loans? You all are involved. Not only is your job at stake but your home is also. Who will make the loans that permit you to buy your home or your car on time if the value of money is uncertain?

MILLIONS OF YOU ARE ALSO INVESTORS

Moreover, millions of you are also investors. It is not the rich who supply the funds today. The great investors in this country are not only the millions of small individual investors, but are the small savers who through the insurance companies, the pension funds, the savings banks, union and fraternal funds, and the other ways of saving buy the stocks, bonds, and mortgages and make the other loans.

Sound money is the incentive that keeps men doing their best. That spurs their imagination to do research and make new inventions. That underlies our great industrial machine. That will modernize the old jobs and make the new jobs to make the new and better and cheaper things we all need to continually increase our scale of living. That will induce the savings and investment of savings of the millions of Americans who have confidence in our free system and the soundness of our finances.

These are the material reasons why a balanced budget, financial responsibility, and the soundness of the dollar are of fundamental importance to each and every one of us, no matter who we are, nor where we are.

Bad money, like a bad apple, will rot the whole barrel.

A government that adopts inflation as a policy to achieve its ends leads its people into false land.

FALSE MONEY LEADS TO THE SLAVE STATE

When you tinker with a value so basic as the value of money—when you induce inflation and make it a policy to give the people more and more income of less and less buying power—falseness in all other things must follow.

The government which adopts a policy of inflation must preempt to itself an ever-growing web of other powers with which it can hide the falseness of its money and smother the complaints of the people as they see the buying power of their savings and life insurance being stolen away, as the prices of food, clothing, and shelter rise faster than more false money can supply.

False money leads to the slave state.

The buying power of the dollar dropped from 100 cents to only 52 cents in just 15 years preceding the election of this administration. But the long trend of inflation that had been eating away at the value of your dollar hos now been halted, and there has been no significant loss in the buying power of the dollar now for over 3 full years.

This means that when your incomes are increased—and they are now at record highs—you have a real raise, not merely a raise to match the higher cost of living that was for so long the order of the day. This has been a real "Eisenhower extra."

WHO WANTS TO GO BACK?

You all remember their slogans in the last campaign "You never had it so good" and "Don't let them take it away." You can ask them now "Who wants to go back?"

Now how did this all happen? What were some of the specific moves by the Eisenhower administration which contributed to this result?

Total Government spending was cut sharply. Spending now is $10 billion under 3 years ago, and $14 billion less than had been planned by the final budget of the previous administration.

We at long last have balanced the budget, the surest index to thrifty management in a home, in a business, or in the Federal Government.

And, we have made the largest dollar tax cut in the history of this country. This great tax reduction of almost $7,500 million was a mighty assist in the transition from a wartime to a peacetime economy.

The Eisenhower administration has also accomplished much toward greater freedom for the individual in his pursuit of happiness and from the ravages of adversity. Artificial controls, rationing, price fixing, and all manner of directives and decisions from Washington were promptly removed in nearly everything but farm programs, where rigid laws prevented. Ten million additional people were included in social-security benefits. The minimum wage was increased. Additional health research is assisting in the prevention and treatment of disease. Large-scale integrated Federal road and school building programs are proposed. The scale of living of 167 million Americans is higher than ever in our history.

SAYS SLAVE STATES MULTIPLY ON INFLATION

These, then are some of the ways that the administration of President Eisenhower has contributed toward peace, defended the value of your work and savings, and increased your freedom of opportunity and free choice.

We can never take for granted the preservation of our free way of life. Only a people of high integrity can deserve freedom. No people, however great, can preserve integrity if it must transact its business, measure its worth, in a false, inflated currency. Prudence, thrift, honest work, and honest government must all go hand in hand.

And make no mistake about it. It is no coincidence that since the scourge of inflation was let loose on the modern world slave states have multiplied.

In the slave state, men do things under the lash of the whip of "do it or else." They have been robbed of the honest values that spur men in the free world to work, to save, and to build a better life. We are determined here on preserving those values, so that in our country men will never lack the incentive to do the things in freedom that make for a fuller and better life—and do them far better than they can ever be done in any slave state.

IN THESE TIMES OF DEADLY CONTEST

These basic incentives to honesty, thrift, hard work, and production cannot fail to inspire—as it has inspired—thrifty, hard-working government. And it cannot fail to preserve among our people those qualities of prudence, thrift, industry, and spirit of self-betterment that have made them the greatest and best provided people on this earth.

In these times of deadly contest between our way of freedom and the reactionary ways of the Communist slave state, it behooves us all to keep intact and vigorous all our qualities of greatness. Only if we do so can we remain a great beacon light of freedom and promise in the free world, an encouragement to all others to pursue our way of freedom, and avoid seduction into slavery.

The large measure of success in restoring freedom from war and financial integrity and progress in the pursuit of happiness for all the people are truly the proudest accomplishments of the great leader we salute tonight.

It reflects, as perhaps nothing else can, the basic honesty and high character of the President himself.

There is no more fitting time than this to pledge that we shall not falter in this great task, nor shall we ever be driven from it by men who would ignore tomorrow's doom for today's advantage.

Talk, Not Trade

EXTENSION OF REMARKS
OF
HON. RICHARD E. LANKFORD
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1956

Mr. LANKFORD. Mr. Speaker, I wish to include in the RECORD an article from the Democratic Digest of December 1955 dealing with the tariff situation. The article follows:

TALK, NOT TRADE

"Can the Republican Party break away from its high-tariff past, and adopt the traditional Democratic position in favor of low barriers to international trade? Or is it impossible to obtain leadership for a liberal foreign-trade policy from the Republicans?"

This question, posed by the St. Louis Post-Dispatch, has been hanging in the minds of many observers of both political parties ever since the Republicans were elected to office in 1952. There was a general recognition of the historic unanimity among Republicans in Congress in opposition to lower trade barriers. But there was hope in the unequivocal protrade statements of General Eisenhower, both as a presidential candidate and as President—hope that his prestige and popularity might succeed in pulling his party away from die-hard protectionism.

After 3 years, however, there is little hope left among those who favor expanded trade. In 1955, Republicans in Congress were about as solidly protectionist as they had been in 1953, when President Eisenhower first came to office. If anything, their opposition to the President on this issue is more intense than ever.

But it is not so much the stubborn protectionism of the Republicans in Congress that gives rise to despair; it is the reluctant realization that, despite its bold statements on behalf of freer trade, the administration itself is, at heart, protectionist. And because the real impetus for expanded trade cannot come from Congress, but must come from the executive branch, friends of freer trade know that if the administration abdicates leadership in the trade field, there will be no leadership.

All through the administration's first 2 years in office, there were signs that the high-tariff forces were important, if not dominant, within the administration circles: The half-hearted testimony of Cabinet officers in 1953 in favor of continuing the reciprocal-trade program; the appointment of known protectionists to the vital Tariff Commission; the President's refusal to press his trade program against GOP protectionist opposition in 1954. Yet these danger signals were accompanied by the most emphatic and unqualified statements from the White House and other administration leaders about the importance of more liberal trade. "If we fail in our trade policy," the President told Congress in 1954, "we may fail in all."

But in July 1954, came the first overt and serious antitrade action by the administration when it yielded to the pleadings of the American watch industry, and raised the tariff on imported watches (mostly Swiss) by 50 percent.

Since then, two other major administration actions have jolted our friends abroad and supporters of freer trade at home:

A 50 percent hike in the tariff on bicycles.

The rejection of a British bid to furnish generators for the Chief Joseph Dam in Washington State, although their bid was substantially below the American bid which won the award.

These actions were in such direct conflict with everything the administration had been saying about our trade policy that the press reacted with unusual sharpness. "Dishonest and hypocritical," the Raleigh (N. C.) News and Observer called the generator decision. "Is Uncle Sam a Hypocrite on Foreign Trade Policy?" was the title of a Louisville Courier-Journal editorial. "Is it not time to end this hypocrisy?" asked the Washington Post.

The Nashville Tennessean noted the damage to United States prestige in the world as a result of the discrepancy between words and action. "Hereafter," commented the Tennessean, "when administration spokesmen talk about free trade, assuming that they will have the nerve to do so, they are not entitled to be taken seriously here at home or overseas."

What distressed many observers was that the administration had seemed to base each of its three major protectionist actions on the flimsiest of reasons. For example, the increase in watch tariffs was justified as necessary to keep the United States watch industry alive in case of a national defense emergency. But it was later revealed that the Defense Department itself had rejected the national defense argument prior to the watch decision.

As to the rejection of the British bid for generators, Neal Stanford, writing in the Christian Science Monitor, points out that "while the Eisenhower administration is constantly reporting new highs in employment, the Nation's economy, American income, etc., it rejects a British low bid (for generators) on the argument of (local United States) unemployment." And the Cleveland Plain Dealer noted that the net profits of a Cleveland bicycle maker in 1948, when imports supposedly began to hurt, were nearly 5 times what they were in 1946.

There was a feeling that if there had been any real determination within the administration to resist the protectionist pressures within the GOP, the decisions could easily have gone the other way. After all, as the Christian Science Monitor points out, President Eisenhower's predecessor, Mr. Truman, had turned down a requested tariff boost on watches just 2 years before Mr. Eisenhower approved the increase.

One high-tariff lobbyist in Washington remarked recently, "Why does everybody get so excited just because they raise the tariff on a silly item like bicycles?" The answer appeared in two sharply diverse publications. Wrote E. F. Tompkins in the New York Journal-American, now that the bicycle industry has won its tariff increase, "other injured industries may now rightfully expect similar relief." And the London Economist commented, "The paramount point for the Americans to realize is that in this country, the long-delayed bicycle decision has always been regarded as a test case."

William H. Draper, Jr., formerly our foreign aid Ambassador in Europe, explains the effect of our unpredictable tariff policy on businessmen abroad.

"Actually," writes Draper, "as foreign businessmen will readily tell you, the rate (tariff) on any item, high or low, is secondary; what's really important is that once the rate is fixed it should stay fixed." No American businessman would deal with a concern that refused to sign a contract unless it contained a proviso that could be broken at any time. "Yet we, as a Nation, insist on behaving this way when we trade with other nations." Draper proposes negotiating treaties with other countries whereby both countries guarantee not to raise tariffs on certain goods for 10 years. That way, he says, foreign businessmen will be more likely to go to the effort and expense involved in entering the American market.

Ambassador Draper also points out that the Communists have benefitted substantially from our erratic trade policy by "shrewdly offering to buy from our allies the very items we exclude from our markets by variable tariff rates and quotas." The results:

Free-world trade with Red China increased nearly $100 million in a single year.

West Germany and France tripled trade with Red China.

Argentina signed a $200 milion trade pact with Russia.

"At every major (1954) diplomatic conference," writes Draper, American representatives have been handicapped because they couldn't compete with trade offers shrewdly injected into the discussions by Communist delegates."

President Eisenhower himself pointed out another major reason for maintaining and expanding our trade with other nations. "For our own economic growth we must have continuously expanding free markets," he told Congress in 1954. The Department of Commerce estimates that some 3 million workers are employed in the production of United States exports, directly or indirectly. A shrinkage of exports could mean substantial increases in United States unemployment.

Looking back, some observers recall Mr. Hoover's failure to recognize the importance of world trade for United States prosperity, as symbolized by his acceptance of the radical Smoot-Hawley tariff bill of 1930.

Illinois Senator PAUL DOUGLAS, formerly a distinguished professor of economics, recalls that he was 1 of 1,028 economists who signed a petition urging President Hoover to veto the Smoot-Hawley bill on the grounds that it would only deepen the depression that was already 8 months old. Despite their plea, Hoover signed the bill. "Everything that we had prophesied came true," DOUGLAS recalls. "Our exports fell off. European countries imposed retaliatory tariffs * * * we drifted into a state of economic anarchy."

Neither DOUGLAS nor any other observer feels that anything as bad as that will happen this time, but the future of our foreign trade policy remains very much a question as long as the vacuum of leadership in the trade field continues.

There Is Need for a Long-Term Foreign Economic Policy

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1956

Mr. WILLIAMS of New Jersey. Mr. Speaker, there is a compelling need today, it appears to me, for a sound, long-term foreign economic policy as part of our foreign policy. Limited authorization for long-term aid would provide the President with the flexibility he needs for such projects as the Aswan Dam, which is of imaginative and dramatic interest to the people in the area it will affect. It is not in our national interest for the President's hands to be rigidly tied in this field.

Authorization is not appropriation, of course, and the Congress must retain its ability to review each year's requests. However, authorization would give renewed courage to our friends in the free world as demonstration of the fact that we are in this fight to win. The contest with the Soviets which we now face requires the ability for long-term planning.

I urgently hope the administration will maintain its position on this vital subject.

I would like to call the attention of the Congress to a statement by 17 House Democrats on this subject, made last weekend. May I also point out the eloquent editorial in this morning's Washington Post and Times Hearld, entitled "On Planning Ahead."

JOINT STATEMENT BY 17 DEMOCRATIC MEMBERS OF CONGRESS ON LONG-RANGE FOREIGN ECONOMIC POLICY

The attached release is issued by the following Democratic Members of Congress, including two members of the House Committee on Foreign Affairs—Congressmen A. S. J. CARNAHAN and HARRISON A. WILLIAMS, JR.—VICTOR L. ANFUSO, New York; THOMAS L. ASHLEY, Ohio; JOHN A. BLATNIK, Minnesota; RICHARD BOLLING, Missouri; A. S. J. CARNAHAN, Missouri; CHET HOLIFIELD, California; LESTER HOLTZMAN, New York; EUGENE J. KEOGH, New York; RICHARD E. LANKFORD, Maryland; EUGENE J. MCCARTHY, Minnesota; TORBERT H. MACDONALD, Massachusetts; ADAM C. POWELL, JR., New York; JAMES M. QUIGLEY, Pennsylvania; HENRY S. REUSS, Wisconsin; JAMES ROOSEVELT, California; FRANK THOMPSON, JR., New Jersey; HARRISON A. WILLIAMS, JR., New Jersey.

JOINT STATEMENT—FOREIGN ECONOMIC POLICY

The shift in the Soviet foreign policy from primary emphasis on military encroachment to emphasis on economic, political, and psychological penetration of the free world has been obvious for some time. A primary reason for the shift has been the success of the United States bipartisan policy of developing the military strength of the free world.

This success argues strongly for the continued maintenance of our military strength, but at the same time we must recognize the new challenge we face and develop policies to forward the free world's interests and combat the Communists' tactical shift. Indeed, we should recognize the shift of Soviet tactics as providing the West with a great new opportunity. If the contest between tyranny and freedom is to be pursued on economic, political, and psychological grounds, we have a clear advantage. Our system of political freedom and an expanding economy which benefits all is clearly superior to the Soviet system of regimentation and forced economic advance. But this advantage is ours only if we use it.

One of the best tools in the arsenal of freedom is a sound, long-range foreign economic policy. We must tell the world, through a statement of principle in the Congress, that America is in the fight for freedom to stay and that we are prepared to continue our offers of help to those free countries which are prepared to help themselves advance economically and politically toward freedom.

We therefore join in urging that such a statement of principle be written into the mutual security legislation this year. We believe this statement should make clear that it is the bipartisan policy of the United States to resist aggressive communism but also, and equally important, to further the opportunities of all men to realize their legitimate aspirations for freedom and economic progress.

Moreover, we look with favor on providing authority in this year's legislation for the President to make certain advance commitments of economic development funds for a period not exceeding 5 years. Within a reasonable limit this will increase, not reduce, the flexibility of our aid program by permitting the Executive to meet emergency situations as they arise.

We recognize, of course, that apropriations for each year's expenditures must and should be reviewed by each Congress. However, we believe a statement of the intent of the American people, speaking through their elected representatives, that we are in this fight to win would assist in offsetting the gains the Soviets are attempting to achieve in those areas striving for economic and political advancement. We believe our friends in those areas would take renewed confidence in their ability to resist Communist encroachment and their capacity to achieve their legitimate aspirations within the framework of freedom if they have tangible evidence that the United States is prepared to assist them as long as such assistance is necessary.

[From the Washington Post and Times Herald of January 24, 1956]

ON PLANNING AHEAD

It is unfortunate that Secretary Dulles' dance on the diplomatic brink has influenced the discussion of long-term foreign aid commitments. Reverberations over the magazine article about Mr. Dulles continue to demonstrate the baneful effects of the indiscretion, more because of the bald and smug overstatement that because of disagreement with the basic doctrine of deterrence of aggression. A return to perspective is not much helped by the assumption on the part of some of Mr. Dulles' champions that it was perfectly all right to release a campaign document which, incidentally, scared the free world, but that it is dastardly politics to question the wisdom and propriety of this sort of performance by the Secretary of State.

Be this as it may, the country simply cannot afford to let the discussion of its long-term interests in foreign affairs be diverted by massive retaliation against Mr. Dulles. Especially for that reason, the courageous statement of 17 Democratic Members of the House of Representatives in support of the principle of advance commitment of certain foreign aid funds is noteworthy and commendable. America's interest in economic aid as an instrument of free world policy goes far beyond partisan politics; and the Democrats' own record in supporting such aid against right-wing Republican opposition is creditable.

Critics can point to a good many instances in which narrow-minded actions within the Republican administration have worked against the very principles it is now promoting. Chalmers Roberts' story in this newspaper Sunday about how Burma was rebuffed last summer when it sought to pay for American technical aid with surplus rice pointed to incredible shortsightedness. It is in just this sort of problem—the adaptation of techniques to suit the needs of individual countries such as Burma—that the Soviet Union has scored a propaganda success.

Administration mistakes quite apart, however, the new Russian campaign designed to neutralize large areas of the free world faces this country with an immediate challenge. Obviously, even so strong a capitalist economy as ours could not stand the cost of attempting to counter every Machiavellian maneuver of the Soviet masters. They are free to promise without regard to public opinion at home or the needs of their own people. If we are to meet the challenge we need to place our emphasis, not on efforts to outbid the Russians frontally, but on skillful application of flexible and selective techniques.

Beyond the grant-and-loan type of aid, we probably ought to devise means of absorbing the surpluses of the countries we are trying to help, either through preclusive buying or a sort of brokerage system. But long-range commitment authority, although it is by no means the whole answer, is indispensable to a flexible approach. We ought to be in a position to encourage countries we are trying to help to plan ahead on specific projects of open economic benefit, such as dams and roads, with the assurance that they can be carried through.

The fact that one Congress cannot bind another need not prejudice this kind of flexibility if legislators will adapt the military aid contract authorization formula to the economic aid program. New appropriations would always be subject to congressional check. Economic warfare of the sort now forced upon us requires broad advance planning of the sort that would be impossible on a year-to-year basis. The economic challenge will remain long after the 1956 campaign and Mr. Dulles' boasts have been forgotten; and this is the point that both the administration and Congress need to keep in mind.

Truman's Memoirs

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post and Times Herald, Tuesday, January 24, 1956, in which the paper discusses and comments on the parts played by former President Truman and Gen. George C. Marshall with respect to Chiang Kai-shek and the loss of China to the Communists:

The second installment of the Truman memoirs, the abridgment of which begins in Life magazine, is bound to revive the "Who lost China?" argument. Mr. Truman is in no doubt it. The government of Chiang Kai-shek did not command the respect and support of the Chinese people. Chiang's attitude was that of an old-fashioned warlord. His commanders had a walled-city complex, and would not heed the advice first of General Marshall and then of our military mission in Nanking. In short Mr. Truman implies, quite rightly, the Chinese themselves lost China, and, specifically the Nationalist Government under Chiang Kai-shek.

All this is well attested history, told in Mr. Truman's customary crisp fashion. Nevertheless, Mr. Truman's account is bound to fan the embers of controversy. Fiction has become fact to many of the leather-lunged China Firsters. Mr. Truman's account occurs in the course of a long defense of his dispatch of the Marshall mission to China in 1945–46. The defense is well taken. Chiang had already come to a formal agreement with the Chinese Communists to work toward national unity. All that General Marshall tried to do, all that he was commissioned to do in our national interest (which was to keep China from being split by civil war) was to encourage the development of a Nationalist-Communist coalition government. In those days, Mr. Truman says, all of us were for it, including Generals Wedemeyer and Hurley, who subsequently alined themselves with the anti-Trumanites (though General Wedemeyer has denied Mr. Truman's version). To be sure General Marshall failed in his task, but it was a gallant failure, and the effort was worthwhile as a diplomatic venture.

Mr. Truman thinks that "If Chiang had been a little more conciliatory, an understanding could have been reached." Surely he is oversanguine to the point of naivete. Chiang's Kuomintang by that time was thoroughly bankrupt, and the "mandate of

heaven," as the Chinese put it, had already passed to the Communists. Far from being responsible for Chiang's downfall through denial of enough United States materiel we actually speeded it, for the arms we gave were regarded merely as counters in a game of panicky and wholesale surrender to the Communists. In those days the Communists called Chiang Kai-shek their supply sergeant.

In this chapter the former President asseverates that he was not credulous about the Communists. He says he knew what they were up to. "Neither Marshall nor I" was ever taken in by the assertion that they were merely agrarian reformers. Nor did Mr. Truman believe Stalin at Potsdam when he said that the Chinese Communists were not proper Communists. These are simply polemical points. The fact is that the Chinese Communists happened to be the spearhead of one of the mightiest revolutions of all time which was fed by a rural discontent in an immeasurable degree. The Truman memoirs would read more like history if Mr. Truman (who, by the way, ought really to eschew all his foolish cracks about hindsight) had included the fifty-odd reports General Marshall sent him from China. These would indeed be a contribution to the history of the period.

A Creed for All

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1956

Mr. McCORMACK. Mr. Speaker, I include in my extension of remarks an editorial containing a beautiful and all-embracive prayer, made in the Massachusetts House of Representatives some weeks ago by Rev. (Father) Christopher P. Griffin, chaplain of the House of Representatives in Massachusetts. This beautiful prayer should be widely read:

[From the Boston Daily Record of September 12, 1955]

A CREED FOR ALL

Not everything that is said on Beacon Hill is worth remembering, and many of the speeches, especially those made in the heat of debate, had best be forgotten.

The conspicuously notable exception was the prayer offered last Thursday by the Rev. Christopher P. Griffin, chaplain of the house of representatives.

We cannot inscribe this prayer on the marble walls of the hall of flags for all to see, now and forevermore. But we can and are going to print it here—as follows:

"Almighty God, whose divine sovereignty and whose authority we can neither question nor deny, we pray that we may faithfully and fearlessly try to do what You have commanded. The first law is that we 'Love the Lord our God with our whole hearts, and minds and souls, and Thy second was like it, that we love our neighbors as ourselves.' This is the immutable, the eternal, the divine law, written on the tablets of Moses, and carved irrevocably on the fleshly tables of the hearts of men. Hatred campaign against Jews, persecutions of Catholics, baiting of Protestants—these are contrary to the divine will.

"There are theological and dogmatic differences that separate us, but there can be no justification for race hatred. The walls and fences of hatred and bitterness can do to America what neither Hitler, Stalin, or all the world's dictators could never do. If there is hatred for Jew, or Catholic, or Protestant, let it be in the name of Satan, not under the blasphemous cloak of religious mockery.

"It is not out of order, nor is there a better time to start here in this spot sacred to human and divine law, blessed in its service to religious freedom, that all of us in fulfillment of the divine mandate, as well as in response to our noble impulses, do not merely try to understand Jews and Protestants and Catholics, not merely tolerate them, but love them with all the fervor of our hearts and would welcome the opportunity to prove that love by the very sacrifice of our lives for them. Amen."

We hope that all teachers will clip this beautiful prayer and read it to their pupils many times throughout the year.

The child who adopts these principles and patterns his life according to them cannot fail to grow up to be a great American.

Optimism Over Geneva Cools

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, January 24, 1956

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Second Look Cools Optimism Over Geneva," which was published in the November 1955 issue of Democratic Digest.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PRESS REAPPRAISES SUMMIT TALKS—SECOND LOOK COOLS OPTIMISM OVER GENEVA

In the fading atmosphere of Geneva, the Nation's press took a second look at the Big Four Conference. The verdict is not reassuring, for many columnists and editors are concerned by the gains which the Russians are scoring in the aftermath of the summit meeting.

"On balance," said James Reston of the New York Times, "it is hard to deny that the Communists are making more progress in the cool war than they ever did in the cold war."

The Russians have won "victory for a smile," said the Wall Street Journal.

"The Soviet objective seems to be to relieve something of the tension of the cold war, but to do nothing positive and decisive about removing the causes of the cold war," wrote Roscoe Drummond in the Herald Tribune. The Kremlin, he said, has "now got all it wants for nothing (that is, for some inexpensive smiles)."

Why were these commentators so concerned? What were the Russian gains which aroused widespread misgivings?

The most dramatic Russian success during the Geneva aftermath came out of Chancellor Adenauer's trip to Moscow, which the New York Times called "a fantastic political and diplomatic defeat" for the West.

Before Geneva the Chancellor had been outspokenly mistrustful of the Soviet regime. On the surface he had seemed unchanged by the new warmth in the atmosphere.

During the post-Geneva interval before Adenauer left for Moscow, the Government of West Germany continued to talk a tough line: diplomatic relations with the Russians would be established only if they would lead to the reunification of Germany and the release of the 100,000 prisoners who had been held by the Russians since World War II.

But once Adenauer arrived in Moscow, said the Times, "the whole concept of dealing with the Soviet Union from strength collapsed overnight," and the Chancellor agreed to diplomatic relations in exchange for no more than a verbal assurance that Russia would release 10 percent of the prisoners.

"The Soviet Union got precisely what it wanted out of the negotiations here with West Germany," wrote Marguerite Higgins from Moscow, "* * * one more step toward general acceptance of the status quo in Europe. The Russians can keep what they have, and at the same time open up prospects for a great deal more trade."

The German collapse, serious as it was, was only the latest sign of weakening in Western defenses. Within less than a month after the Geneva meeting, the Milwaukee Journal listed in its wake these "unhappy" developments:

"The drive to rearm West Germany has slowed down.

"Members of the North Atlantic Treaty Organization (NATO) are seeking to lessen their military commitments.

"France has scrapped a program to modernize its army. Worried about revolt in north African possessions, it is stripping a NATO military contribution which never reached promised levels.

"Sections of the British press are demanding a cut in draft calls. Italy's defense program is slowing to a standstill.

"The Balkan alliance of Yugoslavia, Turkey, and Greece is falling apart as the result of Tito's new friendship with Moscow.

"Britain, Greece, and Turkey are at odds over the future of Cyprus.

"Progress on an anti-Communist alliance in the Near East has halted."

To this list, the New York Times added the disheartening news that "the Communists are using the smiling photographs of President Eisenhower and Premier Bulganin to their own advantage. They are being circulated in Italy to give the Communists a new respectability. They are being widely distributed in Eastern Europe to prove that the leaders of the two most powerful nations have really made up and it will do no good to agitate for any change.

There is no secret about the cause of this erosion in Western strength. It stems from the "Geneva spirit" which millions of people took as a signal that the cold war was all but over.

The developments of the last 3 months are a natural consequence of the relaxation induced by that impression.

The mounting American reaction to Geneva was not directed against holding the meeting, or even against dealing with the Russians in a courteous way. The criticism boiled down to the United States having encouraged a friendly spirit to the exclusion of everything else. In short, many observers now feel that in order to make the conference appear successful, there was a tendency to gloss over and ignore all the real problems while the talks at the Summit were going on.

When the President returned to America, he reported that we had made a beginning toward something of great benefit to mankind. He noted that specific agreements on disarmament and German reunification were yet to come, but the President himself was hopeful that we could keep alive the spirit ignited at Geneva. For this, he said, was "the most shining opportunity ever possessed by Americans."

Looking back, nearly everybody sees that this optimism prompted a widespread reaction. Indeed, some diplomats began worrying about this while the conference was still in progress.

Four days after the meeting, Ludwell Denny of the Scripps-Howard papers re-

ported the fear of professional diplomats that America's role had "unintentionally made it harder for them to fight communism and neutralism at home."

The London Spectator reported that "Sir Anthony Eden is worried about the way in which the Geneva talks went. * * * There is no doubt that the Russians have scored an immense advantage from the Geneva talks. As the British newspapers show, they have gone a long way toward making the West soft."

The concern of American newspapers stemmed from the same cause. The West was relaxiing, even though the Russians had made no concessions of substance on German reunification. European security, or disarmament. Back in Moscow 2 weeks after the Geneva Conference, Bulganin reported to the Supreme Soviet that Russia had yielded no ground on its insistence that American troops must be withdrawn from the Continent of Europe, while last month, Russian party boss Nikita Khrushchev told the East German delegation in Moscow that the Russians would give up Marx and Lenin when the shrimp learns to whistle. Long before then, he predicted, there would be a Communist victory over capitalism, for capitalism is the way of the blind.

After a month of post-Geneva Russian successes, administration leaders became alarmed over the public's second look at Geneva.

Toward the end of August, the administration suddenly abandoned its own Geneva confidence in the Russians. The President warned the world against the pottage of a false peace. In a follow-up speech the next day, Vice President NIXON spelled out America's conditions for a cold-war settlement: Free elections and unification of Germany and Korea, freeing the satellites, and so forth.

Why, asked the press, had this not been made clear at Geneva, instead of many weeks later?

"There never was any excuse," wrote Walter Lippmann, "for letting the impression arise that Geneva would soon be followed by a settlement of the big issues of the cold war. There was never any excuse for raising the false hope that the Soviets were about to surrender their main position in Europe.

"The main result of the zigzag is to give an effect of instability, of uncertainty and immaturity in United States foreign policy."

But despite the admonition of Mr. Lippmann and other critics it was soon apparent that the speeches about getting-tough-again were not being translated into policy. For administration warnings against complacency were promptly followed by plans for more cuts in the defense budget.

"Time to relax?" asked the Washington Post. "If the administration is genuinely worried about excessive optimism resulting from the Summit conference, it had better look first to its own actions. Nothing could be better calculated to lull Americans to sleep and tell our European allies to relax than a large cut in the military budget." Our allies were further lulled when the State Department described Adenauer's agreement with the Russians as a victory for the West.

This optimistic claim "bore almost no resemblance to the analysis of the Moscow-Bonn talks cabled to the State Department by the United States Embassy in Moscow," the New York Times reported. As a consequence "the State Department was being criticized for claiming 'victories' which its own top officials doubted * * *"

This was not the first time the administration has been criticized for excessive optimism in foreign policy. As the New York Times said:

"Any objective and well-informed person who makes a careful analysis of the results of the four great international conferences of the last 6 months—at Bandung, Belgrade, Geneva, and the Soviet-German conference in Moscow—will be appalled if he compares them with the general impression created by United States official statements and United States news reports at the time of those conferences."

Still a Need for Minutemen

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1956

Mr. WILLIAMS of New Jersey. Mr. Speaker, I would like to call the attention of this body to an important statement by Robert C. Crane, editor and publisher of the highly respected Elizabeth Daily Journal, a newspaper which recently celebrated its 175th anniversary. Mr. Crane points up a truth which every generation must learn anew, sometimes at great cost—that freedom is never finally secured. It must be preserved and fought for over and over again. We must not let apathy obscure the fact that we are currently living in another great era when freedom must be preserved through readiness for its active defense. The program which Mr. Crane discusses in this excellent statement is vital to that preservation and, if need be, active defense.

The statement follows:

[From the Elizabeth Daily Journal of January 20, 1956]

STILL A NEED FOR MINUTEMEN

Long, long ago, on the night of April 18, 1775, a thousand British troops marched from Boston to seize ammunition stored at Concord, 20 miles away. Then and there, a legend was born—the heroic legend of Paul Revere and the patriotic Minutemen he spurred into action. The citizen-soldiers of the Colonies fired the "shot heard around the world," and, in striking the first blow for liberty, not only assured our great heritage but set a courageous example of selfless service as well.

From that day to this, American dependence upon the citizen-soldier to fight its battles and defend its freedom has been virtually absolute. But this has been a peace-loving Nation, and a military career has never had much appeal. Warfare is repugnant. Taking up arms is just about the last choice of every eligible male.

Thus, we've achieved a remarkable success story among the world family of nations. We train to build more bridges and tall buildings, manufacture the sleekest automobiles, raise bountiful crops of life-giving food, combat the various diseases that plague mankind—with little thought given to training for the defense of all we have achieved. Yet we've won the costliest wars, the deadliest battles and defeated the best trained, professional warriors at every turn. It's a record to be proud of. However, in the light of a changing world—can we depend on the record in the next battle, if it is to come?

Figuratively speaking, distance consuming monsters of the land, sea and air have shrunken our margin of safety and our time for preparedness. The vast oceans no longer present a sufficient barrier. The skies have become international thruways. Foreign countries may still be foreign in comparative terms of ideological theory and practice, but they are no longer foreign in terms of time and distance.

Consider, if you will, these thought-provoking words spoken by Charles C. Finucane, Under Secretary of the Army, in an address before the Milwaukee Civic Alliance, Milwaukee, Wis., October 25, 1955:

"The military posture we have set for our Armed Forces has fluctuated feverishly with the climate of world affairs. These figures tell their own story.

"The freedom we needed 250,000 men to win in the Revolutionary War, we entrusted to an Army of only 80 soldiers when the Continental Army was disbanded.

"In 1812, we called nearly 300,000 to the colors. Following the war, we sent home all but 5,000.

"Sixteen thousand was the effective Army force with which we began the war to save the Union. Eventually, 2 million from the North faced more than a million in the Confederacy. After peace was won, we had but 25,000 to keep it.

"In 1917, 200,000 men were available to meet a crisis that needed 4 million to resolve.

"We had 190,000 Regulars on guard in 1939. Some 10,420,000 took up arms in that service before our security was temporarily restored.

"Seven times we studied the same lesson—studied it to our enormous cost in blood and treasure—and seven times we threw away the book.

"For when war thundered down from the hills of North Korea, the lesson remained to be learned. Over 600,000 men who had faced fire in World War II were called on by all services to receive that baptism a second time. Yet more than a million and a half nonveterans who had since come of age were never called because they could not be made ready in time.

"Our country paid in the desperate effort by which we clawed our way back from the brink of humiliating—and potentially disastrous—defeat."

At one and the same time, that record is both glorious and shabby. It reveals the true strength of democratic unity in the face of insurmountable odds, and the weakness that engenders apathy when there is no challenge. Perhaps it is time that we charted our course by the light of the stars in the firmament rather than by the lights of passing ships. Perhaps it is time we paid attention to the real need for an adequately trained, Ready Reserve of manpower and charted our course accordingly.

What good are the latest weapons and the latest in defense tactics if no one is trained to use them? What good is a military unit if it is nothing more than a scrap of paper on the planning board?

Rather than forsake our historic pattern of operation for something quite radical, it is for us to strengthen what we have and what we have always relied upon to such good effect—an Armed Forces Reserve program—one which accentuates and rewards the patriotic concept of volunteer service, lest in the last analysis we should have to resort to universal military training with its resultant disregard of individual choice and need.

We are in an era of military disenchantment and deemphasis despite our military expenditures. It is for us to reverse that trend and, applying all our democratic genius, set this Reserve program in motion before it is too late. The Reserve Forces Act of 1955 provides the basis for this turning point.

For those enlisting in the Reserve prior to draft age, there are the following benefits:

1. Elimination of uncertainty as to the future.
2. A choice of branch of service to best suit individual aptitude and future career.
3. Pay for participation.
4. Opportunity for promotion as work warrants.

5. Credit toward future retirement pay.
6. Valuable experience, helpful in any civilian pursuit.

This act offers the youth of this country between 17 and 18½ years of age a means of discharging their military obligations without disrupting their careers or education.

To the employer who cooperates in the training program, it offers among other things a better satisfied labor force, more responsible employees, and fewer men required to be away from the job for 30 to 45 days of old-time annual training.

To the United States it offers the assurance of a fully manned, well equipped, and adequately trained Ready Reserve.

Lt. Gen. Thomas W. Herren, in a recent address before the New Jersey Armed Forces Advisory Committee, stated quite bluntly that we seem to be teaching children everything but their patriotic obligation to protect the great heritage we have fought so hard to hand on to them unfettered. Perhaps, with the combined effort of parents, educators, businessmen and the military, this new act which offers five different choices of active and reserve duty to a young man of 17 years can be discussed candidly and effectively in the home, in the schoolroom and on the shop floor to the benefit of all concerned. For, to become an operational success, the program must first be understood. We hope we have contributed to that aim.

Scope of the Canning Industry of California

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1956

Mr. JOHNSON of California. Mr. Speaker, last evening—January 23—the Committee on Agriculture of the California delegation met with the canners of California.

These meetings started many years ago, usually following the national convention of the Canners League. Mr. Richmond, of San Jose, would usually talk for the canners and review for us the record of the canners in the year just passed and also tell us about the problems facing the canning industry for the coming year. He was an exceptional man and really schooled us on canning problems.

Later our then colleague, Jack Anderson, a very successful pear grower and a farmer who had a broad grasp and understanding of the problems of all of agriculture in California, took charge of these meetings and continued to do so till he left Congress. He did a magnificent job in developing good relations between the canners and the Members of Congress. The meetings were absolutely nonpartisan and were short and snappy, and mixed fun with serious discussion.

My constituents, Dale Hollenbeck and Ted Clark, were regular attendants at these meetings and still are.

Under permission granted me to include extraneous matter, I include a statement entitled "Scope of the Canning Industry of California":

SCOPE OF THE CANNING INDUSTRY OF CALIFORNIA

Over 20,000 California farm families, or an estimated 60,000 to 80,000 persons, depend upon the growing of canning crops for their livelihood.

Between 30,000 to 35,000 agricultural workers are employed in California in harvesting canning crops at the peak of their season.

Between 85,000 and 90,000 cannery workers are employed at the peak season.

Many more thousands of workers depend annually for a living upon producing for California's canning and preserving industry: (a) 400,000 tons of tinplate in steel mills; (b) 3,600,000,000 tin cans in can manufacturing plants; (c) 1,100,000,000 glass jars in glass factories; (d) 100 million fiber shipping containers in box making plants; (e) 1 million miles of labels in lithograph plants; (f) thousands of tons of seeds and seasoning; (g) over 250 million pounds of sugar in refineries; (h) many carloads of food-processing machinery; (i) transportation (rail-truck-water) for over 75,000 carloads of canned foods; (j) operation of warehouses, cold-storage plants, banking facilities, nad advertising agencies; (k) wholesale and retail outlets distributing around $700 million worth of California canned foods.

California farmers receive for their canning crops between $125 million and $150 million per year. The annual cannery labor payroll is between $150 million and $175 million.

All of this is activated through the operation of some 250 California canning plants, which pack nearly 100 different items of canned fruits, vegetables, juices, olives, and citrus.

It is one of the State's three largest industries.

Sixty-two percent of the canning tomatoes in the United States were produced in California in 1955.

George Dixon's "Palsied Poem"

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following poem which appeared in George Dixon's column, Washington Post and Times Herald, Tuesday, January 24, 1956, which Mr. Dixon tags "Palsied Poem":

Palsied poem resulting from a nightmare peopled by such impossibly jumbled characters as John Foster "Three Brinks" Dulles, Secretary of State; Carl W. "Kid Sieve" McCardle, Assistant Secretary of State for Public Affairs in Charge of Leaking News to Favored Publications; Assistant Secretary of State Henry F. Holland, and the recently apprehended armored car bandits:

Said Fearless Foster at the brink;
"Things nearly went upon the blink."
Said Carl McCardle, looking rife:
"As Henry Luce would say, 'That's Life!' "
"Let's fortify ourselves," said John,
"I feel an ordeal coming on."
Said Carl: "I have that feeling, too,
"So what do you propose to do?"
"Let's eat," the great man answer made,
"But what to eat, my tight-lipped aide?"
"Well, at the Summit, on the peaks,
"The newest fad is cream of leaks,
"And for a side dish, dearest boss,
"Disparaged tips with Holland's sauce."
I couldn't stand the horrid dream,
And woke up with a piercing scream.
I lay there in a soaking sweat,
And monade: "These brinks will get me yet.
"They have too much at brinks, methinks.
"They used to just have thefts at Brink's."

The 38th Anniversary of Ukrainian Independence

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1956

Mr. DINGELL. Mr. Speaker, January 22, 1956, was the observance of the 38th anniversary of Ukrainian independence. This day offers the American people a wonderful opportunity to reaffirm their faith in the eventual liberation of the Ukrainian nation from Communist tyranny.

Freedom has been eliminated in the Ukraine. The Soviets have denied the people their civil liberties and have destroyed their democratic institutions. The objectives of the Soviet regime are obvious, for with the denial of human rights and the destruction of Ukrainian culture Moscow hopes that resistance to tyranny will be crushed.

Tangible evidence that despotism exists is the eyewitness testimony of mass murders, starvation, and persecution received from Ukrainian victims of Soviet atrocities given to the House Select Committee on Communist Aggression a couple of years ago.

However, despite these ruthless tactics employed by the oppressor, the Ukrainians have remained faithful to their homeland and its traditions and continue to fight for their ideals. The Soviet press itself acknowledges the existence and activity of the Ukrainian nationalists whose goal is to separate the Ukraine from Russia. This admission is evidence of the growth of the resistance movement and that the Soviets fear what it can do.

There are over 1½ million Americans of Ukrainian birth or descent who are conscious of and have a strong interest in this struggle. It is appropriate on the occasion of the celebration of the 38th anniversary of Ukrainian independence that all Americans join with them in hoping and praying that in the not too distant future the enslaved Ukrainians will once more enjoy the liberty for which they are so valiantly struggling.

These feelings of sympathy, which we in America share for the gallant people of the Ukraine, must not be limited to mere well-wishing. Although this date calls attention to both the joy and sorrow of the Ukraine, the chains which bind the Ukranian people bind many other millions of peoples in other lands; and

we must remember that freedom is assured for none until all are free. Only by rescuing others from serfdom to the Soviet may we then in America be able to devote ourselves to the fullest development of our own economic and cultural heritage.

With these things in mind, America must press vigorously for the right of those countries behind the Iron Curtain to self determination at the earliest possible date, and to see to it that the captive lands are able to enjoy free elections at as early a date as possible. We must continue to help with economic aid, and with weapons, those who courageously fight against Soviet domination in the Ukraine, Poland and other nations held captive.

The principle of early free elections is set forth in both the Atlantic Charter and in the Yalta agreement. Indeed, these two documents specifically guarantee early free elections to most of the peoples held captive by the Russians.

I call upon the President to make it an inflexible policy of this country to press continuously and vigorously for liberation of all the countries detained against the will of their people by the Soviets, by all means short of war. We must make liberation of these countries one of the principal topics of each and every future meeting between representatives of this country and Russia. All our economic and diplomatic pressure must aim at early and truly free elections within all the countries of Eastern Europe.

The Ukranian people, and the others enslaved behind the Iron Curtain, look to us for help in their struggle for freedom and justice. Never let it be said that America has turned its back on those who cry for liberty.

Objects To Supporting Coffee

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1956

Mr. JOHNSON of Wisconsin. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I wish to insert a letter and a clipping that I received from Mr. Lawrence Coyer, of Knapp, Wis.

Mr. Coyer's letter is as follows:

Enclosed find clipping from Time magazine. I am sorry to learn that I have to help bolster Latin American governments with my coffee dollars. But I would like some of the same kind of support for my 9-cent hogs and below-parity eggs and milk that I produce.

The clipping from the January 18 issue of Time magazine reads:

THE AMERICAS—COFFEE, BLACK

Circulating in Latin American capitals last week was a gloomy report labeled "For Governments Only." Subject: Coffee. Gist of the document, drafted by an Inter-American Economic and Social Council Committee: A growing surplus threatens to bring a disastrous slump in world coffee prices unless the governments concerned take drastic action.

Coffeemen already knew that a menacing surplus was piling up (Time, June 20). What surprised them was the fact that the United States State Department's representative on the committee joined the Latin experts in signing a report calling for export quotas and stockpiling to keep coffee prices from sinking through the floor. Main reason for the softening of the State Department's longtime opposition to international coffee-price props is that coffee is, after all, Latin America's No. 1 export. It accounts for 97 percent of El Salvador's exports to the United States, 90 percent of Colombia's, more than 80 percent of Brazil's and Guatemala's, lesser but still important percentages for half a dozen other countries. A steep price fall might bring on dangerous economic and political crises, with tempting opportunities for local strongmen or Communist mischief-makers.

Faced with that prospect, United States officials dealing with Latin American affairs may try to sell the Cabinet and Congress on some kind of price-support program. If so, they will have to be supersalesmen. Congress is well aware that among United States consumers the memory of the 1953–54 coffee-price gouge still rankles.

Secretary Dulles Has Blundered One Too Many Times

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Boston Post, Wednesday, January 18, 1956, in which this paper takes Secretary Dulles to task for his brink-of-war statements which came to light in a recent article in Life magazine:

Granting that Secretary John Foster Dulles knew what he was talking about when he said that three times the United States was taken to the brink of war by the Eisenhower-Dulles foreign policy, which has proved a great surprise to the American people and to the Congress, there is still a compelling need to censure a Secretary of State who permits these things to become known through the babbling of a press secretary.

It isn't true that the country was taken anywhere near war by either Secretary Dulles or President Eisenhower, as careful examination of the record will show. But it is true that Secretary Dulles' press secretary said these things to a magazine correspondent, and the record has been permitted by Dulles to stand attesting to falsehoods.

Perhaps it hasn't been borne home to Dulles that in his statement that the country was three times taken near to war during the past 3 years that he is providing the strongest kind of argument for the Bricker amendment and similar legislation limiting the power of the President to take such risks without consulting the Congress.

It is also somewhat amusing to see Vice President Nixon and "Secretary of Peace" Harold Stassen blasting away at critics of Dulles, for these twain have been responsible for more deviations from Dulles policies than any others in the administration higher echelons. Their reactions—proving their spineless expediency—offer the strongest kind of an argument for the long overdue great debate on American foreign policy and a thorough examination of it as a campaign issue.

Secretary Dulles now has the support of some newspapers which excel in talking out of both sides of the mouth. The burden of their argument is that it was all a result of Secretary Dulles' ineptitude with the spoken word and that his deeds are much more important than his words. If this is the proper evaluation of Dulles' blunder, why is he still Secretary of State? The basic and essential skill required of the skilled diplomat is the ability to conduct a diplomatic discourse with great style and trenchancy without actually committing one's country to an inflexible policy or giving offense to friendly powers.

The late Cordell Hull denounced the Japanese diplomats in ringing words when he accused them of infamy in prolonging the discussions until the Japanese fleet was ready to strike at Pearl Harbor. If the declarations attributed to Dulles by his press secretary are a true exposition of Dulles' policy then they are also infamous.

The great debate on foreign policy is long overdue. It should have taken place during the first year of the 84th Congress. But, in any case, the debate must now be held. Secretary Dulles has blundered one too many times.

Husband-Wife Precinct Team Finds Victory Formula—How To Win in 40 Hours

EXTENSION OF REMARKS
OF
HON. MARTHA W. GRIFFITHS
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1956

Mrs. GRIFFITHS. Mr. Speaker, the December 1955 issue of the Democratic Digest contains an interesting article about a husband-wife precinct committeeman team in Michigan. It is entitled "How To Win in 40 Hours." Under unanimous consent, I insert the article in the Appendix of the RECORD:

HUSBAND-WIFE PRECINCT TEAM FINDS VICTORY FORMULA—HOW TO WIN IN 40 HOURS

"Democrats couldn't lose an election," says Mel Bleich, "if there were a Democrat in every precinct working 40 hours a year for the party."

Mel Bleich's precinct shows what work will do. The Democrats lost in 1952; they took only 40 percent of the vote in 1953, but they took 61 percent of the vote in 1955.

"The Democrats can't lose. There are more Democrats than Republicans in the country, in Michigan and in my precinct for the simple reason that we have a better program. Our problem is to get them out to vote." That is Mel Bleich's formula for victory.

The Bleich's (Mel and Joan) live in the 17th district of Wayne County (ward 22, precinct 258, Detroit). They live in a pretty but small house on a street lined with pretty and small houses. They have lived in their present home for 7 years. Mel is an advertising man. They have always been interested in public affairs, but they did not become active politically until 1952.

In July of 1952, they were on a vacation in the East where they met a Republican committeewoman from New York, a woman full of dedication to her job. She told the

Bleichs about some of her activities—poll watching, canvassing, get-out-the-vote drives, things Mel and Joan had never heard of. In some alarm the Bleichs returned to Michigan and called Democratic headquarters to volunteer their services. The next day their 17th District chairman, Al Meyers, came to call and their political activity really began.

Mel decided to run for precinct delegate as a write-in candidate. It was too late to file a petition. Joan typed up 3-by-5 cards asking people to vote for Mel. They distributed the cards in the neighborhood. Mel was elected.

It was during this first election that Joan and Mel found out what poll watching meant. They went to the class for challengers sponsored by the 17th District. They also began attending district meetings. Here they learned how a political party works.

Mel and Joan began canvassing their precinct. They set up a card file first. Then they divided up the precinct—Mel taking the blocks farther away and Joan canvassing the streets in their immediate neighborhood. The Bleichs have three children, ages 10, 5, and 3. It was easier for Joan to work close by.

Mel and Joan work out their own system for canvassing. Mel uses a small notebook into which he puts various cryptic signs. R equals Republican; D equals Democrat; Reg means registered; a number indicates the number of eligible voters in the household. Joan uses a larger form. Whichever way, they get the information.

They usually canvass during a registration drive. "I am Mel Bleich, your Democratic precinct delegate. There is an election coming up and we wonder if you are registered to vote." Then they go on to find out the political affiliation. "Would you mind telling me how you plan to vote in November?" They find out how many eligible voters there are in the household. They also pick up information on how to build a terrace, tips on gardening, and new recipes. These last bits of information are not put in their card file but the political information is.

When the canvass is completed they know who the Democrats are, who the independents are. They know who is registered and who isn't. Mel keeps after the nonregistered Democrats and independents until they are registered. The Republicans he leaves to the Republican precinct delegate. Because people move in and out of the precinct all the time, the canvassing and registration job is a constant one. With each campaign Mel and Joan get to know their precinct better and can do a more effective job.

Canvassing is a basic job, in Mel's opinion. And it is fun. He and Joan now know the people in their neighborhood, regardless of political affiliation. There are over 600 voters in the precinct and the Bleichs have knocked on every door. Many people had never been called on before by a member of either party. They were pleased.

We asked Joan and Mel what they did on election day to get out the vote in their precinct. The reply was complete.

They distribute literature broadside in the precinct. This is a family project and one the children delight in. Off and on during the day Mel spotchecks his polling booth to be sure that proper instructions are being given to voters. The rest of the day he and Joan go door to door urging the people at home to go and vote early. At 4 o'clock on election day, Mel goes to the polling places and copies the list of those who have voted. He and Joan compare this list with their file of Democrats and independents. By 5 o'clock, they are calling every Democrat and independent who hasn't voted. They have several neighbors lined up to take people to the polls or babysit if that is needed. They keep calling until the polls close.

In the evening Mel goes over to watch the ballots counted and to challenge. Joan goes to another precinct—wherever her services are needed by the district. They watch the counting and make sure the Democrats get every vote that is coming to them. In Michigan, elections have been won or lost on the basis of as little as one-half to one-fourth vote per precinct.

In addition to the canvassing, get out the vote and challenging, were there other things they did which contributed to the increase in the Democratic vote? There were.

During the campaign, Joan gave a tea for Mrs. G. Mennen Williams. She put 40 people in her living room. We looked around and didn't think this was possible. But it was. She borrowed chairs and coffee urns, cups and silverware from her neighbors—many of them Republicans. Not only that, she invited them to the tea to meet the lovely wife of Michigan's Governor and they came.

In 1954, their local PTA group sponsored a Meet Your Candidate Night. It was the first PTA to undertake an activity of this sort and Mel and Joan worked with the other members to make it a success. It was a bipartisan affair. It put on the same platform the candidates of both parties. "Sometimes," says Joan, "it is good to let the Republicans see who they are voting for. We had candidates we could be proud of." (All of the Democratic candidates won.)

Joan passes out literature and gets petitions signed at the local supermarket. Mel is part of the "tack-up squad" on the poster detail. They have candidates come into their home and invite in the neighbors for a bull session on issues. Currently, Mel and Joan are getting prepared to canvass their precinct for the Democratic dollars drive in Wayne County.

Democratic leaders in Michigan are proud of what the Bleichs have done. And because their work and the work of others like them is so important to the party's future, national leaders like Democratic Chairman Paul M. Butler are trying to find a Joan and Mel Bleich in every precinct and put them to work in 1956.

Crisis in Education Is Concern of All

EXTENSION OF REMARKS

OF

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1956

Mr. JOHNSON of Wisconsin. Mr. Speaker, in the course of the last century the people of the United States developed the finest public and private educational system in the world. Our educational system and those who are responsible for its functional operations have served us well in peace and in war. Most students of American affairs believe that our educational system has contributed much to giving our Nation an informed and enlightened citizenry.

In keeping with our concept of the vital role of public education we have retained control and financing of public schools at the local level to assure maximum democratic management. The philosophy of local control and responsibility explains why at the present time only 3 percent of all school funds are contributed by the Federal Government. Local communities pay 55 percent of the Nation's school bill, and the remaining 42 percent comes from State governments. However, since World War II local governments have had more than their share of difficulties in meeting financial responsibilities to maintain and expand school facilities.

The financial difficulties of local and State governments stems from the fact that for a number of years the Federal Government collects more than 75 percent of all tax money. Our State and local governments must get along with what is left. No one will dispute the fact that the Federal Government has had to collect the bulk of taxes to wage a war and prepare for defense in the tense years since the end of World War II. Expenditures for war and defense have left education without fiscal parity since 1940.

I am not an educator, but—as a parent, citizen, and interested layman—I am concerned about the crisis in our educational system. I believe, for a number of reasons, that the crisis in education is the concern of every person. I believe that Congress must enact legislation to provide for Federal aid to education. There is too much at stake to ignore any longer the crisis in education.

During and since World War II a growing number of educators, PTA members and other interested laymen have pointed out the lack of classrooms, shortage of teachers, and other problems rising out of overcrowded classrooms and use of obsolete buildings.

Since 1950 a total of 5,600,000 children have been added to our school population. It is estimated that our annual increase in school population for the next 5 years will be 1,350,000. According to educational authorities, elementary school enrollment in 1960 will be 68 percent above 1946 and 28 percent above that of 1954. Secondary schools also face a crisis, for by 1969 the children already born will push secondary school enrollment to more than 70 percent above the 1954 level.

The increase in school population comes at a time when 56 percent of the Nation's classrooms are overcrowded. The United States Department of Health, Education, and Welfare—in an estimate released on January 12, 1956—states that at least 470,000 new classrooms are needed in the next 5 years. Of this total, 180,000 are needed to replace worn out classrooms of questionable safety. The other 210,000 classrooms are needed to take care of estimated new enrollment. Surveys show that 47 percent of our public-school buildings are over 30 years old, and 22 percent of our school buildings are over 50 years old.

While the proposed legislation deals only with Federal aid for school construction, I believe that some mention must also be made of the teacher-shortage situation. At present we need an additional 140,000 teachers. There will be need for 500,000 more teachers in 1965 than we have today. In other words, we must find 16 new teachers for every 10 that are now teaching.

I presume that one of the main reasons for the shortage of teachers is the low pay. For example, in 1954 the Na-

tion's teachers' colleges graduated 100,000 teachers. Only 63,000 out of the 100,000 graduates were willing to take positions teaching. Our financially hard-pressed State and local governments cannot raise enough money to build schools and increase teachers' salaries. It is pertinent to point out that State and local governments spent almost $2.5 billion on school construction in 1955 as compared to about $1 billion in 1949–50.

Before I close there is one other aspect of our educational crisis that I wish to mention. Earlier in these remarks I stated that our educational system has served us well in peace and war. While I believe we have the finest educational system in the world, I am very much disturbed over reports about the number of scientists and engineers that are being graduated in Soviet Russia.

In 1954, for instance, Russia graduated 54,000 scientists and engineers as compared to about 20,000 in the United States. In a few years Russia will be graduating each year 80,000 scientists and engineers. I need not emphasize the importance of scientists and engineers in the event the world is plunged into a nuclear weapon war. As Admiral Rickover said recently, "if the crisis in education is not met, we will be in danger of losing the cold war by default."

In the event that this comes to pass there will be no Congress in which we—as freemen—can debate the question of Federal aid for education. If we lose by default—and thus fall under the iron heel of a dictator—there will be no opportunity to debate segregation, desegregation, Federal or local responsibility in education.

For this and other reasons, I believe we must act now. I urge my colleagues to temper their thinking with the cold and hard facts of the crisis in education—we may not have too many opportunities to consider this question if we fail to act now for one reason or another.

Mrs. Min Lurye Matheson Testifies on Distressed Areas

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column written by Willard Shelton which appeared in the AFL–CIO News, Saturday, January 7, 1956, in which Mr. Shelton discusses the testimony given by Mrs. Min Lurye Matheson, manager, ILGWU, Wilkes-Barre, Pa., before Senator Douglas' Subcommittee on Distressed Areas:

Once in a while, in the routine of covering congressional hearings, the observer hears a witness who makes him realize that the deeper problems of America are human problems, that there may be something far beyond narrow self-interest or group interest when a citizen sits with distinguished Senators to discuss pending legislation.

Such a situation occurred when Mrs. Min Lurye Matheson, district manager of the Ladies' Garment Workers in the Wyoming Valley of Pennsylvania, testified before the DOUGLAS Senate subcommittee on distressed areas.

The subcommittee was considering a bill sponsored by Senator DOUGLAS, Democrat of Illinois, and seven other Democrats to establish a depressed areas administration in the Federal Government, with authority to lend up to $100 million for construction of industries in areas where mines have petered out or companies have run away.

Several Senators and Members of the House appeared to testify in behalf of the bill. Their statements were persuasive, their marshaling of statistics about unemployment and the number of people on relief in their areas were impressive.

Then Mrs. Matheson appeared, and it turned out that she was not there to ask for help for members of her own union, the women workers in more than 100 plants in her county, the 20,000 members of the Garment Workers who are serviced by the Wilkes-Barre health center.

She talked to the Senators about what was happening to the men of the wornout anthracite areas, the husbands, brothers and sons of the women workers who, through their union, she represents.

She pointed out that it was hard to retrain a veteran coal miner to run a delicate machine processing fragile materials—although some coal miners have tried a training course and a few of them have learned how to operate the machines.

"These men don't want relief," she said. "They don't want Government surplus foods. They don't want their wives to go out and work in a factory while they themselves, despite their industrial ability and skill, are unemployed and do the housework, the shopping and tend to the children in a complete reversal of the normal pattern of family life.

"Idle factories can stand for years and then be reconditioned and opened up," she continued, "but human beings are different, the human spirit once destroyed can never be restored.

"Every day, women members of our union call me and tell of a husband unemployed and beg, 'Can you get a job for him? Anything that will make it possible for him to remain here and earn a living?'

"Women have sought employment in garment factories, becoming the breadwinners, while in the homes men ready and able to work eat their hearts out in idleness and futility. They go away to find jobs and that means a broken home. Or they suffer the frustrations, the terrible deterioration, the corroding effects on their self-confidence which long years of joblessness mean."

Mrs. Matheson thinks the women she represents are pretty well paid. They have their union, there is an actual shortage of women workers, they earn perhaps $100 a week. She was not before the subcommittee to ask anything for them—except for the simple provisions of the Douglas bill that might help restore a community, give jobs and new hope to men who will never be dues-paying members of the garment workers.

Mrs. Matheson association with the ILGWU is a family one. Six years ago her brother, an organizer, was stabbed to death in a New York West 35th Street telephone booth in the midst of an organizing drive. The man accused of the murder, Benedicto Macri, was acquitted—and has totally disappeared.

The Douglas bill is a moderate approach to the needs of depressed areas. In addition to authorizing loans to communities for new industries, it would lengthen unemployment compensation periods for workers in retraining programs. It would offer research facilities, technical information and tax relief to assist towns where there are cast-off workers. This seems about the least the Federal Government could do to aid dozens of communities where as many as one-sixth of the skilled workers are on relief, where some veterans of World War II have never had decent jobs. The guess here is that Mrs. Matheson's testimony was the kind that might propel the bill through Congress, where previously we have had sympathetic words.

Report by Senator Lehman to the People of New York State

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, January 24, 1956

Mr. LEHMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of a radio report I made to the people of New York State on January 20, 1956.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

NEW YORKER'S REPORT ON THE NATION

(Text of Senator HERBERT H. LEHMAN's first radio report to the people of New York State during the 2d session 84th Cong.)

Fellow New Yorkers, greetings from the Nation's Capital. I am resuming my periodic radio reports to the people of New York State. I want you to know what your Senator is thinking and doing in the course of this critical congressional session. Many important issues and legislative proposals, vitally affecting the interests of our State, will be before the Congress this year. I want your help and guidance in representing the interests of New York. So write and tell me what you think, too.

As in the past, I will report to you every 4 weeks over this station. And I want to express my appreciation to the station to which you are listening for carrying these reports.

As you know, Congress convened on January 3, and, as I speak to you today, the legislative work of the session has just about gotten under way. We heard the President's state of the Union message on January 5, his special message on farm problems on January 12, and his budget message on January 16. Our work is now cut out for us.

President Eisenhower's state of the Union message contained some fine words and fine sentiments with many of which I agree. But these sentiments were strangely different from those which have been expressed in the recent past by the congressional spokesmen for the President's own political party. The President's message has been described as a New Deal document. I wouldn't go that far. I wouldn't say that the President has become a New Dealer.

No; he has just borrowed a little of the liberalism some of us have been preaching for a great many years. He borrowed some of our sentiments, and our phraseology—about the welfare of the people and the need for the Government to do for the people what the people cannot do for themselves, with regard to the people's health, and security, and well-being.

Yes, the President said some very fine things. But what does his administration propose to do, to translate those sentiments into actions and programs? Will the Eisenhower administration support sound legislation? Will it fight for amendments to the

McCarran-Walter Act, and for civil rights legislation, for Federal appropriations for school construction and medical research? Will the administration oppose giveaways of our natural resources and the ever-increasing concentration of economic power in the hands of monopolies? Will the administration work to extend social security coverage and to make social security available to the disabled? Will the administration fight for the interests of the consumer against the forces of special privilege? Will it put the welfare of the average farmer and the average worker and the small-business man above the interest of the processor and the great corporations?

Well, we will see. By the deeds of the Eisenhower administration, not its words, shall we know them.

I am going to report to you today on some of the legislation which I think this Congress must pass, and which this administration should support, and some of the legislation which Congress should defeat and the administration should oppose. I am going to talk not so much in generalities as in particulars.

But first, I want to say a word about the world scene, and to comment on the strange story of the Secretary of State, John Foster Dulles, and his recent interview with Life magazine.

This interview has been much discussed in the public press and on the floor of Congress. Senator HUBERT HUMPHREY, a member of the Senate Foreign Relations Committee, has charged that what Secretary Dulles told in Life magazine about last year's great international crises, in Korea, in Indochina, and with regard to the islands of Quemoy and Matsu off the coast of China * * * what Secretary Dulles described as his own policy in these three critical situations, was quite different from what Secretary Dulles had told the Foreign Relations Committee, in confidence, about these same situations.

There is a question of fact involved here. Secretary Dulles owes the Foreign Relations Committee an explanation, and he owes an explanation to the American people.

Did Secretary Dulles deliberately take us right up to the brink of war, as he told Life magazine? Was he, in fact, ready to plunge this country into war, without the consent of Congress, and without even the consent of President Eisenhower, as far as we know?

Who authorized these warlike actions, and these decisions to risk war? Had the American people authorized Secretary Dulles to take these risks, to stake the fate of our civilization on his own wisdom and discretion?

Is this administration seeking peace or war? Is the policy of this administration the one enunciated by President Eisenhower at Geneva or the one enunciated by Secretary Dulles in Life magazine?

In fact, my friends, I believe that we avoided war because of our allies, and not in spite of them. We avoided war because of the strength and unity of the free world, a strength and unity established under Presidents Roosevelt and Truman, despite the reckless policies of Secretary Dulles, which almost broke up the unity of the free world, and almost got us into war. And today, that unity was never more strained, and placed under greater pressure than it has been by Secretary Dulles' unfortunate and ill-timed statements to Life magazine.

Our allies are embarrassed and indignant at the evident distortion of history in which Secretary Dulles has indulged. And our enemies are rubbing their hands with glee, reprinting and rebroadcasting with obvious relish the statements made to Life magazine by Mr. Dulles.

Mr. Dulles claims full and sole credit for deterring the Communist power, in Korea and Indochina and in Quemoy and Matsu. Let him beware. He has resurrected the specter of massive retaliation. He brandishes the hydrogen bomb. He indicts our country as one willing to risk atomic war to gain its objectives, or, at least, Mr. Dulles' objectives.

Mr. Dulles should remember that he who claims credit for the wind must also accept blame for the storm.

Much more remains to be said on this score. It will be said in the months ahead. I hope and pray that no permanent harm has been done our country, and the cause of free world unity and peace by these rash and self-serving assertions by Mr. Dulles. The cause of a nonpartisan foreign policy has been struck a heavy blow.

But back to Congress and its prospects for constructive legislative action.

There is one bill before the Congress which is being hotly debated which I would not call constructive legislation. Quite the contrary. I refer to the natural gas bill, the so-called Harris-Fulbright bill, the bill to take the price of natural gas—the gas that lights your ovens and heats your homes—out from under the regulation of the Federal Power Commission.

The Harris-Fulbright bill would exempt producers of natural gas from rate regulation. The Supreme Court decided not long ago that these natural gas producers were subject, under the law, to Federal Power Commission rate regulation. The purpose of the Harris-Fulbright bill is to set aside the decision of the Supreme Court, and to give the natural gas producers the unquestioned right to charge for natural gas whatever the traffic will bear.

The producers quite frankly admit that as soon as rate regulation is abolished, the price will go up. Who will pay? The consumers will pay. We in New York State will pay.

It will cost the consumers of the Nation from a quarter to a half billion dollars a year. We in New York State will pay our share, to enable the 35 great companies which control 70 percent of the total production of natural gas to increase their already great profits. And these profits are not subject to the ordinary rates of taxation which apply to other business profits. No; these profits get the benefit of a notorious tax loophole, the 27 percent depletion allowance.

I am going to fight against this bill. I am going to oppose it as hard as I can. But what is the administration doing about this bill? What is their attitude? There was no word about it in the President's state of the Union message. There is still today no word from the White House as to President Eisenhower's attitude. There is only an eloquent silence.

I hope this bill will be defeated in the Senate. It has already passed the House. Only you, the consumers—the general public—can prevent this bill from passing. You can express yourself, to your representatives in Congress, and to the President. You can tell them how you feel about this proposed outrage upon the consumers of America.

Then there is the subject of juvenile delinquency, which is very close to my heart, and on which congressional action is urgently needed.

I must mention, too, the need for legislation to provide a system of flood and disaster insurance. The people of New York State, and of Connecticut, and Massachusetts, and Rhode Island and Pennsylvania know how desperately such insurance is needed. I will do my best to see that such legislation is enacted.

I would like to talk at length about the need to amend the McCarran-Walter Act, and the Refugee Relief Act. I need not tell you of my interest in that legislation. I haven't time today but I can tell you that we have a fight ahead on this, too.

And civil rights. If there is one front that calls for legislative action, it is this one. How long can we endure the continued denial of basic human rights to some of our citizens? How long can we tolerate the denial of the right to vote to the Negroes in great parts of the South? How long can we tolerate the brutal physical violence, the reign of terror which is now underway in some parts of the South against Negroes and whites who dare to join in the fight for equal rights, for human rights?

Here is a front that demands action. Here is a test of the good will of the administration, and of its courage and sincerity. I hope that all men of good will, of both parties, and without regard to party, will respond to this challenge and take the necessary action, without further delay. Yes, there is much more to be said, but no time to say it in.

Goodby and good luck, to all of you. I will be talking to you again, over this station, 4 weeks from now with my next report to New York.

Wilderness Manners

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, January 24, 1956

Mr. HUMPHREY. Mr. President, we have heard extensive discussion on the floor of the Senate about the preservation of some of our great wilderness areas. For the benefit of those who may not have had an opportunity to visit such areas, or who are visiting them for the first time, the Friends of the Wilderness, of Side Lake, Minn., has published and is distributing an interesting article entitled "Wilderness Manners," by Sig Olson, president of the National Parks Association.

I digress to say that Mr. Olson is truly one of the Nation's leading conservationists. He is a very dear friend of mine. If any of my colleagues would like to have a good duck dinner—and I do not mean one of those tame grocery store ducks, but a duck in the northern Minnesota style—I think I could arrange it with Sig Olson.

Because the article presents an effective description of what the wilderness areas mean to us and why they should be preserved, I ask unanimous consent to have the article printed in the Appendix of the RECORD. I surely would like to bring it to the attention of my colleagues.

Even though we are in the midst of winter, we are anxiously looking forward to the visits of any Members of the Senate and their families to the greatest recreation area in the world—the State of Minnesota. It is nice even in the wintertime.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Talking about manners among men is a dangerous thing and when you infer that a man is a boor, you must do it with a smile or come out shooting. I have come to the conclusion that the majority of men out in the wilderness are instinctively courteous and considerate of the rights of others. I

have also found that there is always a small minority who forget that good manners are as important there as in civilized surroundings.

Most men when they leave the restrictions of urban living carry with them enough innate respect for the rights of others so that living in the wilderness does not materially change their slant on life, but there are moments even with the best of them when the new found freedom of the wilds invites thoughtlessness.

With those who have a real feeling for the country, these moments are rare, but there are some, who when the bars of convention are down, revert swiftly to the status of their primitive ancestry before the unwritten laws were made for harmonious living with others.

Modern man, no longer sees the wilderness as something to be feared and overcome. He sees it now as a source of physical and spiritual rejuvenation and goes to it as a sick man goes to his doctor to heal the wounds life may have dealt him. No more does he have to go as a primitive hunter to slaughter game or face death and starvation. The odds are no longer that desperate.

Today the wilderness means recreation and the enjoyment of it is actually more of a spiritual than a physical experience. Our attitude toward it is entirely different than it once was, that is until men slip back into a primitive perspective. When that happens, they no longer see it with appreciation or understanding. Then it is every man for himself and the devil take the hindmost. I believe that a man loses his ability to enjoy the wilderness in direct proportion to how completely he reverts to the outlook of his ancestors.

None of us are far removed from the old grooves of racial experience and it is actually easier to slip back into them than stay out. I have often felt after being in the bush for a while, that my own civilized life was just a short interruption in a long wilderness existence. Going back to the old ways of thinking is the normal thing to do because the ancient grooves are far deeper than the new. This is why it is so easy to violate the tenets of good behavior when there is no public censure.

One of the most delightful wilderness customs in the north was never locking a cabin or a cache. Ranger stations, and trappers' cabins were always open to a man who needed shelter or food. A carry over from frontier days, hospitality was the expected thing. In those little woods cabins, there was always a little firewood stacked up neatly beside the stove, a pair of blankets hanging from a rafter, some tea, flour, perhaps a chunk of salt pork in a can. These places were a godsend when the going was tough and there were times when finding them was a matter of life and death.

When a traveller departed, he was expected to leave the cabin immaculate, with dry kindling ready for a swift blaze and a good supply of wood. The same went for food but it was permissable to replace whatever had been used with any surplus on hand. But then came travellers who began to violate the spirit of these friendly shelters. They failed to replace wood and fuel, left refuse and filthy confusion behind them. Then for the first time in history, cabins were locked and bolted all over the wilderness. Bad manners on the part of a few had ruined the pleasure of many and destroyed a phase of backwoods hospitality that may never return.

Campsites are even more sacred than cabins because they have been used for hundreds of years. Chosen because of their strategic location, they are usually found at the end of a day's travel from some well known starting point. Since the memory of man, they have marked a day's progress by canoe, dog team, or on foot, and once established, became wilderness homes that belonged to all who passed.

To violate such a place is as bad as violating the home of a friend. Those who do, have simply forgotten the meaning of consideration and courtesy and the fact that they are not alone in their enjoyment of the wilderness. Such individuals peel birch trees, try their axes on living trees, break off balsam boughs for overnight beds right on the campsites instead of going back in, leave empty tins and bottles and debris strewn around, clean their fish at the landings, leave a hundred evidences of slovenliness to welcome the next comer.

The real woodsman would never dream of leaving his personal garbage around, would burn everything possible and bury the rest far from camp. He would sink bottles and cans in the deepest part of the lake, and before leaving pick up every offending bit of string, tinfoil, or paper, even throw a handful of pine needles over the drenches ashes of his fireplace to lend the illusion of no one having been there. He would leave dry wood and lay the fire so that whoever comes will have a pleasant welcome. Tentpoles would be stacked and pegs and stones piled neatly where the next camper can find them. By leaving his camp as he himself would want to find it, he creates a rapport between himself and those who follow that is one of the joys of wilderness experience.

Privacy should be as sacred in the wilds as in the towns. A campsite once occupied is as inviolate as one's home and no traveller should move in except by invitation. Even so the courteous thing to do is refuse. The primitive who has forgotten his manners may insist that he has as much right to the site as anyone else. But by so doing he is robbing himself of enjoyment and setting up an atmosphere of selfish hostility that has no place in the wilderness of today.

What applies to campsites, applies to an area's landmarks, its places of historic and scientific interest. Such places belong to everyone, not only to this generation but to the generations to come. They give a country character and individuality and should never be defaced or marred. Those who do not understand this leave a trail of vandalism wherever they go, names carved or painted on beautiful cliffs, Indian pictographs chipped for souvenirs, ancient graves disfigured. These thoughtless ones are divorced from tradition, have no knowledge of things of the spirit, no reverence, respect, or love for the country and what it means.

Wilderness travelers look forward to making friends with the whisky jacks, the chipmunks and red squirrels on the campsites; creatures who have lost all timidity and fear. They come immediately when campers arrive, explore packs and duffle as though it was their right, wait for the tidbits they know will come. It seems incredible, but there are some who think it sport to use these campsite friends as targets, thereby depriving all who come of the real companionship and pleasure they afford. Such minds have no conception of the meaning of communion with living things.

But far more important than how a man acts away from civilization is how he feels toward a wilderness way of life. If he sees it only as a way of getting good fishing or hunting, or as a physical workout with no holds barred, then he is missing the real essence of the experienced. If he goes into the wilds with reverence and a certain awe, realizing that here is country still unchanged by man, the enjoyment of which is not only a privilege but a great spiritual adventure, then it will mean what it should. With such an outlook there is no question of wilderness manners. They are as much a part of the wilderness as quiet and solitude.

Adequate Highways: How and When?

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1956

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address made by me before the 54th annual convention of the American Road Builders' Association, at Miami Beach, Fla., on January 13, 1956:

It is always a pleasure to attend a national convention of the American Road Builders' Association—and this is one of the best. The atmosphere is informal, the company is genial, and the main discussion is one that's close to my heart.

Having been a roadbuilder myself and having spent many a long hour on highway legislation in Congress, it is not hard for me to understand the mutual problems that bring you together. I think I can share the sentiments you feel about a business that is one of the toughest and, yet, one of the most rewarding in the world.

I am a firm believer in the application of private enterprise methods to highway construction. I'm glad to say it and you can mark it down: ARBA is the champion when it comes to supporting this viewpoint. The ingenuity and thoroughness with which most of America's roads are being built today is evidence of the effectiveness of the contract method of doing business.

When men are pitted against each other in competitive bidding, as required by most of our State and city highway departments, the best in each comes to the top. The public gets the benefit—in lower costs and higher quality.

The leadership that America has earned in the know-how of roadbuilding comes from this unique teamwork of public officials, engineers, and businessmen.

Right now, the vital issue facing our industry is what Congress will do about the need for a national highway program. For months, my colleagues and I have wrestled with this problem at close range. It is a subject surrounded with complications and opinions.

A frequent question that comes up, is: "Can the highway industry, without economic dislocation, expand to handle a larger construction program?"

ARBA has always answered that question to my satisfaction, and I am sure, to the satisfaction of most Members of Congress. We are not so far from World War II that we cannot remember how quickly industry can expand its capacity. That is particularly true if wise planning has eliminated some of the uncertainties from the picture.

I think you should always be prepared to appraise your own strength—and I'm glad to hear you are now making a reappraisal—and to give Congress the benefit of your expert findings. We have learned to rely upon ARBA's knowledge of the roadbuilding industry and the capacity of each segment to produce the kind of highways America needs—and in the time and volume they are needed. We will need your help in this session, as in other sessions, to answer some of the still unresolved problems that hamper adoption of a greatly expanded roadbuilding program.

I would like to divert for just a moment and pay my respects to the officers and staff of the American Road Builders Association, in their endeavors that the country may

have adequate highways. To you, Mr. President Robertson, you have done an excellent job, Bert Miller, Bob Smith, and all of the other staff members have been most helpful and most courteous, however, today we do miss one who has been of great assistance not only to your present speaker but to the problem of the road industry and America as a whole. I am referring to my distinguished friend, the late Tom Keefe, who departed from this world a few months ago. Tom is not with us in body but his activities and the results of his endeavors will long be remembered by all of us.

It was my pleasure to address you a year ago on the subject, President Eisenhower's Highway Challenge. A great deal has happened since then, some of it dismaying—some of it highly encouraging. You have followed the progress of Federal legislation closely throughout the past 12 months and it is not necessary to review the defeat of what many Members of Congress considered a reasonable, workable solution to the problem of financing a long-range road program. It is pointless to dwell upon what might have been, or to quail before the job that must be done now to get our highways into shape. The important thing is to keep our mind on the increasing need and seek fresh solutions.

The grand plan presented by our beloved President, speaking in the interests of all America, may have lost some of its trimmings, but his noble objective is intact. Thanks to the boldness of our Preesident's proposal and to the farsightedness of highway leaders, we are thinking today in terms of money for road construction far larger than ever before. That contribution—in imagination and leadership—must be acknowledged, for it has played a major part in advancing the national good roads cause—farther than any other one action in history.

Some of us who have worked in legislative harness for highway development in this country for many years can appreciate better than others that last year was not a year lost. It was actually a gain. We went through a legislative shakedown and we all learned a lot.

Two years ago, it was my responsibility to serve as chairman of the House Subcommittee on Roads. For weeks, that committee heard the testimony of witness after witness lay bare the highway dilemma facing the Nation. It became apparent to all of us that, on one hand, the automotive age had almost overwhelmed the country and, on the other hand, highway construction had not kept pace. It was reported that automobiles and trucks manufactured in the last 10 years, if parked bumper to bumper, would occupy 4 times as many vehicle lanes as new highways built to accommodate them.

This disturbing imbalance was brought home to us at our hearings 2 years ago. It became obvious that Congress must step up Federal assistance to the States to build expressways, cross-country throughways, and farm-to-market roads. This we did in the Case-McGregor Act. Federal aid was boosted 52 percent above the act of 1952 to $875 million annually.

Soon after that, when President Eisenhower advanced his grand plan for a multi-billion-dollar-road program, many of us knew that the proposal was not unreasonable nor overly ambitious. The burden of testimony before our committee had all said otherwise. The pro and con arguments were still there, of course. But there was no doubt of the need. Not any longer.

Today, the need simply grows greater. Last year, our assembly plants turned out 8 million motor vehicles. It has been estimated that 4½ million more will be produced in the current 6-month period. Those of you who are dealing with traffic problems know what that means.

Traffic accidents continue to mount as the number of automobiles, trucks, and buses on our streets and highways increases. Some 38,500 lives were lost last year. The Christmas holiday traffic slaughter was a nightmare. There is no valid excuse in a nation as advanced as ours for such preventable loss in human life. Where inadequate highways are at fault, they must be expanded or rebuilt to safer standards. Other stern measures must be taken. How can we do otherwise?

Economic losses are secondary to the loss of lives, and the toll of injuries, but they are significant. Here's a flat statement: Inefficient highways are costing the American people entirely too much money. Maybe those who won't be moved by crushed bones and spilt blood, will feel a twinge in the pocketbook. But this is no joke.

Every morning and evening literally millions of safe-driving people are forced to waste precious hours driving or riding to work on congested, overtaxed streets. Where is our vaunted national efficiency?

Economic advisers tell us that America is expanding at a tremendous rate and that our transportation facilities will be strained to the limit within the next few years. Highway transportation, which serves the Nation so well, must not be held in stalemate during this expansion period. Roadbuilding must go ahead—fast—so that this form of transportation can keep pace with demand.

These are pressing reasons for immediate, realistic action.

The question is: "What will Congress do about it?"

I wish I could answer that question positively for you. I know that in the roadbuilding business, the uncertainty during legislative debate can be discouraging and sometimes costly.

Most of us in Congress who have studied the highway needs of America for years know exactly where we stand. Some of our colleagues, and I say this kindly, are just becoming re-educated on this new and greater road problem and are just now realizing in full the urgency for new highways. I know that the number of advocates of realistic roads is increasing. It may be a slower process than we would like, but it is the only right way for problems of such scope to be properly handled. The legislation that finally starts America into an era of unprecedented roadbuilding will be better because of that process.

I am sure that men of good will can sit down together and resolve their differences. I am sure they will do so in this case. If one man can help, I assure you I'm ready and willing to cooperate—to the hilt—right now.

We who are privileged to hold responsible posts on the House committee are fully aware that the next move is ours. You may be sure it occupies the time and thought of all of us. I assure you that my most conscientious effort will be to help draft the kind of legislation that will bring America's highways up to the high standards required.

May I quote from President Eisenhower's state of the Union message to Congress January 5, 1956.

"In my message of February 22, 1955, I urged that measures be taken to complete the vital 40,000-mile interstate system over a period of 10 years at an estimated Federal cost of approximately $25 billion. No program was adopted."

Continuing my quote from the President's message, "If we are ever to solve our mounting traffic problem, the whole interstate system must be authorized as one project to be completed approximately within the specified time. * * * Furthermore, as I pointed out last year, the pressing nature of this problem must not lead us to solutions outside the bounds of sound fiscal management. As in the case of other pressing problems, there must be an adequate plan of financing. To continue the drastically needed improvement in other national highway systems, I recommend the continuation of the Federal Highway Act."

That, ladies and gentlemen, was a statement of the President of the United States and I am in accord with it 100 percent. I want to make it perfectly clar that I favor and will do everything I can to put into a law an adequate highway program, both for the interstate and the intrastate and I will be for a reasonable program whether it goes into effect as a one-package bill, or the interstate and intrastate in separate pieces of legislation.

The 1954 Highway Act, which it was my privilege to author, is a biennial highway authorization, and it expires June 30, 1956. This bill authorized $315 million primary, $210 million secondary, $175 million urban, and $175 million interstate, plus various amounts for forest highways, roads and trails, parkways, Indian reservation roads, etc. This total amount approximately equals the amount of revenue brought in by the 2-cent-per-gallon Federal gas tax.

This authorization is financed by taxes now in existence, and no additional taxes would be necessary if the existing law, 1954 Highway Act—Public Law 350—would be reenacted. Additional amounts or allocations could be added to each system, possibly $100 million total, and we would still be within the limits of the revenue brought in by existing taxes. I am of the firm conviction that this law could be reenacted with very little opposition. You know the history of the Clay committee bill, as well as the so-called Democrat, or Fallon, bill, that was before the last session of Congress. Both bills were defeated, and, in my opinion, because of the financing involved. Some refused to accept the Clay committee bond recommendation, which called for $25 billion worth of bonds for highway purposes extending over a period of years. The Congress also defeated the so-called Democrat, or Fallon, bill, because many felt that the revenue-raising features or taxes were not equitable. Regardless of the arguments pro or con, the program was defeated. Regardless of the merits or demerits of the interstate highway program, which is to be financed by an entirely new financial program, the question arises, Shall the interstate system, with a new financial program requiring additional taxes, be incorporated in the same legislation that includes the intrastate system primary, urban, and secondary roads when the financing is already established and no new taxes are necessary.

I hear the same arguments, and some new ones, on the floor of Congress and on the Hill that I heard last August. No one seems to object to the intrastate bill but most everyone seems to object to the interstate proposal financing program. Most everyone, with some exceptions, wants an interstate highway but they want the other person to pay for it. I hear some old arguments renewed, with more emphasis relative to financing the highway program and I am referring to the Governor's Conference group, and others, insisting that the roads, both interstate and intrastate, should be financed from revenue derived by the Federal Government from existing excise taxes on automotive products paid by highway users. A very fetching appeal. I would like, however, to point out some of the facts of life regarding this approach. Excise taxes levied by the Federal Government have been and are now levied and justified as a source of revenue for the general support of government. I know as well as you that while the Federal gas tax was never levied as a highway user charge, that developments over the past 10 years have more and more led to its being accepted as such and I think we all understand the reasons behind this acceptance. The excise fuel tax yields approximately $1 billion a year. The total excise yield to the Government from this and related automotive excises now reaches $2.5

billion. I question seriously whether we are entitled to consider these excise taxes as highway user charges, certainly those taxes beyond the Federal fuel tax and lubricating oil taxes. I question the physical soundness of a move in this direction, at least beyond the Federal fuel tax. The other excises can, by no stretch of the imagination, be considered a fair measure of highway use. Congress at no time by legislative action has ever identified these excise taxes as highway user charges.

To earmark the total yield of the automotive excise taxes for highway purposes, as some are recommending, would deprive the general revenue now used for support of the Government of an additional $1½ to $2 billion over and above the fuel tax yield. This would unbalance our Federal budget to the tune of $1½ to $2 billion and would have to be made up from other tax sources if the budget is to be balanced and, ladies and gentlemen, the budget is balanced for the first time in many years. I am asking you would you deplete our existing general revenue fund by that amount of money to build highways? If you would, what tax would you recommend to take its place to make up this deficit? Would you want me to support or would you, if you were in my position, support an increase in the income tax, for example? Faced with this choice, it would seem to me—and I hope that you will agree—to be a sounder financial procedure to consider the levying of additional equitable charges on the highway users, who are the direct beneficiaries of a greatly expanded system, in some manner related to the benefits they derive.

May I again quote from the President, who has said on numerous occasions, "A sound Federal highway program, I believe, can and should stand on its own feet with highway users providing the total dollars necessary for improvements and new construction."

Another important factor should be considered when we are even thinking of depleting the general revenue fund. We all know that the general tax funds of all levels of our Government—Federal, State, and local—are presently drained nearly dry and with our tremendous increase of population, the burden placed on the revenues in the forseeable future will require all the talent and ingenuity we have to prevent the complete destruction of our various government structures. The increasing demand for schools, hospitals, welfare, social security, sanitation, public buildings, and playgrounds presents us with a general revenue problem of staggering proportions. So, before your organizations or any of you individually propose to deplete the revenue fund by $1½ to $2 billion for highway purposes, give consideration to the other urgent and, yes, vital needs.

It is never possible to devise a tax acceptable in full degree to those upon whom the tax is imposed. No tax that this Congress or any other Congress may devise will be completely painless to that individual or group upon whom the increase falls. I, personally, believe that there is equity and fairness in the theory that the highway-user-charge principle should be applied on the basis of benefits derived. I state positively and publicly that I do not believe that such a user charge should be punitive. The justification of levying a tax is to soundly finance an adequate highway program and not to exterminate or discriminate unfairly against a legitimate highway user.

I have endeavored to explain my position relative to a new financing program. You can readily see that it is controversial and subject to a great deal of discussion but remember one thing, ladies and gentlemen, if you are going to build highways somebody has to pay for them.

The controversial subject of financing the new program for the interstate system is not applicable to the existing law which was passed by nearly a unanimous vote of the Congress in 1954 and which I authored. It is known as the Highway Act of 1954. It expires June 30, 1956. I have previously given to you the amount of money that it spends for highways. It can be renewed and no new taxes required over the existing taxes. I repeat, why jeopardize this program now in effect by incorporating in the same legislation a 10- or 15-year highway construction program newly and entirely differently financed and which, in my opinion, will jeopardize the passing of the existing law.

I firmly believe in an adequate highway program including the interstate system as well as the intrastate system but I do not want the existing highway program destroyed and scuttled because of the insistence of some to incorporate into the legislation, soon to be before the Congress, new ideas including financing and distribution. I think the interstate system is strong enough to stand on its own merits in its own legislation and I think the proponents of the interstate system are weakening their position when they are attempting to have it carried in the program of the existing law. Let us not jeopardize the existing program that is working so well. Let us have a 10-year or 12-year interstate program in separate legislation and let us continue our intrastate highway program, bringing it before Congress once every 2 years for a look-see by the membership of Congress at that time.

Admiral Burke Restates Old Truths

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1956

Mr. WILSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following from the San Diego Union of January 18, 1956:

ADMIRAL BURKE RESTATES OLD TRUTHS

Implicit in the public expressions of Adm. Arleigh Burke during his San Diego visit last week is a forceful restatement of some old principles of national strategy.

As the United States Navy's professional chief, Admiral Burke would be expected to present a strong advocacy of its mission and needs. His argument is most persuasive, however, in that it rests not on a defeatist estimate of the United States naval position but an inventory of Russia's formidable—and surprising—naval capabilities.

What gives the Soviet Navy its contemporary power and menace is that, as Admiral Burke pointed out, it has a limited specialized mission and as being single-mindedly equipped to fill that mission.

Communist sea power is directed at being able to control the coastal waters of Europe and Asia and the "narrow seas" of those continents. It has no aircraft carriers but 4,000 shore-based planes (Mig 15's and Mig 17's; medium attack and patrol bombers), which are under the sole operation control of the fleet commanders. Russia has no big-gunned cruisers. But those of the *Sverdlovsk* class—its most modern—are swift, maneuverable, well-armored and equipped for mine-laying, torpedo and anti-aircraft missions.

Russian submarines are reported to be mostly medium-range types, equipped for mine-laying. Some are probably using hydrogen-peroxide turbines for submerged cruising.

By 1957 the current Russian construction program will build up its navy to 30 cruisers, 150 destroyers, 500 submarines (current production is about 1 a week), 500 PT boats and 1,000 minesweepers. Use of Chinese ports such as Tsingtao amplifies the power of this fleet.

What are the principles of strategy in Admiral Burke's statements? They were enunciated 75 years ago by Adm. Alfred Thayer Mahan: Control of the "narrow seas" plays a vital role; the great end of a war fleet is to close the oceanic highways; naval power exerts profound influence in peace as well as war.

Few will deny the deterrent power and the pacifying potency of the United States nuclear arsenal. But what if our employment of these weapons were out of proportion to the provocation? Or to the target? Russia has an old-fashioned navy but the mission for which it is intended could be crucial. It is reassuring to learn that Admiral Burke believes that this force could not keep us away from the shores of Europe and Asia.

Admiral Mahan was convinced that his principles of naval strategy would "remain, as though laid upon a rock." This fact would make for old-fashioned sea campaigns.

Can civilization afford any other kind?

Arab and Jew Have Mixed History—Reds Increased Peril for Israel

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1956

Mr. MULTER. Mr. Speaker, Mr. George E. Sokolsky has given an historic account of Israel in the following 2 articles which appeared in the New York Journal-American for January 16 and 17, 1956. I call them to the attention of our colleagues:

[From the New York Journal-American of January 16, 1956]

ARAB AND JEW HAVE MIXED HISTORY

(By George E. Sokolsky)

The Arabs and the Jews are, by tradition, kinfolk, whether one accepts their descent from Noah or from Abraham. Whichever tradition is accepted, both Arabs and Jews are basically Semitic, that is, they trace their beginnings to Noah's eldest son, Shem; they speak cognate languages, Hebrew, Arabic, and Aramaic, and these have been their languages from the earliest times we know anything about; they have related religions, the Koran accepting the authority of the Bible, although up to the seventh century, the Arabs were pagans, worshipping spirits or jinns. The history of the Jews and Arabs is intermixed.

Where the Arabs originated has not been determined by modern scientific methods. There have been many theories on this subject, but none of them add too much to our knowledge of present problems. What we do see is that there is a crescent of fertility which nearly surrounds a vast desert. In this crescent, from time to time, many nations have formed and all the great conquering countries in ancient and modern times have sought to own the Arabian nations and often succeeded. The southern Arabs mingled freely with African peoples; the northern Arabs intermingled with Syriac and Persian peoples. Among all these, there have always been some Jews.

The Arabs themselves make a distinction between the pure Arabs who descend from Kahtan and the others who descend from Ishmael. However, the Arabs have so often been conquered and the population of this entire area is so fluid that racial purity is not to be expected, except that all these peoples are so closely akin.

NOT STRICTLY ARABIAN

Palestine which is now called Israel is one of the countries of the crescent of fertility surrounding the Arabian Desert. It is part of the Syrian area. It lies close to Egypt which is not strictly an Arabian country but is composed of a large number of mixed peoples. The present culture of Egypt is Arabic and the dominant political element in the country is Arabic; nevertheless the Egyptians are a mixed people, including various Mediterranean and African components.

In modern times, most of the Arab world had been conquered by the Osmanli Turks, a nomadic people out of Kansu Province in China—probably the Hsiungnu of whom there is so much in Chinese history. While it is true that the Turks were influenced by Arabic as they were by Persian cultures, by the time of Suleiman the Magnificent (1520–66), not only the Mediterranean but the Black Sea was a Turkish lake. Turkish power extended in North Africa from Egypt to Morocco. The Turks became Moslem perhaps as early as the 10th or 11th Century.

World War I destroyed the Turkish Empire and a numer of Arabic countries came into existence as sovereign states. During the period between World War I and World War II, Great Britain and Germany vied with each other for the control of these countries and during World War II, Germany nearly had them. It was the discovery of the world's largest oil reserve that made these otherwise practically barren countries so important economically and politically. After World War II, the United States made enormous investments in these oil operations.

ALLIANCE FAILED

The organization of the Arab League, under the leadership of Egypt, has been an effort to form an alliance not only to include all Arab countries but all Moslem countries into a powerful political unit from Pakistan to Morocco, from the borders of Soviet Russia to the Indian Ocean. This effort has failed because such Moslem countries as Turkey, Iran, Iraq, and Pakistan are not prepared to submit to Egyptian influence.

Furthermore, just as before World War II, Germany played an important role in the Arab world, so at the present time, Soviet Russia has moved into this area. It is to be remembered that a very large part of the Soviet population is Moslem and that many of the so-called Soviet Republics are inhabited by vestiges of Turkish peoples, who, although they are not Arabs, are closer to Arab than to Russian culture. It is to be expected that Soviet Russia will exploit these relationships to American disadvantage.

Involved further in this situation is the existence of Israel which as a Western enclave in the Arabic world becomes a serious problem to the Arabs.

[From the New York Journal-American of January 17, 1956]

REDS INCREASED PERIL FOR ISRAEL

(By George E. Sokolsky)

There never has been a time in Jewish history when the land, now called Israel, was not the focus of the affections of the Jewish people. Abraham came into this land; Moses returned his people to it from Egypt. Zion, as it has often been called by prophet and psalmist, is the land to which Jewish memories are dedicated. When the captives sat by the rivers of Babylon, they said, "If I forget thee, O Jerusalem, let my right hand forget her cunning."

In A. D. 70 the Jews lost Palestine and their temple was burned. Their scholars gathered in Babylonian cities (Nehardea and Pumbedita were two) in the hope of keeping the people together and the sacred tradition of the Torah alive in the memory of man. Actually many of the Jews scattered among the Mediterranean peoples and eventually to every country of every continent. For many centuries, Zion remained a symbol of affection for an ancient land. It was not until the Nineteenth Century that practical steps were taken to restore Israel to the Jewish people.

At first, colonization plans were made and some were carried through to fruition. This was part of a program of restoring the Jew to agriculture which was his original way of life. But under the leadership of Dr. Theodor Herzl, a Viennese journalist, Zionism took on a political nature. At the Basle Congress (1897), the first time Jews from all countries were brought together to consider their condition, Herzl's concept of political Zionism was accepted and the Zionist movement was launched. There was considerable opposition inside world Jewry, but over the years the opposition died down and where it still exists, it is so unpopular as generally to be hidden away. In the United States, opposition to Israel among Jews is negligible.

HOMELAND SEEMED ASSURED

Up to World War I, the Zionist movement made certain progress but it was not until the Balfour Declaration was issued by Great Britain in 1917, as a result of the please of Dr. Chaim Weizmann, the inventor of TNT, that the hope for a home land for the Jews in Palestine seemed assured. The Balfour Declaration said:

"His Majesty's Government view with favor the establishment in Palestine of a national home for the Jewish people, and will use their best endeavors to facilitate the achievement of this object, it being clearly understood that nothing shall be done which may prejudice the civil and religious rights of existing non-Jewish communities in Palestine, or the rights and political status enjoyed by Jews in any other country."

Palestine, prior to World War I, was Turkish territory and as the Turks and Jews got on well together, there was no question of antagonism. After World War I, Palestine was mandated to Great Britain and this led to considerable trouble as the British were anxious to hold the Arabs in line and the Arabs were anti-Zionist and anti-Jewish. This conflict continued in many forms until 1949 when the United Nations recognized Israel as a sovereign state. In this recognition, the United States, Great Britain and Soviet Russia joined.

The way of Israel, however, has not been smooth. Arab, particularly Egyptian, opposition to the existence of Israel has produced almost constant warfare between Israel and some Arab country. In recent months, the violent anti-Israel attitude of Soviet Russia has increased the peril for Israel.

GOP Governor Scores Dixon-Yates Deal

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1956

Mr. EVINS. Mr. Speaker, lest we confuse principle with partisan politics, I think it is well to remind ourselves that such issues as the Dixon-Yates deal, the Hoover Commission recommendations on public power, and the overall question of utilizing our natural water resources for the public good are or should be resolved on the matter of principle rather than partisan politics.

A Republican governor has most recently emphasized that thought. Gov. Fred Hall, of Kansas, according to an article in the New York Times of today, has some interesting things to say on the public-power question and I desire that the report of his remarks be included in the Appendix of the RECORD.

The article follows:

DIXON-YATES SCORED BY GOP GOVERNOR

ST. LOUIS, January 23.—Gov. Fred Hall, of Kansas, a Republican, declared today that the Eisenhower administration's decisions on the Dixon-Yates power contract and Hells Canyon Dam were "prime examples" of a "mistaken philosophy."

Mr. Hall addressed the annual meeting of the National Rural Electric Cooperative Association.

"Somebody really sold somebody a bill of goods on Dixon-Yates and Hells Canyon," he declared.

The now canceled Dixon-Yates contract and the Hells Canyon power proposal should not have been decided alone on the principle of keeping the Government out of business, Mr. Hall said, adding:

"They should have been decided primarily on the principle that the public interest outweighed private interest.

"This whole situation is further aggravated by the Hoover Commission recommendations which, in the case of water resources, completely confused the principle of freedom of enterprise, and the principle of regulation of free enterprise and public ownership for the great public interest."

Rewriting History

EXTENSION OF REMARKS

OF

HON. ROBERT HALE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1956

Mr. HALE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Daily News of January 21, 1956:

REWRITING HISTORY

Former President Truman, in the current Life magazine installment of his memoirs, makes a bold effort to rewrite history in defense of one of the blackest marks against his administration: its contribution to the loss of China to international communism.

He does this chiefly by blaming Chiang Kai-shek at every unfavorable turn of events in that dreary period, by defending the fateful mission of Gen. George Marshall to China—and by weighty omissions.

General Marshall went to China under a directive as loaded as a block-buster. Though redrafted several times, in the end it stemmed from memos prepared by the China "expert," John Carter Vincent. Mr. Truman does not mention that, nor the fact that Mr. Vincent, though cleared in loyalty hearings, subsequently was required to resign from the State Department.

The directive required General Marshall to make every effort to bring about a "coalition" government in China, with Chiang Kai-shek accepting the Communist bosses on an equal basis in his cabinet. This, despite bitter ex-

perience of Poland, Rumania, Bulgaria, and Yugoslavia, where so-called coalition governments had paved the way for complete Communist control.

Unless Chiang bowed to our State Department wishes, it was made clear, all American aid was to be cut off. Eventually it was, as Chiang stood his ground, and nobody knows what vast quantities of ammunition, weapons and even planes earmarked for the Nationalist Government actually were destroyed. Mr. Truman says nothing about that.

Meanwhile the Communist forces were arming themselves from the huge stores of munitions taken by the Russians from Japan's overrun Kwantung army in Manchuria. Red guerilla bands were formed into formidable fighting forces, and as they plunged southward the Communists no longer were interested in a mere share of Chiang's government. That was one of the turning points of the whole affair—yet it is notably omitted in the Truman account.

Neither does Mr. Truman identify the "Treasury experts" who blocked a $500 million loan to the Nationalist Government evidently because Chiang wouldn't lay down his arms. "They were correct," says Mr. Truman, but who were "they"? Could "they" have included the late Harry Dexter White, later named as a Communist spy, who then had a guiding hand in Treasury Department policy?

Before the final directive to General Marshall had been framed, the views of our three Far Eastern commanders were sought on his mission. They were Generals MacArthur and Wedemeyer and Admiral Spruance. Though they agreed as to the general objective of the mission, all three later were to make separate denials of any intention to favor an attempt to force a "coalition" on Chiang.

And Mr. Truman does not mention that.

Mr. Truman says flatly he sent General Marshall to China in the interests of a "coalition government" between the Nationalists and the Commies. "Neither Marshall nor I," he writes, "was ever taken in by the talk about Chinese Communists being just 'agrarian reformers.' "

Yet on March 11, 1948, 2 years later, he was telling a press conference emphatically that the United States never had favored inclusion of the Reds in the Chinese Government.

In his view, he said, "broadening Chiang's government does not mean taking in Communists but it does mean taking in Chinese liberals."

In such fashion does Harry Truman re-jiggle history.

Freedom for the Ukraine

EXTENSION OF REMARKS
OF
HON. HORACE SEELY-BROWN, JR.
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1956

Mr. SEELY-BROWN. Mr. Speaker, under permission given me to extend my remarks, it is my purpose to speak briefly about freedom for the Ukraine, in connection with the 38th anniversary, January 22, of Ukraine independence.

In my district, last Sunday, several thousand Americans whose ancestral origin is in the Ukraine, gathered in their churches, and afterward in their fraternal halls and in their homes, to take appropriate recognition of this day, which commemorates a joyous but unfortunately only a briefly fulfilled achievement in the centuries-old struggle for freedom and independence on the part of the Ukrainian nation.

I wish that all Americans might have shared in some way in the recognition of Ukrainian Independence Day, because if the hope of every one of us for the expanding of freedom to include every human being throughout the world is to be realized, Ukraine as soon as possible must take its place as a sovereign and equal partner in the buttressing of a free Europe and a free world.

The Ukrainian people are 40 million strong. They comprise the largest non-Russian nation behind the Iron Curtain. They admire the American people, and they are the friends of the United States of America. But, unfortunately, they are the captives of Soviet imperialism, and in the last 38 years they have been made many times the most conspicuous victims of that imperialism translated into shameful tyranny.

The Soviet lexicon calls the Ukraine a "republic" in the Union of Socialist Soviet Republics, but this is a mockery of the term, as is the membership of the Ukraine in the United Nations, where it is recognized as a satellite, and where it is known by everyone that its delegates, like all of the officers of the "republic" are but tools of Moscow.

The determination of the Ukrainian people to be really free and independent, however, is stronger than any bonds which temporarily may restrain them. Have they not struggled for centuries for freedom and independence, and having won it, and then lost it, are they not using every resource which is theirs, to win it again?

When the shackles that bind the loftiest aspirations of many noble peoples in Europe are broken at last, the Ukrainian people will have an important part in that achievement, and they will be our allies and our partners in making a better world.

Dulles States Basic Truths

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1956

Mr. WILSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the San Diego Union of January 19, 1956:

POLICY DISPUTE: DULLES STATES BASIC TRUTHS

If this Nation is to avert war, it must take some calculated risks. It must let the enemy know it will not retreat. This is part of the price of peace.

This, in general, is what State Secreary Dulles has said in his press conference and in a controversial magazine article. To us he appears to state basic truths.

Unfortunately Mr. Dulles' words have been twisted and perverted by opponents of present United States policy.

The foreign policy chief has been careful to point out that in seeking peace, a primary consideration in United States foreign policy has been to let the enemy know that if he goes too far he will endanger his own welfare.

It was a lack of such a warning regarding which lead the Communists to think the United States would not oppose aggression in South Korea. A public statement in 1950 by former State Secretary Acheson laid down a United States line of interest which excluded the Korean peninsula.

Part of the present controversy over Mr. Dulles' statements concerns whether the United States has been on the brink of war. This can be interpreted several ways, but, realistically, it must be said that the United States position was made so definite to the aggressors that had the Communists gone too far in Indochina or Formosa this country would have been obligated to strike back or surrender self-respect. The alternative to this position was appeasement.

The carefully calculated risks resulted in peace.

During a nonpresidential election year, 1954, Mr. Dulles wrote an article for Foreign Affairs magazine stating the same position he now relates. He reasoned:

"A would-be aggressor will hesitate to commit aggression if he knows in advance that he thereby not only exposes those particular forces which he chooses to use for his aggression, but also deprives his other assets of sanctuary status.

"That does not mean turning every local war into a world war. It does not mean that if there is a Communist attack somewhere in Asia, atom or hydrogen bombs will necessarily be dropped on the great industrial centers of China or Russia.

"It does mean that the free world must maintain the collective means and be willing to use them in the way which most effectively makes aggression too risky and expensive to be tempting."

It long ago was proved that appeasement leads to war. A nation which refuses to stand firm in this era of power politics will be defeated. And a nation which fails to make its stand known invites enemy miscalculation.

Cotton Production Cost Study by Twin City Farm Bureau Members

EXTENSION OF REMARKS
OF
HON. PRINCE H. PRESTON, JR.
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1956

Mr. PRESTON. Mr. Speaker, I would like to invite to the attention of the Members a cost of production study on cotton made by members of the Twin City Farm Bureau in Emanuel County, Ga. This study, which clearly demonstrates that even under favorable conditions a cotton farmer cannot make expenses on his crop, is the more impressive because it was made by cotton farmers themselves.

Of course, I do not discount the studies made by Government research agencies, foundations and other specialized groups, but I think the findings of the farmers themselves are most impressive. They are the ones who spent their money on fertilizer, seed and insect poison. They are the ones who had to raise the cash to pay for the chopping and the picking of this staple commodity.

These figures show conclusively that even with a yield of 350 per lint to the acre, well above the average, they lost

almost $6 an acre on the cotton they produced. Their less fortunate neighbors who did not make such a good yield lost even more, for the cost of seed, fertilizer, poison, and other expenses were high even though their production was low.

Mr. Speaker, I would like to insert in the RECORD this brief study made by J. E. Brown, W. B. West, and Floyd Wimberly, of the Twin City (Ga.) Farm Bureau. This compilation was sent to me by Mr. J. L. Moore, who is president of this farm bureau chapter:

REPORT OF THE STUDY ON THE COST OF PRODUCING COTTON MADE BY A COMMITTEE OF FARM BUREAU MEMBERS

How much does it cost to produce an acre of cotton?

What are the net returns that a farmer may expect from an acre of cotton?

Cost of producing an acre of cotton

Rent	$7.00
Tractor and equipment	29.75
Seed	4.30
Fertilizer	16.40
Soda	2.95
Poison	10.80
Harvesting	42.00
Ginning	6.72
Man labor	17.00
Transportation	2.00
Marketing	1.00
Total	139.92

Receipts from an acre of cotton

350 pounds of lint, at 34.26	$119.96
700 pounds seed, $40 per ton	14.00
Total	133.96
Loss per acre	5.96

In addition to the expenses listed above most farmers have other problems that add to the cost of production. Droughts, storms, and excessive rainfall can seriously damage a cotton crop. Many farmers this year report that their cotton was damaged to the extent that it was a total loss, and in other cases the quality was below United States Government grades.

Many of our farmers are cultivating nonmarginal land and do not produce 350 pounds of lint per acre. Members of these families must do all the harvesting and furnish all the other labor to survive.

It is the opinion of this committee that there is not enough difference between the cost of production and the price received for farm products to give the farmer a decent income. We need legislation that will give us this protection.

Respectfully submitted.

J. E. BROWN.
W. B. BEST.
FLOYD WIMBERLY.

Ten-Year-Old Hoover Plan Still Valid

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1956

Mr. MULTER. Mr. Speaker, I direct the attention of our colleagues to the following article by Mr. Ezekiel Rabinowitz, veteran Yiddish publicist and correspondent, which appeared in the December 1955 issue of the American Zionist:

ARAB REFUGEES: A SOLUTION BY ENGINEERING—10-YEAR-OLD HOOVER PLAN STILL VALID

(By Ezekiel Rabinowitz)

The problem of the Arab refugees is being exploited by the Arab States and the enemies of Israel in this country for political ends in a most cunning manner. The very Arab rulers who demand the return of the refugees refuse even now to concede Israel's right to exist and openly avow their intention to destroy the State. A veritable smoke screen of propaganda and hatred has been let loose around this question.

The preoccupation of the world with this problem underscores the paramount significance of a plan by former President Herbert Hoover which, although submitted 10 years ago, remains as current and as challenging as ever.

At the time the plan was submitted by the former American President, public opinion in the United States was deeply concerned with the question of the displaced Jews in Europe and their resettlement in Palestine, where they would be able to rebuild their national homeland.

Liberal minded Christians who were anxious to wipe out one of the darkest blots on our civilization, the persecution of the Jewish people, assailed the then proposed Anglo-American Commission of Inquiry of Palestine as a shameful act of appeasement of British imperialism and feudal Arab chieftains. They appealed to the White House to support the Wagner-Taft resolution in the United States Congress for a Jewish national home in Palestine.

In response to an inquiry by the New York World Telegram, former President Hoover approached the entire problem from an engineering point of view. In his reply, on November 19, 1945, he made a very constructive, practical and humanitarian proposal which aimed to subordinate the emotional, racial, and political aspects of the problem to a process by which Jews and Arabs would benefit materially. In his reply the former President stated as follows:

"There is a possible plan of settling the Palestine question and providing ample Jewish refuge. * * *

"In ancient times the irrigation of the Tigris and Euphrates valleys supported probably 10 million people in the kingdom of Babylon and Ninevah. The deterioration and destruction of their irrigation works by the Mongol invasion centuries ago, and their neglect for ages are responsible for the shrinkage of the population to about 3½ million people in modern Iraq.

"Some 30 years ago Sir William Willcocks, an eminent British engineer, completed a study of the restoration of the old irrigation system. He estimated that about 2,800,000 acres of most fertile land in the world could be recovered at the cost of under $150 million. * * *

"My own suggestion is that Iraq might be financed to complete this great land development on the consideration that it be made the scene of resettlement of the Arabs from Palestine.

"This would clear Palestine completely for a large Jewish emigration and colonization. A suggestion of transfer of the Arab people of Palestine was made by the British Labor Party in December 1944, but no adequate plan was proposed as to where or how they are to go. * * *

"There is room for many more Arabs in such a development in Iraq than the total of Arabs in Palestine. The soil is more fertile. They would be among their own race, which is Arab-speaking and Mohammedan.

"The Arab population of Palestine would be the gainer from better lands in exchange for their present holdings. Iraq would be the gainer, for it badly needs agricultural population. * * *

"Today millions of people are being moved from one land to another. If the lands were organized and homes provided, this particular movement could be made the model migration of history. It would be a solution by engineering instead of by conflict. * * *

"I realize that the plan offers a challenge both to the statesmanship of the Great Powers as well as to the goodwill of the parties concerned. However, I submit it, and it does offer a method of settlement with both honor and wisdom."

Mr. Hoover's view was confirmed by Walter Clay Lowdermilk, then the Assistant Chief, Soil Conservation Service, United States Department of Agriculture, who made the following statement in his book Palestine, Land of Promise:

"In the great alluvial plain of the Tigris and Euphrates Valley there is land enough for vast numbers of immigrants. Centuries of neglect of their lands demonstrate that the Arabs have not shown the genius or ability to restore the Holy Lands to their possibilities. But the Jews by their magnificent examples in colonization have demonstrated their ability to reclaim and redeem waste lands from desolation to high productivity."

We can see that the Hoover plan for resettlement as a means for solving the Palestine question came at a time when close to a million Arabs were part of the Palestine population.

Simultaneously, Iraq was on record that they were badly in need of more population. The Prime Minister of Iraq, Jafar Pasha Al-Askari, so stated in a paper to the Royal Asia Society in London, in 1926. Said the Iraqi Prime Minister:

"The size of our country is 150,000 square miles, about 3 times that of England and Wales, and the population is only 3 million. What Iraq wants above everything else is more population."

It is worth while remembering that at the time Mr. Hoover submitted his plan, the present problem of the Arab refugees did not even exist. The former President suggested the financing of a plan whereby Palestine would be completely cleared for a large Jewish emigration and colonization:

"The Arab population of Palestine would be the gainer from better lands in exchange for their present holdings. * * * They would be among their own race which is Arab speaking and Mohammedan."

The Hoover plan also reflected the desire of the American people to help the Jews in their movement for a national home in Palestine. The movement was endorsed in both party platforms in 1944.

A resolution jointly sponsored by Senator Robert F. Wagner (Democrat, New York) and Senator Robert A. Taft (Republican, Ohio) was adopted by the Senate on December 17, 1945, and by the House on December 19, 1945.

The resolution commended the President for his attempts to secure the admission of greater numbers of Jews into Palestine. It recommended that the United States use its good offices with Great Britain "to the end that Palestine shall be opened for free entry of Jews to the maximum of its agricultural and economic potentialities, and that there shall be full opportunity for colonization and development, so that they may freely proceed with the upbuilding of Palestine as the Jewish national home."

Two years later, on November 30, 1947, the special session of the General Assembly of the United Nations authorized the establishment of a Jewish State in Palestine. As a challenge to this decision, the Arab States sent their armed forces to crush the new State of Israel. Simultaneously, Arab propagandists urged the Arabs living in Palestine to flee the country and join the invading armies. Threats were made that if the Arab population failed to join the attackers, they

would be severely punished after the invasion forces had successfully completed their mission to drive the Israelis into the sea.

The armed forces of the Arab countries were badly defeated. The great majority of the Arab population in Palestine, heeding the threats of their Arab brethren in Egypt, Syria, Jordan, Iraq, Lebanon, and Saudi-Arabia, left the country, thus creating the problem of the Arab refugees; refugees by their own will, refugees by the advice and management of their own leaders and the leaders of their neighbors.

In 1949, the U. N. established its Relief and Work Agency for Palestine Refugees in order to alleviate their plight, and to find ways and means for their rehabilitation. All these efforts have been steadfastly thwarted by obstacles created by the Arab nations.

In his report to the Ad Hoc Political Committee (see Ad Hoc Political Committee, 28th meeting, November 16, 1954), Mr. Henry R. Labouisse, director of the U. N. Relief and Work Agency for Palestine Refugees in the Near East, admitted that little progress had been made toward finding a permanent solution to the problem.

Mr. Labouisse stated as follows:

"The third important factor affecting the Agency's work was the attitude of the contributing states. They would evidently like to see an end to the problem, not only because of human suffering involved and the political tensions which have been generated, but also because their legislatures were naturally restive at continued appropriations of funds for a problem which shows no signs of being solved."

Mr. Wadsworth, the United States delegate, stated:

"If prompt action was not forthcoming the United States Government must inevitably reconsider its attitude, as it would continue to support the Agency only if there was tangible evidence of progress * * *.

"The extension of the UNWRA program would give satisfactory results only if the host governments cooperate effectively with the Director of the Agency in settling the issues remaining before it."

Looking back 10 years it is indeed remarkable that Mr. Hoover characterized his plan as a "challenge to the statesmanship of the great powers." He suggested that Iraq, badly in need of land development, should be financed on the consideration that it be made the scene of resettlement of all the Arabs in Palestine, close to a million in number. At this moment the U. N. is confronted with a problem of resettling some eight hundred thousand Arab refugees among 40 million of their kin in eight sovereign states; states with unexploited land and water resources, with huge oil revenues coupled with international funds and assistance available in generous measure.

A New Life for Old Cities

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following address which I delivered over station WMEX, Boston, Mass., on Saturday, December 17, 1955.

The address follows:

A NEW LIFE FOR OLD CITIES

American cities are faced with a serious challenge.

That challenge is: How to do the modernizing job that has been postponed time and time again, until now it can be postponed no longer.

Cities have not yet broken with the outmoded past. In many cases they have not succeeded in adjusting themselves to the present. Few of them are thinking of the future.

The downtown areas of cities were designed for a bygone age. Every development since then has been expected to fit into this rigid mold.

Of course this has been impossible.

Cities are belatedly waking up to the fact that they must adapt themselves to the needs of motor cars and electric power. They cannot expect progress to operate in the channels and according to the patterns that were good enough for the 19th century, but are inadequate for the dynamic needs of today.

Both people and industries are in flight from the cities to the suburbs.

A big city like New York tried to meet the challenge by vertical development but this has obvious limitations.

Industry cannot function in skyscrapers.

And huge apartment houses are not the best places in which to bring up families.

People want more room for living and more room for working.

When a conservative organization like the United States Chamber of Commerce recognizes the problem as urgent, we can believe that it is.

The Federal Government has alerted itself to the problem by making some Federal aids available for the redevelopment of cities. More help will be forthcoming, as the pressure for change becomes inevitable.

The Chamber of Commerce of the United States, as a result of an exploration of community problems by local chambers, has issued an urban-development guidebook which is a pioneer in its field.

It is recommended for all civic-minded people who are interested in the problems of community growth and change.

As the chamber observes, and I quote: "For many generations, the physical structure of the city remained the same. It had rectangular blocks with narrow building lots on them. It was designed to be compact. Its supply of power and its means of transportation made compactness necessary. The waterwheel and the steam engine, the horse and buggy, and foot travel, did not permit a community to spread out. At the turn of this century, the motor age and the age of electric power began to pull apart the time-honored city structure. The radius of men's activities multiplied several times. Today, after 50 years, our cities are in an urban crisis. Basically, this crisis is created by the process of finding more room in which to do things. But we cannot get more room within the old structure of our cities. These structures have to be broken apart and recreated, and this is what we are in the process of doing. As a result of our urban crisis, a new community is emerging out of the old community."

Congestion, blight, inadequate public finance—these are the three major headaches of every city and town.

The typical community is threatened by suffocation.

Take one example.

Worcester, Mass., had a population of about 100,000 in 1900. By 1954 this had more than doubled. For transportation, at the turn of the century, Worcester had 16,000 horses. By 1954, with the same downtown street layout, over 67,000 motor vehicles were crowding for passage, and at a faster speed.

New York City has estimated that traffic delays cost its citizens more than $1 billion a year, or about two-thirds of the city's budget.

This is driving business, industry, and residents out of town, lowering property values and damaging the tax base.

The third factor, urban blight, may be defined as deterioration. It affects commercial and industrial properties, as well as residential. This failure to maintain properties or improve them, makes them less inviting for use. Neither people nor industries will put up with rundown houses or factories.

Nearly every city or town in the country is faced with increasing difficulties in its public finances, frequently amounting to crises. Hardly enough revenue is coming in from the one source—real-estate taxes—to keep up municipal services. The result is a shortage of funds to cope with the problems of congestion and blight.

In the last analysis, it is up to all the people of a given community to cooperate in the renovation of their city or town, so that it will keep step with progress.

Of course, a wide base of citizen participation is necessary to prevent any few individuals or small groups from exploiting a city's redevelopment program for their own selfish interests, instead of working for the community at large.

Since the early 1930's, most American cities have been receiving direct financial aid from other governments, but principally from the State government. This aid most commonly takes the form of shared taxes and of annual grants, to be used mainly for highways, public welfare, and schools.

Since 1949, direct Federal financial aid has been available for slum clearance and urban redevelopment. The Housing Act of 1954 has considerably widened the range of Federal participation in dealing with slums and blighted areas.

The Congress, in providing funds for urban renewal, emphasized the fact that the communities themselves must assume the main initiative and responsibility.

There is no justification for Federal assistance except to cities which will face up to the whole process of urban decal and undertake long-range programs.

As soon as a community proves that it has developed a so-called workable program for dealing with the problems of slums and blight, it may qualify for the following types of Federal aid:

1. The urban renewal service. The chief purpose of this service is to provide technical and professional assistance in preparing the workable program, and in planning and developing urban renewal programs.

2. Advances for surveys and plans.

3. Temporary loans for urban renewal projects.

4. Definitive (long-term) loans for urban renewal projects for use when project land is leased rather than sold for development.

5. Capital grants for urban renewal projects—up to two-thirds of net project cost.

6. Special grants for demonstration projects in urban renewal—also on a two-thirds basis.

7. Special grants for urban planning assistance. Of importance to the smaller cities and towns and to metropolitan areas, in the field of community planning.

8. Special provisions for FHA mortgage insurance to provide easier financing for building or rehabilitating residential property.

9. Special mortgage-insurance provisions to facilitate construction or rehabilitation of low-priced residential accommodations to rehouse families displaced, either by urban renewal projects, or by other governmental action.

10. Provision for low-rent public housing to be used in connection with rehousing displaced families that cannot pay for adequate private housing.

In cases where blighted housing is redeveloped to commercial or industrial use, of course, the revenues received by the city are

usually substantially greater than would result from residential use of the land. This, in turn, eases the load of all other real-estate taxpayers.

Project treatment of blight often benefits the community by helping keep its central area economically strong by removing an important cause of the migration of residents, business, and industry to areas beyond corporate limits. In many instances, those who move would prefer central-area locations except for nearby unpleasant or profit-inhibiting conditions.

In many instances, the judicious selection of project areas near the downtown district, and the careful replanning of land uses and street patterns in these areas, serves to loosen up and spread out the area and thus provide more space for traffic movement and for parking.

Slum areas are not only firetraps, health hazards, and traffic bottlenecks, but cost a city more in terms of municipal services, than they pay in taxes. When torn down and replaced by modern facilities tailored to the automobile age, they not only pay their share of the tax load, but considerably more.

Sacramento, Calif. (population 163,000), is an example of a city that is working hard on slum clearance, the elimination of traffic congestion, and in the establishment of industrial areas to provide locations for new industries.

How is this being financed?

The Sacramento Redevelopment Agency is pioneering a new type of revenue bond which is permissible under the California community redevelopment law. It is expected that this bond arrangement will provide the necessary one-third local grant-in-aid which, combined with a two-thirds Federal grant, will meet net project costs.

These bonds will be secured primarily by the increased tax revenue derived from the new buildings in the redeveloped project, which may be pledged under California law by the city council to pay local cost of that development project.

In Nashville, Tenn., the congested central business district is not far from the State capitol buildings and grounds, but has long been separated from them by residential slums and blight. The rundown area of about 70 acres is now being cleared for redevelopment, mainly for commercial use. Improved highways and off-street parking will ease the traffic flow. It is evpected that, within a few years, the business district itself will occupy substantially more space than at present. This will mean greater economic activity and greater income, for a city that is liberated from the seedy slums that once held back its progress

There is no city or town in the United States that cannot improve itself if its people cooperate in a program of urban redevelopment.

We have some public and private means to do the job.

If necessary, we can devise new and better ones.

But any means unused are as good as none.

A new life for old cities can be created only by citizen interest and citizen action.

The Ridgway Story

EXTENSION OF REMARKS
OF
HON. CHARLES RAPER JONAS
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1956

Mr. JONAS. Mr. Speaker, under leave to extend my remarks in the Appendix, I include an editorial which appeared in the Charlotte News on January 20, 1956. I think the advice given in this editorial is sound and I commend it to the consideration of all Members of Congress.

The editorial is as follows:

AFTER THE SIDESHOW, BACK TO BUSINESS

General Ridgway's revelation about political skulduggery in the shaping of the administration's defense policy was welcomed with whoops of joy by the Democrats. But it was little more than a noisy diversion, contributing nothing to a particularly serious problem requiring sober bipartisan attention.

General Ridgway's ideas on the subject were never really in doubt. It was not necessary to buy a copy of the Saturday Evening Post to gage the depth of his dicontent. He has protested manpower cuts in the Army privately and not-so-privately for quite a time. It was not even any particular secret that he had testified before a congressional committee (behind closed doors) that the new reduced strengths of the Armed Forces fixed by the President were never submitted to the Joint Chiefs of Staff for approval. This information was published in a Washington newspaper last February.

Secretary of Defense Charles E. Wilson confirmed at a press conference Tuesday that in his recollection General Ridgway had in fact "continually advocated a higher strength for the Army than the other chiefs." He was just unable to sell his colleagues.

Now that practically everyone involved has issued a statement and impressed the voting public with his political virtue and patriotism, we suggest that the administration and Congress knuckle down to the business of planning future United States defense policy with as much objectivity and realism as possible.

The means and the mechanism must be provided to meet changing conditions in the world. Make no mistake about it. Conditions have changed and changed profoundly—including strategy, the economics of strategy and the nature of war. That is what makes the task so difficult and so demanding of the best thinking the Nation can muster. We must have a defense policy to keep the Nation from being nibbled to death on the periphery by "brush-fire" wars. The policy must not exclude a continuing need for infantry and sea forces. At the same time, the Nation must have the means to trigger a full-scale atomic counterblow if and when needed—including an adequate missile program.

If this type of versatile defense sounds expensive that is because it is expensive. But in these years of crisis it is a necessary expense.

Area Redevelopment

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1956

Mrs. ROGERS of Massachusetts. Mr. Speaker, my bill, H. R. 8491, would carry out the President's recommendation, in the state of the Union message, to "help deal with the pockets of chronic unemployment that here and there mar the Nation's general industrial prosperity."

In spite of the prosperity enjoyed by the Nation as a whole, some of our communities are suffering from chronic unemployment. For example, in my congressional district, the city of Lowell, Mass., has had severe, continued unemployment resulting from a loss of basic industries.

While many of these situations are due to special causes of a local character, the whole Nation has an interest in helping the affected areas to achieve sound and lasting improvement in their economic condition. Federal assistance should be provided, because the particular localities most seriously affected may be most handicapped in financing their own redevelopment. However, emphasis should be on helping the communities to help themselves. Federal participation should be kept within modest limits and in conjunction with State and local programs.

The plan is simple. A State having an area of substantial and persistent unemployment may apply for Federal assistance. The Secretary of Labor would then certify the area as one eligible for assistance upon finding certain objective conditions as to the duration and amount of unemployment in the area. Federal assistance would then be provided in research and planning to rehabilitate the local economy; the construction or improvement of industrial plants and facilities, and related community facilities such as water and sewage systems; and the training or retraining of workers in skills necessary to take advantage of new employment opportunities and to supply the labor requirements of new industries. Financial aid for plant construction or improvement would be in the form of loans.

General administration of the program would be assigned to an area assistance administrator in the Department of Commerce. Technical assistance in programs to increase the employability of the labor force for specific job opportunities would be provided by the Secretary of Labor, with the Secretary of Health, Education, and Welfare providing assistance to State vocational education agencies in their programs. An advisory board with the Secretary of Commerce as chairman, and the Secretaries of Agriculture, Labor, Treasury, and Health, Education, and Welfare, and the Administrators of the Housing and Home Finance Agency and the Small Business Administration as regular members, would advise the Secretary of Commerce in carrying out the policies of the act.

Communists in United States Back Arab Line Against Israel

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Messrs. Guy Richards and Jeffrey Roche, which appeared in the January 18, 1956, issue of the New York Journal-American:

COMMUNIST IN UNITED STATES BACK ARAB LINE AGAINST ISRAEL

(By Guy Richards and Jeffrey Roche)

Communists in the United States and elsewhere have swung over bodily to the Arabs' propaganda line in attacking Israel and its supporters, it was learned today.

The Communists' new line follows the announcement by Egypt, on September 27, of its deal for large shipments of Czech arms.

In that respect, its timing coincides with the current attempts by Arab propagandists here to blame American Jews for the growing Arab-Israeli tension in the Middle East.

The Arab propaganda drive in this country was described in an exclusive story in Monday's New York Journal-American. The story revealed that the Arab Information Center at 445 Park Avenue, armed with a $700,000 slush fund, had launched a nationwide propaganda campaign in the United States against America's aid and ties to Israel.

DAILY WORKER CITED

Evidence of the Reds' shift can be found in many recent issues of their party organ, the Daily Worker.

Similar pro-Arab tirades can also be discovered on the pages of such professional antisemitic publications as Gerald K. Smith's Cross and the Flag, and Common Sense, long a breeding ground for antisemitism.

Long accustomed to ideological swerves when Moscow calls the tune, the Daily Worker is evincing no perceptible signs of embarrassment at finding that in taking up the cudgels for the Arab attitude toward Israel it discovers itself in the same editorial pew with publications it has in the past branded as viciously Fascist.

Thus, the American Reds, with the Daily Worker bucking the line for them, have in recent weeks launched a campaign to accuse Israel of being a war-minded aggressor against Egypt and the Arabs; to charge that Israel wants to start world war III at an early date; to paint Israel as the docile victim of "British and Washington imperialists" who aspire to use the Israelis as leverage to make desperate gains in the cold war.

EVIDENCE BOLSTERED

Overwhelming evidence that the new line was fashioned in Moscow was underlined by a recent International News Service dispatch from Paris. It quoted the Paris office of the American Jewish Committee as reporting that another anti-Semitic campaign may be in the making behind the Iron Curtain. It continued:

"Newspaper reports that emphasize Jewish names of persons supposed to have committed crimes against the Soviet system have again appeared in the Russian press in what may be the portent of new attacks against Jews in the U. S. S. R.

"The arrest of Jews in the U. S. S. R. on grounds that they were in possession of Zionist literature is ominous, particularly in the light of the new turn of Soviet policy in regard to Egypt and the Middle East."

The AJC added that the publication of such arrests "by Soviet papers, where nothing is left to chance, is a danger signal that cannot be ignored."

ARTICLE QUOTED

In a policy article by Joseph Clark, the Daily Worker of January 15 describes Israel as a pawn in the cold war. Clark writes:

"The Baghdad Pact was formed as an upper tier alliance against the Soviet Union. Furthermore, the State Department has been trying to use Israel as well as the Arab States as pawns in the cold war. This has, of course, brought nothing but grief to the State of Israel, which needs peace above all to build up its struggling new state."

Two days before, this same Joseph Clark, in the same Daily Worker, wrote:

"The fighting in the Gaza area and elsewhere would stop immediately if the spirit of Geneva was carried over into the Middle East," but he then put the blame on Washington for preventing this 'spirit' from traveling to the borders of Israel.

"* * * Dulles and the State Department persist," he stated, "in building pacts and tiers against the Soviet Union. It insists on trying to enlist the Middle East as pawns in this struggle. It insisted, in U. N., on getting together only with the Western Powers and excluding the Soviet Union in consideration of the Syrian-Israeli dispute.

SHOWN BY FILES

(Soviet Russia has been supporting Syrian efforts in the U. N. to invoke severe penalties against Israel for the December 11 Israeli assault on a Syrian outpost near the Sea of Galilee.)

Traveling backward in time, through December, November, and October—ever since the Czech-Egyptian arms deal was proclaimed at the end of September—evidence in the files of the Daily Worker shows how they have jumped to the Arabs' side of the fence.

Typical Daily Worker quotes:

America is "pushing Israel into an aggressive and bloody war against Egypt."

"The trade agreement between Czechoslovakia and Egypt will strengthen the resistance of Egypt to anti-Soviet war blocs."

Press commentators closest to the State Department "are making it increasingly clear that a Middle East peace is being blocked by the desperate desire of our Nation's ruling circles to keep the Soviet Union isolated in that area."

"It is generally recognized that the use of Israel as a pawn by the State Department along with its efforts to build an Arab bloc against the Soviet Union—climaxed by the Baghdad Pact—only increases tension and creates dangers for Israel."

Debate on "Brink" Holds Peril—Renouncing Policy of Deterrence Could Imply Unwillingness to Fight

EXTENSION OF REMARKS

OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1956

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert a column by David Lawrence from the Washington Evening Star of Monday, January 23, 1956, which sheds some very interesting light on the "brink of war" debate.

DEBATE ON "BRINK" HOLDS PERIL—RENOUNCING POLICY OF DETERRENCE COULD IMPLY UNWILLINGNESS TO FIGHT

If, as now indicated, there's to be a political debate in the Senate on foreign policy and the brink of war doctrine, the Democrats might well reread a most interesting speech that Adlai Stevenson, Democratic candidate for the presidency, made in Chicago on September 29, 1952. Here is what he said:

"We all know that when the Communists attacked across the 38th parallel that was the testing point for freedom throughout the world.

"The men in the Kremlin thought they would be unopposed, and, if they were, the whole question of the future could be settled in one blow. If they had been allowed to conquer free people in Korea, they could have picked away at the free world and engulfed millions, piece by piece, 1 by 1.

"Sooner or later we would have had to fight and the later we made our stand the bigger and the harder the war would have been. * * *"

Significantly, Mr. Stevenson concedes that the "men in the Kremlin thought they would be unopposed" if they attacked in Korea. But why did they think so? Why weren't they warned by the United States Department of State that, if they did attack, it would bring them to the brink of war?

The answer generally given is that Dean Acheson, Secretary of State in the Truman administration, did the opposite. He revealed publicly in a speech on January 12, 1950, that Korea was not within "the defensive perimeter" of the United States, which he defined as running from the Aleutian Islands to Japan to the Philippines.

He excluded Korea when he said that if any attack occurred on any country outside the "defensive perimeter," the power of the United Nations would have to be invoked and he didn't think it had proved a weak reed to lean upon by any people who are determined to protect their independence against outside aggression.

But Soviet Russia never thought the U. N., or, specifically, the United States, would intervene and it so happened that only 6 months after that speech was delivered the Moscow government's delegation happened not to be present at the Security Council meeting in New York City to exercise a veto when the U. N., on the initiative of the United States, did order collective resistance to the aggression in Korea.

Hence the Soviet miscalculated twice—about America and the U. N. itself. Had the United States, however, enunciated a policy of deterrence such as Secretary of State Dulles has been espousing, namely to warn clearly in advance what will be done to repel aggression, it is conceivable that the Korean war might have been prevented altogether.

The 140,000 American casualties might have been saved and also the millions of Korean, Red Chinese, and European casualties, to say nothing of the $10 billion or more spent by the people of the United States in the Korean war.

There is no misunderstanding of the Dulles policy by thoughtful observers in Europe. On January 17—in the midst of the furor over the Life article—the London Daily Telegraph was saying editorially about that article:

"No one can deny that in Korea and Indochina the Communists were challenging Western interests and that over Formosa they were threatening to do so. If the deterrent policy is not a complete sham, it therefore stands to reason that the United States was, as Mr. Dulles affirmed, brought to the brink of war. In each case the possibility of the United States declaring war in China was a major factor affecting, if not determining, Chinese policy. To deny this or to attack Mr. Dulles for affirming it, is to weaken by implication the whole conception of the deterrent policy on which Western security rests. * * *

"But is it in substance so very different from the policy which Sir Winston Churchill was urging on the Chamberlain government in 1938—except that Mr. Dulles has a real saber to rattle whereas Chamberlain's scabbard was empty?

"Since the summit conference at Geneva, it has been fashionable to talk about war having been outlawed by common consent. This gives a profoundly misleading impression. What happened at Geneva was that both sides understood each other to have renounced ambitions which might lead to war. From renewed Russian toughness it is possible that Moscow is confusing these two impressions.

"No doubt China, whose conduct in recent months has been noticably mild, needs little encouragement to follow suit. That is why the hysterical outburst against Mr. Dulles' reference to war is doubly dangerous.

"If it were to confirm Russia's happy confidence that Geneva had cleared away the great deterrent, or if it were to encourage China to start probing again, then our distaste for hearing Mr. Dulles mention the awful word now might make us face the reality of war later."

The Daily Telegraph points out further that "to allow these marginal complaints" about the Life article "to provoke us into denouncing the central burden of his (Mr. Dulles') argument—that peace has depended in the past, and still depends, on America's willingness to fight—is to cut off England's nose to spite Mr. Dulles' face."

The idea may be paraphrased for American domestic politics this way: For Democrats to denounce the Dulles doctrine for captious reasons and to imply an unwillingness of the United States to fight when it becomes necessary, would be to cut off America's nose to spite a Republican Secretary of State. It could push the United States over the brink into war.

Oil Feudalism: "Where Wealth Accumulates and Men Decay"

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1956

Mr. MULTER. Mr. Speaker, the following editorial appeared in the January 7, 1956, issue of Labor. I direct it to the attention of our colleagues:

OIL FEUDALISM: "WHERE WEALTH ACCUMULATES AND MEN DECAY"

Twenty years of rule by an Arab king and American oil companies have produced a "police state," moral corruption, fabulous wealth for a few, slavery and misery for the common people, "decay and doom" which open the way for communism. That sums up an article on Saudi Arabia, carried recently in the conservative magazine Time.

Saudi Arabia is a big Arab country with the richest oil deposits in the world, completely controlled by Aramco, a subsidiary of four giant oil corporations. They are Standard of New Jersey, Standard of California, the Texas Co., and Socony-Vacuum, another Standard concern. Aramco pays oil royalties of about $200 million a year to King Saud, one of the last remaining "absolute monarchs."

Since World War II, the article says, King Saud has run through $1.4 billion paid him by the oil companies. Where has it all gone? Certainly not much of it to better the lot of the country's 5 million citizens, says Time. It cites this record:

"Life expectancy in Saudi Arabia is only 33 years; tuberculosis is prevalent; 70 percent of the population have trachoma (a serious eye disease), and at least 40 percent suffer from syphilis. In 1950, the per capita income was $45. As many as a quarter of a million Saudi Arabians may actually be living in slavery."

In shocking contrast, the article points out, "322 princes of the royal blood get $32,000 a year apiece, plus expenses—upkeep of palaces, car and travel allowances. Those who hold office get $320,000 a year each, plus expenses.

"Three new air-conditioned palaces now under construction will bring the King's personal total of palaces to 24. Though the country boasts only 200 miles of surfaced roads, it continues to rate as the best Cadillac market east of Suez. In a country which must import half its food, the most noteworthy farm project is 1,800 acres operated primarily for the benefit of the royal family tables."

Almost all the oil wealth, the article says, "has gone down the drain in vast private fortunes, vast expenditures by princes and officials," and lavish squandering by King Saud.

For example, when he visited the neighbor country of Iran this year, Saud presented the Queen with diamond jewelry worth $900,000. After attending the 1953 coronation of King Feisal, he presented the Iraquis who looked after him with a fabulous tip—$80,000 in cash, two Cadillacs and a Chevrolet.

At Simla (India), he gave $400 for one cup of tea, and when his car flattened a farmer's chicken, the owner received $40 in kingly recompence. At Aligarh, he gave $600 to his car drivers. During a few days in New Delhi, his party spent $100,000 for gold-braided cloth, sandalwood and ivory bric-a-brac for the wives back home.

"As the profligacy of King Saud's household has increased, his tyranny has tightened," the article says. "This is the surest sign of the regime's decay and doom.

"Wealth has become the only criterion of merit. The common thief still forfeits his hand, the common adulterer his head. But the higher spheres of society, where speculation and vice are practiced, live their lives with complete immunity from censure. A police state has usurped the functions of the Islamic law.

"The fountain of Arab chivalry has been fouled with oil," the article says. "The mouths of the preachers and prophets have been stopped with gold." And it's gold from American oil companies.

Statement by Hon. Abraham J. Multer, of New York, to the Antitrust and Monopoly Subcommittee of the Senate Judiciary Committee

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1956

Mr. MULTER. Mr. Speaker, I wish to call the attention of our colleagues to the following statement which I presented on December 30, 1955, to the Antitrust and Monopoly Subcommittee of the Senate Judiciary Committee:

Mr. Chairman and distinguished members of the committee, permit me first to thank you for the opportunity to present this statement to you.

I know only too well the tremendous task that confronts you in trying to get at the facts concerning the automobile industry and all of its facets.

Manufacturing and assembling, wholesale and retail selling, transporting, financing, servicing, repairing, are all part of the overall problem.

Not the least of the problem is the fact that what we are dealing with in the final analysis is the automobile which is undoubtedly one of man's most modern vehicles of progress. At the same time it can easily be, even in the hands of a good and thoroughly experienced driver, as described by the late Justice Holmes, "a lethal weapon," a veritable juggernaut of destruction.

Many an inexplicable accident is caused by defective vehicles. The blame should rest on the manufacturer. He passes his responsibility on to his dealers. They cannot assume it or begin to fulfill the obligation.

There was a time when every auto leaving the assembly line was thoroughly inspected and tested. That time has long since passed. Today no manufacturer and no assembler of cars does more than spot check them. Sometimes 1 in 10, ofttimes 1 in 20.

All the public ever hears about is the stock car that stood up under all sorts of road tests for thousands of miles. We never are told how few of the total number of cars made or assembled are so tested.

The companies' warranties today are practically worthless. Cars leaving the assembly lines have all sorts of defects. The burden is placed on the dealer to deliver a car in good running order and to service it, if it is not.

With price competition what it is, the dealer gives a minimum of service until the guaranty period runs out, after which he can charge the consumer for his service.

There is a very simple remedy for this. Enact a law that no automobile may be sold, transported, or used interstate unless accompanied by a certificate from the manufacturer or assembler of the car that it has been inspected and found in good working order and further, that it has been road tested and found in good operating order after at least 100 miles at each of the speeds of 15, 30, 45, 60, and 75 miles per hour.

For the sake of brevity I will not repeat the details of much of the testimony already presented to this committee. I know that you appreciate that most dealers dare not come before you and tell the full facts as they exist in this industry.

The pressures exerted upon them are terrific.

They are required to buy and stock accessories they know they will never sell.

They are required to receive and dispose of automobiles they do not want to order and did not order.

Most of these cars, like those they do order, are shipped into the dealers with accessories, which are billed as extras. These extras are built into the car and the dealer has no choice as to whether he or his customer wants them.

For instance, every car comes with a hole in the dashboard for a cigarette lighter; but the lighter is an extra.

Most cars are specified as equipped with a vacuum windshield wiper. The cars, however, are shipped in with electric wipers as as extra.

There are any number of other items affixed and shipped similarly.

The dealers must pay for advertising literature they do not want and would not order. It is sent in to the dealer in such quantities as the manufacturer thinks he should distribute. The dealer is billed and must pay for that literature even though he throws most of it into the waste basket.

The dealers must pay a fixed sum per car to the manufacturers toward the cost of advertising. The dealer's name and address is never part of that advertising, only the product is mentioned.

The dealer must handle only genuine parts and accessories with the manufacturer's name, which is not made by, but is sold by the auto manufacturer to the dealer at top prices. The dealer could buy the same parts much cheaper from the actual

manufacturer thereof, but does not dare do so.

The dealer who complains about those things will not be a dealer very long.

The manufacturer and assembler charge the dealer for freight and taxes on the freight in accordance with the fixed tariff of the most expensive carrier and ship the auto at the dealer's risk by the cheapest means of transportation. The manufacturer pockets the difference, including a sum in excess of the tax paid to the United States Government.

That racket can easily be destroyed by prohibiting the phony charge and requiring the tax to be paid on the amount collected for freight regardless of the amount paid by the manufacturer.

Lump sum bills should be prohibited and complete itemization should be required of both manufacturer and dealer and no sum should be collectible by either for extras unless ordered in writing signed by the buyer.

As long as the manufacturers want to have dealers under contract to handle only particular makes of cars, the manufacturers should be required to sell only to such dealers and to prohibit bootlegging. The manufacturers should be required to cancel the franchises of bootleggers.

The exaggerated and fraudulent advertising by dealers is encouraged, and practically demanded by the manufactures. Make all such advertising the responsibility of the manufacturer and it will cease overnight.

The last matter I wish to touch on involves the now well-known adage: What is good for General Motors is good for the country.

You will see in a moment that we can now change that to "What is bad for the insurance companies is not bad for the automobile companies."

On September 8, 1955, I wrote to Secretary of Defense Wilson calling his attention to a scheme by which armed service personnel returning to this country are being duped and mulcted of thousands of dollars in connection with the sale to them of new automobiles.

I indicated that the matter had been called to the attention of the automobile manufacturers but they have failed to do anything to prevent these practices.

I further stated that the Secretary of Defense need not make any determination of whether these practices are fraudulent or merely unethical, but urged him to direct all commanding officers to alert their men to these practices to afford them an opportunity to protect themselves accordingly.

My letter of September 8, 1955, is exhibit A, annexed.

I received an answer dated September 23, 1955, a copy of which is annexed as exhibit B, in which the Department of Defense refused to take any action.

I replied by letter of September 28, 1955, a copy of which is annexed as exhibit C, again indicating the need for departmental action.

No answer has been received to my last letter.

Now let us see what happened when the Department's attention was called to similar fraudulent practices by insurance salesmen. No General Motors was involved.

An investigation was instituted which confirmed the charges.

A complete set of regulations was promulgated by the Defense Department, including a directive to commanders of all bases, making them responsible for protection of the men against such frauds.

Another reason for different treatment of the phony automobile salesmen is that the fraudulent business is so profitable that the automobile manufacturers have sent their own direct representatives overseas to grab this business.

Thank you, gentlemen, for permitting me to make this statement to you.

EXHIBIT A

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., September 8, 1955.

Hon. CHARLES E. WILSON,
Secretary of Defense,
Department of Defense,
Washington, D. C.

MY DEAR MR. SECRETARY: For some time Members of Congress have been receiving complaints about the tactics being used by various dealers in selling new automobiles to members of the Armed Forces returning from posts outside of the country.

It seems that some of these retailers have sent representatives abroad who through fraud and deceit induce these men who are about to return to the United States to sign contracts, and to pay deposits for the delivery of new automobiles to them at the port of their arrival in this country. As part of this scheme these retailers have made exclusive rental agreements for offices in the hotels in this country at which these men and their families are temporarily lodged upon their arrival here. The deceptive practices are continued at those places until the delivery of a new automobile is made and payment obtained.

No purpose can be served by setting forth in this letter the nature of the fraudulent representations that are made, nor is it necessary for the purpose of this letter to determine whether or not these practices are actually fradulent or merely unethical business practices. The result of all of these practices is that these men are being duped and taken advantage of. They are paying more for these automobiles than if they bought them in their home towns or, for that matter, if they bought them at the port of arrival. They are paying higher finance charges than they would pay if they took the opportunitiy of financing their automobiles in their home towns or in the city in which they are discharged from the service, and they are being deprived of the inspection and service that ordinarily goes with a new-car purchase when made in their home towns.

The automobile manufacturers, when apprised of these practices, have taken the position that these retailing practices are no concern of theirs.

I believe you will agree with me that in the absence of the manufacturers undertaking to prevent these practices, something must be done to help these men.

My suggestion is that you immediately issue a directive requiring commanding officers in all stations outside of this country to alert the men under their command to this situation, and to advise those men that it is inadvisable for them to make such purchases while abroad, or, for that matter, even at the place of arrival in this country, or the place of discharge from the service in this country, and that their best interests will be served by their making such purchases from dealers in their home communities. The hometown dealers, in almost every instance, can arrange for the delivery of a new automobile to them at their point of arrival or discharge in this country, which would then be available for them for transportation to their home towns.

I hope you will agree with me that such a directive will serve a very useful purpose. As a matter of fact, the directive and the notice from the local commanding officer can be appropriately worded so that neither manufacturers nor retailers need be accused of any wrong doing or impropriety, and yet provide some measure of protection to the members of our armed forces.

With kindest personal regards, I am,
Sincerely yours,

ABRAHAM J. MULTER.

EXHIBIT B

ASSISTANT SECRETARY OF DEFENSE,
MANPOWER AND PERSONNEL,
Washington, D. C., September 23, 1955.

Hon. ABRAHAM J. MULTER,
House of Representatives.

DEAR MR. MULTER: This is in reply to your letter of September 8 concerning certain practices of automobile dealers in selling to members of the Armed Forces returning from overseas posts.

You appreciate, I am sure, that no agency of the Department of Defense sponsors any plan of automobile sales such as you describe, and the Department is therefore without jurisdiction to discontinue it. The selection of an automobile salesman or sales contract is a matter of individual choice.

Overseas representatives of United States automobile dealers are not amenable to military control. So long as they comply with the laws of the locality in which they do business they can offer their merchandise for sale to both civilian and military. Control of this group like their contemporaries at the port would appear to rest with the automobile dealers, their trade associations, and perhaps the manufacturers.

I believe that the directive you suggest would be more restrictive than is appropriate for issuance by this Department and that it might effect the legitimate activities of firms and dealers who render real service to our personnel. I believe that the objective we seek, the use of caution and judgment by servicemen in their purchases from unknown vendors, can best be accomplished by a continuation of the present normal counseling given by commanders to their troops. I am taking the liberty of sending a copy of your letter to the military departments.

Your interest in the welfare of our Armed Forces personnel is appreciated.

Sincerely yours,

CARTER L. BURGESS.

EXHIBIT C

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., September 28, 1955.

CARTER L. BURGESS,
Assistant Secretary of Defense,
Department of Defense,
Washington, D. C.

DEAR MR. BURGESS: Receipt is acknowledged with thanks of yours of September 23.

I fail to understand how the directive as suggested by me is in any manner restrictive. It does not require the Department or any commanding officer to take a position on the matter, nor in any manner to interfere with automobile dealers in this country or abroad. It has always been proper for the Defense Department to alert the members of the Armed Forces against dangers that they may encounter, whether physical, moral, or financial.

Alerting these men to these practices is in direct line with such procedure.

Sincerely yours,

ABRAHAM J. MULTER.

Habeas Corpus Bill Upheld

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1956

Mr. CELLER. Mr. Speaker, under leave to extend my remarks, I insert herewith a letter which was printed in the New York Times of January 24, 1956:

HABEAS CORPUS BILL UPHELD—CONGRESSMAN DEFENDS LEGISLATION AS SEEKING TO END ABUSE OF WRIT

To the EDITOR OF THE NEW YORK TIMES:

The letter from A. Philip Randolph, president, Brotherhood of Sleeping Car Porters, published January 16, contained a critical view of a bill, then pending in the House of Representatives, relating to habeas corpus applications.

In the letter Mr. Randolph stated that the proposed legislation, if enacted, would "place such crippling restrictions" on the writ that it would become "unavailable and useless as a remedy except in very exceptional circumstances." He also stated that it will put "wage earners and Negro citizens in situations where it would be difficult for them to vindicate their Federal constitutional rights and to secure their personal liberty."

Such statements, as well as the entire letter, give an incorrect, if not completely false, impression of the purpose of this legislation. The letter is so written that it leads the reader into believing that the legislation is designed to discriminate against minority groups because of their race, color, or creed. Nothing could be further from the truth.

RACIAL BIAS DENIED

Even Thurgood Marshall, special counsel for the NAACP, recognized that such was not the case. While he testified in opposition to the bill, he nevertheless stated that the legislation had "no special racial significance" and contained "no threat of racial discrimination."

The purpose of the bill, H. R. 5649, is to restrain the abuse of the use of habeas corpus in our Federal courts by prisoners who have been convicted in State courts of State crimes. Until recent years a court having jurisdiction of the defendant and of the crime could render a judgment which was binding until reversed on appeal.

A person imprisoned under such a judgment could be released on habeas corpus only on a showing that the court was without jurisdiction to render it. Recent decisions of the Supreme Court, however, have held that even though a court may have had jurisdiction at the inception of a case it may lose jurisdiction during the course of the proceedings as a result of some violation of the defendant's constitutional rights.

This expansion of habeas corpus by the Supreme Court led almost at once to flagrant abuse of the writ, especially by persons imprisoned under judgments of State courts. Prisoners began to use the writ to appeal, as it were, their State convictions in the lower Federal courts. Simply by alleging a violation of a constitutional right a prisoner could seek to have a lower Federal court review the entire State court proceedings even where the conviction had been confirmed by the highest court of the State and certiorari denied by the United States Supreme Court.

The great writ of habeas corpus is one of the most important safeguards of individual liberty; but it was never designed as a writ of review in the Federal courts or anywhere else. The purpose of the proposed legislation is to restrict State prisoners to State courts, and require them to first exhaust available State remedies such as habeas corpus proceedings in the State courts before they will be permitted to make application to the Federal courts.

APPROVAL OF JUDICIARY

It is worthy of note that this legislation has the support of both Federal and State authorities. It has been approved by the Judicial Conference of the United States, composed of the Chief Justice of the United States (Justice Warren) and the Chief Judges of the Federal courts of appeal, the Conference of Chief Justices of the States, composed of the senior judge of the highest court of each State, the Association of State Attorneys General and the Section on Judicial Administration of the American Bar Association. It also has the support and approval of the United States Department of Justice.

Yet in the face of this considered judgment by our learned legal authorities Mr. Randolph implies that the legislation is unconstitutional.

Actually the legislation takes away the use of the writ from no one. The right is guaranteed under the Constitution. No one can suspend the writ; the Constitution forbids it. In those cases where there is a miscarriage of justice the writ will still be available. No matter what injustice there may be, there will be no denial whatsoever of the application for the writ under this legislation. But the application must be properly channeled and there must be proper supervision.

On January 19 this legislation passed the House of Representatives without opposition. This additional approval by the membership clearly indicates its worthiness, from a legal standpoint as well as from the standpoint of justice.

EMANUEL CELLER,
Chairman, Committee on the Judiciary.

Albert Gallatin, a Great Swiss-American Patriot

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1956

Mr. REUSS. Mr. Speaker, we are approaching January 29, the birth date of Albert Gallatin.

From the very inception of the democratic way of life on our shores there have come from across the seas men and women whose contribution it was to help build America into a nation that is today the freest, richest, and most powerful on earth.

Some came in time of war and others came in time of peace. The illustrious names of Lafayette, Kosciusko, Von Steuben, Rochambeau are known to all of us as the heroes whose assistance on the fields of battle or on the high seas helped the colonials throw off the yoke of the foreign oppressor. Their military feats are forever enshrined in the memories of our people.

But after the birth of the Nation came the growth of the Nation. It was then the young republic turned to heroes of another sort, men whose job it was to fill out the democratic framework which had been erected at such cost.

Such a man was the young Swiss-born Albert Gallatin, a youth of 13 in Geneva when our great Revolutionary War began. Born on January 29, 1761, and an immigrant at 19, Gallatin, as Senator, Congressman, and Secretary of the Treasury, was destined to fulfill himself nobly as an American and to earn for himself, in the company of such giants as Washington, Jefferson, Madison, John Adams, the title of Founding Fathers.

His history as an American began in 1780 when he landed in Boston, fired with the concept of democracy he was never to forget, even in the most provoking circumstances.

For Gallatin, whom Jefferson called a man "of a pure integrity, and as zealously devoted to the liberties and interests of our country as its most affectionate native citizen," was, during his early political career, to be submitted to the most outrageous attacks because of his foreign birth.

When Gallatin entered Congress in 1795 and had the temerity to challenge the fiscal operations of the United States under the Federalists, Secretary of the Treasury Alexander Hamilton was in power. And, smarting under the demand that the Treasury must account to the people for its expenditures, Hamilton and his associates unleashed their attack on Gallatin who, nonetheless, achieved his purpose by keeping a cool head on his shoulders and fighting with the immense financial learning he commanded.

In 1801, when the Federalists were defeated by Jefferson and Gallatin was named Secretary of the Treasury, the Federalist attack on Gallatin was renewed; but he was to weather it, and, in the course of his tenure, substantially reduce the national debt, lower taxes, and develop and extend the credit and commercial relations of his adopted land in the markets of Europe.

Idealism, tempered by a respect for thrift and work, made Gallatin an ideal addition to the party of Jefferson and Madison. His early and exacting training in Switzerland, plus a natural aptitude for finance, were the very leaven his party needed to achieve the prosperity which, along with its democratic ideas, won and kept the support of the people.

Sound commercial relations—not war—offered the key to prosperity in Gallatin's thinking; and his policies were to bring the young Republic enormous dividends, and even the friendship of England with which he negotiated a commercial treaty following the War of 1812 which abolished all discriminatory duties.

In this light, it might be well to reevaluate some of our Government's recent decisions to place pitfalls in the way of commercial harmony. I refer especially to the increase in the watch tariff last year which affects the country of Gallatin's birth and our own country as well.

A successful working through of this tariff problem, in the light of Gallatin's precepts, is one way America can now profit from the exemplary life of this devoted adopted son.

The 38th Birthday of Ukrainian Independence

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1956

Mr. LANE. Mr. Speaker, January 22 marked the 38th anniversary of the in-

dependence declared by the gallant people of Ukraine.

In spite of Communist occupation and conquest, their devotion to freedom lives on, as strong and as imperishable as their Christian faith.

It is the light that never fails.

Communism has employed every torture and oppression to crush their spirit without success.

With all their material power the Communists are uneasy.

Why?

Because they know they are powerless to overcome the eternal spirit that glows in the hearts of 40 million Ukrainians. Having rejected the divinity that is in man, communism has alienated itself from the people.

Reading between the lines of Communist strategy, we detect this weakness.

Under one pretext or another, they seek to have the United States recognize the status quo in Eastern Europe and thus legitimize their brutal conquests.

That cunning plan is doomed in advance.

For the avowed and undeviating policy of the United States is to achieve by peaceful methods, the eventual liberation of every country held captive behind the Iron Curtain.

Peace can never be established on the shifting sands of expediency or appeasement.

It must be built on the firm foundations of moral principle, freedom, justice, honor.

Free Ukrainians the world over reverently observe the 38th anniversary of their independence.

In so doing they remind us of our own struggle to win freedom and of our responsibility to give every assistance possible to others seeking this same objective.

To the Ukrainians in the United States, and to their relatives overseas, we send greetings.

Although the times are dark, their day will come when the sun will also smile over a free, self-governing, and happy people who are proud to be Ukrainians.

Cyprus and American Foreign Policy

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1956

Mr. WILLIAMS of New Jersey. Mr. Speaker, we are all greatly concerned about the tense situation in the Middle East and about developments regarding Cyprus. I wish to call the attention of the Congress to a statement which may be helpful in formulating intelligent conclusions on the subject, in the hope of eventual solution.

The statement follows:

CYPRUS AND AMERICAN FOREIGN POLICY

(By Gene Rossides)

If Moscow had been directing the British diplomatic moves concerning Cyprus, a better job of weakening the West's position, militarily and politically, could not have been done. Even a cursory analysis reveals that Great Britain is the ally primarily to blame for weakening NATO, shattering Greek-Turkish relations and seriously jeopardizing American interests and those of the free world. If Britain is to qualify for her role as a leader in diplomacy in the Middle East then she will certainly have to show greater responsibility, foresight, and ingenuity than she is exhibiting over Cyprus.

For years Britain refused even to discuss the situation with the Greek Government or with the Cypriot people themselves. When Britain persisted in her refusal to negotiate, Greece informed her in early 1954 that she would be forced to bring the issue to the UN in the fall unless Britain agreed to private talks. Britain continued her policy of indifference. In the July 28, 1954 parliamentary debate the Conservative Government, through its Minister of State for Colonial Affairs, Mr. Hopkinson, aggravated the situation by saying that Cyprus "can never expect to be fully independent" (official report, July 28, 1954; vol. 531, chs. 507–508). Time magazine commented that "never" is a word British diplomats are never supposed to use (Time, Jan. 9, 1956, p. 26). There were many other statements uttered during that debate which added to the inflammatory situation. The remarks of the outgoing Secretary of State for the Colonies, Mr. Oliver Lyttelton, belittling Greece, can only be characterized as irresponsible especially when one recalls that it was Greece who stood by England in "her darkest hour" and with American help is the only member of NATO to have defeated the Communists by force of arms.

There can be no doubt that the above statements by high-ranking members of the Conservative Government severely hampered a peaceful solution to the Cyprus problem in 1954. Time magazine in referring to the Hopkinson statement wrote "his indiscretion was a signal that diplomatic pleading would not be enough" (Time, Jan. 9, 1956, p. 26). It is to be noted also that Mr. Hopkinson's "indiscretion" was repeated, in substance, as late as May 5, 1955, in the House of Commons debate and endorsed by the Secretary of State for the Colonies, Mr. Alan Lennox-Boyd (official report, May 5, 1955; vol. 540, chs. 1912–2000).

Even more irresponsible than refusing to negotiate is that at the same time Britain was privately conducting talks with Turkey designed to obtain the open opposition of Turkey to a plebiscite on the island. As Mr. C. L. Sulzberger stated in his column Foreign Affairs (the New York Times, Aug. 24, 1955):

"The British privately encouraged the Turks to express their interest. That was all Ankara needed. Ever since Turkey has been whipping itself into a frenzy over Cyprus. Instead of being dismayed, the British Foreign Office—which had taken over the hot potato from the colonial office—was pleased to cite Turkey's arguments as further excuse for doing nothing about changing the island's status."

It is significant to recall that 6 days after Greece submitted the Cyprus issue to the U. N., the British and Turks issued a communique from Istanbul that they would follow the same line on Cyprus (the New York Times, Aug. 28, 1954). It was only natural that the Turkish leaders with serious economic and political troubles internally would welcome the chance to divert attention to a foreign issue.

This is not all. In an effort to obtain American support the British Colonial Office deliberately misrepresented the factual situation on the island. The British suggested that the agitation was nothing more than a church-inspired movement imposed from above by a few church leaders for self-gain. Then the colonial office stated that the Communists were fomenting the discord. Even a slight familiarity with the Cyprus issue would demonstrate the falsity of these assertions. The truth is (1) the Communists have no voice in the nationalist movement; (2) that a plebiscite giving independence and union with Greece would strip the church of its lands and much of its prerogatives and outlaw the Communist Party. (A future essay will discuss fully the coddling of the Communists by the British.)

On June 30, 1955, less than 2 months after the May 5 debate, Prime Minister Eden announced a complete reversal of the no-talk policy by calling for a conference on the Cyprus issue. He invited not only Greece but also, for some reason, Turkey. The Cypriots were not invited on the excuse that this was now an international issues. At the conference Greece further modified the demands of the Cypriots concerning the timing of self-determination from immediate to within a reasonable time. Britain, in substance, repeated its previous position and refused to recognize the right of the people of Cyprus to self-determination while the Turks, whose only legitimate interest is minority rights, had the effrontery to say she wanted no change in the status quo; that if there was to be a legislative assembly the 17.5 percent Moslem minority must have 50 percent representation and that if there was any change in sovereignty it should revert to Turkey. As a result the conference broke down.

British motives in calling this conference are not above suspicion for several reasons: (1) the calling of a public conference versus the traditional British preference for secret negotiations; (2) the alternatives were clear—accept the offer of military bases and agree to self-determination either immediately or in the near future; (3) the failure to invite the Cypriots; (4) yet inviting Turkey whose only legitimate interest was and is minority rights; (5) Britain's attempt at the conference to give the appearance of a mediator. If Britain was not prepared to modify its extreme position why did she call the conference? Edward R. Murrow said in part the following in his CBS radio broadcast (September 9, 1955):

"Now in hindsight one can say it would have been better never to have held it [the conference]. The Greeks now are sure the British invited the Turks so as to hide the real issue, which was between Greece and Britain. The British made it appear that they were there mediating between Greece and Turkey. If this was the British intention, it didn't work. An unpleasant situation wasn't bypassed; instead a dangerous hostility was produced between two allies. This, of course, is what the Kremlin is working day and night to bring about. Now this much has been accomplished without Soviet help. The men in the Kremlin must be not a little gratified."

In the parliamentary debate of December 5, 1955, the British apparently withdrew Mr. Hopkinson's "never" and appear to have replaced it with a "sometime under certain conditions" but still refused to say when. The debate was hampered as the Government requested that they not be pressed as private negotiations with the Cypriots were in progress (official report, December 5, 1955). It appears from the news reports that these negotiations are still continuing.

The United States is highly interested in inducing Greece and Turkey to resume friendly relations and make their alliance what it once was. We are also interested in keeping England our stanch ally. What is the solution? A year and a half ago, before Turkey was injected into the dispute, the New York Times, in an editorial, suggested the following (the New York Times, August 20, 1954):

"As the British acknowledged in respect to Suez, the value of any base depends on the friendship and cooperation of the surrounding people, whose enmity would turn the base into a liability. This recognition would

seem to open the way to a compromise, which is also urged in the British press. Such a compromise might well envisage titular Greek sovereignty and self-government in Cyprus under an ironclad and irrevocable treaty providing for British bases on the island and a secure British occupation of them. The first should satisfy Greek patriotism, the second should meet British strategic requirements."

As regards American relations with England the Cyprus question is a reflection of the broader American problem of preaching an anticolonial policy on the one hand yet supporting allies who are colonialists. In the case of Cyprus there is no reason why our stand on colonialism should be different from that on Russian colonialism in the satellite countries.

Traditionally, the United States and Greece have been the closest of friends. Daniel Webster in his famous speech in the House of Representatives, January 19, 1824, on the Greek War of Independence, noted that the United States was the first Nation to support the movement of the Greeks to regain their freedom. In the present era of struggle between the West and the Communists, American aid to Greece was eminently justified when the Greeks defeated the Communists by force of arms. In addition, Greece, as a member of the Balkan alliance, contributes to the defense of the free world.

Today Greece stands on Russia's doorstep a symbol of freedom, and it is vital to the United States that she so continue. Greece can undoubtedly be convinced to renew an active role in the relatively dormant Balkan alliance. However, Greece's resumption of normal relations within the Balkan alliance will depend primarily on Turkey because of the staged anti-Greek riots of last September which devastated the Christian and Jewish communities in Turkey. The full extent of these riots, so reminiscent of Turkey's 19th century massacres, has yet to be revealed. In this connection mention must be made of the identical letters sent after those riots to Greece and Turkey by our State Department. The reaction to those letters appears in the following quote from Mr. C. L. Sulzberger (the New York Times, Sept. 24, 1955):

"Now the United States, thanks to maladroit public diplomacy is rapidly losing favor [in Greece].

"Mr. Dulles sent identical messages to Athens and Ankara telling both allies to be good boys and recalling how much aid we had given them. The Greeks felt as if, having been beaten up in an unprovoked fight, they were being hailed into the same dock as the bully who assaulted them.

"The two most serious Athens newspapers reacted as follows: 'Mr. Dulles places criminals and victims on the same level. He has not felt either the moral or the political necessity to condemn the atrocities of Izmir and Istanbul and instead mentions financial aid, suggesting it will cease unless we comply with his instructions.' And: 'His message is a revolting and unacceptable composition of cynicism, guilty falsification of reality and insolent behavior toward an honest people. Silence would have been a thousand times preferable.'"

With Greece, American diplomatic strategy could be quite simple. Adhere to traditional American concepts of freedom and opposition to colonial rule and we retain stature. Depart from such policies, or give the appearance of departing from them, and we do ourselves, and the free world, great injury. Such is not the case regarding Turkey. She would have us support Britain's colonial rule of the island and even further suggests that the island should revert to Turkey because of prior conquest, giving no thought to the fact that over 80 percent of the population is Greek and that the Turkish minority is about 17.5 percent. If one carries Turkey's argument to its logical conclusion then all of the Middle East and Greece should revert. The United States should not tolerate such a position. This is especially true when one realizes that the prime reason Turkey seized the opportunity to voice its objections was to divert attention from serious political and economic troubles at home to a foreign issue.

The United States should oppose continued colonial rule of Cyprus for the following reasons among others:

1. The British themselves are sharply divided. Both the Labor Party and Liberal Party have repeatedly criticized the Eden government on this issue, and most of the editorial comment in England and quite a few members of the Conservative Party favor the acceptance of the compromise position.

2. NATO would be strengthened by a plebiscite as whatever value the base has would be increased by a friendly rather than a hostile population plus additional manpower (at least three divisions) from amongst the Cypriots.

3. The Cypriots, a mature, civilized people, could govern themselves today.

4. The rights of the Turkish minority can be fully protected.

5. There is no problem of the Communists getting control as, among other points, union with Greece would outlaw them.

England's serious errors over the island of Cyprus have badly damaged the American and western defense system in that area and lowered sharply American political prestige. The United States is not faced with her usual postwar dilemma of supporting the colonial power versus a reactionary local government or the Communist-led aspirations of subjugated people. In the case of Cyprus human rights and political expediency combine. American self-interest is best served by a position designed to make the British Conservative Government accept the compromise position of British bases and self-determination at some determinate time in the near future. If Britain accepts the compromise offer it would go a long way to restrengthening NATO and the free world and help in reestablishing the normal functioning of the Balkan alliance. In this connection it is worth noting the following from Time magazine (Time, January 9, 1956, p. 26):

"But the special tragedy of Cyprus is that it involves friends, and that the suffering should be so simply avoidable. A clear statement from the British Government promising the right of self-determination at a definite time in the near future to Cyprus' 520,000 people could halt overnight a conflict that daily grows more violent and more dangerous. Week by week it becomes more apparent that Britain's release of control of Cyprus to its inhabitants is not only the just solution, but the inevitable one."

Must Tariff Reduction Be a Strictly American Move?

EXTENSION OF REMARKS

OF

HON. CHARLES RAPER JONAS

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1956

Mr. JONAS. Mr. Speaker, under leave to extend my remarks in the Appendix, I include an editorial which appeared in the January 22 issue of the Charlotte Observer. While stimulation of world trade is a most desirable objective, this editorial contains a timely reminder that we are practically a free-trade country with respect to all commodities we buy in quantities and that our markets are wide open to any country that wants to sell us something we do not have in exchange for something they do not have. I trust our negotiators at Geneva will keep these facts in mind.

The editorial follows:

American newsmen covering the tariff conferences at Geneva are sending dispatches to their papers saying that the division of the 26 nations paticipating seems to put the United States on one side and all the rest on the other.

This is hardly surprising, because the previous conferences under the General Agreement on Tariffs and Trade seemed to have the same cleavage. This organization, in fact, has given the impression of a general offensive against American tariffs. This is the first time, however, that the division has been described so candidly.

All the delegates know that the Eisenhower administration has been given authority to lower tariffs by as much as 5 percent a year for 3 years, and their chief object at the conference apparently is to see that Mr. Eisenhower does it.

They are carefully avoiding one other circumstance: that the United States began lowering tariffs by Executive order 20 years ago, and as a result of this the country now has one of the lowest tariff schedules in the world.

For all commodities that we can buy in quantity, we are practically a free-trade country. It is only on those goods that we produce in abundance and that we do not need to buy abroad that we maintain a protective tariff.

We need to protect our textiles, for example, because no other textile producing country in the world pays its workers such high wages as we do. Japan pays its textile workers only one-tenth what the American worker gets. It is to protect those wages that we keep tariffs on goods that we do not need to buy from other countries.

But our market is wide open to any country that wants to sell us something we do not have in exchange for something they do not have.

The GATT requires that, when two nations negotiate a bilateral agreement reducing tariffs to each other, this agreement is automatically extended to all other members, even if they do not negotiate for them.

Few of the nations represented at Geneva in the current conference are showing any interest in reducing their own tariffs. Neither do they indicate that they will remove other trade barriers like import quotas and pegged currencies that have the same effect as high tariffs.

The United States is the only country represented at Geneva that is willing to negotiate tariff reductions with all the others. The line-up, however, remains the same. All the rest appear to be standing by, waiting for President Eisenhower to reduce American tariffs.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

The Need for Youthful Spirit in Government and Private Affairs

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, January 25, 1956

Mr. WILEY. Mr. President, I was privileged last Sunday to address the Green Bay Junior Chamber of Commerce of the subject of the need for youthful spirit in government and private affairs. I ask unanimous consent that my address may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SENATOR WILEY STRESSES THE NEED FOR YOUTHFUL SPIRIT IN UNITED STATES GOVERNMENT AND PRIVATE AFFAIRS—SAYS YOUTHFUL SPIRIT "WILLING TO TAKE CAREFULLY CALCULATED RISKS" IS ESSENTIAL IN AIR-ATOMIC AGE

(Excerpts of address delivered by Hon. ALEXANDER WILEY, Republican, of Wisconsin, before Green Bay Junior Chamber of Commerce, January 22, 1956, Beaumont Hotel)

It is a real privilege for me to be present at this distinguished service award banquet.

Wisconsin is proud of the Jaysee movement. And Green Bay has every reason to be particularly proud of the award tonight to the most outstanding young man who has best served this fine community.

VALUE OF GRASSROOTS LEADERSHIP IN COMMUNITY

Awards of this nature serve to spotlight the most responsible type of grassroots citizenship.

They give a wonderful shot in the arm to those fine folks who, known and unknown, 365 days a year, are trying to make Green Bay and other Wisconsin and American communities real garden places.

I mean the sort of flourishing community in which we most enjoy raising our children—a wholesome community, appealing, friendly, clean, forward looking.

SPIRIT OF YOUTH ESSENTIAL FOR FOUR REASONS

The fact that you have selected your outstanding young man serves as the keynote for my comments tonight.

Why? Because America needs the spirit of youth, as much or more now than at any previous time in our history. Let me prove that point by four basic reasons:

1. We need the spirit of youth which recognizes the new realities of the air-atomic age, the realities of the contracted world of the 20th century.

I shall have more to say about this later on.

YOUTHFUL SPIRIT VITAL IN SCIENCE

2. Second, we need youth, because this is a scientific age. And in this age we urgently need the young mind, the growing mind, the fresh mind, which is curious, which is inquiring, which seeks to come up with answers to the great, great scientific problems of the universe.

What science? All science—physical science and social science, "pure" science and applied science.

I refer particularly to nuclear science, to electronic science, to physics, chemistry, biology, as well as to astronomy, geology, and yes, very definitely the social sciences as well.

Man today is reaching out billions of light-years into outer space.

He is preparing to fling a space satellite hundreds of miles into the sky, there to circle the earth in its orbit, and to transmit data on cosmic waves and other phenomena.

Meanwhile, too, man is reaching down to the most minute form of matter and energy within the atom. He seeks to harness forces so tiny that not even man's highest-powered electronic microscope can see them.

And so, in this quest of the infinite, man needs a youthful, dynamic spirit.

In our great atomic laboratories it is not unusual to find young 30-year-old geniuses directing operations that may critically affect the peace and well-being of the globe.

MANY YOUNG CIVILIANS IN GOVERNMENT

So, too, I may add, in our United States Government in Washington—in nonscientific pursuits as well—we have been bringing in an increasing number of able young leaders.

We have had a 27-year-old Assistant Secretary of Health, a 33-year-old Assistant Secretary of Labor, a new 37-year-old member of the Interstate Commerce Commission.

We have literally dozens of young men, serving as "right hands" to top Cabinet and agency officials. These young men come from the grassroots of America.

UNPRECEDENTED MASS OF YOUNG LEADERS IN WASHINGTON

Comparative studies are not readily available as regards the total number of young men appointed down through the years, by the executive branch of the Government.

But I have seen impressive lists of the enormous number of young people who have been appointed to very high office in Washington since January 1953.

And I believe that there is good ground to estimate that, probably at no previous time in American history, have more qualified young men been appointed in such numbers and to such high positions, in virtually every single Cabinet department and agency of our Government, than the past few years.

From the ranks of these young men will come the Cabinet officers and agency heads of tomorrow. From their ranks in the Department of Defense will come, as well, America's military leadership in years to come.

YOUNG AND OLD WOULD SUFFER IN WAR

It has long been said that "young men fight the Nation's wars, but older men are responsible for handling the Nation's affairs at peace."

Well, the facts show that, today, young people are high up in the effort as well, to keep this Nation at peace. That is as it should be.

Of course, the burden of the next war, if ever it comes, would not simply fall on the young people in combat ranks, it would fall on our entire population.

War must not come; it need not come, and I don't believe it will come.

AMERICA'S GROWING PEACETIME NEEDS

3. Now, let us continue on the need for youth.

Thirdly, we need the spirit of youth to meet the dynamically growing peacetime needs of our people.

We number, as you know, 165 million people today.

We will number 220 million people by 1975. This tremendous increase in population means that we need a youthful spirit which will help provide us with more housing, more jobs, more schools, more playgrounds, more hospitals, more roads, yes, more parking space, more suburban communities, more of all the good things of life.

Our gross national product today is $400 billion. It will reach the half-trillion-dollar mark in the not too distant future. But that will take work—and a youthful spirit.

TEAMWORK ESSENTIAL

4. Finally, and perhaps most important, we need the spirit of youth in teamwork.

Young folks—on and off the athletic field—particularly enjoy working together, playing together, growing together; and that is what we need today.

We are a country of competitive individualists, but we need cooperation.

We need it between the 48 States. We need it between regions—North and South, East and Midwest and Far West.

We need it between labor and management. (If you or I want to see grim examples of the results of lack of cooperation and understanding, you and I need only look to communities very close to us, to see the tragic consequences.)

THE AIR-ATOMIC FACTS—KEY TO SURVIVAL

But, my friends, I should like to turn back now to the very first phrase to which I referred.

You will remember that I mentioned that we need the spirit of youth in the air-atomic age.

Why? Because upon such spirit depends our very survival.

If you were to ask me: "Senator WILEY, what is your most important job in Washington? What do you regard as your greatest obligation?" My answer would be simply this— in one word: "Survival."

I mean that this Republic must endure; it must protect itself. That is the first law of nature—self-preservation.

You are all familiar with the overall Communist threat—a military-diplomatic-economic threat to our beloved country.

It is the most serious threat in world history.

Why, particularly, the military threat?

NATURAL BARRIERS NO LONGER EXIST

The answer is simple: It is because natural barriers no longer exist against possible lightninglike destruction of our country.

What were those barriers?

They were two: First, the barrier of space.

Second, the barrier of time.

Today, because of man's ingenuity and inventiveness, there is virtually no space or time barrier between ourselves and the potential enemy.

The Atlantic and Pacific Oceans have been shrunken to the size of mere ponds. And the north polar area has been shrunken as well.

I have said from one end of Wisconsin to another, and I say to you tonight: We, in Green Bay, are actually closer than is the east coast to enemy attack—across the polar route—from Soviet bases in Siberia.

The fastest jet bomber from Soviet bases can reach us in less than 6 hours. Is it any wonder that our neighbor city of Milwaukee is today being ringed with Nike guided missile sites for purposes of defense against aerial onslaught?

And if there is developed—in 1 year—or 5 years an intercontinental ballistic or guided missile, it may reach us—not in 6 hours—but in less than half an hour. I repeat, less than half an hour.

In less than 30 minutes, a Soviet guided missile—with a nuclear warhead—could come crashing down on us, from over the Arctic roof of the world.

So, I ask, can we dare underestimate the need for fresh minds, youthful minds, open minds to cope with this terrific defense problem?

YOUTH NOT A MATTER OF CHRONOLOGICAL AGE

You will note that I do not refer necessarily to young people, alone, as such.

Why? Because youth is not really a matter of chronological age. The truly young person is the person who is young in spirit.

There are so-called elderly men and women who genuinely have the youthful spirit, as much as a bright-eyed young person of 25 or 30. That is precisely what we need in this air-atomic age—alert eyes, alert minds—dynamic outlooks, peering into the future.

NO ENTANGLING ALLIANCES—AN OBSOLETE CONCEPT

Now, just as the facts of the air-atomic age have changed the strategy and tactics of war, so they have changed international diplomacy.

For years we Americans had prided ourselves on our avoidance of entangling alliances.

But now we have found that even if we wanted to continue that policy it would be hopelessly obsolete; it would no longer protect us.

So if some of us tend to look backward instead of forward, we must take the blinders off our eyes. We must recognize the new and dangerous world in which we live.

A great American President, Abraham Lincoln, once said: "The dogmas of the past are inadequate to the stormy present. * * * As our case is new, we must think anew and act anew. We must disenthrall ourselves and we will save our Nation."

THE REPUBLIC—MY PARAMOUNT INTEREST

Thus, in my work as senior Republican on the Senate Foreign Relations Committee, I have sought to make sure that we follow up-to-date policies which will truly save our Nation.

My interest, as you know, has always been this Republic—yours and mine—first and foremost.

But I have recognized—as you, my friends, should, that, because the globe has been contracted, we must try to prevent wars before—not after—they flare up in far corners of the world.

Of course, we must not try to take on all the world's burdens, but we must be willing to carry our share. We must not be mental shirkers or slackers.

Youth has courage. Youth is willing to face the facts. That is the spirit we need.

SAMPLES OF KEY QUESTIONS TODAY

What are the facts? Where are the dangers in the world today? What can we do—what should we do, if anything, about them?

These are vital questions. They deserve study.

What about our attitude toward the riots in North Africa, so near our strategic air bases?

What should be our position on the explosive Middle East problem, between the Arabs and the Israelis?

What about the growing Communist threats inside countries ranging as far apart as France and Indonesia?

What should be the level of appropriations in next year's mutual-security bill? How much can we really afford? How much is necesary? What safeguards, what restrictions, should be written in the bill? Should aid be limited to 1 year? What should be our attitude, as regards aid to neutralist powers?

These are not easy questions. But they are not questions which we can duck.

Reality is still reality, whether we ignore it or not. And we dare not ignore it, if we would survive; as we must, and as we will.

It is not I, alone, who must come up with sound answers to these questions: it is you and you and you who must help me, and help all our legislators and our Chief Executive to find and to stay on the right path to peace.

THE BRINK-OF-WAR CONTROVERSY

Now, you have all heard about the recent criticism of our Secretary of State because he is said to have asserted that we have been close to the edge of war on three occasions.

These criticisms of Secretary Dulles are, in my judgment, unfair and unfounded.

It is not he who brought us close to conflict, nor President Eisenhower, but the leaders of the Kremlin. Secretary Dulles merely responded to the Red danger; he did not create it. He responded firmly and forthrightly, precisely as the American people and the Congress desired.

In this world, we cannot escape danger.

Let no one fool himself into thinking that there is any easy, nondangerous way to avoid global conflict.

War requires sacrifices and risks, and avoidance of war requires sacrifices and risks.

These are perilous times. The unhappy fact of the world in which we live, is that perhaps for the rest of our lifetimes, whether we like it or not, we are going to live close to danger.

That does not mean that war would be actually imminent at any time, but it does mean that, so long as the Soviet Union continues to desire to conquer the world, we have no alternative but to be ready and vigilant every single hour of every single day and year.

Our vigilance helps to prevent war. Our firmness reduces the danger of war. It is not the taking of risks which brings war closer; it would be a policy of timid appeasement—a policy of so-called no risk—which would really be the greatest danger of all the riskiest of all alternatives. Why? Because the Reds grow fat and strong on their enemies' weakness.

We want peace. We despise war. But we will not be appeasers. We will not throw a little nation to the Red wolf, or a big nation. We will and we must stand firmly against Red aggression.

This is the answer of America's young and old alike.

CONCLUSION

It has been a great pleasure to be with you tonight, as you salute the outstanding young man of Green Bay.

I want to reiterate my tribute to the Jaycee movement of Wisconsin and the Nation.

I hope that this occasion will serve as a great stimulus to the young folks who did not gain this coveted award tonight.

They should feel encouraged to carry on their work, because whether they win a prize or not, they can feel real satisfaction for jobs well done, on behalf of a greater Green Bay and greater America.

Arabs Open Hate Drive Here Against Israelis

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1956

Mr. MULTER. Mr. Speaker, the nationwide campaign of the Arab Information Center—an adjunct of the Arab League—against this country's aid or ties to Israel is aptly described by Messrs. Guy Richards and Jeffrey Roche in the following article which appeared in the New York Journal-American for January 16, 1956:

ARABS OPEN HATE DRIVE HERE AGAINST ISRAELIS

(By Guy Richards and Jeffrey Roche)

Armed with a $700,000 slush fund, the Arab Information Center has launched a nationwide propaganda campaign in the United States against this country's aid and ties to Israel, it was learned today.

The main strategem of the Arabs' new propaganda campaign here is to attack Israel's supporters in the United States of America by spreading anti-Semitic literature and endeavoring to influence public opinion in countless other ways.

STUDENTS ORGANIZED

Headquarters of the drive are on the 12th floor of the shiny, metal-edged Universal Pictures Building at 445 Park Avenue.

With the recent Arab-Soviet arms deals, and the effect of this on American public opinion, the Arabs have made the following moves here:

They have organized 3,500 Arab exchange students in the United States to serve the dual functions of community propaganda agents and intelligence collectors.

They have retained the services of a Washington legal firm at a $6,000-a-year fee. Douglas Whitlock, partner of Sanders, Gravelle, Whitlock, and Markey, registered his services with the foreign agents section of the Department of Justice on August 8.

Louis A. Gravelle of the firm said that "we are only handling legal matters" for the Arab Information Center. He denied the firm was acting as "lobbyists."

The Arab group retained the services of Chester S. Williams, a New York public relations counsel of 350 5th Avenue, who prepared a 150-page report suggesting various subtle approaches to influence public opinion here.

His total compensation for time and expense for less than 8 months' work was $14,986. For a while the Arabs followed his "kid-gloves" approach; then ended it and began a bolder, more violent campaign, spearheaded by anti-Semitic propaganda reminiscent of Hitler's Nazi techniques, Williams no longer works for them.

They have hired Mahmoud L. Hawari, an experienced Egyptian newspaperman, as a full-time press officer. One of his main assignments is to woo American newspapermen and columnists.

They have developed new contacts with radio commentators and started dickering for a possible TV outlet.

SPEECHES DISTRIBUTED

They have begun a monthly newsletter, a weekly press digest and a weekly newssheet. The latter is aimed at providing newspapers with "filler" material antagonistic to Israel and Jewry in general, and favorable to the

eight Arab States—Egypt, Iraq, Jordan, Lebanon, Libya, Saudi Arabia, Syria, and Yemen.

They have sent out in a wide reprint distribution every one of the more than 120 speeches made by Arab League or Arab Information Center principals. The recipients included more than 50,000 persons throughout the nation.

They have established a relationship with several notorious anti-Semitic agitators here.

Their diplomats—when they thought they were in civic assemblages not covered by the press—have launched the type of tirades not heard from foreign officials since the days of the Hitler regime.

The Arab Information Center in New York, an adjunct of the Arab League with offices in several parts of the world, has been granted a special operating fund of $700,000 to conduct its propaganda activities against Israel and American Jewry.

Of this total, two of the richest members of the league, Egypt and Saudi Arabia, have contributed, respectively, $140,000 and $70,000. Reliable but unconfirmed reports have Saudi Arabia putting up an additional $180,000 in the last week or two. The Arab League's own treasury has subscribed the remainder.

The collaboration of Egypt and Saudi Arabia in carrying the major load of the Arab propaganda drive in the United States of America is in line with similar action on the military front. The two nations recently agreed with Syria to an overall unified command of their military forces facing Israel's frontiers.

In another move on the economic front, Saudi Arabia has barred its nationals from trading with any American business firm whose officers are of the Jewish faith.

URBANE DIRECTOR

The New York office of the Arab Information Center opened last January under the direction of the urbane and jovial Kamil Abdul Rahim. For several years this moustachioed Egyptian was King Farouk's Ambassador to the United States. Rahim knows his way around Washington and New York.

Until the last few months, the Arab organization was distinguished by few signs of public activity.

During this period, Williams, the public-relations man, was preparing his survey of the American scene as the Arabs should view it.

We made five attempts to interview Williams. Two brief telephone calls were the closest we got.

He admitted being hired by the AIC, but stated that his relationship with it was "confidential." He readily conceded that he had done a 150-page "survey" for the Arabs and as readily declined our offer to submit extracts from it in our possession to be checked for authenticity.

REGISTERED AS AGENT

Williams also declined to discuss the work he did for the AIC, and the fees paid him, as "confidential" matters between himself and his client.

Documents he filed with the foreign registration section of the Department of Justice, however, shed light on these matters. As president of World Information, Inc., he registered on March 8, 1955 as an agent of the Arab Information Center.

In reports filed later, he stated that his services terminated on May 31, 1955.

We have checked the authenticity of the extracts from Williams' report that he declined to talk about. Williams' recommendations for influencing American opinion were subtle and all-encompassing. Among factors he outlined for "smooth functioning" of an Arab propaganda campaign in the United States of America were the following:

"The primary purpose of the Arab Information Center should be to open channels of communication with influential Americans.

"Contributions by American citizens to Israel should be taxable.

"American guidance on content emphasis (in pro-Arab literature, brochures, etc.), form of presentation, editing, is imperative. Make use of Americans who know how to enter the channels of communication."

STIMULATION URGED

The role of the 3,500 Arab exchange students now is much stronger than anything suggested by Williams.

He recommended: "Stimulate Arab students' activities in American universities and colleges. Someone would have to be directly responsible for supplying students with well-thought out material, discussing the Arab students' talents as speakers, organizers, and putting them to work."

But what has actually happened with the Arab students in recent months has far surpassed the scope of Williams' blueprint. Starting last May, Arab students have received two letters in Arabic, one of which an Arab Information Center spokesman identified as coming from his office, the other of which he repudiated.

This newspaper has been assured by Arnold Foster, general counsel for the Anti-Defamation League of B'nai B'rith, at 515 Madison Avenue, that the second letter as well as the first was authorized and distributed by the Arab Information Center. (The ADL has been investigating the Arab campaign.)

DIRECTIONS QUOTED

The first, acknowledged by AIC as its own, tells the students that "the Arab homeland should have the greatest share of your idle time that you may dedicate to its service and to the defense of its cause," and says it will supply necessary material.

The second tells the students that among the most important work cut out for them are:

"Writing articles and letters to newspaper editors in your university and local newspapers and magazines in defense of the Arabs and their cause. Sending to us reports on these efforts and on the doings of Zionists in your area, and on the stand taken by the press, radio, and television toward the Arab question."

A Cairo broadcast on the eve of the Czech-Egyptian arms deal tends to bear out the authenticity of the letter repudiated by the AIC, the letter which directs the students to be both propaganda and intelligence agents.

On August 8, the United States Foreign Information Service monitored the following bulletin from the Cairo radio:

"The Arab League is endeavoring to mobilize the efforts of the Arab students studying abroad, particularly in the United States, and to direct them in a patriotic way on Arab questions.

"It has distributed pamphlets among them and has provided them with the information required to combat Zionism.

"It has also asked them to perform the duty of making propaganda in favor of their countries through speeches and articles in and outside of their universities."

Considering that Egypt's Premier Nasser made public announcement of his arms deal with the Czechs on September 27, and that it was being negotiated for weeks before, the August 8 date of that Cairo broadcast about the students becomes doubly interesting.

That is the precise day that Douglas Whitlock registered as legal adviser in Washington for the AIC.

It was not long after Nasser's announcement that abundant evidence developed that the Arabs here had decided to throw away all restraints in attacking Jews in general in order to combat American support for Israel.

On November 14, at a luncheon of the Women's National Democratic Club of Washington, D. C., Syrian Ambassador Farid Zeineddine launched one of the most intemperate attacks on Jewry that members of the club had ever heard. It turned out that he believed no reporters were covering the event. He was wrong.

He warned that an American security pact with Israel might bring "American youths fighting against Arab youths in great bloodshed."

He alleged that Israel had "pushed Arab refugees out of their homeland," and in a reference to the number of Jews living in New York asked sarcastically:

"Why not let New York be a homeland for the Jews?"

His speech brought a formal protest of Secretary of State Dulles, signed by a number of non-Jewish Americans.

But Premier Nasser's decision to buy weapons behind the Iron Curtain not only served to strip all restraint from some Arab spokesmen here.

It seemed to trigger into action a new pro-Arab campaign by several notorious American anti-Semites who began to favor the Arab cause in their literature.

St. Louis Federal Jury Turns Against Injustice

EXTENSION OF REMARKS

OF

HON. FRANK CHELF

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1956

Mr. CHELF. Mr. Speaker, under unanimous consent, I place in the Appendix of the RECORD an editorial entitled "St. Louis Federal Jury Turns Against Injustice" that appeared in the Florence Morning News, Florence, S. C., on Tuesday morning, January 24, 1956, concerning the indictments of Matt Connelly and Lamar Caudle. Also a copy of a wire that I sent to the Messenger and Intelligencer at Wadesboro, N. C., on December 2, 1955, with respect to the same subject matter.

As a former chairman of the subcommittee of the House Judiciary Committee that conducted an investigation of the Justice Department in 1952, I agree with this editorial. In my opinion the indictment of Caudle will boomerang on the Republican Party because it is strictly political. A Democratic and Republican investigation of Caudle in 1952 and again in 1953 found nothing about which to indict Caudle. Why all this action on the eve of the 1956 presidential election?

The matters follow:

[From the Florence (S. C.) News of January 24, 1956]

ST. LOUIS FEDERAL JURY TURNS AGAINST INJUSTICE

The Federal grand jury in St. Louis is giving confirmation to strong statements of opinion that have been voiced over the past few weeks.

Matt Connelly and Lamar Caudle of the Truman administration have been indicted in St. Louis on a tax fraud conspiracy charge. The charge has all the obvious earmarks of a political effort to make Democrats bad and Republicans good. In a "frame" of this kind, where could the Republicans find two better men than Caudle and Connelly?

Now the jury has charged that much of what has happened is political; that the Government almost ordered the indictments; and, that things are going slow as a matter of election timing—not as a matter of justice.

Caudle has been hounded for years.

Previous hearings and investigations have demonstrated that this Justice Department tax official exemplified something of a high point in political naivete. They can prove he didn't use good judgment in some instances, but they haven't been able to prove he was dishonest—and they have worked with this same charge before.

If Caudle were not honest, any prosecutor able to pass a bar exam would have been able to prove it by now. The effort expended has been amazing.

Why try again?

Because he is a good gimmick.

His name has been tied to "Democratic corruption." Lamar Caudle has been associated with all of the evil connotations of Trumanism. This is election year and the Republicans made such a hit with their anvil chorus of crime and corruption at least election time that they are playing for a repeat.

Since the last time the Republicans burned a "Truman witch" a few of their 14 carat gold crusaders have tarnished. Men like Talbott, Wenzell and Strobel have pointed out that all Republicans aren't proper public servants.

The Republicans needed a real quick deal to get back in the headlines as champions of justice. They have done so by making justice a part of party politics.

From St. Louis comes the word that some members of the grand jury want out. Both Democrats and Republicans have protested the tactics being used and have been quoted in the St. Louis Post-Dispatch as believing the investigation is being handled so that any further indictments will be spaced at long intervals until November to serve the Republican Party rather than the interests of justice.

It would seem that the Republicans have enough to answer for without using the Justice Department as a means of stuffing the ballot boxes.

There is something more than sinister, worse than unjust, about using a man—already persecuted past reason—to serve partisan political advantage.

No one has been able to demonstrate that Lamar Caudle has been anything other than naive and kindhearted—neither of which seem to be acceptable in government. If we could feel that the government was honest in seeking conviction, then there would be little complaint; but there is the obvious evidence that the government is doing nothing more than using a well-worn name in an old game to win a new election.

WASHINGTON, D. C., *December 2, 1955.*
MESSENGER AND INTELLIGENCER,
Wadesboro, N. C.:

While I have not and shall not criticize a grand jury or court for any action or judgment, nevertheless, I believe I am one person who can say that your fellow-citizen, Lamar Caudle, has been really investigated. If after that investigation our subcommittee had thought he should have been jailed we would have said so in no mistaken language. After a thorough, searching and relentless study and examination of the record and of the facts, the Subcommittee of the Judiciary Committee of the House investigating the Department of Justice in 1952 said among other things the following about Lamar Caudle:

"Every member of the subcommittee and its staff who observed Caudle and listened to his testimony over a long period shares in the opinion that he is an honorably motivated man. This does not rule out his shortcomings * * *. He made errors of judgment, some of which played their part in destroying public confidence in the Government he served; and he swallowed more in the name of personal loyalty than any man should stomach, but Caudle never sold himself for riches or for power. If indeed he so much as skirted the edges of venality and corruption, he did more soul-searching about it than many of his associates who have emerged with unscathed reputations. And in every instance where the choice was clearly black or white, Caudle's choice appears to have been impeccably correct.

"The career of this man from his start as an eager young United States attorney to his final inglorious demise as a scapegoat is the most accurate reflection of decay within the Department of Justice that this subcommittee has come upon."

I am of the opinion that the leadership of the Republican Party wants to use both Caudle and Connelly as scapegoats to divert the attention of the country from the miserable record of Ezra Benson who has without any effort at all in less than 3 years, almost ruined every farmer in America. The GOP leadership wants us to forget such names as Adolphe Wenzell, Peter A. Strobel, and former Secretary of Air Talbott, and others who have been forced out of the present administration.

As a young prosecuting attorney I found it was much easier to indict a man than to convict him. As a young lawyer I also discovered it was far easier to sue a man in court than to get a judgment against him. It requires only words to indict or sue but thank God under our democratic judicial system it takes proof to convict in a criminal court or to get a judgment in a civil court. Last summer when the Justice Department requested the House Judiciary Committee to furnish it with our confidential files of our 1952 investigation, as the former chairman of the subcommittee that investigated the Department of Justice, I was unanimously named by the full committee to study the old records and to recommend to the committee whether they should allow the Justice Department to have these files. Although I knew at the time that "Justice" was on a hunting and fishing expedition, nevertheless, I recommended to the full committee that they allow the Department to have free access to all the files. In reading the old records this past summer I found nothing that would have changed my mind, thinking, opinion or judgment in the Caudle case and for that matter any other individual investigated by us. Remember, the fellow heading the Department of Justice at the present once intimated that former President Harry S. Truman was a "traitor" to his country. Just how partisan can one get? In my opinion Lamar Caudle is being castigated, eradicated, and "politicated." Therefore, in the interim, between now and the time of trial, I urge the good people of Wadesboro, Anson County, and North Carolina, where Lamar Caudle was born, raised, and educated, to reserve judgment of their fellow-citizen. Don't let anybody sell your hometown boy short.

FRANK CHELF,
Member of Congress, Former Chairman, Chelf Subcommittee.

Hospital at Wise Monument to Miners

EXTENSION OF REMARKS
OF
HON. W. PAT JENNINGS
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 25, 1956

Mr. JENNINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Bristol Herald-Courier, of recent date, in regard to he forthcoming opening of a new hospital at Wise, Va. This hospital has been constructed by the United Mine Workers of America to care for miners and their families in the area around Wise.

The editorial is as follows:

HOSPITAL AT WISE MONUMENT TO MINERS

The modern, magnificent hospital which the UMW has constructed at Wise, Va., simply as a utilitarian structure, is a tremendously vital addition to the lives of southwest Virginians.

But, more than that, the hospital is a monument to the coal miner.

It reflects his perserverance in the face of day-to-day dangers and adversities. It bespeaks the quality of his faith in a better day tomorrow, and the day after, and the day after. It portrays his concern for the health and happiness of himself, his family, and his fellow citizens.

The new hospital, however, will not be a monument of cold stone; it will not be just a commemorative bit of architecture.

Rather, the new hospital will be a living tribute. It will issue forth life in the newborn; it will offer solace and treatment for the sick and injured; it will give hope to the critically ill; it will embrace the span of mortal man from the first rasping cry to the last deep sigh.

So we join with the UMW and all the citizens of southwest Virginia in warmly welcoming this new institution into our midst. Its dedication will be an historic monument in the annals of this area and we are certain the years ahead will add luster to the pages on which that history is written.

An Amendment to the National Banking Act

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 25, 1956

Mr. ZABLOCKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to commend to the attention of the membership of this body a resolution which was adopted on January 17 by the Common Council of the city of Wauwatosa, Wis.

The resolution pertains to H. R. 8622 and any related measures which would enable commercial banks to deal in public revenue bonds. It is my understanding that this legislation is presently pending before the Committee on Banking and Currency of the House. It is my hope that early hearings will be held on this proposal so that this legislation may be considered by the full House in the near future.

The resolution follows:

Whereas an amendment to the National Banking Act permitting commercial banks to deal and trade in public revenue bonds has been proposed in the Congress of the United States; and

Whereas United States Senate hearings on the proposed amendment are scheduled to begin in the spring of this year; and

Whereas the hereinabove proposed amendment to the National Banking Act would promote the best interests and general welfare of the city of Wauwatosa: Now, therefore, be it

Resolved by the Common Council of the City of Wauwatosa, That the city of Wauwatosa be recorded in favor of the passage

of the proposed amendment to the National Banking Act permitting commercial banks to deal and trade in public revenue bonds now pending in the Congress of the United States; be it further

Resolved, That the city of Wauwatosa strongly urges our national representatives in Washington to support and vote for this legislation; be it further

Resolved, That the city clerk be and he is hereby authorized and directed to mail certified copies of this resolution to Senators ALEXANDER WILEY and JOSEPH MCCARTHY and Congressman CLEMENT ZABLOCKI, National Capitol, Washington, D. C.

Passed and dated January 17, 1956.

P. H. RIEMER,
City Clerk.

Approved January 17, 1956.

WM. B. KNUESE,
Mayor.

A Good Ambassador

EXTENSION OF REMARKS
OF
HON. EARL WILSON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 25, 1956

Mr. WILSON of Indiana. Mr. Speaker, our country certainly does not have an overabundance of good-will emissaries traveling abroad in our behalf and it is most heartening to note the work being done by that extraordinary young man, Evangelist Billy Graham. His unselfish devotion to his God and his country is indeed inspiring. More and more of our people are coming to appreciate this man and to regard him as a truly dedicated person. One of the major newspapers in my congressional district, the Bedford Daily Times-Mail, recently saw fit to devote its lead editorial to Mr. Graham, and I would like herewith to insert that fine editorial in the CONGRESSIONAL RECORD:

WE SEND A GOOD AMBASSADOR ABROAD

We had a letter from Billy Graham last week, and we suspect that just about every other American editor got the same thing. Billy is starting a trip to the Orient. The first stop is India, where he will spend 3 weeks, holding meetings in Bombay, Kottayam, Palamcottah, New Delhi, and Calcutta.

With scarcely a breathing spell, the evangelist will move on to Manila, Hong Kong, Taipai, Tokyo, and Seoul.

The letter was so unusual that we read it over a third time, expecting that it was primarily an offer to sell a series of articles which Graham would write while in the Far East. Frankly, we rather hoped there would be such an offer, as we admire the man and would have been a hot prospect were such articles available.

"We are making this tour," wrote Reverend Graham, "with two objectives in mind; first, to present Christianity; and second, to try and build some good will for the United States." He then went on to point out the tremendous propaganda results of the visit to India by Russia's Khrushchev and Bulganin. "They were smart enough to go over the heads of the state and appeal directly to the people," added Graham.

Graham expressed the hope that he would have from 50,000 to 100,000 people a day at his meetings, and that more than a million would hear him at his various stops. He wrote: "We are hoping the people of India will realize that we in the United States have something of moral and spiritual value to offer, as well as economic aid and engineering know-how."

Right there it seems to us that Graham has touched on the most grievous error in our approach to India, China, and the other lands now struggling against fear, poverty, and disease. We have been generous with money, technical aid, and advice but there has been no intimation that such acts were prompted by conscience, rather they have been a part of our program of national defense.

The human appeal simply could not be there in our aid to India, as the transactions have all been through governments, and governments think in terms of plans and patterns rather than in terms of people and the present.

Our programs have reached only the leaders and the intellectuals; we certainly have failed to win them. In view of the current riots in Bombay, perhaps the Indian leaders themselves have not reached the people. Cries of "Down with Nehru" are heard openly, more frequently, and by more people.

Most of our efforts have been of the do-good type, with no small touch of condescension. Instead of gaining good will we have been resented as interferers with Indian conceptions of law and procedure. This has been made manifest many times by statements of Nehru that he knows what India needs and wants, and he neither asks nor accepts advice from others. The result has been that we have poured in millions of dollars and got back ill will from the chief beneficiaries—the high Government officials—and in the meantime, we have lost all contact with the masses of the Indian people. From any viewpoint, India does not stand out as a bright spot, nor an added argument, for more foreign aid; at least, aid of the type which has been doled out for the past 8 years.

Krushchev and Bulganin paid scant attention to the Indian Government leaders. Nehru was very much miffed by the antics of the Russians, and especially their success in using the public appearances for anti-Western denunciations. What else could be expected? Had he studied previous Russian visits, he should have known. This one followed the usual pattern—and it is a good pattern too for them. The technique of appealing direct to the people has been worked very successfully in this country. Franklin Roosevelt was a master at it. Why shouldn't it work in India? It did—but for the Russians.

Billy Graham believes that without a spiritual presentation of what inspire America, made directly to the people, the most lavish programs of aid will fail. There is nothing in them which touches the heart. And men do not live by bread alone.

So the Western World will watch Billy Graham. He may well turn out to be the most effective—and the least expensive—bit of foreign aid we have used since the war. He will not take us to the brink of war; he will offer something firm, substantial, something of the human spirit, which is still the most important—and the most effective—force even in this world of confusion, distrust, and cold war. Keep your eye on Billy.

Albert Gallatin and Our Trade Policy

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 25, 1956

Mr. ZABLOCKI. Mr. Speaker, 160 years ago there was elected to our House of Representatives from western Pennsylvania the young Swiss-American Albert Gallatin who, as a Congressman, Secretary of the Treasury, and minister to European lands, was to establish his reputation indelibly in the history of this country to such a degree that he is ranked in the annals of America as one of the Founding Fathers, along with Washington, Jefferson, John Adams, and Madison. Gallatin was born in Geneva on January 29, 1761, and I believe it is fitting that we who have succeeded him as Congressmen celebrate his birthday today.

In his diary, Juljan Ursyn Niemcewicz, famous Polish writer and poet who accompanied Revolutionary War hero General Kosciuszko on a visit to America in 1797, early makes mention of the young Gallatin. He wrote:

Our stay in Philadelphia brought me countless friendships. I made friends with many Members of Congress and citizens of Philadelphia—among them Jefferson, whom I had met when he was American Ambassador to France, and Gallatin, born in Geneva and one of the finest Members of Congress.

The youth of 19 who landed in Boston in 1780 was not fleeing Europe in the sense that he personally was oppressed; but it was in America that he felt he had the greatest opportunity to work out those principles of democracy which he was to hold so high throughout his valuable life.

Before embarking upon his successful and distinguished career as a public official, Gallatin fought in the Revolutionary War, taught at Harvard, and farmed in western Pennsylvania. He read extensively and was largely self-taught. It is in a sense surprising to read that his command of the English language was poor, and that he spoke with a heavy accent throughout his many years in this country. He himself complained to Jefferson that he could not write even a decent letter without great labor. In spite of these difficulties, he became distinguished as an excellent debater, and well-known for his logic and his tremendous knowledge and understanding of financial matters.

In the realm of finance, he was to institute two major reforms which were to give the people greater control over the Nation's finances. With Jefferson, he instituted a system of strict accounting and submission to Congress of all appropriations. This was to earn him the enmity of the aristocratic Hamiltonian forces who held the contrary view that there was time enough to tell the Congress about disbursements after the money had been spent.

Gallatin's management of the public debt earned him the gratitude of the American people during the first decade of the 19th century. Under the Federalists, public debt had risen to some $83 million—which was better than 9 times the total annual income of the Federal Government. Yet Gallatin, upon entering into office of the Secretary of the Treasury, made careful plans and estimated that the entire debt could be repaid in 17 years. During the 8 years of the Jefferson administrations—when the total revenues of the Government averaged $12 million a year—he lived up to his promise and managed to retire

$57 million of the public debt. That is a record difficult to better.

For his financial acumen and democratic principles, Gallatin earned himself the hatred of the Federalist Party which was to abuse him for his foreign birth and accent. But he had the love of the people, the confidence of Jefferson and the unshaken belief that America's way was the democratic way.

The reduction of taxes and the promotion of trade were the basis of Gallatin's policy throughout his political career; and, in negotiations with foreign lands, he worked to end discriminatory tariffs to further the development of commerce. In this respect, he was one of the earliest proponents of the policy of "trade, not aid," either for his own country or for others.

It is regretfully that I recall now that just over a year ago this country ran counter to Gallatin's ideas in its dealings with Switzerland, land of his birth, in blocking the road to harmonious trade relations with that friendly trade partner.

Shortsightedly, we imposed higher tariffs on the imports of watches which largely emanate from Gallatin's native city—Geneva. A blow thereby was struck, not only against the Swiss watchmakers, but against America's exporters who value highly this cash market, and the American consumer who must pay more for his watch—results Gallatin would not countenance.

Few persons seem to remember that Switzerland, which has received no economic aid from us, has been our best cash customer in Europe. Since World War II, they purchased more from us than we bought from them. Our export surplus to Switzerland during this period amounted to $500 million. The annual volume of trade between our two countries has been very substantial. In 1954, for instance, we exported over $150 million worth of agricultural, manufacturing, and mineral commodities to Switzerland. Of this total, almost $3 million came from the State of Wisconsin.

Now if we are going to close our markets to Swiss goods, we are simultaneously curtailing their ability to purchase our products. We are hampering an exchange which is beneficial to both countries. It would be well, I believe, if we would reconsider the effects of our recent actions in the light of Gallatin's sensible precepts put forward nearly two centuries ago.

Ukrainian Independence

EXTENSION OF REMARKS
OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1956

Mr. MADDEN. Mr. Speaker, last Saturday evening I had the pleasure of attending a banquet at the Mayflower Hotel in Washington, D. C., wherein a great number of Ukrainian folks and friends of all nationalities gathered to commemorate the 38th anniversary of the declaration of Ukrainian independence. The unfortunate nations behind the Iron Curtain can be assured that Ukrainians living in this country will continue the fight for freedom and self-government until victory is attained. The continuation of Ukrainian struggle for liberation has not abated since enslavement by the Communist tyrant.

After the breaking up of tsarist Russia in 1917, the declaration of the independence of the Ukrainian State was solemnly proclaimed on January 22, 1918, by the will of the entire Ukrainian people. This meant the resurrection of that independent state of the Ukrainian people which had formerly existed for more than 500 years and had reached a high state of culture under the name of Kievan Rus. This had been ruined in the 13th century by the Mongol invasion. It arose again under the name of the Ukrainian Kozak State and was destroyed by tsarist Moscow. In January 1918, the aggressive invasion of the Moscow Bolshevik army, which poured from the north into Ukraine, precipitated the Ukrainian-Muscovite war. After 4 years of bloody struggle the Muscovite aggressors succeeded in again occupying Ukraine and with barbaric violence liquidating the revived Ukrainian State. In the place of a Ukrainian government, freely elected by the Ukrainian people, Bolshevik Moscow placed in power its own subordinate colonal administration composed of Muscovites and a handful of Ukrainan Quislings.

But the Ukrainian people never became reconciled to the violent seizure by Moscow and did not give up their political aspirations which they showed in the declaration of January 22, 1918. Again and again revolts broke out against Moscow's forces of occupation in Ukraine. Even that handful of Ukrainian Quislings who had been fascinated by the doctrine of communsm and had therefore become collaborators with Bolshevik Moscow, at the end of the twenties, broadcast the slogan, "away from Moscow" and called for the creation of a Communist Ukrainian State, but one completely independent from Moscow and as a result Moscow liquidated almost all the recent Ukrainian Communist leaders.

It is thus clear that if even the recent Ukrainian Communist Quislings took the path of independence from Moscow and sought to rid Ukraine of the occupation by Moscow, the Ukrainian anti-Bolsheviks defended their right to an independent Ukrainian state even more vigorously. They stood for their ideal in all possible ways and in all fields of life. As an example, in science in January 1928, the vice president of the All-Ukrainian Academy of Sciences, Prof. K. Voblyn, gave a lecture at a scholarly meeting in Kiev on the subject that Ukraine should become an independent economic unit and that it had all the resources for a separate and independent development; and another Ukrainian scholar, Volobuyiv, published at the same time in the Bolshevik of Ukraine an article on the Problem of the Ukraine Economy and openly alluded to the colonial exploitation of Ukraine by Moscow in the older and the most modern times and drew the conclusion that the Ukrainian people could have a free economic development and correct social conditions only in their own separate state completely independent of Moscow. The same efforts and desires for independence from the occupation of Moscow were shown in literature by the Ukrainian writers and poets. The Ukrainian social and political workers organized an underground Centre of Revolt to revive the armed struggle against occupying Moscow and after the discovery of this center by the Bolshevik secret police and its liquidation in 1924, the Union for the Liberation of Ukraine with its youth division, the Union of Ukrainian Youth.

The Muscovite forces of occupation attacked these consistent efforts of the Ukrainians to recover their national political independence with the most savage measures. They ruthlessly liquidated not only the Ukrainian political leaders but they shot or tortured in the prisons with the methods of the medieval Inquisition dozens of Ukrainian scholars, writers, and poets. During the so-called Yezhovshchyna, Moscow liquidated, shot, or banished to concentration camps for efforts to separate Ukraine from Moscow even all the members of the Tsk-KP(b)U and replaced them with satraps brought from Moscow, Nikita Khrushchev, A. Korotchenko, and so forth, and thus emphasized the complete colonial dependence of Ukraine upon Moscow in the system of the U. S. S. R. The entire Ukrainian people showed their desires for independence from the occupation by Moscow and to break this, the Moscow Communist Government organized in 1932–33 an artificial famine in Ukraine by collecting from the Ukrainian people and removing from Ukraine all the food supplies and thus starved about 4 million Ukrainians. As a manifestation of protest against this unprecedented barbaric crime of genocide committed by the Moscow Communist Government against the Ukrainian people, a member of the Organization of Ukrainian Nationalists—OUN—made an attempt on the life of the representative of the Moscow Bolshevik government.

This Organization of Ukrainan Nationalists—OUN—was an underground organization which took the further leadership of the struggle of the Ukrainian people for liberation from the occupation by Moscow and the restoration of an independent Ukrainian State.

On June 30, 1941, when the Moscow forces of occupation left Lviv, the capital of western Ukraine, the revival of the independent Ukrainian State was proclaimed. The German Nazis attacked the independent Ukrainian State. The German Gestapo arrested the members of the government of the revived Ukrainian State and thousands of Ukrainian patriots and sent them to German concentration camps. But this did not discourage the Ukrainians. They created for the armed revolutionary struggle against Germany the Ukrainian Insurgent Army—UPA—and continued the fight for fredom.

When in 1944 the Germans retreated from Ukraine and the country was again

occupied by the Moscow Bolsheviks, the Ukrainian Insurgent Army turned its armed revolutionary struggle against them and appealed to the civilized world to aid the Ukrainian people in defending the independence of the Ukrainian state. But the Western World was then deaf to the appeals of the Ukrainian patriots and allowed themselves to be duped by the peace-loving false declarations of the Moscow Bolsheviks. The Ukrainian patriots continued their armed struggle under the banners of the UPA to defend the independence of the Ukrainian State which was being brutally enslaved by Bolshevik Moscow. They had to carry on the struggle alone without any help from the freedom-loving world which was completely indifferent. In this heroic struggle for the independence of their state and for freedom from occupation by Moscow tyranny, after the ending of World War II thousands of Ukrainian patriots perished including the organizer and commander in chief of the UPA, General Taras Chuprynka—in civil life, Engineer Roman Shukevych—who fell in battle in March 1950 in a suburb of Lviv.

All these facts show that the Ukrainian people are consistently struggling for the return of their own national state independence proclaimed on January 22, 1918 and reaffirmed on June 30, 1941. They have not stopped their fight for an independent Ukrainian state even under the most difficult conditions but are continuing it unbroken to the present day. Most recently the Western World has heard of this struggle from the Germans, English, Americans, French, et cetera, who have been released from Bolshevik concentration camps and who met during their confinement millions of Ukrainian patriots who had been banished from their opposition to the occupational forces of Moscow to the Moscow Bolshevik concentration camps.

This natural desire of the Ukrainian people, as of every other people, to revive their national state independence must be fully supported by the Western world both in the name of their respect for freedom and also because an independent Ukrainian state will be a natural defensive barrier for Europe against aggression from Moscow. The existence of an independent Ukrainian state is an assurance of the security of Europe against the aggression of Moscow and is therefore in the interest of the entire Western World.

Truman, Farm Expert

EXTENSION OF REMARKS
OF
HON. JACKSON E. BETTS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 25, 1956

Mr. BETTS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Cleveland Press of January 16, 1956:

TRUMAN, FARM EXPERT

Harry Truman in St. Paul Saturday made a political speech about the farm question.

He said the failure of agriculture to keep up with the rest of the booming economy was all the fault of Ezra Benson and President Eisenhower. Farm prices have slumped, said Truman, because Ike and Secretary Benson planned it that way.

Truman might disagree with the Benson farm policies on logical grounds. But when he accuses the hard-working Agriculture Secretary of deliberately driving down farm policies, he is just talking to hear the words run out. Truman knows better, and that makes his statements all the more outlandish and imprudent.

Politics Forced Some Action on the Farmers' Problem

EXTENSION OF REMARKS
OF
HON. FRANK CHELF
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 25, 1956

Mr. CHELF. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial entitled "Politics Forced Some Action on the Farmers' Problem" that appeared in the Louisville Courier-Journal on Wednesday, January 11, 1956:

After 3 years, the Eisenhower administration has had to admit prosperity is not "just around the corner" for the Nation's farmers.

Stirred by the growing volume of protests from some of the Nation's most efficient producers, the Corn Belt farmers, President Eisenhower and Secretary of Agriculture Ezra Taft Benson finally have proposed action looking toward relief for the farmers.

As many of the farm-States legislators were quick to point out, the proposals contained in President Eisenhower's farm message offer the farmer little hope for 1956. They can only hope that Mr. Benson really intends to carry out the pork and beef buying program he has said will begin sometime next month.

The nine-point program which was offered to Congress rests heavily upon the idea of a soil bank. And this is merely a new name for the production restriction program that once was called the Agriculture Adjustment Act.

There is considerable doubt about the effectiveness of the soil bank ideas. If farmers are to be paid for taking some of their land out of production, it is reasonable to suppose that they will abandon their poorest acres and use the Government payments to increase the production of crops on their remaining land.

But even assuming that this scheme will result in some reduction of farm production, it is a curious sort of proposal to come from an administration which has argued so long and so forcefully against regimentation of farmers under Government programs. Surely the policing of farms that cooperate in this program will be one of the most stringent forms of regimentation our farmers yet have seen in peacetime.

One point among the nine offered to Congress deals with disposal of the accumulated Government stocks of farm products. While the administration here finally admits the desirability of such disposal, its proposal still is weak. Except for the suggestion that sales of these commodities be permitted at somewhat lower prices than the law now permits, it consists mainly of more coordination and study rather than direct action at present.

It should be pointed out here that if Secretary Benson had been more diligent in disposing of these Government stocks when the pile first began gathering 3 years ago, it would not now be the problem it is. It was his stubborn refusal to act or to get permission to act on this matter early that caused the hoard to grow and farm prices to sink constantly lower.

There are those who deplore the fact that the farm problem has gotten into politics. But had it not been for the fact that the farmer's plight became a political issue, the administration still would be standing idly by, preaching its curious mixture of 19th century economics and atomic age science as the solution to the problem.

Let us hope that the administration in its desperate hours before the 1956 elections will become even more aware of the political importance of the farm problem so that even more substantial support is forthcoming for the farmers.

Ukrainian Independence Day

EXTENSION OF REMARKS
OF
HON. FRANK M. CLARK
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 25, 1956

Mr. CLARK. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD a statement on Ukrainian Independence Day by the Ukrainian Congress Committee of America, a branch of which is in Lyndora, Pa., in my congressional district.

This year, like in previous years, Americans of Ukrainian descent observed the 38th anniversary of the proclamation of the independence of Ukraine on January 22.

The statement follows:

The universal proclamation of the Government and Parliament of Ukraine was issued in the capital city of Kiev on January 22, 1918, and the new state was recognized as the legitimate nation of the Ukrainian people by many foreign governments, including that of Soviet Russia, the latter, however, almost simultaneously with recognition, declared war and began hostilities against the new Ukrainian Republic.

Since that day in January 1918 Ukraine has spent about 35 years enslaved under the yoke of the Communist Soviet Russian empire without, however, surrendering in spirit or giving up hope of eventual liberation and complete independence. During this period of enslavement, Ukrainian armed resistance has been going on without interruption and as a matter of course. This has been attested to by a foremost American journalist, Mr. Stewart Alsop who, in his report on a trip to the Soviet Union in the summer of 1955 mentions the fact of the killing of a Russian colonel in Ukraine and says that he had been killed "by the Ukrainian nationalist underground." Mr. Alsop was surprised that his relator said it "as though it were the most natural thing in the world for a Russian colonel to be killed, 4 years after the end of the war, by underground resistance fighters." (Saturday Evening Post, December 31, 1955, p. 66.)

It is also the almost unanimous testimony of recently returning German war prisoners that the Ukrainians constitute the largest absolute and relative number of inmates of slave and concentration camps and that the

Ukrainians, along with other non-Russians, are the organizers and leaders of the anti-Communist resistance movement throughout the Soviet Union, the concentration camps included.

Underground resistance is only one of the many facets of opposition on the part of Ukrainians and other non-Russians to the enslavement and exploitation conducted by the Communist imperialists of the Kremlin. Refusal to be converted to atheism and perseverance in their religious beliefs is another area where the godless Kremlin rulers have been helpless against the people whom they would deprive of a faith in God.

This struggle of the non-Russian people, among whom the Ukrainians are the most numerous and most determined, is vitally important to the entire free world and particularly to our own United States, now the recognized leader of this free world. Our President and our Secretary of State have properly recognized this fact and have unequivocally reaffirmed the unwavering position of all good Americans by promising never to acquiesce to the continued and permanent enslavement of all captive nations.

This 38th anniversary of the proclamation of Ukrainian independence was the best occasion to repeat and make known to the world once again that Ukraine and the other so-called Union Republics of the Soviet Union have been jailed on the Soviet prison of nations for the longest time and that they deserve priority of liberation in the interests of peace and security of the whole peace-loving world, and primarily in the interests of the United States of America.

Word for an Unnamed Editor

EXTENSION OF REMARKS
OF
HON. FRANK M. KARSTEN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1956

Mr. KARSTEN. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the St. Louis Post-Dispatch for January 23 in reference to the recent apology of editor in chief of Life magazine, Henry R. Luce:

WORD FOR AN UNNAMED EDITOR

Editor in Chief Henry R. Luce has apologized for Life magazine's unfortunate brink-of-war headlines on the authorized interview with Secretary of State Dulles, and for the caption on the cover, "Three Times at Brink of War—How Dulles Gambled and Won." Thus Mr. Luce in effect blames some unnamed editor who handled the article or arranged its presentation.

The unnamed headline writer certainly did not write into the article that Dulles and the Eisenhower administration had walked to the verge of war three times and averted it by strong action. That was the news in the article and that is what the headline was based on.

It lacks a lot of being fair to make an editor the goat for the effect of the Life article. The trouble caused by the article was not caused by any headlines but by what Mr. Dulles said.

Mr. Luce's defense of Secretary Dulles could probably be well summed up in the following four lines:

Billy, in his bright new sashes,
Fell in the fire and was burned to ashes;
Now, although the room grows chilly,
I haven't the heart to poke poor Billy.

Tito Suggests

EXTENSION OF REMARKS
OF
HON. WILLIAM E. McVEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1956

Mr. McVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to include an editorial from the pages of the Chicago Tribune entitled "Tito Suggests." We shall soon have before us the mutual security appropriation which, in more understandable terms to the public, means our foreign aid spending program. The appropriation asked for this year is about $2 billion in excess of the amount appropriated during the last session. To those of us who have voted consistently against the foreign-aid program in previous years, this amount seems excessive.

Particularly are we opposed to spending of the type that has been appropriated heretofore for Yugoslavia. That country adheres to the Communist doctrine. Tito, himself, has openly espoused that philosophy. There can be no doubt on this question. Nevertheless, we have aided that country in cold cash to the tune of approximately $689,316,000, in addition to substantial loans and credits.

The Federal Government has no money except what it draws from the taxpayers of this country. In my judgment, there is no justification for taking taxpayers' dollars to help support a Communist country in any part of the world.

Other governments receiving our aid are using such funds to balance their budgets and reduce taxes while we continue on the road of deficit spending. Our expenditures in our various foreign aid programs, without interest charges, now total $108,847,779,000. Think what a splendid fiscal position we would enjoy if even a considerable portion of that expenditure could have been used to discharge our own obligations.

Anyone who feels we can buy friendship with money is doomed to disappointment. Ideologies are not for sale. We can only hope to win out over Communist philosophy by setting an example to the world of a better form of government, and even in that case, we shall not always win. Take for example, China. That country, not including Formosa, has received aid from this country to the extent of $2,476,260,000. Yet everyone is acquainted with the controversies continually raging between China and the United States.

It is difficult for the average individual to understand the impact on our economy of this foreign aid spending program. If one should undertake to spread this cost over the householders of the Nation, it would be found that for every family of four, this program has cost or will cost approximately four thousand dollars. The working men and women, as well as the corporations, will carry this burdensome taxload, much of which is hidden in the excise taxes we pay everyday. We meet these taxes at every turn, and it is important that workers become conscious of the inroad of taxes upon their earnings.

The following editorial deals with only one aspect of our foreign-aid program, but it is well worth reading:

TITO SUGGESTS

Hardly had Secretary of State Dulles and his delegation to the United Nations discovered that we are now primarily in social and economic competition with the Soviet Union for the favor of fence sitting countries than Marshal Tito of Communist Yugoslavia professed to discover the same thing.

In a speech at Belgrade he called upon the big powers to gain the sympathy of underdeveloped countries through economic aid rather than treaties of military alliance. He coupled this statement with a denunciation of the Baghdad Pact, in which the United States has a sympathetic interest. This treaty alines Pakistan, Iran, Iraq, Turkey, and Britain in a defensive coalition against Soviet incursions into the Middle East.

When Tito called upon the big powers to give unselfishly, he was obviously mindful of two things. One is that he has collected a billion dollars in aid from the United States; the other, that he has refused to join 14 non-Communist nations in the North Atlantic Treaty organization for defense against Russia.

The possibility cannot be excluded that Tito sees some profit to himself in supporting the notion that the most agreeable rivalry between the United States and the Russians is a competition in handouts. He stands to collect from both sides, and, on performance, he can expect to collect more handsomely from the United States. This commits him to nothing, which is very much to his taste, for his renewed friendship with the Soviet Union in the last year suggests that it is not in his temperament to side against his fellow Communists in a quarrel.

Report of the Second Hoover Commission

EXTENSION OF REMARKS
OF
HON. CLIFTON (CLIFF) YOUNG
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1956

Mr. YOUNG. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to insert a resolution received from the Las Vegas Junior Chamber of Commerce concerning the Second Hoover Commission report.

Their action herein is but one of a number of indication in my State of a growing awareness of the continuing need for efficiency and economy in government and adherence to constitutional principles:

Be it resolved, That the Las Vegas Chapter of the United States Junior Chamber of Commerce endorse and support the principles of Federal efficiency, economy, and adherence to constitutional precepts and hereby urge our Representatives in Washington to give full study and consideration to the report of the Second Hoover Commission as a possible blueprint for securing better government at a better price.

In particular, I would like to commend Mr. Dave Boyer, chairman of the Las Vegas Jaycees committee on Your Stake in Better Government, and the members of his committee for the efforts they have expended in studying this complex report and their work at a grassroots level to obtain better government.

Brink of War

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1956

Mr. BEAMER. Mr. Speaker, under unanimous consent, I include an editorial from the Huntington (Ind.) Herald-Press of January 21, 1956:

BRINK OF WAR

Before Secretary Dulles' time many American public men have made themselves popular by preserving the peace against odds. Teddy Roosevelt was loudly applauded for "carrying a big stick" and it has been long regarded as sound American doctrine to "keep your powder dry" so it will be ready for quick use if somebody else does not want peace as honestly as we do.

Secretary Dulles, however, finds himself in the midst of controversy because of a phrase used to describe how the Nation was kept out of war. The "brink of war" phrase, of course, was not his own. It was neatly turned by a Life magazine writer to embellish an article about the Secretary and the State Department. But there is nothing wrong with the phrase except that this is a presidential election year and any phrase that yields to distortion is quickly and expertly distorted by partisans.

The Dulles' article joins the complaints of General Ridgway that his Army budget recommendations were rejected as an example of what can happen to anything said in a politically electrified year. The critics of Secretary Dulles seem to be in a rather tangled position, however, when at the same time they cry out in support of General Ridgway's demands for larger military expenditures. The general's purpose was to build an armed establishment so strong that its very strength deters any aggressive designs of a potential foe. Those who support the general's viewpoint are, in fact, supporting the proposition that the United States maintain an armed force so great that if aggression of another nation brings us to the brink of war our might will prevent aggression from becoming war.

The reason Ridgway's fears can be discounted is that the avoidance of war after approaching its verge proves that we now possess the strength to discourage aggressors from attack. The military defense of this country, even though it does not consume the total of national expenditures that a very articulate group says it should, is not being neglected. The military and economic strength of the United States is being carefully maintained for this very purpose of establishing a might sufficient to assure peace of the world. Secretary Dulles' report that the peace has been maintained after coming to the brink of war removes cause for further worry that we cannot arrive at that position of security unless General Ridgway's figures are accepted in full.

After all, how in the current state of the world when there is no substance behind the smiles of fleetingly recurring episodes such as last year's Geneva spirit, can peace be maintained without the physical and moral courage to advance to the brink of war? If another phrase was coined in the words of diplomacy it would amount to the same thing as this controversial phrase coined in the words of journalism. The Reds have not yet at least attacked Formosa because the United States has naval forces in the waters between that island and the Chinese mainland of such might that it can stand at the brink of war to keep peace. The conception behind NATO was to establish a force for the protection of Western Europe sufficient to stand at the brink of war to discourage Communist aggression.

Dean Acheson tragically demonstrated that peace cannot be maintained by refusal to go to the brink of war for its preservation. By telling the world, which includes the Russians, that Korea was without the defense perimeter of the United States he invited an armed invasion that forced the United States into its most tragic and unrewarding resort to hostilities. If the United States had been willing and able to go to the brink of war then the tragedy of Korea might have been averted.

What other alternative to brink of war, or call it by any other name, is there other than appeasement? This, in its final deduction, was the Acheson policy, which so bankrupted United States foreign policy. Appeasement is a losing, delaying tactic. It neither frightens enemies nor holds the respect of friends. A lot is being said in the current controversy about friends. There certainly has been adequate demonstration in years past that appeased friends are not friends to be counted upon. Something better was demanded of the most powerful nation on earth than Acheson had to offer. Fitting American policy to cope with new aggressions over the world as the Russians called the tune was a losing cold-war tactic. A constant state of cold war is not a pleasant world condition in which to live, and waging it is not 100-percent efficient in the State Department or anywhere else, but it is much better to keep out of hot war by approaching the brink of war than getting into hot war by surrender or appeasement.

Fighting the Immigration Act

EXTENSION OF REMARKS
OF
HON. TORBERT H. MACDONALD
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1956

Mr. MACDONALD. Mr. Speaker, I would like to call to the attention of the Members of the House a very timely editorial entitled "Fighting the Immigration Act," which appeared in the Malden Evening News and Medford Daily Mercury, two of the leading newspapers in my congressional district.

As one who desires a complete reevaluation of our immigration policy, I am in absolute accord with the position taken by Mr. David Brickman, well-known editor and publisher of the Malden Evening News and Medford Daily Mercury. The editorial makes clear that our immigration laws need to be thoroughly revised. I agree wholeheartedly and feel that the time has arrived when we must stop shadowboxing on this vital issue. It is absolutely essential for our Nation's self-interest that the McCarran-Walter Immigration Act be abolished and be immediately replaced by one without racial and national bias. I once again point out that the leadership of both parties should take immediate action on this problem.

The views expressed in Mr. Brickman's editorial should be of great significance to all Americans:

FIGHTING THE IMMIGRATION ACT

No section of the country has a greater interest in revision of the pernicious provisions of the McCarran-Walter Immigration Act of 1952 than New England.

President Eisenhower, in his state of the Union message last Thursday, pointed out the need for revision of the immigration and nationality laws that have been codified under this act of a few years ago, an act which was vetoed by then President Truman when passed, and then enacted over his veto.

President Eisenhower's opposition, one of long standing, taking into account the discrimination written into the McCarran-Walter Act, asks two vital changes: That the number of persons admitted to this country annually be based not on the 1920 census but on the 1950 census; and to balance this, that greater flexibility of quotas be introduced, so that if one country does not use its share, another may, under certain rules to be laid down.

New England's interest in the act stems from the strong devotion to liberty here, and equally to an appreciation of what contributions immigrant stocks have made not alone to our area in culture, economy, and devotion to American ideals, but also to the rest of the United States. Yet the McCarran-Walter bill wrote a sordid chapter of discrimination and contempt into American law, so that it has been the object of Presidents from both parties to do something to ameliorate its effect. They have widespread support in this aim.

Yet success is dubious because of a shocking indifference in enough circles of influence to the act's more outrageous provisions.

As President, Mr. Eisenhower in April 1953 cited "injustices" in the act and later in the same month asked legislation to admit 240,000 above-quota immigrants in the 2 ensuing years. In a series of off-the-floor compromises the refugee legislation was substantially accepted while revision of the omnibus immigration act was postponed.

The McCarran-Walter Act establishes an annual total immigration quota of 154,657. It reaffirms a provision of the Immigration Act of 1924 which, with some exceptions, based immigration quotas on the ratios of foreign-born in the white population of the United States in 1920. New York Senator HERBERT H. LEHMAN'S bill in 1952 would have based quotas on such ratios in 1950.

Of the total McCarran Act quota, almost 43 percent goes to Great Britain and Northern Ireland, and this allotment goes largely unused. Germany has a quota of 16.6 percent; Eire (Ireland), 11.5 percent. Italy has 3.6 percent of the total quota, less than Poland, with 4.1 percent.

Pierce J. Gerety, director of the refugee program, pointed out on December 31 that, whereas under its special provisions, the United States has been admitting about 25,000 immigrants from Italy yearly and about 6,500 from Greece, the normal Italian quota is only 5,645 and the Greek quota only 308. "We are approaching the point, in Italy and Greece particularly," said Gerety, "where we are going to be closing the door on immigration."

If immigration quotas were based on the 1950 census rather than that of 1920, the total number of immigrants would be reduced unless the percentage of entrants was raised. The 1950 census listed only 10,161,168 foreign born, as against 13,712,748 in 1920.

On the other hand, the quota distribution would be altered drastically. In 1920 England and all of Ireland accounted for 15.9 percent of all the foreign-born white population; in 1950, their proportion was only 13.4 percent. But in 1950, 14 percent of all foreign born were of Italian extraction, as against 11.7 percent in 1920.

The President proposes a pooling of quotas, so that unused allowances for Great Britain, Germany, and Austria, for example, could go to Italy and Greece. A bill sponsored by Senator LEHMAN and 12 other Democratic Senators would go even farther, abolishing the whole national-origins system and establishing a world-wide annual quota of 250,000. The fight goes on.

Tribute to 50 Years of Wilkes-Barre Sunday Independent

EXTENSION OF REMARKS
OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following historical summary of the Wilkes-Barre Sunday Independent on the occasion of its 50th anniversary. Mr. Speaker, I would like to take this opportunity to extend my congratulations to this outstanding newspaper which has performed admirably its civic responsibility through 50 years of service to the people of the Greater Wilkes-Barre area. I wish Tom Heffernan and his organization the best of success in the years that are ahead.

A MAN, A NEWSPAPER, AND 50 YEARS

Fifty years, measured by the flow of printer's ink, can cover a lot of events and a lot of changes.

Back in 1905, Wilkes-Barre was getting ready to celebrate the 100th anniversary of the start of the city as a borough. Fred C. Kirkendall was mayor; trolley cars were doing a thriving business; there were no parking problems; and the movies were threatening to do to legitimate theaters, the same thing now, 50 years later, television is doing to the motion-picture houses.

One of the heights' most prominent residents was John Maloney, whose home on East South Street adjoined the dwelling of the late James H. Shea, then one of Luzerne County's most prominent lawyers. Both men were interested in civic affairs, politics, and whatever of interest was happening in the community.

During one of their frequent front-porch visits, Mr. Maloney expressed the belief that Wilkes-Barre should have a Sunday newspaper of its own. He had some experience in the newspaper business and felt that people would be interested in reading—and buying—a weekly newspaper that would serve them in their long leisurely weekends.

MUCH URGING UNNECESSARY

Attorney Shea was to tell later how he encouraged his friend and neighbor to try out the idea. Mr. Maloney did not require much further urging and began to assemble his newspaper organization.

First he had to get an appealing name for his unborn newspaper. Mr. Shea suggested "Independent" and Mr. Maloney promptly settled on "Sunday Independent." So far, so good.

How about getting somebody to write the news; solicit the merchants for advertising? Mr. Maloney said he would handle the writing and editing with some extra help on Saturday night. He would hire somebody to call on the merchants.

Then, what about getting the paper printed? The new publisher decided that could be answered by renting the plant and equipment of one of the daily newspapers for one night each week—Saturday night. Buying costly new equipment was out of the question.

Mr. Maloney approached John A. Hourigan, Sr., publisher of the Evening News, and placed his proposition. The Evening News had its business office on North Maine Street, close to Public Square, and its composing room and press room were located in a rear building along Butler Alley. The two men reached an agreement on terms and Wilkes-Barre's own newspaper—the Sunday Independent—was in business.

EARLY YEARS NIP AND TUCK

The editorial and business offices were set up in a single room over what is now Leo Matus' newsstand on Public Square at North Main Street. There the news stories would be written, hustled back through Butler Alley to the composing room and put into type.

The early years were nip and tuck but Mr. Maloney's newspaper kept inching along, getting a little foothold and gaining public confidence along the way. Meanwhile, it had some competition from William Leslie's Elmira Telegram. The Telegram was printed in Elmira and shipped here by railroad. Each Sunday it contained a lengthy news letter in which Mr. Leslie thundered his wrath and editorial opinions freely and with gusto. For a long time Mr. Leslie's opinions on politics, religion and civic progress created a profound impression on a lot of older readers. But it was not a local paper.

In 1913 Mr. Maloney decided to retire from the newspaper business. He approached his fellow newspaperman, Thomas F. Heffernan and wanted to know if the latter might be interested in buying the Sunday Independent. Mr. Heffernan was and the Independent had a new owner.

HAD WIDE EXPERIENCE

Mr. Heffernan had considerable previous experience in the newspaper business. Starting out in Plymouth as a correspondent for the Wilkes-Barre Record, he got the smell of printer's ink early in life and it remained with him throughout his days. After spending some years as apprentice writer in the Plymouth office, Mr. Heffernan had been transferred to the Wilkes-Barre office of the Record in the early 1900's. Some time later he and John A. Hourigan, Sr., took over and began publishing the Evening News, which had been converted from a morning newspaper.

One of Mr. Heffernan's first moves after purchasing the Sunday Independent was to seek larger, more commodious space as an editorial and business office. That was accomplished by moving across Public Square to a second-floor suite over the original Colombo Cigar Shop, present site of Bartikowsky's Jewelry Store.

The Sunday Independent took over the entire second floor of the building, which now gave it 2½ rooms instead of 1. A United Press wire was installed. Mr. Heffernan appointed his two brothers, John V. Heffernan as managing editor and George P. Heffernan as advertising manager. Through a new arrangement the Sunday Independent then began doing its printing at the West Market Street plant of the Times-Leader, then published by Fred C. Kirkendall and Col. Ernest G. Smith.

OPINIONS WERE QUOTED

Under the direction of Thomas F. Heffernan, the Independent made steady progress and its opinions began to be repeated more and more wherever people gathered. The masthead on the editorial page stated its policy: "A conservative newspaper for select readers."

News gathering was quite an acrobatic feat in those days. Taxicabs and automobiles were not too prevalent and reporters, for the most part, had to rely on the trolley cars or travel on foot. But reporters of those days had a helpful ally who no longer exists—the friendly telephone operator. Instead of one system as at present, Wilkes-Barre had two telephone systems—the Bell and the Consolidated. Quite frequently a telephone operator who had "somehow overheard" a phone conversation, could pass a helpful hint about a news story along to the reporter. (That source of information ended with the dial system.)

While the Sunday Independent continued to gain slowly but surely, the problem of meeting the payroll every week was one of Publisher Heffernan's biggest headaches. Advertising and circulation sales were increasing but the costs of publication were growing even more rapidly.

Fortunate it was for Wilkes-Barre's young Sunday newspaper that a short time earlier Mr. Heffernan had been appointed postmaster of Wilkes-Barre. Frequently the postmaster's entire salary check would be turned into the Independent's bank account just in time to meet the payroll.

DISPLAY ADS APPEAR

Files of the Sunday Independent for the year 1923 show how the newspaper gained stature during Mr. Heffernan's first 10 years as publisher and editor.

The advertising columns carried large displays for all of the leading merchants including some whose business had since passed into other hands. Among the leading advertisers 30 years ago were the Boston Store, MacWilliam's (now Pomeroy's), Lazarus, Bergman's, Weitzenkorn's Duncan & Howmer, Joseph S. Coons & Co., Murray-Smith Co., and others.

And Percy A. Brown started the new year of 1923 cheerfully by declaring in his advertisement: "You'll be interested to know that for Christmas and New Year's we sold 43,725 pounds of poultry. The time in which this tremendous amount was sold was from December 20 to December 30—enough to fill eleven 2-ton trucks."

Theatergoers learned from the amusement page that vaudeville was in full swing at Poli's theater (now the Penn) and also at the Capitol (now the Comerford); there were stage plays at the Grand Opera House and the Nesbitt; the principal motion picture house, the Savoy (site of the present Paramount) was offering East Is West, while down at the Majestic Theater the burlesque girls were featured in some entertainment called the Wrinkle Wreckers.

TWO OUTSTANDING COLUMNS

Two of the outstanding columns in the newspaper were Mike Bernstein's Sifting the Sport Sieve and Publisher Heffernan's Political Comment. It was back in those days that Bernstein developed his sportswriting style that has made him a long-recognized authority. Some time later Bernstein conjured his ghost pugilist "Battling Bevo." (Whatever happened to him?)

Publisher Heffernan's Political Comment on the editorial page was unique and authoritative because his articles were drawn from his own political contacts as Luzerne County Republican chairman, plus his personal acquaintance with some of Pennsylvania's political leaders who have become legendary. There was always great interest in his anecdotes concerning Senator Boise Penrose, Matt Quay, Senator Sterling Catlin, and the Vares, of Philadelphia.

Present-day television viewers can imagine the thrill the following item created when it appeared in the January 7, 1923, issue of the Independent: "When Governor Pinchot delivers his inaugural address on the steps of the capitol next Tuesday at high noon his words will be heard by people over the eastern half of the United States. The loudspeaker projector, plus the telephone, plus the radio, have made this marvelous scientific feat possible."

Editorials in those days pleaded for "a new bridge at South Street," and chidded automobile owners with the fact that "we boast of an automobile association but only a few of the leading spirits in it take any interest in road improvements."

It was just before that time when Mr. Heffernan decided to have his paper in its own

plant, and to that end he bought the property at 22 South Washington Street, which extended back to South State. On Washington was a 3-story building, with a storeroom on the first floor and 2 apartments above. The storeroom was used to house the business, advertising, circulation, and news departments on the Sunday Independent. Then, to contain the press to be purchased on the first floor, and the composing room and stereotyping department on the second, a new brick building was erected to the rear. In 1922 the Sunday Independent moved in.

It is still there, but some changes have been made. The first floor of the South Washington Street building now contains the advertising and business departments. On the second floor is the news department, while the third floor contains the circulation department's clerical office, with circulation handled by the Durkin Distributing Co.

The building, built in 1921 and 1922, still holds the press on its first floor, while the composing room has taken over the entire second floor. The stereotyping department now is just to the rear, on the second floor of a new building built a few years ago. The first floor of this latest building is used for newsprint storage.

Back in 1922 the building which fronts on South State Street held a poolroom on the first floor operated by Brown and Rasper—known also for catering. That first floor now is the mailing room and working space for the circulation department. The second floor is rented by the Barre Engraying Co., headed by William Butcher.

Mr. Heffernan continued as editor of the Sunday Independent until his death in 1951—a few days before what would have been his 80th birthday. He was succeeded by his son, Thomas E. Heffernan, who had joined the paper permanently in 1922.

Not all of those who should be on hand to help mark the Sunday Independent's 50th anniversary—in proper recognition of the splendid service they gave the paper—can be with us today. Death has visited and the loss was great.

Two names are coupled—Peter A. Golden and Owen Durkin. Partners first as circulation chiefs of the old Times-Leader, they first handled the Sunday Independent on weekends, then came as full-time operators of this paper's circulation. The services they rendered a struggling newspaper were tremendous.

They remained until the death of Mr. Durkin in 1944. Several years before, in December of 1941, Mr. Durkin's son, Eugene F., had come into the organization and he carried on then and after the death in 1948 of Mr. Golden.

Original employee of the Independent was the late Joseph P. Rusnock, who spent his life as mechanical superintendent. Native of Freeland, he took the position while John Maloney was publisher and remained until his death in 1949. Joe Rusnock is part of the paper's tradition.

A particularly sad death visited the Independent in 1947 when Howard W. Davis was claimed. One of the most promising young newspapermen the city had produced he was but 33. Starting as a copy boy while still in school, he moved in full time as soon as he graduated from Coughlin High and became one of the best-informed and best-liked sports writers Wyoming Valley ever knew.

GEORGE P. HEFFERNAN

Joining the paper a few years after it had been acquired by his brother, T. F. Heffernan, George P. Heffernan joined the staff as advertising director, a post he held until his untimely and sudden death in 1953.

A native of Plymouth, he was graduated in the law at Cornell University but turned soon to the line of activity that was to be his life's work. He came back to Wilkes-Barre to serve the Independent in 1920.

A Tribute—Timely Observations

EXTENSION OF REMARKS
OF

HON. W. R. HULL, JR.

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1956

Mr. HULL. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the following article by A. V. Burrowes, editor of the St. Joseph (Mo.) News-Press, one of the fine newspapers of the great middlewest. Although this tribute to nine men was published in the News-Press last October when the Congress was not in session, I feel that its perpetuation in the RECORD is justified not only as a well earned tribute to the individuals named, but also as a word of thanks and encouragement from a grateful Nation to the thousands of fine citizens all over the land who uncomplainingly and generally without recognition, have assumed the arduous and often unpleasant duties of serving on our selective service boards:

TIMELY OBSERVATIONS

PERSONAL

This is a tribute to nine men. We prefer to offer it while they are living. We wish all were. But one is gone. Five of those nine are still in the service. It is so much more satisfying to toss a bouquet while the recipient can catch it, rather than lay gorgeous roses on the bier in chapel or mortuary. This column arises from a few lines that passed over this editor's desk just this morning. For in the News-Press tomorrow morning in Turning Back the Pages to 15 years ago there is recorded that the three Buchanan selective-service boards were underway and prepared for the first peacetime lottery in all American history. That drawing of names for draftees from this city and county was to be undertaken October 30, 1940.

Here are the men who comprised those first draft boards: Board No. 1 (meeting place, city hall): W. Fairleigh Enright, chairman; members, Everett Hillyard and J. Ham McCord. Board No. 2 (meeting place, Federal Building): Robert G. Clayton, chairman; members, Melvin Binswanger and L. Earl Stephenson. Board No. 3 (meeting place, Transit House): Walter H. Laubach, chairman; members, Charles Feeney and Michael O'Malley. The last named comprised all south side and rural Buchanan County.

This writer knows perhaps better than any man in St. Joseph just what those boards did and do. And the reason for that knowledge is that this writer served with Chairman Jack Stapleton, of Albany, Mo., on Missouri Appeal Board No. 1, comprising the 33 counties of north Missouri, and Buchanan County boards No. 1, No. 2, and No. 3 came under our jurisdiction. That appeal board continued 7 years, 1 year prior to the opening of World War II and 2 years after the surrender to General MasArthur on board the U. S. S. *Missouri* in Far East waters. Appeals now are handled at Army headquarters in Jefferson City.

There was not a board in all our wide jurisdiction—from St. Joseph to Hannibal and from the Iowa line to and including North Kansas City and Excelsior Springs, that functioned with more wisdom, the judgment, the integrity and the forbearance than did those three Buchanan County boards. What a tale they could unfold. Glamorous heroism covered with the modesty of sterling young Missouri Americanism. And to dastardly cowardice, yellowback draft-dodging by the depraved; utterly unscrupulous. What a volume could be written jointly by those three chairmen: Bob Clayton, Fairleigh Enright, and Walter Baubach. Humanity at sublime heights. Humanity at ugly cesspool level.

Winston Churchill once said of the RAF that never in all history was so much owed by so many to so few. On our local scene this writer personally believes that never in his long memory of public servants in this city—Federal, State, local, has there been a continuing monumental task of so noble proportions, so magnificently carried to the ultimate ideal—the perfect, as was given by Selective Service Boards, 1, 2, and 3 preceding, during and following World War II. A strong statement, yes. True, every word.

We gladly offer these orchids because 5 of those 9 still are serving. For absolutely not a penny, the unhappy long,wearying dragging processing of men into the service of Uncle Sam goes on. Gone is the glory of warfare. Now remains the drudgery only of peacetime conscription. There are no town bands playing martial airs in depots while civilian groups serve doughnuts and coffee. Now is the cold, undramatic tapping of this, that or the other young man. "Uncle Sam wants you." These five St. Joseph citizens carry on as faithfully as they did when the drafts were heavy and when glory was waiting St. Joseph men in all parts of the world.

Many months after the close of World War II there was a reorganization of the Selective Service, and St. Joseph now has one board. Mike O'Malley had died; Earl Stephenson had gone to Kansas City, where he is an executive vice president in City National Bank, one of the Kemper brother's towering institutions known all over the Middle West. The present members of selective-service board No. 11, as it is known today, comprises Mr. Clayton, as chairman, and as his members Mr. Enright, Mr. Feeney, Mr. Binswanger, and Mr. Laubach.

Talk about your bronze and your marble to commemorate our great. Our Federal Government should erect somewhere here in old St. Jo town a lasting monument to these 9 men, 5 of whom still serve. We of the appeal board had play in comparison. Ours was merely a review of official papers coming up from local boards. For under the law no appellant could appear before that appeal board. Nor could he send a dependant mother or father, nor could any attorney, paid or gratis, come before us.

That did not hold and does not hold with the local selective-service boards. They get it all. We wonder how many times Edward and Alvah Clayton have wanted to call down maledictions on the head of that President for naming their elder brother to that draft system way back in October of the year 1940. For Bob, as chairman, has borne the heaviest load. That's not said in disparagement to the others. Our friends Fairleigh and Melvin and Charley and Walter would be the first four citizens to insist this fact be made known. But there is glory enough for all, the five still in service and the others who have served in earlier years.

So, gentlemen, please accept on behalf of a knowing public, if not always a spontaneously speaking public, our thanks. You have done and are doing a grand job. No man in public office here—post office, courthouse, police station, library, firehouse, city hall, school district—gets salary enough to compensate truly and accurately what you men deserve. Our deepest admiration, sirs. And also, men, let us say there is a personal joy in this writer in the 15-year-old assignment you took willingly from Franklin Delano Roosevelt on nomination of Gov. Lloyd C. Stark that brisk autumnal day of October 1940.—A. V. B.

National Defense Without National Bankruptcy—An Answer to General Ridgway

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 25, 1956

Mr. ALLEN of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Newsweek dated January 30, 1956:

NATIONAL DEFENSE WITHOUT NATIONAL BANKRUPTCY

(By Gen. Carl Spaatz, U. S. Air Force, retired)

Gen. Matthew Ridgway has raised the question of the proper force level for the United States Army. In the first of his series of articles for the Saturday Evening Post, he argued that the one million-man ground force to which the Eisenhower administration is now committed is not large enough to meet the Nation's requirements in various parts of the world.

He warns that such a meager total force won't permit the United States to maintain more than a thin line of defense against the Soviet Union across northwestern Europe, for example. Even with atomic artillery and rockets spaced at 25-mile intervals along this line, he points out, the line will be vulnerable to attack by the numerically superior Soviet infantry.

These statements are completely correct. But the conclusions General Ridgway draws from them are faulty. It is perfectly true that the thin line of American infantry in Europe is not adequate to withstand an assault in force by Soviet ground divisions. It never can be. We haven't enough manpower resources to make it so, even if we were willing to spend the United States into bankruptcy to maintain a vast standing army in Europe—and elsewhere.

Fortunately, our global defense strategy doesn't depend upon our ability to match the Soviet Union in ground forces. What we must depend upon primarily for our defense is our air-atomic striking power. We have the talents and resources to excel in this kind of power.

We, of course, need ground and sea forces and Allies. We also need to maintain ground units in foreign outposts, including Western Europe. They serve the necessary purpose of reassuring our Allies that we stand with them and of serving notice on our potential enemies that an attack on our Allies is an attack on us.

But the massive ground forces are not required to perform these cold-war tasks. Relatively small units are sufficient.

During the many years that the British Empire kept order in the world, it relied upon naval superiority and limited overseas garrisons. Now the United States and its allies are trying to keep watch over the part of the world not already dominated by the Kremlin. Since the U. S. S. R. and its satellites are operating within the confines of a large land mass, what we need are small garrisons spaced around the perimeter of their territory—and unquestionable air superiority. In the cold war ahead the free world must rely primarily on its economic staying power, shielded by superior air power.

Economic power must be husbanded meanwhile. The present Federal budget calls for an outlay of $35 billion for defense. This represents more than half the Government's total expenditures. It should be enough to provide our Nation with its share of the military forces essential for the free world—and it would be if it could be wisely spent. Unfortunately, the present organization of our Army, Navy, and Air Force prevents true economy. We do not get the maximum value in military power for the defense dollars appropriated.

COMPETE

Four services—the Army, the Navy, the Marine Corps, and the Air Force—will compete for the $35 billion with overlapping and redundant services. Each, for example, will build its own air force and three of the services will carry on experiments in rocket development. The Navy, competing with the Air Force for strategic striking power, will build its sixth supercostly supercarrier and the atomic plant for a seventh, even though the utility of the first is still in question.

The defense dollar could be made to go 25 percent farther than it will go if it could be wisely and prudently spent. However, for this to be possible we need true unification of the services—not the partial and half-hearted unification we now have. All branches of the Armed Forces should be placed under the Secretary of Defense with a chief of staff and a general staff, carefully selected from outstanding graduates of the National War College. Personnel should be dressed in one uniform except for ceremonial occasions. Then traditional dress uniforms of the individual services should be worn. Career personnel of any service should have freedom to transfer to another service without loss of rank. The opportunities thus created would make career service more attractive and increase efficiency.

Eventually, this would eliminate the service rivalries which keep obscuring the primary defense problem, which is to maintain an Air Force capable of taking and keeping command of the air any time, any place in the world. This kind of unification would permit the Nation to establish an adequate defense system and to maintain it indefinitely without overtaxing the national economy.

Flood Control and Hurricane Protection

EXTENSION OF REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 25, 1956

Mr. SADLAK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a resolution, approved unanimously by the General Assembly of the State of Connecticut, in special session, memorializing the Congress to aid the program of flood control and hurricane protection.

House Joint Resolution 6

Resolution memorializing Congress to aid in a program of flood control and hurricane protection

Whereas hurricanes and floods have become a serious menace to life and property in Connecticut; and

Whereas Connecticut is a highly industrialized State, and an important part of the national economy and national defense, ranking fifth in the per capita payment of Federal taxes, so that disruption of its production and commerce adversely affects the Nation as a whole as well as the people of Connecticut; and

Whereas these hurricanes and floods are occurring with increasing frequency and violence, and the State of Connecticut is not able to finance adequate corrective and protective measures to meet the threat of future hurricanes and floods. The floods of August and October 1955, alone, have caused personal and property damage estimated in excess of 200 million dollars: Now, therefore, be it

Resolved, That this General Assembly believes it of the utmost importance that the Congress of the United States take immediate action to provide adequate funds to carry out a program of flood control and hurricane protection measures which will protect the State of Connecticut against future disasters of this nature; and be it further

Resolved, That the clerks of the house and senate shall cause a copy of this resolution to be sent to the President of the United States, the Speaker of the House of Representatives, and to the President of the Senate, the chairmen of appropriate committees in the House and Senate, and the Connecticut Senators and Representatives in Congress.

ALFRED A. TOSCANO,
Clerk of the Senate.
JOHN WASSUNG,
Clerk of the House.
[SEAL] MILDRED P. ALLEN,
Secretary of State.
HARTFORD, CONN., *December 15, 1955.*

Swede Nelson Award—A Saga in Americanism

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 25, 1956

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks, I include herein several articles from Boston newspapers dated January 8, 1956, regarding the presentation of the annual Swede Nelson Award.

This award is given every year by the celebrated Gridiron Club of Boston to a contemporary football player, who, during the current season, by his conduct on the gridiron, demonstrates a high esteem for the football code and exemplifies sportsmanship to an outstanding degree.

It was given this year to Quarterback Don Holleder of the Army team for his unselfishness in accepting assignment as quarterback, notwithstanding that he was an outstanding all-American end, in order to further the interests of his team.

A very significant thing about this award is that it is given in the name of N. V. "Swede" Nelson, prominent cotton broker, sportsman, and former outstanding Harvard football star, to the young American college football player, who, in the judgment of the board of judges, best exemplifies those qualities of character and sportsmanship which "Swede" Nelson himself exemplified during his football career and throughout his life.

"Swede" Nelson was a teammate of mine at Harvard and I, therefore, am in a position to appreciate the sterling qualities upon which the Nelson award is predicated. In my opinion, it would not be possible for anyone to excel the

sportsmanship or idealism of "Swede" Nelson. A great player himself, extraordinarily devoted to the game, he has ever preserved a very high sense of values, not only in football, but in all his varied activities.

He has enjoyed great success in athletics, in business and in civic achievement. But his greatest triumphs have been in human relationships, in his vigorous, impressive work to improve the opportunities of youth and to stimulate the spirit of fair play and toleration in American life.

"Swede" Nelson has worked with incredible zeal to spread his gospel of sportsmanship and fair dealing. Without a peer as an after dinner speaker, wit, and humorist, throughout the years he has given unselfishly of his great talents and of himself to every good cause. His contributions to youth have been tremendous and have invaluably assisted in opening the door of opportunity to a great many young men. His noble work of spreading high standards of sportsmanship, tolerance and patriotism cannot adequately be evaluated here.

"Swede" Nelson has never turned down a plea in behalf of the cause of youth, of charity, of philanthropy or any other worthy objective and it is most fitting that, in his name, this annual Gridiron Club award should be made to an American college football player, who, in an unselfish way, carries out the spirit of this great American.

Of rugged ancestry and proud heritage, he has intelligently and effectively labored to inculcate into American youth the solid precepts that he learned in the bosom of his own family from his late, esteemed father and from his beloved mother who, at the age of 93, is still, as ever, an inspiration to him and to all those who know her. And in his invaluable work, he has likewise been inspired and assisted by his gracious wife, lovely daughter and her family.

"Swede" Nelson has often said: "American football is not concerned with a man's race, religion or station in life, but rather with his merits, his loyalty and his ability to deliver." If that fine creed could find universal respect, our Nation would be all the stronger for it.

His personality, his philosophy of life, his concern for others, his willingness to serve and help his fellow man indelibly stamp him as a great citizen, bringing gladness and sunlight into the lives of others and spreading the gospel of understanding, tolerance, and loyalty to America.

Millions of football fans throughout the country. and large numbers of our people, join me, I know, in hailing "Swede" Nelson for his high ideals and his peerless service to American sportsmanship and in extending him and his family our heartiest congratulations and best wishes for continued good health, success and happiness in his great work.

The articles referred to follow:

[From the Boston American of January 8, 1956]

HOLLEDER HAILED AT NELSON FETE

Don Holleder, Army's All-American end who unselfishly moved to quarterback last fall for the good of the team was acclaimed before a Sheraton Plaza gathering of 600 as he received the 10th annual Nils V. "Swede" Nelson sportsmanship award last night.

The modest West Pointer, who singled this occasion out as the happiest moment of his life, stated there were two major reasons for his thrill in being so honored.

"It's wonderful to have my name listed with the previous great football players who have won this award and secondly, the award is given for good sportsmanship which has been my aim since I started in athletics.

And, around this standout athlete, most of the speakers built their themes. Capt. Felix "Doc" Blanchard, Army plebe coach and former All-American who was representing West Point, lauded Don as a great athlete. Harry Stuhldreher, quarterback of the Four Horsemen and now a United States Steel vice president, was the featured speaker and brought out the fact that Holleder had the three ingredients necessary for success in sports or business—hard work, teamwork, and loyalty.

Nils V. "Swede" Nelson praised Holleder for his ability and leadership which is so vital in sports and in democracy. Nelson then made the presentation of a replica of a huge plaque to Holleder.

[From the Boston Globe of January 8, 1956]

GAVE UP ALL-AMERICA HONORS—HOLLEDER RECEIVES NELSON AWARD

(By Bob Holbrook)

Don Holleder, Army's All-America end who gladly gave up his honors to become a T-quarterback, last night became the 10th recipient of the Nelson award for sportsmanship, at a dinner held in the Sheraton-Plaza.

Ramrod-straight in his uniform, Cadet Holleder made a striking impression on 600 guests as he accepted the award from Nils V. "Swede" Nelson, for whom the honor is named.

Holleder said, "Truly, this is one of the happiest moments of my life. I say this for two reasons:

"One, that I am fortunate enough to join the list of outstanding football players who have preceded me in this award.

"Secondly, the award is for good sportsmanship. And that is something I have been striving for all my life. This award is a tribute to my coach, Col. Earl Blaik, a fine man, my teammates and the Academy.

"I accept this award with pride, humility, and gratitude," he concluded.

PRAISED FOR LEADERSHIP

Holleder heard words of praise from Nelson, Capt. Felix "Doc" Blanchard, and Harry Stuhldreher, former coach and Notre Dame great.

"We need men with leadership like yours," Nelson said. "I am proud to welcome you to the Gridiron Club family."

Blanchard, Army's immortal "Mr. Inside," extended the congratulations of the military academy.

Stuhldreher, who quarterbacked the famed Four Horsemen of Notre Dame and now is a vice president of United States Steel, gave a hard-hitting talk.

He said, "The scoreboard doesn't tell the full story, as some people think. It is what leads up to the final score and what comes afterward that is important.

"There are three vital elements in football and he (Holleder) fits them all. First is hard work. Certainly, Don has had his share of that.

"Second is teamwork. Now he proved his willingness for teamwork when he made this transition. Third is loyalty. Now I ask you where you'd find a better example of loyalty than what this young man demonstrated this past season. * * *

"I think the greatest tribute to Holleder was paid by Navy's George Welsh. He said, 'I've been a quarterback all my life and I'm still learning the position. That'll give you an idea what Don Holleder had to do this year.' "

Dr. Roy Heffernan served as toastmaster. The head table included: Walter Brown, D. Leo Daley, Rev. Joseph Glavin, Louis Pierini, Mayor Hynes, Stuhldreher, Dr. Heffernan, Holleder, Joseph C. Tomasello, general chairman; Blanchard, Henry Hormel, Rev. Alexander Henderson, Joseph Madden, Les Smith, Arthur Sampson, and Rabbi Shubow.

Previous Nelson award winners were: Perry Moss, Illinois; Everett Dorr, Boston University; Gordon Long, Arkansas; Doak Walker, Southern Methodist University; Bob Williams, Notre Dame; John Bright, Drake; Joseph Mitinger, Yale; Don King, Clemson; and Arthur Luppino, University of Arizona.

[From the Boston Sunday Post of January 8, 1956]

SIX HUNDRED HAIL NELSON AWARD WINNER—HOLLEDER IN TRIBUTE TO COACH

(By Will Cloney)

Spick and span in the gold-braided dress uniform of a cadet captain, Don Holleder of West Point, last night became the 10th recipient of the Gridiron Club's Swede Nelson Sportsmanship Award, as an audience of more than 600 applauded, misty-eyed, in the main ballroom of the Sheraton Plaza.

"I accept the award with great pride, humility, and gratitude," said the clean-cut all-American from upstate New York. "Personally, this is one of the happiest moments of my life, for two reasons. First of all, it is a tremendous honor to have my name added to the list of men who have won it.

"Second, and even more important, is the fact that this award is given for sportsmanship, and sportsmanship has been what I have hoped to achieve from the first time I participated in athletics."

In his neat, firmly spoken acceptance speech, the former all-Catholic interscholastic all-American from Aquinas Institute shared the Nelson honor. "I want particularly to pay tribute to my coach, Col. Red Blaik, a fine man as well as a fine coach, and to my teammates, who stuck with me in my darkest moments and gave me the extra encouragement I needed."

STUHLDREHER HAILS STAR

Holleder qualified for the award for switching from his all-American role at end to the trouble spot in the Army backfield, quarterback, in an effort to help his team. Don received an engraved wristwatch and a permanent plaque, while Capt. Felix "Doc" Blanchard, representing the Military Academy, accepted the huge bronze perpetual trophy that will remain at West Point for a year.

Harry Stuhldreher, former Notre Dame great and Wisconsin coach, paid particular tribute to Holleder in the principal address of the affair. "Almost everybody thinks that the scoreboard tells the true story of a game," said Stuhldreher, "but those of us close to sports know that the real story lies in what leads up to and down from those figures on the scoreboard.

"Behind that score are the elements that Don Holleder has exemplified—hard work, teamwork, and loyalty—the loyalty to his staff, his teammates and his institution that made him happy to sacrifice his personal glory. Those three elements are necessary to success in any business or individual endeavor. Don deserve all the credit in the world, and is a better all-American for it."

The inimitable Swede Nelson, for whom the annual award is named, hailed Holleder. "Few among us will give up something we have for something we know nothing about," said Swede. "Here is one of the greatest pass receivers in college football giving up fame and glory for the team, and one of the fundamentals of our citizenship is being a member of the team.

ILLUSTRIOUS GROUP

"We welcome Don to the Gridiron family."

Nelson and Gridiron president, Henry Hormel, made the presentations. Dr. Roy Heffernan, making his bow as a Gridiron toastmaster, kept the program moving smoothly through a list of speakers that included Mayor Hynes, the Reverend Joseph A. Glavin, S. J., Rabbi Leo Shubow, the Reverend Alexander Henderson, and humorist Joe Madden.

Other highlights on the program set up by general chairman, Joseph C. Tomasello, were parodies by John Buckley. At the head table, in addition to the speakers, were Walter A. Brown, D. Lou Perini, Les Smith, and Arthur Sampson.

The 1955 winner joins an illustrious band that started with Perry Moss of Illinois, in 1946, and since then has added Everett Dorr of Boston University, Gordon Long of Arkansas, Doak Walker of Southern Methodist, Bob Williams of Notre Dame, John Bright of Drake, Joseph Mitinger of Yale, Don King of Clemson, and Arthur Luppino of Arizona.

[From the Boston Herald of January 8, 1956]

ARMY STAR SACRIFICED FAME FOR THE UNKNOWN—HOLLEDER'S SPORTSMANSHIP WINS PRAISE FROM NELSON

(By Joe Looney)

Personable Don Holleder, resplendent in the dress uniform of a West Point cadet captain, accepted the Nils V. "Swede" Nelson sportsmanship award with pride, humility and gratitude, last night at the 10th annual dinner attended by 600 football enthusiasts at the Hotel Sheraton-Plaza.

HAPPIEST OCCASION

After receiving the award from Nelson, Holleder said: "This is one of the happiest occasions in my life. First, it is a great distinction to have my name added to the list of great athletes who have been previously honored by this fine organization. Secondly, I will always cherish this award because it represents sportsmanship, and a sportsman is something I've always tried to be."

Continued Holleder, "I wish to thank my coach, Col. Earl Blaik, his staff and my teammates who worked with me throughout the trying season we just had. I accept the award on behalf of the United States Military Academy with great pride, humility and gratitude."

Nelson praised the 21-year-old end-quarterback from Webster, N. Y., suburb of Rochester, as "a great sportsman by any standard, anywhere. Few of us give up something we already have for something we know nothing about."

"Don gave up definite fame and glory as an All-American end to become a quarterback because it was for the best interests of his team. What he did makes us proud to be able to welcome him into the Gridiron Club family."

Harry Stuhldreher, quarterback of Notre Dame's Four Horsemen, and United States Steel Corporation vice president, lauded Holleder as one exemplifying the best traditions of football success—hard work, teamwork, and loyalty.

STUHLDREHER RECALLS COMMENT BY WALSH

Stuhldreher declared, "The best tribute to Holleder was given by George Welsh of Navy who said, I've been playing quarterback all my life and am still learning. You can imagine what Holleder went through and accomplished in 1 year."

Capt. "Doc" Blanchard, West Point's freshman coach, termed Holleder "a great team player, a great all-around athlete and a person held in high esteem by everybody at the Academy."

Other speakers were Rev. Joseph A. Glavin, S.J., Rev. Alexander Henderson, Rabbi Leo Shubow, Boston's Mayor John B. Hynes, Gridiron Club President Henry Hormel, Boston Herald football expert Arthur Sampson, humorist Joe (Uncle Dinny) Madden, and Joseph C. Tomasello, dinner chairman.

Dr. Roy J. Heffernan was toastmaster, while Johnny Buckley of Hyde Park led the parody singing. Head table guests included Walter Brown, D. Leo Daley, Lou Perini and Les Smith.

The Nelson award for sportsmanship is an annual award by the Gridiron Club of Boston on a basis of the following requirements:

"To the player who, by his conduct on the gridiron, demonstrates a high esteem for the football code and exemplifies sportsmanship to an outstanding degree."

Holleder, who made the transition from All-America end to the new role of quarterback to help his team, was chosen as the winner after nominations from teams all over the Nation had been considered.

Soviet Underground in Lithuania

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news story which appeared on the front page of the Wikes-Barre Record, Saturday, January 21, 1956, which states that Soviet authorities broadcast an appeal by radio to anti-Communists still at large in Lithuania to give themselves up and have offered amnesty to those that do. Mr. Speaker, this is just another graphic example of the extent that the Soviet authorities will go in order to carry out their treachery and barbarism on mankind. I fervently hope that no one will fall for this insidious and phony appeal:

LONDON, January 20.—Soviet authorities broadcast an appeal over the Vilnyus radio today to anti-Communists still at large in Lithuania to come in and give themselves up.

This constitutes an admission that still—15 years after the Soviet occupation of the Baltic republics and more than 10 years after the end of World War II—there is an anti-Soviet underground in Lithuania.

The Soviet Union absorbed the three Baltic republics of Lithuania, Latvia, and Estonia in 1940, and little has been heard from them since.

The Lithuanian State Security Committee urged in the broadcast that "those few persons still in hiding" take advantage of a Soviet amnesty announced last September for those who "through lack of courage or ignorance, became involved in collaboration with the occupying forces during World War II." A similar appeal was issued in Latvia January 11.

The broadcast in Lithuania follows the pattern of appeals to Soviet emigrees abroad to return to the U. S. S. R., where, it is said, they will be "pardoned for their crimes."

In earlier stages of Soviet history, similar appeals have been directed to anti-Communists to take advantage of amnesty terms. Russian emigree leaders say that always after voluntary surrenders of anti-Communists under such terms, the Kremlin has eventually liquidated them under other pretexts.

Dispatches from Moscow yesterday revealed the dismissal of the long-time Premier of Lithuania, M. A. Gedvilas, and his replacement by a Communist Party secretary of the republic, M. Y. Shumauskas.

The United States has never recognized the Soviet seizure of Lithuania, Latvia, and Estonia, which took place in the early period of World War II, when the Soviet Government was working in alliance with Hitler.

Mr. Dulles, on the Brink

EXTENSION OF REMARKS

OF

HON. BURR P. HARRISON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1956

Mr. HARRISON of Virginia. Mr. Speaker, under leave to extend my remarks in the Appendix, I include an editorial which appeared in the Richmond News Leader, of Richmond, Va., on January 17, 1956, and an article by Mr. James Marlow, of the Associated Press, which appeared in the same newspaper on the same date.

The editorial and article are as follows:

MR. DULLES, ON THE BRINK

The preposterous story of how Mr. Dulles personally averted three wars in as many years could be ignored or laughed into merciful oblivion as just another Life extravaganza, if it were not for one thing: the overwhelming evidence that it was based, as its author, James Shepley, specifically declares, "on information provided by the Secretary and the State Department."

True, the picture of Mr Dulles marching repeatedly to the brink of war is not quite as funny as the one the Russians used to paint of him standing on the 38th parallel, starting the Korean conflict backwards. In fact it isn't funny at all. Because it is Mr. Dulles' job to make our foreign policy, we are entitled to expect that his decisions—which may mean the difference between life and death to all of us—are based on facts and not on theories. Any evidence that he is making the facts fit the theory, particularly an egomaniac brink of war theory, brings his competence for the job into the most serious question.

And it is certainly fair to say that in his story of how he averted war in Korea, Indochina, and Formosa, a thoroughly sloppy job of evaluating the facts has been done.

In dealing with the crisis that was precipitated by Syngman Rhee's release of all the Chinese and North Korean prisoners, a dramatic story is made of the reprisals, atomic and otherwise, that were ready to be launched if the Chinese renewed the war. But it is also stated as a fact that the armistice negotiations had then reached the stage where it was necessary for the Communists to retreat on the PW issue if a resumption of the war was to be avoided, and it was necessary to allow them to retreat without losing face if possible.

"It was while the negotiators were searching for a back way out of this dangerous impasse," the Life article states, that Syngman Rhee took his arbitrary action. If this is so, it is at least arguable that the much maligned Dr. Rhee did as much to bring the Korean war to an end—by providing the Chinese with what was certainly a face-saving way out of the PW impasse—as Mr. Dulles did with his threat of atomic reprisals.

The strong action Mr. Dulles took to prevent the Chinese from sending their armies into Indochina is never made very clear to the reader. In the first place, no proof is offered that the Chinese ever intended to send their armies into Indochina and the fact is

ignored that there was not, after Dienbienphu certainly, the slightest need for them to do so, unless the United States went in first. And no mention whatever is made of the United States refusal to go it alone with the French, after the British declined to buy Mr. Dulles' plan for allied action. It was this refusal that undoubtedly determined France to seek, and get, a Korean-type settlement at Geneva.

In the account of the Formosa crisis 9 months ago, Mr. Dulles is on firmer ground, but not much firmer. He says he never had any doubt of the President's intention to intervene massively in the Chinese civil war last spring if Red China attacked the offshore islands, and from this he concludes that war was again diverted. This may be so. But at least two other explanations are equally plausible. First, we may seriously doubt whether Red China was ready to attack the offshore islands last year. Second, the diplomatic pressure brought to bear on Red China by all the Asiatic and Arab powers at Bandung could have played a very large part in relaxing the tension in the Pacific at that time.

Most of us are numbed to the idea of the United States standing perpetually ready to plunge the world into an atomic war to prevent Communist aggression. It is not a pretty idea, but it is not new. Never to our knowledge, however, has the threat been so boastfully declared by any acknowledgment, at home or abroad, of the deterrent effect of our atomic and hydrogen weapons.

What is so terrifying about the threat in this instance, is the insufficient evidence and faulty logic on which Mr. Dulles apparently bases his belief in its omnipotence. In Mr. Dulles' job, particularly if he is going to regard diplomacy as the art of getting to the verge without getting into the war, it is imperative that he make no smallest mistake about the relation of cause to effect. All he has to do is to misjudge the enemy's probable reaction once, and the bell will ring.

THE WORLD TODAY—DULLES' VIEW MAY SURPRISE COMMUNISTS OF INDOCHINA

(By James Marlow)

WASHINGTON, January 17.—Secretary of State Dulles, who seems to have a sunny nature, is able to look back upon his part in events with pride and contentment although the same events may have left others shaken and gloomy.

It may come as a surprise to the Communists that Dulles, recalling his role in the Indochina war, seems to think he scared the daylights out of them although they won half of Vietnam.

Life magazine, in an interview with Dulles, quotes him as saying—and he says the quotes are substantially correct—the United States has been brought to the brink of war three times in 18 months, once in Indochina.

Dulles seems to think that getting up to the edge and teetering on it, is artistic. He said, "The ability to get to the verge without getting into the war is the necessary art."

How he came to think this way needs a little explaining:

After World War II the French, who had held Indochina almost 100 years and exploited it, still refused the people their independence. The revolt which broke out came under the control of the Indochinese Reds.

The rebels were only guerrillas, but in a war which lasted from 1946 to 1954, the French couldn't rally the rest of the Vietnamese. They saw little sense in fighting to perpetuate French colonialism.

While this war was staggering along, the Eisenhower administration in the fall of 1953 announced its "new look" for the military forces: less money for better protection, the administration said.

Dulles, on January 12, 1954, attempted to explain the "new look." It was designed, he said, to depend "primarily upon a great capacity to retaliate massively."

SCARED UNITED STATES ALLIES

This may have scared the Reds—although they kept right on fighting the Indochina war. It certainly scared American allies who had visions of themselves being led into war by this country.

Dulles tried some more explaining. So did other members of the administration. There was a lot of confusion for some weeks. Vice President Nixon said United States troops might have to be used in Indochina.

But President Eisenhower said it would be tragic for American forces to become involved there. Senator KNOWLAND, of California, the Senate Republican leader, said he could give "categorical assurance" there was no intention of sending American troops to Indochina.

At a foreign ministers' meeting in Berlin on February 18, 1954, the French pressured Dulles into agreeing to meet with the British, French, Russians, and Red Chinese in Geneva on April 26 to discuss the southeast Asian problem.

At this point, the Indochinese Reds opened an attack on the French at Dien Bien Phu. By March 29 Dulles was badly worried. He said the free world should take "united action" to save Indochina. This was a long way from going it alone.

NOTHING DOING

Since this was his plan for saving Indochina, he hurried to Britain and France. Would they join? Nothing doing.

They wanted to wait to see what happened at Geneva in April about ending the war. Dulles left Geneva while the French let the Reds have half of Vietnam as a price of peace.

Soviet Lithuania Changes Premier

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news story which appeared in the New York Times, Friday, January 20, 1956, that states that Mechislovas A. Gedvilas, Premier of Soviet Lithuania since 1943, has been relieved of his post and replaced by a local Communist Party leader:

GEDVILAS, TOP MAN IN BALTIC STATE SINCE WORLD WAR II, REPLACED BY SHUMAUSKAS

Moscow, January 19.—Mechislovas A. Gedvilas, Premier of Soviet Lithuania since 1943, has been relieved of his post and replaced by a local Communist Party leader, according to the January 16 issue of the newspaper Soviet Lithuania, received here today.

The new Premier of the Baltic Soviet Republic is Moteyus Shumauskas, a secretary of the Central Committee of the Lithuanian Communist Party.

The change was announced in a decree issued by the Presidium of the Lithuanian Supreme Soviet. No reason was given, nor was there any indication of Mr. Gedvilas' future position. The Lithuanian Soviet newspaper did not name any successor to Mr. Shumauskas in the party post.

This is the latest in a series of changes in Communist Party organization that are interpreted by some observers as preliminary moves for the all-Soviet party congress opening here February 14.

Another local Premier, Nuritdin Mukhitdinov of Uzbekistan (Soviet Central Asia) was last month switched to the post of first secretary of the Uzbekistan Communist Party. The change was announced soon after Premier Nikolai A. Bulganin and the first secretary of the Communist Party, Nikita S. Krushchev, visited the region. Mr. Mukhitdinov took the place of A. I. Niyazov, who was ousted. Sabir Kamalov was appointed Premier.

Both Mr. Gedvilas and Mr. Niyazov were elected to the Central Committee of the Soviet Communist Party in 1952, Mr. Niyazov as a full member and Mr. Gedvilas as a candidate (nonvoting) member.

MOSCOW DISSATISFACTION

(By Harry Schwartz)

The replacing of Mr. Gedvilas seems to fit in with recent indications of Moscow's dissatisfaction with the economic and political situation in Lithuania.

Last year's Lithuanian harvest was apparently unsatisfactory, in part because of poor weather. Production of corn, sponsored nationally in the Soviet Union by Party Chief Khrushchev, was apparently particularly disappointing after the area devoted to that crop had been sharply expanded in Lithuania.

Falling under Soviet control in 1940 and thereby the conclusion of World War II, Lithuania is apparently inadequately Sovietized from Moscow's viewpoint. Since 1945 there have been large-scale movements of Russians into Lithuania and deportings of many Lithuanians.

Complaints about the political situation in Lithuania voiced in the Soviet press in recent months have made these points:

There is still much "bourgeois nationalism"—that is, aspiration for Lithuanian independence and opposition to Soviet rule.

The collective farms in Lithuania are operating poorly. Farmers there were collectivized only a few years ago and many of them show what the Soviet press calls poor labor discipline. The fact that most Lithuanian farmers live on their own scattered holdings rather than in collective villages is apparently another factor that has created difficulties for the collectives.

The Roman Catholic Church is said to continue to exert an important influence on the Lithuanian people, including many young people. The Roman Catholic Church is regarded by Soviet authorities as one of the worst enemies of the Soviet system, so that great pains have been taken to try to wipe out its influence in this traditionally Catholic area.

Indicative of the continued independent spirit in Lithuania was the recent complaint that a group of students at Vilna University had circulated a manuscript journal entitled "Fig Leaf," in which they published "vulgar decadent" verse. Such independent effort is virtually unheard of elsewhere in the Soviet Union.

Mr. Gedvilas' ouster as Premier presumably means he will not be reelected to his post as an alternate member of the Central Committee of the Communist Party at the Party Congress in February. Half a dozen members of the Central Committee have been removed from key positions in the last few months.

These removals have seemed to suggest a purge in which the present ruling faction of the Soviet Union and the Soviet Communist Party is eliminating beforehand persons who might prove troublesome.

The Associated Press says Mr. Gedvilas, 51 years old, headed the Partisan movement in Lithuania against the Germans during World War II. He holds the Order of Lenin and other medals.

Tributes to Hon. John White Stevenson

EXTENSION OF REMARKS
OF

HON. EARLE C. CLEMENTS

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Wednesday, January 25, 1956

Mr. CLEMENTS. Mr. President, on December 9, 1955, it was my pleasure to participate in ceremonies sponsored by the Christopher Gist Historical Society of the Covington and Newport area in Kentucky. These ceremonies were held to commemorate the memory of one of Kentucky's greatest statesman—John White Stevenson.

One of the highlights of the program dedicated to John White Stevenson was the unveiling of an historic marker of granite, containing a steel time capsule. In it were placed a number of important historical papers, a quotation pertaining to Governor Stevenson's career from the Biography of American Congressmen, a report on the history of the land, today marked by the granite monument, and which was once the site of Stevenson's mansion, which dates back to 1751; a number of current, local newspapers, and other documents in which any reader of the future would be interested.

John White Stevenson served with great distinction as Governor of the Commonwealth of Kentucky, a Representative in the United States Congress, and as a Member of this great body.

Because of the contributions made by John White Stevenson to both the State and Federal Governments, I ask unanimous consent to have the proceedings of the dedication ceremony and of the remarks made upon that occasion, printed in the Appendix of the RECORD.

Mr. President, I am informed by the Public Printer that the proceedings are estimated to make 2¼ pages of the RECORD at a cost of $180. Notwithstanding the fact that the manuscript exceeds by a quarter of page what is permitted to be printed customarily, I ask unanimous consent that it be printed in the Appendix of the RECORD.

Mr. President, following the proceedings to which I have referred, I ask that there also be printed in the RECORD the address which I had the privilege of making before a meeting of the Christopher Gist Historical Society on the same occasion.

There being no objection, the proceedings and address were ordered to be printed in the Appendix of the RECORD.

The proceedings and the address by Mr. CLEMENTS are as follows:

A REVIEW OF THE CEREMONY COMMEMORATING THE LIFE, TIMES, AND ACCOMPLISHMENTS OF JOHN WHITE STEVENSON, HELD DECEMBER 9, 1955, AT COVINGTON AND FORT MITCHELL, KY.

(By Charles B. Truesdell, secretary, Christopher Gist Historical Society)

The program honoring the memory of John White Stevenson, former Governor, former member of the National House of Representatives, and former United States Senator, held Friday afternoon and evening, December 9, 1955, was under the sponsorship of the offices and members of the Christopher Gist Historical Society of the Covington-Newport area of Kentucky.

At 4 p. m. Friday, December 9, history was reenacted when the historical marker of granite, about 4 feet high, with a bronze inlay—giving the highlights of Governor and Senator Stevenson's career was unveiled. The marker stands at the northeast corner of Fourth and Garrard Streets in Covington, Ky., the site of Governor Stevenson's mansion until recently, when it was razed to make way for the construction of a new Kentucky State office building.

Records, prepared by the Christopher Gist Society's document committee, were placed in a steel box inside the marker by Senator EARLE C. CLEMENTS and Judge James B. Milliken, Cold Springs, Ky., chief justice, Kentucky Court of Appeals.

This phase of the program was attended by numerous city, county, and State and Federal officials, as well as local citizens, including Russell S. Clark, assistant principal of the John G. Carlisle School, Covington, and city clerk of the city of Park Hills, Kenton County, Ky., chairman of the board of management of the Christopher Gist Historical Society, who presided; the Reverend John F. Murphy, president of the Villa Madonna College of Covington; Charles B. Truesdell, secretary of the Christopher Gist Historical Society; Prof. Charles E. Stevenson, South Fort Mitchell, associate professor of law at the College of Law of the University of Cincinnati, Ohio.

In commencing the afternoon program, Chairman Clark said: "Ladies and gentlemen, as chairman of the board of management of the Christopher Gist Historical Society, permit me to give you a warm welcome on this cold and snowy afternoon. We appreciate your interest in this event which has led you to brave this rather inclement weather to witness this historic event of the unveiling of a marker to the memory of John White Stevenson, whose former home stood upon this site and which now is in the process of becoming a State office building."

Chairman Clark then presented the Honorable James B. Milliken. In his introduction of Judge Milliken, Chairman Clark said: "Now may I present to you the Honorable James B. Milliken, who lives and whose home is in Cold Spring, in our adjoining county of Campbell, a member of the Kentucky Court of Appeals, who will soon become the chief justice of that court on January 1, next. I take great pride in presenting Judge Milliken, who will speak on the career of John W. Stevenson, whose memory we honor today."

In his statement, Judge Milliken told those in attendance at the ceremony: "With us today to mark the site of the home of John White Stevenson are two of his grandchildren. In the truest sense, history and memory mingle here in a common cause—to commemorate the homesite of a great man.

"If 'the use of history is to give value to the present hour and its duty,' as Emerson once remarked, then the traffic which swirls about us now might well pause to appreciate the fact that the man who once lived here, as a boy, knew Thomas Jefferson, and came here upon the advice of James Madison. Born in Richmond, Va., in 1812, the son of an able statesman and former Ambassador to Great Britain, and graduated from the University of Virginia at Charlottesville, in 1832, John White Stevenson came west imbued with the ideas and ideals of the Founding Fathers of this Nation, and promply put them into practice on the local scene. Soon after his arrival here he became a member of the Covington City Council and shortly afterward was county attorney.

"Imemdiately after the Mexican War he was elected to three successive terms in the State Legislature, was a delegate to the Constitutional Convention of 1849, and was a member of the committee of three who adopted a civil and criminal code of practice for use in the courts of the State. The criminal code is still in use with few changes, and the civil code largely remained in effect until the adoption of the new civil rules patterned after the new Federal rules in 1953.

"It was natural that a man of his ability and experience should be called into the national orbit. He was a delegate to the Democratic national conventions of 1848, 1852, and 1856, and was a Member of Congress from 1857 until the outbreak of the Civil War in 1861. As a disciple of Jefferson and Madison he strove to save the Union, but when war came his sympathy was with his friends and kin in the South, a position forced upon many of his southern contemporaries by the crushing course of events.

"When the Civil War was over Kentucky called him back into service as Lieutenant Governor in 1867. He restored civil order by dissolving renegade bands of former soldiers who marauded the countryside and took determined measures to get the schools back into operation. From the Governorship he went to the United States Senate in 1871 where he served with marked distinction until 1877. He refused to stand for reelection in order to return to the practice of law in the hope of bolstering his dwindling finances.

"Successful as he was in private practice—he was general counsel of the Kentucky Central Railroad, now a part of the Louisville and Nashville Railroad—John White Stevenson always responded to the call of public service. He taught law at the Cincinnati Law College, taught a 'quizz' class for young men who were about to take their bar examinations, and he was chairman of the Democratic National Convention which met in Cincinnati in 1880.

"At the time of his death in 1886 he was known as one of the pioneer spirits and a former president of the American Bar Association. Rich in background, rich in talent and character, he served and prospered in the best American tradition.

"In honoring his memory today we pay tribute to liberty under law, to hope, and dedicate ourselves anew to the great American proposition that government of the people, by the people, and for the people, shall not perish from the earth."

Following Judge Milliken's remarks, Chairman Clark then asked for the historical documents, prepared by the document committee of the Christopher Gist Historical Society, to be placed in the steel container later sealed within the marker by Senator EARLE C. CLEMENTS and Judge James B. Milliken.

Statements made by various civic, commercial, historical, religious organizations, and churches predicting what the Kenton-Campbell County area would be like in the year 2055 were also enclosed in the bronze marker. Organizations submitting statements were: Kiwanis Club of Covington, Thomas Sullivan, chairman of the education committee; the Kenton County chapter of the American Red Cross, Mrs. Genevieve H. Runner, executive secretary; the Ludlow Business Men's Club, Paul J. Blanford; the Colonel Aerie of Eagles of Dayton, Fred H. Blakely, secretary; the Simon Kenton chapter of the National Society of the Daughters of the American Revolution, Mrs. Alberta Stevenson (W. Baxter) Harrison, chapter registrar; the Young Men's Christian Association of Covington, Willard L. Wade, general secretary; the Covington Protestant Children's Home, Robert R. Shepherd, superintendent; Kenton County Ministerial Association, Rev. Jesse L. Murrell, executive secretary; the Trinity Episcopal Church of Covington, Rev. Bruce A. Weatherly, rector; the Covington Retail Merchants Association, Mrs. Mildred Hitch, secretary; the Kiwanis Club of Latonia, Kentucky Historical Society, Bayless R. Hardin, secretary-treasurer; the Listening Post of Kenton County, Mrs. Frances Glas-

cock, acting secretary and counselor; the Jaycee Wives, Mrs. P. Summe, president; the Covington Lions Club, Edward Wimmer, president; the Covington Optimist Club, R. Clark; the Opti-Miss Club, Mrs. Bernard Klosterman; the Covington Rotary Club, Edward Williams, president; the Covington Ro-Anns, Mrs. Edward Williams, president; the Covington-Kenton County Chamber of Commerce, Col. John G. Cox, executive director; the Northern Kentucky Druggist Association, W. Nie, president, and Mrs. Nie; the Covington Art Club, Mrs. Homer Snook, president; the Covington Business and Professional Woman's Club, Mrs. Ida C. Dyas, news director; the Boy Scouts of America, C. T. Alexander; Licking area council Girl Scouts of America, Katherine Boyce; the Chamber of Commerce of Campbell County, Miss Lenora Bacon, executive secretary; the Latonia Kiwanis Club, Stanley Chrisman; the Covington Kiwanis Club, Dr. Sullivan; the Fort Wright Civic Club, the Park Hills Civic Association, Harry Hamilton; the Kersten-O'Day Post Veterans of Foreign Wars, Dayton, Kentucky; the Kenton County Taxpayers Association, Earl Metcalfe, secretary; the Daughters of Isabella, Mary Moser; Kenton County Bar Association, Harry K. Aurandt, president; Kenton County Realtors Association, John Krumpelman, president; and others.

The November issue of the Kentucky Historical Society Communique, Bayless E. Hardin, editor, was placed in the box; also a roster of the members of the Christopher Gist Historical Society; also the first issue of the Gist of Things, Mrs. Ida C. Dyas, editor, official publication of the Christopher Gist Historical Society, issued on November 15, 1955; also the 1954 issue of the bound volume of monthly papers read at the society's meeting, this one being written and read by Mrs. Stephens L. Blakely, on the subject: Chronicles of Old Trinity (Trinity Episcopal Church of Covington), which carried an article relative to Governor Stevenson who was an ardent member of that church.

In addition to these statements, a history of the land on which the marker stands was sealed within the marker. It read as follows: "Within this envelop is to be found a report of the owners of the land whereon the Governor John W. Stevenson Mansion was located from 1751 until the present time (1955), and now owned by the State Property and Building Commission of the Commonwealth of Kentucky. (1751) The Ohio Land Company of Virginia first owned the land under provisions of a survey made by Capt. Christopher Gist, in March 1751, under patent granted by the Colony of Virginia. Later owners of the property were Col. Stephen Trigg, Col. John Todd, Jr., and Col. William Christian, from 1780 until 1782; James Welch, 1785; Col. George Muse, 1788; Col. James Taylor, 1798; Thomas Kennedy, 1801; Gen. John S. Gano, Richard Gano, and Thomas D. Carneal, 1815; Uriel Sebree, Alfred Sanford, Joseph Kennedy, William Ruddle, and John C. Buckner, first trustees of the town of Covington, 1815; Thomas Carneal, 1818; John W. King and wife, Ann, 1818–19; Herman J. and his wife, Rosina E. Groesbeck, 1838; John P. Winston and his wife, Julia P. Winston, 1852; John W. and his wife, Sibella Winston Stevenson, 1855; on December 14, 1914 the property passed from the family ownership, at which time a conveyance was made from John W. Stevenson, a widower, Mary W. Stevenson Colston and Edward Colston, her husband, Judith Stevenson Winslow, a widow, Judith Braxton Colston, unmarried, Sally Colston Mitchell, and Mary L. Mitchell, to E. B. Sayers, 1914, and finally the State Property and Building Commission of the Commonwealth of Kentucky—the report was compiled by Attorneys John R. Blakely, John H. Klette, Jr., Dr. Charles G. Talbert, Attorney Orie S. Ware, Bayless E. Hardin, secretary of the Kentucky Historical Society, and C. B. Truesdell, chairman of the document committee.

"Other documents placed in envelopes and handed to Senator CLEMENTS and Judge Milliken were extracts from the Cincinnati Commercial Gazette, August 11, 12, and 13, 1886, relative to the death of Governor Stevenson; also extracts from the Cincinnati Enquirer, of August 11, 1886, relative to the death of Governnor Stevenson. Also, copy from Biographical Directory of the American Congress, 1774–1949, by Harrison, relative to Governor and Senator Stevenson, 1812–86; also copy of the same directory relative to Andrew Stevenson, father of John White Stevenson, 1784–1857. Also copy of an article taken from the American Biography relative to John White Stevenson.

"Also, copy of the inscription on the face and side of the marker; copy of the records of Spring Grove Cemetery, Cincinnati, Ohio, where Governor Stevenson is buried; copy of a letter under date of July 7, 1955, from Miss Judith Braxton Colston, granddaughter of Governor Stevenson, to C. B. Truesdell, secretary of the Kentucky Historical Society, relative to her grandfather and the Governor Stevenson Mansion; also, copy of program at both the site of the Governor Stevenson Mansion in Covington and at the Fort Mitchell Country Club; also copies of the Kentucky Post, the Kentucky edition of the Cincinnati Enquirer, the Kentucky Times Star, and the Louisville Courier-Journal, covering a period of the last month which contained articles relative to the program; also a photo of Governor Stevenson and an etching made from the photo of Governor Stevenson and an etching made from the photo of Governor Stevenson by Mayor John J. Moloney of Covington."

Promptly at 6:30 p. m., Friday, December 9, the second phase of the commemorative program sponsored by the Christopher Gist Historical Society in honor of former Governor and Senator John White Stevenson commenced with a reception at the beautiful Fort Mitchell Country Club, Fort Mitchell, Kenton County, Ky. Mr. Eugene E. Druly, chairman of the reception committee was in charge of greeting and introducing the more than 150 members and guests of the Christopher Gist Historical Society.

Robert S. Tate, president of the Christopher Gist Historical Society, presided over the evening meeting and commenced his opening remarks by stating that, "The purpose of this meeting, as you well know, is for the purpose of paying homage and tribute to a very distinguished Kentuckian and Kenton Countian, of our own area; a former State governor and a former United States Senator—John White Stevenson."

Mr. Tate then introduced Mr. Gilbert W. Kingsbury, who served as master of ceremonies and toastmaster for the rest of the program. Mr. Kingsbury, prior to introducing the speakers for the evening said:

"Our objective is to make our fellow citizens more aware of our heritage. And we do have a heritage—as the flags before us on the table indicate. We were claimed by the French, governed by the British, contributed to the Confederacy and the Union, and we pay our allegiance today to the flag of the Commonwealth and the Stars and Stripes.

"We have given our State and Nation many a man of whom we can be proud, in addition to John White Stevenson, the man we honor today. There are Richard P. Ernst, John Fisk, John G. Carlisle, William Goebel, Maj. Samuel Woodfill, Brent Spence, who has served in Congress longer than any Kentuckian in our history.

"With us, here tonight, to help in calling attention to our glorious past, are two granddaughters of Governor Stevenson, Miss Braxton Colston and Mrs. Mark L. Mitchell, of Cincinnati. Also with us are two great grandsons of that illustrious man, Mark Mitchell, Jr. and Edward Mitchell.

"I would be remiss if I did not pay tribute to Mr. John C. Morrell who helped us in constructing the monument dedicated this afternoon. At times we feared that the job would not be completed in time for this event but I reckoned without the skill and know-how of this engineer. I must also pay tribute to William Judy, executive director of the State building commission who, from the beginning has given us his great help in planning the dedication.

"This afternoon we heard from a fellow-northern Kentuckian, Judge James B. Milliken, who, on January 1, will become chief justice of the State. I would have to look up the records to find out the last time we have been so honored. Judge Milliken adds another star to our crown.

"Tonight we hear from another student of law. Charles E. Stevenson has been a friend of mine since we attended Covington High School. Today, I told him in considerable awe for his attainments as a scholar. He is associate professor of law at the University of Cincinnati, where once taught Governor Stevenson. Soon, Professor Stevenson will be Dr. Stevenson, and tonight he is going to trace the teaching career, at the same college of law, where Governor Stevenson once held forth. Professor Stevenson of Kentucky and the University of Cincinnati College of Law."

REMARKS OF GOV. JOHN WHITE STEVENSON'S CAREER AS A LAW PROFESSOR

(By Charles E. Stevenson, associate professor of law, College of Law, University of Cincinnati)

It is indeed a privilege and a pleasure to be asked to represent the College of Law of the University of Cincinnati in this program honoring the memory of one of its distinguished faculty members, John White Stevenson.

When I was asked to speak of Governor Stevenson and his career as a law professor, my feeling at first was that I should decline, as such a talk by me would be out of tune with the trend of today. For some reason in the recent years of our time, we are not accustomed to hear one Stevenson speak well of another, but rather have come to expect to hear only of Stevensons for Eiesnhower.

After I had overcome this first reluctance and accepted the commission, I recalled some of the personal problems Governor Stevenson had posed for me in the past. For many years in my childhood, I lived within two blocks of the Stevenson home at Fourth and Garrard Streets. Often I had heard others speak of the Stevenson Mansion, and long and fruitlessly I puzzled as to why, if this were the Stevenson Mansion, my family never went there. And this problem of mine was further complicated by the fact that although everyone spoke of the large brick building on the corner as the Stevenson Mansion, it bore over its door in large and unmistakable letters the name "Lafayette." Why was this? It just did not come to make sense to me, and as nearly as I can recall, I never did solve the mystery.

Later on when I attended Trinity Church, I at first thought a special welcome had been prepared for me, for I chanced to sit in a pew bearing the name "Stevenson." I became somewhat suspicious of this conclusion, however, when I noticed a window dedicated to the memory of John White Sevenson. After I had taught at the College of Law of the University of Cincinnati for a time, I learned that Governor Stevenson had preceded me there also.

The teaching career of Governor Stevenson at the Cincinnati Law School started in 1878 and lasted until 1886; 8 years. During those years the law school was located on Walnut Street between Fourth and Fifth,

at the present location of the Mercantile Library Building. The law-school bulletins of those days indicate that the classes ran from the Thursday after the second Tuesday in October until the second Wednesday in May. The regular course of study lasted 2 years, with the optional third-year postgraduate course. No particular previous course of study was required of the students. The student body average about 130 persons. The faculty was composed of some six men. Governor Stevenson taught the courses in commercial law and contracts.

The Cincinnati Law School traces its history back to 1833, and is the oldest law school west of the Allegheny Mountains. The faculty of the law school has included many prominent men, jurists, judges, governors, and one President. In general, the order of procedure was for the members of the faculty to go from the law school into public life. In the case of Governor Stevenson this order was reversed and he brought with him to his teaching all the practical experience gained from a lifetime of service as jurist, Congressman, Senator, and governor.

It has been said that the teacher is the only craftsman whose raw material has a soul. To him is given an opportunity not given to others. How well he performs his function, the development of this raw material—often will be unknown to the teacher for a long time. Indeed, it may never be known to him and may be but dimly perceived by others. Governor Stevenson's teaching career came at the end of a lifetime of public service and it is to be regretted that he did not live long enough to observe in the lives of his students the fruits of this career.

It would be impossible to list here the names and accomplishments of all the students who came within the orbit of Governor Stevenson's teaching, or even of the Kentucky students who attended the law school during this period. Indeed, it is impossible to tell with certainty the extent of the influence Governor Stevenson exerted on any individual. It is clear, however, that many of the students who sat at the feet of Governor Stevenson later rose to prominence and were imbued with his spirit of public service.

Some of Stevenson's school students from Kentucky, whose names will be recalled by many of you here, were Alex D. Simrail, James Pryor Tarvin, Lewis Conner Yager, John Flavel Fisk, John Galvin, George Benjamin Ranshaw, Benjamin F. Braziana (the family of this student later acquired the site of the Stevenson mansion, and it was from them that the Commonwealth of Kentucky purchased the land. It also may be of interest to an historical society that the firm of attorneys who represented the vendor in this latter transaction traces its decent from the firm founded by Governor Stevenson.) and Senator Richard P. Ernst, who lived diagonally across the street from the Stevenson home. Senator Ernst, perhaps the prize student of all, had a lifetime of public service—known to all of us—that emulated that of his teacher.

When I started this subject of the teaching career of Governor Stevenson, I assumed that none of his former students would still be alive. However, on November 25, 1955, the Cincinnati Enquirer carried a notice of the death of one David Woodmansee, 96, a graduate of the Cincinnati Law School, class of 1885. It is entirely possible that others of this period are still alive who recall from their personal experience the teachings of Governor Stevenson. Within the lives of these two men—teacher and student—the present had contact with a large portion of the history of this area. Our country is indeed young from the standpoint of history. It is entirely possible for someone alive today to have had personal contact in his childhood with another who lived during the American Revolution. Although we today, consciously or unconsciously, are guided by the ideals and wisdom of those who have gone before, it is well to recall always that the history of our country largely lies before us.

Through the students who studied under him to the present generation and through them to the future, undoubtedly will pass some of the inspiration of Governor Stevenson. It can be said with confidence that he did not waste his talent, but rather made the most of his opportunity to mould this "raw material with a soul."

ADDRESS BY SENATOR EARLE C. CLEMENTS BEFORE THE CHRISTOPHER GIST HISTORICAL SOCIETY OF THE COVINGTON AND NEWPORT AREA IN KENTUCKY, DECEMBER 9, 1955

Following the address by Professor Stevenson, Mr. Kingsbury introduced Senator EARLE C. CLEMENTS, as follows:

"It is fitting that our senior Senator from Kentucky make this dedicatory address for he is the political heir of Governor Stevenson. Like Mr. Stevenson, he has served as a Member of the House of Representatives, he has occupied the Governor's Mansion at Frankfort, and today he is the assistant majority leader in the United States Senate where he follows closely in the footsteps of another great Kentuckian, ALBEN W. BARKLEY.

"Time does not permit a recitation of his accomplishments during the 5 years he has been in the Senate, nor the listing of the honors his senatorial colleagues have heaped upon him. However, it was the New York Times, I believe, which last summer described him as a Senator's Senator. And that, I feel, is praise indeed.

"I now have the honor of presenting Senator EARLE C. CLEMENTS, of Kentucky."

ADDRESS BY SENATOR CLEMENTS

Mr. Toastmaster, members of the Christopher Gist Historical Society, distinguished guests, ladies and gentlemen, it has been said that some men are born great, others achieve greatness, and still others have greatness thrust upon them.

John White Stevenson was a great man. Moreover, he was destined to be great for this time—and with this man—destiny took no chances.

Usually fickle—wholly whimsical—swayed by passing fancies and sudden enthusiasms—and ever inscrutable—destiny sometimes kind, other times tragically cruel—always is unpredictable.

But—somehow—not with John White Stevenson. On all three counts—birth, achievement, and fortutious circumstances—Destiny qualified and foreordained him to be great. This time destiny was resolute—clearly evidenced throughout his 74 years—was to make John White Stevenson a great American—a great Kentuckian—a great man.

First, destiny saw to it that John White Stevenson was born great.

On the 4th day of May in the trouble-tossed year of 1812, with the Nation on the verge of war, he was born at Richmond, Va., the son of Andrew Stevenson, who himself was a man of parts, having served as the Speaker of the National House of Representatives at Washington, and as Minister to the Court of Saint James at London.

Secondly, destiny decreed it so that the time was propitious for the man named John White Stevenson to achieve greatness. The period between 1812 and 1877, when by his own choice and decision, he terminated his public career, were years of challenge. And, to make doubly certain that the man and the time came together, destiny scheduled several meetings for young Stevenson, where he met and knew and listened to greatness, to men like Thomas Jefferson and James Madison. History records that it was Madison who urged young Stevenson to go west; Madison spoke the words, but every Kentuckian has every good reason to believe that destiny inspired them. John White Stevenson took that advice, and headed west from his native Virginia to Vicksburg, Miss., where he nailed up a shiny, new lawyer's shingle, and entered the practice of law. But not for long. He had an appointment elsewhere, and destiny made sure he kept it by prodding him to partially retrace his steps East, to the place where all of the plans for him were to unfold, on to our own, lovely Covington, Ky.

He arrived in 1841, a young man, tall, lean, strong; a man full of vitality, interest, and the urge to be useful, a man just right for a brand new county named Kenton, that had come into being only the year before his arrival. Now everything was neatly in place, the right man born at the right historical time, and at only 29 settled in the right place.

It was almost natural that John White Stevenson was quickly and favorably noticed. Almost immediately he had his foot on the first rung of the ladder of public service, as the representative of the first ward of the Covington City Council. His term of office on that council was outstanding, and his fellow citizens happily encouraged him to the next rung of the ladder, by electing him attorney of Kenton County.

The years passed quickly, and with them came additional success as the young lawyer steadily rose to achieve greatness.

Let's briefly sketch his climb up the ladder of public service.

In 1845 he was elected to Kentucky's house of representatives, where he served with distinction until 1849, when he was a delegate to the State constitutional convention, where he became one of the architects of that great legal structure, which, with some subsequent modifications, continues to serve us today.

In 1850, John White Stevenson was appointed one of the three commissioners to revise Kentucky's civil and criminal codes.

In 1848—in 1852—and again in 1856—he was a delegate to the Democratic National Conventions.

In 1857 destiny was growing impatient, and the voters ended that impatience by electing him to the United States House of Representatives, and he served in the 35th and 36th Congresses.

In 1861, the Nation trembled, was a house divided against itself. Darkly, the shadows of civil strife fell across the land, and with war, again came dark and bloody ground.

On January 30, 1861, John White Stevenson rose in the House of Representatives at Washington. He plead for an end to the threat that hung over the Nation, divided, split, shaken to its very foundation. His words were charged with the fervor of high patriotism and deep devotion to the Union. The speech, which was hailed as one of the greatest of the session, was a valiant appeal that rang with the honesty of Stevenson's own convictions, but not great enough to clear the national atmosphere of the tension and bitterness that simultaneously gripped and divided the people, now to disperse the emotional thunderheads then rumbling over the length and breadth of the country. Nevertheless that speech publicly and nationally marks John White Stevenson as a man having the courage of his convictions even though as he knew it would, in the next election, it cost him his seat in Congress.

In 1867, John White Stevenson was elected Lieutenant Governor of Kentucky, and now, suddenly, he had greatness thrust upon him, because 5 days after taking the oath of office, Gov. John L. Helm died, and John White Stevenson became the 25th Governor of the Commonwealth of Kentucky and, by virtue of subsequent reelection, served in that capacity until 1871, when he resigned, having been elected to the United States Senate.

When in 1867, John White Stevenson became Chief Executive of the Commonwealth, it was a raw, lusty time but he, who, himself

had been born in another violent period, in 1812, brought all of his talents, all of his great gifts of leadership to bear on the solution of the tense and trying problems of the day, to restore balance and order. Yet, it was a time of peace, but an uneasy one, not unlike our own in that respect, and men's hearts were not yet free of the awful hurts and aftermath of 4 bloody years of Civil War. The house divided was now one, on the blueprints at least, but in Washington, the House of Representatives had adopted a resolution to impeach President Andrew Johnson for high crimes and misdemeanor. The tragic year, the blight and vengeance of so called reconstruction years, had descended like a pall over the still bleeding heart and soul of the South.

But there were other things, other headlines—some of them good news. On March 2, 1868, the State legislature appropriated money in the amount of $4,000 to clear and improve the Cumberland districts. Kentucky's riverways had been discovered as passages to the interior of the United States—when Texas cowhands rode steamboats—not broncos—up to Louisville—then herded them north—to high profit. Jesse James had not yet become a legend—in the time of John White Stevenson; on March 20, 1868, Jesse and his outlaw band stormed into Russellville and robbed the bank and in Owen County a woman was charged with being a witch—but good news was made when oil was discovered at Boyd Creek near Glasgow in Warren County.

But behind this hodgepodge of news, other work—good work—was going forward. Right here in Covington, in September 1869, a waterworks was authorized, and funds in the amount of $300,000 were appropriated to build the Holly waterworks—and in December of that same year, Governor Stevenson notified the State legislature that he had leased, for 50 years, at $1,500 annually the locks and dams on the Kentucky River and in 1871 the newspapers recorded the tobacco crop as outstanding—106 million pounds.

Now, those who really know, need not be told that no scholar am I, always having preferred the field to the bleachers, and so I want to thank you for the opportunity your invitation has afforded me to take a close and detailed look at the statesman, John White Stevenson, to whom we are paying tribute today. In the preparation of this talk, I have come to see him in sharp focus. I have come to recognize him not only as a predecessor of mine, but to visualize him as a familiar figure in the same places I have served, in our State legislature, where I, too. have served; in the Governor's office, and in the marble halls of Congress, in both Houses of which I, also, have served. Not that this is at all unique. In the interests of factual information as well as modesty, let me add that in 1953, my distinguished colleague, Senator FRANK CARLSON (with whom I served in the National House of Representatives, and whose services as Governor of Kansas paralleled mine as Governor of Kentucky and, needless to say, we are contemporaries in the United States Senate) compiled a complete historical list of all the men who have occupied the offices of Governor, Congressman, and United States Senator.

Of all the States, the Commonwealth of Kentucky has the signal honor of having more men to have occupied all three offices than any other State. Seven men, all together, from our Commonwealth, have been so honored. In addition to John White Stevenson, and myself, there were John Adair, John J. Crittenden, James B. McCreary, Thomas Metcalfe, A. O. Stanley, all of whom served Kentucky as governor, Congressman, and United States Senator.

My friends, every period has its problems, its challenges, and certainly ours is no exception—indeed, ours may well be described as a period of utmost challenge. For a very long time the old adage that contended two conclusions had been definitely established, (1) history repeats itself; and (2) there is nothing new under the sun—stood without fear of contradiction; but entirely not so any longer—there is something new under the sun, atomic energy—first the atomic bomb and now, even more terrifying, the hydrogen bomb, which is no longer our secret. The mauve shadow, the veiled threat of the vast, mushroom-shaped explosion, hangs over the entire world, and because of it, through continued superior military strength, inspired diplomacy, plus the wisest use of the facilities of the United Nations, we must cope with and successfully meet this supreme challenge of our period, the equal of which does not appear in the annals of recorded history. Probably not in our day, but eventually, humanity, in sheer self-defense, must meet the supreme challenge of atomic destruction, and remove and erase that specter from the horizons of the world.

Beneath that shadow in southeast Asia this supreme challenge manifests itself indirectly—almost stealthily. Under that shadow teeming millions, long dormant, are arousing, restlessly stirring, awakening to their inalienable rights, demanding self-rule and a better way of life.

Last June it was my privilege to visit the Far East—Korea, Formosa, Vietnam, Laos, Cambodia, Burma—and talk with the leaders of those hordes of awakening peoples who are desperately hungry, not for food alone, but for learning, for opportunity, for tools, for medicine, for privacy, for strength to develop and defend their newly won independence, for time to master the difficult art of self-government, and last, but not least, hungry for acceptance—by us and the other and more fortunate advanced nations of the world. These gnawing hungers, now rising from the ancient, troubled soil of Asia, gradually must be assuaged and eventually satisfied, through the continued aid and cooperation of the older free nations of the world. By denoting these dangers, the free world will make certain that the vast populations of southeast Asia will not, in the urgency of their duress, turn from sustenance to the demoralizing pap of communism. Were that to happen, the Iron Curtain would ring down on all of Asia, and the hope for peace would, indeed, grow dim.

There is also the challenge of the crises in the Middle East—of which we are all aware.

Here at home, there are problems too, that add to the pressure of this period of the supreme challenge.

There is, for example, the ironic situation that confronts us in agriculture. There was one, and not so long ago, the challenge of providing enough food for ourselves. We met that challenge and reversed it until today there is the challenge of plenty of abundance, of what has become known as surpluses. It will take wisdom to provide a solution, to cope with this current challenge, the sardonic challenge of plenty.

In a few weeks the second session of the 84th Congress will convene and the representatives of the American people will return to the seats in Congress with high hopes and renewed determination to cope with and meet the challenge of our time at home and abroad.

We will, for example, devote ourselves anew to finding a legislative solution to the current farm crisis—that now threatens to again undermine as it did back in the 1920's the entire economic and financial structure of the Nation.

We will consider, and I hope enact, legislation to provide veterans' survivorship benefits, to simplfy customs, to build more schools, to build additional highways, to further the development of peacetime atomic energy, aid and lend further impetus to the development of medical science, to improve the health of the Nation, to erect necessary additional houses, and to liberalize and expand our social security system.

These are a few items that I submit to you tonight as a kind of bill of particulars on the activities of the forthcoming session.

We will do our courageous best to meet the challenge of our times, knowing all too well that there are too few John White Stevensons to assist us.

In closing I want to congratulate the officers and members of the Christopher Gist Historical Society on their efforts toward creating a greater awareness of Covington's adopted distnguished son, John White Stevenson. In this you are making a significant and magnificent contribution because our youth of today will be mindful of another great Kentuckian, giving them one more heroic figure to add to the long list of Kentuckians who have gallantly served our Commonwealth and our Nation wholly deserving of praise and emulation.

A State nurtured, influenced, encouraged, and developed by men of the intellectual attainments, courageous vision, and exceptional stature of John White Stevenson can look back with pride and forward with confidence; Kentucky and the Nation need not be alarmed about the future. As we go forward to meet the supreme challenge of our time let us remember that other men of other times successfully met the challenge of their time and that as they did, so must we.

CONCLUSION OF PROCEEDINGS

Following the address on Governor Stevenson by Senator CLEMENTS, Toastmaster Kingsbury thanked the many individuals who had helped to make the program possible, and turned the meeting over to Robert S. Tate, who extended his appreciation to various members of the society who had helped plan and organize both the afternoon and evening ceremonies honoring John White Stevenson.

President Tate also paid tribute to the activities and work of Attorney Stephens L. Blakely, one of the organizers of the local historical society and its first president, who has served continuously as a devoted worker and officer. He also paid tribute to Mr. Irle R. Hicks, Sr., the society's clerk and treasurer, and to Mrs. Calvin S. Weakley, a charter member, who has been a member of the board of management since the society was organized. President Tate, who is also referred to as "Colonel" Tate, by having served on the staff of former Governor Wetherby, of Kentucky, also paid tribute to other officers of the historical society for the work they had done, naming specifically Professor William A. Fitzgerald, assistant secretary, a member of the faculty of Holmes High School, Covington, and mayor of Florence, Ky.; Attorney W. Baxter Harrison, a member of the board of management, who served as the second president of the society, and Mrs. Vincent Reuscher, the society's librarian.

Address by Hon. Edward Martin of Pennsylvania Before State Highway Officials

---

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 25, 1956

Mr. MARTIN of Pennsylvania. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I delivered be-

fore the 41st annual meeting of the American Association of State Highway Officials at New Orleans, La., on December 6, 1955.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY UNITED STATES SENATOR EDWARD MARTIN, OF PENNSYLVANIA, DELIVERED BEFORE THE 41ST ANNUAL MEETING OF THE AMERICAN ASSOCIATION OF STATE HIGHWAY OFFICIALS AT NEW ORLEANS, LA., TUESDAY, DECEMBER 6, 1955

I am highly honored by your invitation to come to the historic city of New Orleans, the metropolis of the rich and charming State of Louisiana.

Courageous and God-fearing people of many nationalities have developed this area into a great empire of commerce, industry and agriculture, combined with the highest cultural and spiritual attainments.

I want to take this opportunity to express my high regard for my distinguished colleagues in the Senate from Louisiana, ALLEN ELLENDER and RUSSELL LONG. Although we are on opposite sides politically, I admire them greatly as sincere and patriotic American statesmen.

It is a great honor to appear before this association. Here are assembled the road builders of America. Much of the future progress of our country depends upon you because transportation is the lifeline of our expansion and roads are the backbone of transportation.

Transportation has always been and still is one of America's big problems. It is a problem we must face with the same courageous spirit that our ancestors met the difficulties of their day.

Roads are today, as always, the basic means of transportation. The other systems—railroads, waterways, the air and pipelines—aid and supplement the highways just as the auxiliary branches of the armed services help the "doughboy" gain and hold his objective.

We have spent an enormous amount of money for transportation in the United States as the following figures show:

In highways, 1931 through 1955, we have spent $75,230,000,000 distributed as follows: Federal, $11½ billion; State, $43 billion; local, $21½ billion.

In waterways, 1931 through 1955, the Federal Government has spent $1,450,000,000. It will take $2½ billion more to complete our waterways system.

In railroads, fully owned by the people, there is invested, $33,581,000,000. Enormous expansion is being made in this service to keep up with the public demand.

In airlines there is invested by Government $2,200,000,000. Practically every city is improving its airport facilities.

In pipelines, fully owned by the people, there is invested $10 billion. The "big inch" lines now have as many miles as the railroads and are continually increasing this mileage.

The last half century has seen more progress in transportation than all the rest of recorded history. In that period we developed what we were proud to call the finest highway system in the world. That is true. Our highway system is superior in quality and mileage to any other in the world. At the same time we have 75 percent of all of the passenger cars and 50 percent of all the trucks in the world. Nevertheless the tragic fact remains that highway development, as we all know, has fallen far behind the rising needs of our vastly increased volume of traffic. Our roads are now what they should have been 10 years ago.

It is true, of course, that part of our highway difficulties can be blamed on the necessary suspension of roadbuilding activities during the war years. But more than anything else, the problem has been aggravated by our phenomenal national expansion.

One of the most spectacular developments has been the surprising increase in our population. According to the latest Census Bureau estimates we are now a Nation of more than 165 million people. We did not expect to reach that number for many years to come. It represents an increase of more than 33 million, or 25 percent, in less than 15 years since the general census of 1940.

Translated into terms of human needs this amazing population increase has imposed upon us many great problems in addition to the problem of our inadequate and hazardous highways.

We need more schools to educate the growing army of young people. We need more housing. We need expanded recreational facilities. We need more hospitals. We must build more churches of every denomination.

Each of these vital needs is an essential part of the American way of life. They must be paid for, either with private funds accumulated by hard work and thrift, or by public funds raised by taxation.

It is no exaggeration to say that President Eisenhower's call for bold new steps to solve the highway problem has made the Nation highway conscious. The President performed an outstanding service to the Nation when he centered attention on this vital problem. I am convinced that when the next session of Congress convenes it will be bombarded from all sections of the country with demands for prompt action.

We need the roads. There is no question about that. We must have them if we are to have an expanding economy.

We need them for our industrial, cultural, and spiritual advancement.

We need them for national and civilian defense.

We need them to reduce the frightful toll of lives taken each year by accidents on our highways.

We need them to bring the people of every section closer together and thus provide the means for a better understanding of our great country and its problems. My study of the War Between the States convinces me that if we had had a good system of highways and better means of communication the war might have been avoided.

The big decisions we must now make are how the highways shall be financed, where they will be built; how they will be built; how they will be policed; and how they will be maintained.

It's up to the American people to decide, for they must pay the bills.

The President's proposal was, of course, the most ambitious highway construction program ever visualized for this country or any other country. At no time were its broad objectives the subject of controversy.

Every phase of the situation was examined with the greatest care by the subcommittee on roads of the Senate Public Works Committee under the distinguished junior Senator from Tennessee, Mr. GORE. The printed record of hearings held by that subcommittee comprises a volume of 1072 pages. It includes the views and opinions of every element concerned with the planning, construction, financing, and administration of highways. The subcommittee heard testimony from State governors, the mayors of numerous cities, outstanding engineers, contractors, highway safety experts and many others.

The hearings disclosed that it will probably take 2 years to get the program fully underway. It will be necessary to increase the number of engineers working on road projects. Contractors will have to enlarge their organizations. More road building equipment will be required and the production of road building materials will have to be expanded. But we were assured that within 2 years we can have an adequate engineering personnel, an adequate number of qualified contractors and adequate materials available to do the job.

In this most comprehensive presentation of the highway situation there was virtually unanimous endorsement of President Eisenhower's broad concept of a vastly expanded and strengthened national highway system.

The principal area of disagreement was the method for financing the program. That is the big problem before us today.

At this point I would like to recall the statement of President Eisenhower issued on July 28, the day following the defeat of the Fallon bill in the House.

Expressing disappointment over the rejection of the legislation the President said, and I quote:

"The Nation badly needs new highways. The good of our people, of our economy, and of our defense, requires that construction of these highways be undertaken at once.

"There is a difference of conviction, I realize, over means of financing this construction. I have proposed one plan of financing which I consider sound. Others have proposed other methods.

"Adequate financing there must be," the President continued, "but," he added, and this is the important part, "contention over the method of financing should not be permitted to deny our people these critically needed roads."

You are all aware, of course, that I supported the corporation-bond plan regardless of the fact that for a half century in public life I have favored the pay-as-you-go principle. In order to get the roads built I would again support a bond plan. However, in view of the opposition to that plan, particularly among many fine conservative people who stand against deficit financing of any kind, I would give my support to any reasonable compromise that will assure prompt action.

In this connection it is worth noting that 75 percent of the State and local bond issues proposed to finance road building and other projects were defeated at this year's elections. There was a real revolt by the voters who approved only about $470 million of the proposals. More than $982 million were turned down. This reversed the pattern of recent years since World War II in which the voters ratified an average of 85 percent of the bond proposals submitted for their consideration.

Recently I received a brochure prepared by the American Municipal Association which disclosed some startling facts. It stated that the failure of Congress to enact an expanded Federal-aid program for highways has delayed up to 10 years the construction of expressways, arterials, and bypass routes that are needed now to alleviate the traffic strangulation of existing city streets.

A survey by the association revealed that in 85 cities representing 38 States and the District of Columbia, 129 projects, with a total estimated cost of $5½ billion, are or will be adversely affected by the absence of a national highway program.

Here are a few examples:

Detroit is holding up the construction of 6 expressways involving more than $363 million pending Federal action.

New York City has plans for a $600 million network of roads and bridges but cannot proceed without assurance of expanded Federal aid.

Chicago wants to complete 33½ miles of expressways which will cost over $350 million.

In Pennsylvania much work has already been done in the cities of Pittsburgh and Philadelphia. Philadelphia has a limited access road where the speed limit is 60 miles per hour, from Fairmont Park to the Pennsylvania turnpike. These 32 miles cost over $100 million.

The parkway in Pittsburgh is almost completed. The 33 miles cost $118 million. In

both Pittsburgh and Philadelphia the Federal and State government paid about 95 percent of the cost.

I have mentioned only a few samples. There are many more. They point out very clearly that the longer the accelerated highway program is delayed the more it will cost in higher prices for right-of-way and construction as well as economic losses from traffic congestion.

It goes without saying that under any plan that may be adopted the people will pay the bill through new and higher taxes.

Some day a great genius may arise among us who will devise a system of taxation that will meet with universal approval. But until that day arrives every tax proposal that may be advanced will bring opposition from some source. Therefore it must be our constant aim to impose such new taxes as may be required in as fair and equitable a manner as is humanly possible.

There is no doubt in my mind that the financing problem related to highway development can be solved in a way that will distribute the costs on a fair and equitable basis.

Such a solution will not be difficult if all parties concerned approach the problem in the American way and that means placing the National interest above sectional advantage. It will require strong and resolute resistance to those groups who seek to exert political or other pressure in their desire to gain selfish advantage.

Now let us look at some of the financial aspects of the highway situation.

Federal, State and local governments are spending annually on roads and streets about $7½ billion.

The three levels of government are collecting taxes related to the use of roads of more than $8 billion.

The Federal Government collects more than $2½ billion in taxes on gasoline and excise taxes on motor vehicles, parts and tires.

This is twice the amount of taxes collected by the Federal Government from all sources before World War I.

There is general agreement that the national system of interstate highways is a prime responsibility of the Federal Government.

The interstate system, as you know, is a specially designated network of 40,000 miles. It was carefully laid out to meet the military, civilian defense and industrial needs of the country. To serve these purposes it will connect 42 State capitals and 90 percent of all the cities of over 50,000 population. It will have controlled access and will bypass large centers of population. It will take about $25 billion to complete it.

How can this expenditure be financed? Some proposals that could be considered are as follows:

An additional 1 cent Federal tax on gasoline which would yield annually more than $500 million. This year 15 States have already raised their gas tax.

The present tax on rubber might be increased to yield an annual total of $300 million.

A Federal license fee on trucks and buses using the interstate system to yield $300 million.

Increased appropriations from the general fund and some matching funds from the States.

The collection of tolls on tunnels, bridges, and perhaps some sections of road on the interstate system could yield $300 million. In this connection there is being discussed the possibility of charging tolls for the use of the locks and dams, built with Federal funds, on our waterways. It is a sound principle of government to make governmental projects, as far as possible, self-liquidating. This principle has been applied with great success to reclamation and irrigation projects.

Although emphasis is placed on completing the interstate system in a 10 or 15 year period we must always provide for the needs of the primary, secondary, urban and other roads. They have increasing importance in our general highway plan.

In any national road program we must keep our economy strong.

Taxes and spending must be carefully planned to keep local government in a healthy financial condition.

Balanced budgets at all levels of government, Federal, State and local, are essential to our economic progress.

It now appears that we will have a balanced budget through increased revenues and economies in government departments and agencies. That means that highway money can be taken from the general fund provided the present level of taxes is maintained.

Personally I do not think there should be a reduction in taxes until the budget is balanced and a start is made in cutting down the enormous Federal debt.

All of these fundamentals of government finance are tied in with the vast expenditures that must be made to give the United States a modern, safe and efficient highway system.

The completion of the interstate highways will be a monumental achievement. Our first objective must be to get the job started. I am confident that the next session of Congress will clear the way.

The Parity Level of Dairy Products

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, January 25, 1956

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from an address which I delivered over radio station WTMJ on January 22, 1956, on the subject of the raising of the parity level on dairy products to that of the six basic commodities.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

SENATOR WILEY URGES PROMPT ACTION ON RAISING DAIRY PARITY TO LEVEL OF SIX BASIC COMMODITIES—PRESENTS OTHER SUGGESTIONS TO ACHIEVE SUPPLY-DEMAND BALANCE

(Excerpts of remarks delivered by Hon. ALEXANDER WILEY, Republican, of Wisconsin, over WTMJ farm program, Milwaukee, Wis., January 22, 1956)

Congress is definitely going to enact a new and effective farm law to help raise dairy and other farm income.

ACTION MAY COME IN FEBRUARY

By the middle of February, the Senate Agriculture Committee is expected to report out its version of the new bill. The House of Representatives had already passed its version, last year, designed to raise parity to 90 percent. The Senate version will undoubtedly be offering a compromise figure.

One thing is sure, and that is, that increased income assistance for the dairyman is and must be on the way.

THE IRONIC CONTRAST OF FARM HARDSHIP TODAY

Why? Well, just note this unfortunate contrast:

Dairy income has been skidding or holding at low levels, while almost all other segments of our economy are at the highest levels of our history.

The dairyman's hardship has resulted in lower purchasing power all over Wisconsin. That means that everyone is hurt, including the consumers, when the farmer is hurt.

Our aim, of course, is definitely to eliminate the cost-price squeeze on the farmer.

The prices of machinery, labor, and equipment have skyrocketed. Meanwhile, price of milk, pork, beef and other products have been at low or declining levels. Today, as a whole, the farmer is getting only around 40 cents out of the consumer's average food dollar. We must close this gap between the farmer's small return and the ultimate sale-prices so as to provide for the farmer a sound basis of operation—that, is, his cost of production plus a reasonable profit.

How are we going to do this?

FAIR TREATMENT UNDER THE PRICE-SUPPORT PROGRAM

We must all remember that the price-support program—imperfect as it is—serves at least as a temporary implement to help sustain our farmers.

Our ultimate objective, of course, must be a program that does not depend upon Government support to maintain a stable and profitable price level.

We must aim to reestablish farming on its own healthy plane, independent as much as possible, receiving its full share of our national prosperity.

Meanwhile, we must make sure that milk gets the same parity level as other so-called basic products.

MILK AS BASIC AS ANY PRODUCT

Milk is just as basic as cotton, tobacco, wheat, or corn. It must not be discriminated against or treated as a step-child.

Cheese, butter, milk powder, ice cream, none of these essential dairy products must be allowed to suffer—as regards price, production, or consumption.

PRODUCTION HIGHER

Today, milk production is at the 124½ billion pound per year mark.

The so-called milk surplus has fortunately been declining. It would actually be eliminated entirely if we were all to drink more milk each day.

ESTABLISH A SUPPLY-DEMAND BALANCE

One of the first things we must do is to attempt to establish a supply-demand balance. Many folks have said that we are suffering from overproduction. I don't think so. Instead, I believe that our problem is underconsumption.

Until the surplus problem is solved, however, it may be necessary to adjust our production as well as attempt to increase consumption.

NEW MEANS OF FOOD DISPERSAL

Basically, we must be more enterprising in figuring out ways of dispersing and utilizing foods. I will list some of the means by which this can be done:

1. We must develop new distribution channels, both foreign and domestic, to increase consumption of our so-called surplus foods;

2. We must constantly improve sales promotion, to educate the public in the uses of dairy foods; and

3. We must expand our research program. As you know, I have introduced a bill (S. 788) for a Dairy Research Laboratory in Madison, to provide research into new and different uses of our dairy products.

DISPOSING OF SURPLUS FOODS

Meanwhile, let's not keep our dairy and other farm products sitting in warehouses. Let's get them out to the people to be consumed.

Merely providing warehouse space for our stockpiles of surpluses—of corn, wheat, etc.—is costing us $1 million a day for stor-

age. We have got to eliminate the governmental redtape and foot dragging on surplus disposal. We've got to move this cheese, butter, milk powder and other products into the stomachs of hungry people.

The dietary standards of many people can be greatly improved if we disburse these so-called surplus foods wisely, and perhaps profitably, to those in the world who need it.

This can be achieved by:

1. Stimulating the sale—not just give away—of surplus products held in storage by the Department of Agriculture. During 1955, for example, the Department sold—I emphasize—sold $1.2 billion worth of surplus products.

2. Expanding distribution of milk, cheese, milk powder, and other foods, through school lunches, the Armed Forces, and relief to distressed people; and

3. Encouraging the use of surplus foods in foreign policy, as strategic weapons in the economic warfare against communism.

FOOD STORAGE

A program of permanent food storage should be an important consideration for any plan for the future.

Our great, cosmopolitan cities, depending to a large degree on perishable foodstuffs, are only a few days away from potential food storage. Consequently, we must take a new look at our storage practices, to determine how to keep sufficient food on hand for local, regional, or national emergencies, as well as for normal modern use.

LEGISLATION

As we all recognize, there is no blanket cure for the current farm crisis.

Instead of hunting for a cure-all, we must deal realistically and individually with each phase of the problem.

Our legislative pattern in Congress for 1956 must be guided by this philosophy. The dairying problems, for instance, will have to be resolved according to today's needs of the dairymen, and according to tomorrow's production and consumption prospects.

In the new Congress, I have so far introduced three bills of significance to the dairy farmer:

School milk: The first two bills provide for expansion of the school-milk program for this year and for 1957. It would bring more milk and health to the school children of Wisconsin and America.

Bang's disease: I have also introduced a bill to provide sufficient funds to continue expanding the program for eradicating dread brucellosis which has cost such severe economic loss for the farmer.

Seaway: In addition, my bill, S. 171, to expand and deepen the connecting channels of the St. Lawrence seaway is coming up before a Senate committee this month. This great seaway, upon completion, will provide speedier and more inexpensive domestic and foreign markets for the agricultural products of Wisconsin and all of the great Middle West.

I shall, of course, introduce additional legislation in the Congress as new situations arise, or as we find solutions to our present problems.

LONG-RANGE PROGRAM

A prominent feature of any program must be long-range planning, to provide a stable future for our farmers. Important aspects of such planning are:

First, we must develop long-range farm studies, with the objective of changing over production from surplus commodities to products in short supply.

This would help use our productive capacity over a more varied field. We would provide new and different products, which would result in a better living for all of us. We would help to eliminate the recurring cycles of surplus foods and price depression.

Second, we must establish a soil-bank program to preserve the fertility of the land. This plan would involve safeguards to prohibit nondairy farmers from using acres diverted say, from wheat and cotton to production of dairy products for commercial purposes. Such diversion would, if unchecked, only serve to increase the dairy surplus.

CONCLUSION

In conclusion, I want to emphasize that these proposals are designed not simply to help the farmer, but also to help the storekeeper, farm-implement dealer, professional man, and all of the other Americans who are dependent upon the buying power of the farmer. I include, too, the housewife who wants vitamin-rich, nutritious products for her children and family.

Yugoslavia in the Security Council

EXTENSION OF REMARKS

OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 25, 1956

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a news release issued by me on December 20, 1955, entitled "Yugoslavia in the Security Council."

There being no objection, the release was ordered to be printed in the RECORD, as follows:

YUGOSLAVIA IN THE SECURITY COUNCIL

It is deeply humiliating to any true American to see the representative of the United States at the UN taking part in a deal over whether the Philippine Islands should have the vacant seat on the Security Council.

The Philippine Islands are perhaps our closest friends as a nation. They were our allies in a cruel war and bore the heaviest brunt of the battle, while the Soviet Union, which contributed no men to the Pacific War, took all the spoils. The Filipinos are our friends in the struggle to preserve freedom and international morality against Communist hate and barbarism. We know that in another war against totalitarian brutality our fighting men can count on them to stand beside us in the fray.

What is Yugoslavia to us? The Yugoslavs shot down American airmen on a peaceful mission and sneered at our demands for an apology. What was Tito doing while the Filipinos were fighting a bloody fight for every inch of their soil? Tito was a traitor to his own country, hiding in Moscow until the danger was over and he could come back in safety and murder our valiant ally, Mihaelovitch and his brave men. Let us not forget in passing that Mihaelovitch's guerrillas destroyed the Nazi supply trains which were to equip Rommel's armies in Africa. Our men who fought in Africa have reason to remember.

Does anyone in the United States believe American fighting men could count on Tito's armies to fight beside them, if we are forced into another war with totalitarianism? I hope our representative to the U. N. is not so innocent to believe that.

Let me remind you of the real reason why the Soviet Union is determined to prevent the Philippines from taking their seat on the Security Council. When the Bandung Conference opened, the Soviet Union and Red China were confident that Nehru could manage it as they wished into innocuous desuetude. Their little plan did not work because the wise and brave anti-Communist nations of Asia and Africa spoke out with all their force against the new colonialism of the Communists. The grand climax of that great conference was the speech by Carlos Romulo, in which he told the people of Asia to forget some of their hatred for the colonial power on whose flag the sun never sets and face the immediate threat from the new colonial powers on which the sun never rises.

The Soviet Union never forgives and never forgets. The Philippines must be humiliated because they spoke out as freemen.

But what of the United States? Do we not have enough courage to support, without stint, the brave and far-sighted Philippine nation, which spoke at Bandung as America used to speak.

The choice of the Philippines for the Security Council is an issue of principle and we must watch while the delegate from the United States consents to decide an issue of principle by drawing straws.

Imagine George Washington agreeing with the British to draw straws over who would win at Valley Forge. Imagine General Pershing drawing straws with the Germans over the battle of Belleau Wood. Imagine, if you can, General Eisenhower drawing straws with the Nazi leaders over the Battle of the Bulge.

What has happened to our country? The answer to our stupid weakness over the Philippines is the same as the answer to our stupid weakness over Outer Mongolia. It is the same as our stupid weakness over the clever move of the U. S. S. R. to pair by its veto, the desert province of Outer Mongolia with the 90 million highly productive people of Japan. The trouble is that our representative in the U. N. does not represent the people of the United States. He does not represent the Government of the United States, including Congress. He receives his instructions from, and represents only, the permanent elite established within our Government by the New Deal, whose real policy is firmly to establish a collectivist international, in which the United States will be one obedient province.

The plan was carefully laid to put over both the package deal on Outer Mongolia, and the defeat of the Philippines, in the shadows while the Geneva Conference was theatrically lit up to hold our attention away from the U. N. It was a clever plan but it failed. Free China's courage bought us time.

Yesterday I said that Congress must look into the question of our representative's fantastic role in opposition to Dr. Tsiang of Nationalist China and in support of Soviet bulldozing tactics. Today I say again, Congress must look at our fantastic role in the fight to reward a brave leader of the anti-Communist Afro-Asian nations, with a well-deserved seat of honor on the Security Council.

In both cases we will find the same dominant role of the permanent elite over our foreign policy.

If the American people are ever to have a voice in the United Nations or in any other aspect of our foreign policy, Congress must cut down the power of this nonelected cabal and restore government by the people in place of government by leviathan.

Progress Under the Eisenhower Administration

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, January 25, 1956

Mr. WILEY. Mr. President, last Friday night it was my pleasure to attend

the gala salute to Eisenhower dinner held in Milwaukee.

This dinner, like companion rallies all over our Nation, evidenced the enthusiastic support of the Republican Party for the President of the United States—support which is, I know, shared by the overwhelming mass of the American people.

We heard a splendid address from the distinguished Secretary of Commerce, the Honorable Sinclair Weeks.

Secretary Weeks presented point by point the proof of the great and constructive change which has occurred since Dwight D. Eisenhower took office on January 20, 1953.

He commented, of course, as well, on the future opportunity for the Republican Party's service to our Nation.

I am pleased to ask unanimous consent to have printed in the Appendix of the RECORD the text of Secretary Weeks' remarks.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

COMPLETE U-TURN IN GOVERNMENT

(Address delivered by Hon. Sinclair Weeks, Secretary of Commerce, at the salute to Eisenhower dinner January 20, 1956, Pfister Hotel, Milwaukee, Wis.)

I am most happy to be with you tonight and to participate in your salute to one of the greatest Americans in history—our President, Dwight D. Eisenhower.

The most gratifying experience of my life is to be a member of his Cabinet and to attempt to carry out his policies to the best of my ability.

Sufficient time has elapsed since the President's inauguration, exactly 3 years ago today, for the American people to pass judgment on his character, his leadership, and his brand of dynamic conservatism.

THREE SHORT YEARS AGO

Three short years ago American families were receiving heart-breaking telegrams announcing that a father or a son had perished in Korea.

The people of this State remember with solemn pride and sorrow that 723 Wisconsin boys were killed and 1,936 were wounded. Thanks to President Eisenhower's leadership, those tragic days are over.

Three short years ago people were talking about corruption and security risks. They were waiting eagerly for the new administration to clean up the mess. And it has.

Three short years ago inflation was pushing up the cost of living. Today we have a stable dollar in an era of unprecedented prosperity.

Why the change?

The American most responsible for today's peace, prosperity, and individual well-being is the leader whom we salute tonight, our President.

CLASH OF DIFFERENT IDEOLOGIES

I propose to cite chapter and verse on some of the accomplishments of the Eisenhower administration. But before I do so I believe it might help pin point the political situation if I described the difference between Eisenhower principles and those practiced in an election year by the current spokesmen of the opposition party.

I allude to spokesmen rather than rank-and-file Democrats. I do so because—as the 1952 election and every nationwide poll thereafter indicate—millions of Democrats are united with millions of independents and Republicans in wholehearted support of the President. And if—as we all hope and pray—President Eisenhower runs again, he will win by an even greater landslide.

Nevertheless, the professional politicians in the opposition party, who lack popular issues, are doing everything in their power to wiggle back into the White House and to greater control of the Congress. In a nutshell most of these old "pros" have three basic political principles—utterly different from the ideals of Eisenhower supporters.

First of all, to them politics is just a game.

Second, to them the Federal Government is a combination of Great White Father and Simon Legree.

Third, to them the only right course is toward the left.

Let me explain in more detail.

HIT-AND-RUN ACCUSATIONS

1. To them politics is just a game. To us politics is serious business, affecting the welfare of the Nation and future generations. Because they look upon politics as parlor tricks you will find many normally responsible men temporarily abdicating responsibility and making hit-and-run accusations about the administration or expressing opinions on public questions which at heart they do not believe.

To many of them—I regret to say—the art of election-year politics is to try to get away with as many reckless charges and fake promises as possible. They have their tongue in cheek so much that it is a wonder they don't choke.

In my opinion, however, the average voter today is too smart and too fair to be deceived by false charges which seem to be the election year stock in trade of altogether too many headline-hunting politicians.

WHY PEOPLE TRUST PRESIDENT EISENHOWER

In contrast, I believe that one of the chief reasons why the people of America and the people of the world trust President Eisenhower is because of his great sincerity.

Can anyone recall a single instance in which he has thrown mud at a critic or hit an opponent below the belt?

Can anyone point to his ever taking a stand which he did not believe was in the best interest of all the American people?

GREAT WHITE FATHER

2. To many of our professional opponents, the Federal Government is a sort of two-faced creature; one moment squandering vast sums of the people's money on unnecessary projects in the role of the Great White Father; the next, cracking down on business and other groups with the slave whip of Simon Legree. Both moves are aimed at wangling the votes of special interests.

DISHED UP BY SOCIALISTIC COOKS

3. To many of our professional opponents the only right course for government is toward the left. So they have scant interest in the success of private enterprise and a mouth-watering hunger for any radical scheme dished up by Socialistic short-order cooks. Such things as socialized medicine, bureaucratic-electric power monopoly instead of private power, and other pink concoctions.

Study the record and you will find that the inevitable result of unsound left-wing doctrines are back-breaking taxes, colossal debts, increasing deficits, grave injustices, wastes, scandals, bureaucratic browbeating, chains on business and class warfare—all bad for the American people.

Do you think the American people want to junk the current prosperity of private enterprise for that sort of throwback?

COMPLETE U-TURN IN GOVERNMENT

The Eisenhower conception of the role of the Federal Government is quite different from what it had been for 20 years. In fact during the past 3 years the American people have witnessed a complete U-turn in Government. Because the change in direction has been accomplished without the squeaking of brakes and the blowout of tires, some people do not quite understand yet what has been happening.

This is what has happened: For two decades the thinking at top Government levels was that economic stability was impossible without huge, continuous Government expenditures and without Government nursemaiding the entire economy.

President Eisenhower completely changed that kind of negative thinking. His administration operates on the theory that the role of Government is to create and maintain conditions favorable to private initiative. Instead of having economic decisions made by distant bureaucrats, our policy is to encourage millions of private individuals to make their own economic decisions.

TIED TO THE APRON STRINGS OF GOVERNMENT

The Eisenhower administration withdrew the heavy hand of Government from the economy and substituted the friendly hand of encouragement. We turned our back on socialism and took the path to freedom. Instead of a weakling economy tied to the apron strings of Government, we now have a self-managed, self-supporting economy, encouraged by an understanding Government, which is producing the greatest prosperity in the experience of all mankind.

FACED A FINANCIAL JUNGLE IN 1953

In the words of Al Smith, "Let's look at the record."

Three years ago the incoming administration faced a financial jungle far worse than we had suspected during the campaign.

The inherited budget, left on our doorstep by the previous administration, was estimated at $77.9 billion. The estimated revenues were $68 billion—leaving a deficit of $9.9 billion.

We found obligations to spend around $80 billion with no provision for payment. The value of the dollar had shrunk in purchasing power in 15 years from 100 cents to 52 cents—an inflation which was eating up pay raises and the savings and pensions of individuals. A further indication of the price paid by the public is shown by the increase in the cost-of-living index from August 1945 to January 1953. In the 7½ years immediately following the war it climbed 47 percent. But from January 1953 to the present, it has risen only 1 percent.

This from a previous administration whose spokesmen this year are begging for a second chance to plunge this Nation into the monetary swamp again.

Had the former state of affairs continued we would have suffered a fiscal debacle. Not only would our economy have been seriously weakened but its slump would have dragged down national security, which depends on a vigorous economy to support atomic defense.

WENT TO WORK WITH THE PRUNING SHEARS

The President determined to take drastic measures to cure the situation. His entire team went to work with the pruning shears, lopping off waste and extravagance in Government.

Since fiscal 1953 Government spending has been reduced by $10.5 billion. This made possible the largest tax cut in history. Almost $7.5 billion were kept by business and people to spend or save as they pleased and not, as formerly, handed over in taxes for Government to spend. The reduction helped every single taxpayer in the country with almost two-thirds of the savings going directly to individuals—a fact which accounts for their current record income.

TWO YEARS OF BALANCED BUDGETS IN SIGHT

Only 3 years ago we started with a terrible financial handicap. Today we look forward to a balanced budget for this fiscal year and next year and to another year of prosperity.

Today inflation-breeding deficits have been replaced by modest surpluses, despite new obligations for defense, agriculture, health, and programs to enhance opportunities for human well-being and economic growth.

Has any administration in history ever cured financial troubles so fast and stimulated prosperity so widely? When critics complain about flyspecks, the Eisenhower

administration proudly points to its record.

All this and peace, too.

HELP FOR AREAS OF CHRONIC UNEMPLOYMENT

But although the majority of Americans never had it so good, this administration will not ease up in our endeavors to nudge the economy until our farmers and people in areas of chronic unemployment share more of the general prosperity.

I should like to describe briefly our plans for area redevelopment because it is one of the Commerce Department programs to foster a stronger economy.

For quite a number of years areas dependent on a single local resource or single industrial activity often have been hard hit when their major asset failed. Previous administrations neglected them. At the Commerce Department we established an Office of Area Development which gave local communities expert advice in finding ways to increase local industry and employment. But despite this practical assistance, the operation was limited. We requested additional funds last year from Congress which were denied.

This year we are asking for much greater authority and appropriations to assist communities in wiping out chronic unemployment and in getting back on their feet. Among the benefits planned are greater technical assistance; grants to educational institutions and public authorities for surveys of local conditions; training in new job skills and adequate loans to supplement local efforts for self-improvement.

I think the program is typical of the Eisenhower administration approach to economic problems—a humanitarian effort to lift the burden of worry and privation from the families of the unemployed—a sound economic program to help communities to help themselves. Thus they will again become productive units, adding to the stability and growth of the overall economy.

This is just one example of the things the Eisenhower administration is doing.

We want this type of administration to continue. We do not want to go back. Who will decide this?

WHERE ELECTION WILL BE DECIDED

I believe that the 1956 presidential election will not be decided by the sour grapes arguments of leftwing columnists or the revived New Deal brain trust or the professional Calamity Janes or the antiadministration politicians, whose sales pitch—as usual—will be playing up gripes and greeds.

The 1956 election will be decided in the grocery store by housewives who know from bitter experience that the cost of living doubled during the 15 years before the Eisenhower administration.

It is stable today, and has been since January 1953.

The election will be decided by families who now can have new washing machines, new do-it-yourself kits, new television sets, new cars, and new homes.

The election will be decided by rank and file labor-union members who in a Republican administration have more overtime pay, better working conditions, and less time lost through strikes.

The election will be decided around the fireside where elderly people, the disabled and victims of adversity will remember that an Eisenhower administration extended social security to additional millions and encouraged States to expand unemployment insurance and other economic security measures.

The election will be decided in the home, where the family circle no longer is broken by war but now is united and happy.

The election will be decided on the Eisenhower Republican record and on the program which this administration will set in action unless blocked by a Democratic-controlled Congress.

FIVE MORE YEARS OF EISENHOWER?

In the time at my disposal I have described briefly some of the wreckage left by the previous administration; some of the measures by which the current administration cleared away that wreckage and brought healthy economic recovery, which eventually developed into the greatest prosperity in the history of mankind—a prosperity without war and without inflation.

But the fortunate economic state of the union is more than material plenty. It is the reflection of the executive ability and the moral stature of the greatest American of our age, the best liked President of the century.

To what heights of peace and prosperity this Nation can go, if we have 5 more years of President Eisenhower.

In conclusion, I repeat my expression of pleasure for this opportunity to join you in saluting the President of the United States. You will find in his recent state of the Union message not only his accounting of stewardship and future programs but also a clear insight into his fine character.

STATE OF THE UNION

Let me refresh your memory with the first paragraph of that inspiring message:

"The opening of this new year must arouse in us all grateful thanks to a kind providence whose protection has been ever present and whose bounty has been manifold and abundant. The state of the Union today demonstrates what can be accomplished under God by a free people; by their vision, their understanding of national problems, their initiative, their self-reliance, their capacity for work, and by their willingness to sacrifice whenever sacrifice is needed."

The best tribute we can pay the President is the pledge of our active support.

Conditions in the Farm Belt

EXTENSION OF REMARKS

OF

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Wednesday, January 25, 1956

Mr. BUTLER. Mr. President, the Senator from North Dakota [Mr. LANGER] was called from the floor a moment ago. Before he left he asked me to request unanimous consent to have printed in the Appendix of the RECORD the texts of two statements published by the Farmers Union Grain Terminal Association, of St. Paul, Minn., and I now make that request.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

WEDNESDAY, *January 18, 1956.*

Hog prices, as every farmer knows, are not very good these days. But, Secretary of Agriculture Benson thinks they are. Now, the Secretary will have a chance to explain what he means. He has been asked, by Congress, to explain why his pork-buying program has not strengthened hog prices. The President of the United States, you may remember, was quoted in one of his messages as saying that Benson's pork-buying program was helping hog prices, and he liked the idea. Now, the members of the subcommittee of the House Farm Committee in Congress have Benson on the carpet. They want him to tell his story.

To bring you up to date on the Benson pork-buying program, he started it last fall. Hog prices were around $11 a hundred pounds. So, after Republicans from farm areas got him off dead center, Benson set out to buy pork. He had $85 million in the lard can. He was as happy as a bear in honey. But, what's happened? Hogs still sell for around $11—maybe $12, if you have choice No. 1 lightweights.

Representative POAGE, of Texas—he's chairman of the House Agricultural Committee—is not satisfied. He has called on top officials of the Department of Agriculture to explain why they pay higher prices to packers for finished pork, while packers still pay bottom prices for live hogs. POAGE is a Democrat, but two Iowa Republicans—Representatives GROSS and JENSEN—feel the same way. They want Benson to explain why he buys from packing companies, instead of buying hogs from farmers so they would benefit. Representative GROSS said cold storage of pork is at such a low point that it amounts to "buying on order by the packers."

That has a lot of farmers puzzled. Why don't hog prices go up, when supplies of pork in packing plant cold storage are so low? What holds the hog market down? House subcommittee members will ask Secretary Benson and other top officials of the Department of Agriculture, who are supposed to know. They are supposed to have ways of finding the answers. Congress wants to know. There's one more answer Congressmen want to find out. They want to know where the $85 million of hog money is going. It was earmarked to help farmers by raising live hog prices, but it goes to packers for finished pork products. Live hog prices don't come up. Farmers don't get the benefit. Who does?

Maybe Congress can dig out the facts, but that's hindsight. What's needed to strengthen farm prices is foresight and courage. A new overall farm program—bold measures, designed to raise farm prices and bring net incomes of family farmers up with the rest of the economy.

It takes a long time to get such a program, and lots of hard work. But, that's why grain farmers start planning years ahead, and building for tomorrow, GTA, the co-op way.

FRIDAY, *January 20, 1956.*

As we broadcast from St. Paul today, GTA's general manager, M. W. Thatcher, is testifying in Washington before the farm committee of the United States Senate. As a veteran of more than a quarter of a century in the struggle for economic equality for agriculture, and from his long experience representing grain farmers of the Midwest, he is giving a studied opinion of features that should be included in 1956 farm legislation.

Twelve points stand out in Mr. Thatcher's testimony, and here, in brief, is what they are:

First, price supports should immediately be raised to full 100 percent of parity. And, the old parity formula should be continued for basic crops until a new up-to-date formula can be devised by Congress. These measures are necessary because farm income is at least $8 billion below what it should be, with little hope of a rise in 1956.

Second, there must be permanent "set-asides" of feed grains. That is not being done at present. Mr. Thatcher is urging that a 4-month supply of feed grains be kept on hand at all times.

Third, to cut back the feed supply substantially, soil-bank payments must be high enough to be effcetive in high-yield areas.

Fourth, the acreage reserve program, for whatever crop it is used, should return to farmers parity income from diverted acres.

Fifth, corn must be kept as a basic commodity, not removed from the basic list as recommended by President Eisenhower, nor

should corn price supports be left to the discretion of the Secretary of Agriculture.

Sixth, Government sales of crop surpluses in the domestic market should not be made at less than 105 percent of the support price plus carrying charges. Lowering that figure, as recommended by the President, would undercut market prices.

Seventh, arbitrary deductions for prepaid storage, now taken off parity loan rates, and private "swapping" of grain between Commodity Credit Corporation and processors, should be outlawed.

Eighth, about $4½ billion a year is now collected in excise taxes on tobacco, sugar, and alcohol. These and other farm crop tax revenues should be used to finance the farm program.

Ninth, a food stamp plan should be started immediately, and the cost charged to the national welfare, to feed underprivileged people in this country.

Tenth, emergency loans should be made available now to save the farm homes of hard-pressed family farmers.

Eleventh, present Federal housing aid discriminates against farm homes, and a special program to modernize or replace substandard farm homes is needed.

Twelfth, recommendations to the Department of Agriculture by special advisory committees, now kept secret, should be made public.

Mr. Thatcher also urged the Congressmen to make full use of GTA family farm survey results. This cost and income study, made in 1955, has been printed in book form, and copies furnished to the Congressmen. It is a graphic, realistic portrayal, county by county, of the postwar downward trend in farm income, covering the years 1950 through 1954. "With the present depressed condition of farm prices," Mr. Thatcher told the Congressmen, "many more fram homes will be wiped out unless the positive steps I have outlined are taken to aid family farmers."

And, that is the parity message that United States Senators received today from the bountiful Midwest farm belt. It is the voice of the farmer, and it is heard in Washington today through GTA, the co-op way.

Package Deal on New U. N. Members

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 25, 1956

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, a news release issued by me on December 19, 1955, entitled "Package Deal on New U. N. Members."

There being no objection, the release was ordered to be printed in the RECORD, as follows:

PACKAGE DEAL ON NEW U. N. MEMBERS

I warmly congratulate the representative of Nationalist China in the United Nations for his fearless veto of the admission of Outer Mongolia as an independent state.

Everyone who loves freedom owes a debt of gratitude to Dr. Tsiang and to free China, for this courageous refusal to bow the neck to the demand of Soviet Russia, that every nation must defer to her bullying, or all pending applicants would be barred from membership in the United Nations. Dr. Tsiang has performed a service for the United States, for all independent nations, and for those pitiful men and women who still love freedom though they dwell in the darkness of the new colonial slavery.

I only wish Dr. Tsiang had gone further, and used his veto against admission of the Communist governments of the four captive nations.

It is a matter of the deepest shame to most Americans that the delegate from the United States did not stand beside free China, and publicly refuse to yield to the threats of Soviet Russia.

Our Government pretended to abstain from taking any position. But for 2,000 years Pontius Pilate, who washed his hands of responsibility, has been the symbol of the lowest form of moral cowardice.

I do not know by what process the American Government committed itself to acecpt the Canadian proposal for a package deal on admission of new member nations into the United Nations. It is obvious, if the requirements of the charter have any significance that each nation seeking admission should be voted on individually. We have always in the past insisted on careful examination of the qualifications of each applicant for membership. To agree to a package deal on any terms was to make a major concession to the Soviet Union. In this instance we had to accept the ridiculous pretension that Outer Mongolia is either a nation or free, when it is neither. It is a dependency of the Soviet Union as well as legally part of the territory of China.

This package deal also permitted the Soviet Union to win recognition by the U. N. of four bastard governments, set up by Soviet arms and Soviet guile, to misrepresent the free people of Hungary, Bulgaria, Rumania, and Albania. William Z. Foster has told us why the Soviet Union is so eager to get additional votes in the U. N. Its aim is to add to the voting strength of the Soviet leviathan in its war of votes against the United States in the U. N. He does not tell us why the United States should accept such a hostile proposal. But we know, from Geneva, that consent of the United States to obliteration of the last vestiges of once free nations, is a step in the insidious campaign to inveigle us into full acceptance of the status quo in Europe, and desertion of the liberty-loving people of the captive nations.

I am therefore deeply shocked to learn that statements have appeared in the press attributed to American Government sources, and carrying the tone of a threat, saying that Nationalist China would be voted out of the U. N. if it dared to oppose the Soviet deal on this question. This is a strange new doctrine. The American people ought to understand clearly what it means. It means that a nation which uses its legal veto, against the will of the Communist leadership, is to be dismissed from the U. N. Such warnings indicate a subservience to the threats and bluster of the Soviet Union which is almost beyond belief. If this is what the spirit of Geneva is leading us to, let us face it now.

I hope that no member of the American Government will support, by any slightest approval, this threat to a free and fearless nation. I shall consider it a matter of the greatest importance to Congress if it appears that American officials have condoned attempts to punish free nations which do not bow to the commands of the Soviet Union.

I hope that Congress will give its early attention to the question of American policy in the United Nations. It must make absolutely certain that our American representatives accept no secret proposals to strengthen the Communist bloc. Rather let us insist now and always that any spokesman for the American people at any conference of the United Nations or its subsidiary organizations, speak out with the true voice of America in defense of all those who love freedom.

Current Farm Situation

EXTENSION OF REMARKS
OF
HON. STUART SYMINGTON
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Wednesday, January 25, 1956

Mr. SYMINGTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the January 12, 1956, issue of the Gallatin (Mo.) Democrat, entitled, "Mostly Negative—Gloom of Current Farm Situation Seen In Answers To Questionnaire."

The Missouri Farmers Association, representing more than 150,000 members in Missouri, asked 100 farmers and bankers the question, "How would you advise a young man in good health that had $25,000 and wanted to start farming?"

I believe my colleagues will be interested in the answers received, as shown by this news article.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MOSTLY NEGATIVE—GLOOM OF CURRENT FARM SITUATION SEEN IN ANSWERS TO QUESTIONNAIRE

How would you advise a young man in good health that had $25,000 and wanted to start farming? This question was recently asked by the Missouri Farmers Association of approximately 100 farmers and bankers.

The replies from this area included a variety of recommendations. For example P. W. Peterson, R. F. D. 1, Trenton, suggested "He could invest in a 'game of chance' at a Las Vegas casino, with some slight chance of hitting the jackpot. His farming venture would result in a somewhat slower, but much more certain loss, with no chance at a quick kill."

William M. Quinn, veteran member of the Missouri State Senate and the operator of a large farm advised, "Keep his $25,000 in cash in some good bank or banks, until the farm economy improves to the point where he could expect a fair return on his labor and investment, which he could not expect to do under present prices and conditions." Quinn added, "Having been actively engaged in farming for the past 40 to 45 years, I am convinced the national economy will in a few years, reach somewhere near the level of those engaged in farming, or vice versa."

Glenn Maize of Pattonsburg explained, "If he wants to keep his money together he had better stay out of farming."

W. R. Kendrick of Albany writes, "He had better get a job for a year or so and leave his money in the bank. * * * I think he would lose part of his investment and all of his labor."

Bob Hill, of Columbia, is executive manager of the Missouri Bankers Association. Hill is a graduate of the Missouri College of Agriculture and operates a farm near Columbia. He is a past president of Rotary International and a great booster of country cured ham. Hill wrote, "I would urge him not to start farming. He cannot make a fair return on his investment."

J. W. Waitman, of Tina, wrote, "In view of present conditions my advice to this young man is to invest his $25,000 in E bonds, postal savings, savings-bank account, or any other place where his capital will be safe and accessible. Then, if he must farm, obtain a job as a farmhand."

Richard Morris, Gilman City, says, "Take it easy and invest only a small part of his capital. Rent a farm, use a minimum of used machinery. Specialize in sheep and dairy cows. The farming situation should improve in 2 or 3 years."

Grayson McCrea, of Maysville, answered, "Some of we old hands at the business are having trouble showing a profit. Could be that you should counsel your young man to dig a small flower garden, let the weeds take it, find industrial work, invest nothing but his time, sit on the $25,000, and save a lot of worry."

Benton Brabtree, of Bethany, answered, "Buy a farm and rent it to a good operator to farm on grain shares."

Don W. Schooler, vice president of a Chillicothe bank, said, "If this young man insists on going into farming at this time, I would recommend that he try to lease some good land, a unit of from 200 to 300 acres, and go into crop production and forget about livestock at the present time."

E. R. Vyrostek, Gallatin, told of the heartbreaks that go with farming. He explained that he was 75 years old and had gone broke 3 times but that he raised 5 boys and 1 girl. They are all married and have places of their own. He concluded, "A young couple, that really like farming, can make a go of it and make money even in the face of coming events, and enjoy life."

The Committee for an Effective Congress

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 25, 1956

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a news release issued by me on December 30, 1955, entitled "The Committee for an Effective Congress."

There being no objection, the release was ordered to be printed in the RECORD, as follows:

THE COMMITTEE FOR AN EFFECTIVE CONGRESS

The so-called Committee for an Effective Congress, which has displayed marked hostility to anti-Communist Members of Congress, has issued a violent denunciation of certain Senators who do not agree with its left-wing policies. This denunciation is worth careful study because it gives us the program which the left-wing collectivist faction has worked on to win control of Congress in 1956.

Properly to understand the aims of this committee, it is necessary to translate their statements from the "double-speak" of 1984, which they habitually employ, into simple English.

The name of the Committee for an Effective Congress is double-speak for "Committee for a Left-Wing Congress." The committee has operated over the last 8 years giving research assistance and funds to those Members of Congress who support the measures leading to a collectivist welfare state at home, and a collectivist one world in foreign policy.

Among the directors of the committee are Stringfellow Barr, George Biddle, Oscar Hammerstein II, Marshall MacDuffie, Robert Nathan, Arthur M. Schlesinger, Jr., Telford Taylor, Sumner Welles, and Maurice Rosenblatt, its campaign director.

This so-called nonpartison Committee for an Effective Congress is working, as I said, for the election of a left-wing Congress. It is also working for election of a centrally dominated Congress, whose members will obey the orders of their mentors, regardless of the people of their districts. The committee asks for contributions to provide its obedient Congressmen with research and technical assistance during the session, and financial aid in the campaign. The committee is, of course, serenely indifferent to the sentiments of the voters in the Congressional districts. It believes in the domination of both parties from some mysterious center, and in insuring the election of its supporters by heavy expenditures of funds and clever publicity, to overwhelm public opinion in the districts.

The committee is also working for a minority-dominated Congress. It hopes to control the election of enough members in key districts, to dominate the work of both parties and ignore the vast majority of the American people.

The committee is part of the "apparat" which is working to bring about in this country a single monolithic party, directed and managed from above, but presented to the people behind two different masks, one labeled "Democratic" and the other labeled "Republican," but both forced by this hidden minority to move ever farther to the left.

The plan is to name leftwing candidates in both parties in key districts, so that the voters will be confronted with Hobson's choice between two leftwing candidates with different labels. Whether the voters vote for a leftwing candidate, or stay at home, a minority will have won control of the district and an important advantage in control of the next Congress.

By dangling promises of support, or warnings of opposition, before present-day Members of Congress, the committee is building up a bloc of members who will vote for leftwing measures in the hope of leftwing support for reelection. Thus they gain leverage control of the Congress in office and use it to elect their bloc in the coming Congress.

The Committee for an Effective Congress is afraid and it tells us what it is afraid of, in double speech. It is afraid of what it calls "the hard core who voted against the censure of the junior Senator from Wisconsin." They are afraid this group of Senators will "hamstring both Republican and Democratic Presidents in the area of foreign policy." Translated into American English, this means the committee is desperately afraid some of the Republican Senators will speak out against our Achesonian foreign policy, and the double-speak peace of Geneva.

It is afraid Members of Congress will insist on an impartial investigation of the fund for the Republic.

It is afraid the Senate Internal Security Subcommittee will carry on its investigation of Communists, even if they have penetrated into the sacred precincts of newspapers which have blatantly supported the left-wing blocs in our political life.

It is afraid Congress will make a real investigation of the Government security system and find out why it has been so very difficult to remove important pro-Communists from Government offices.

The committee admits—in double speech—that it wants to keep discussion in Congress sidetracked on matters like farm prices, electric power, school construction, and insignificant tax reductions because it is afraid if Congress is permitted to discuss what it calls "Geneva, another Yalta," or the crisis with Red China, or, to quote them again, "subversion rampant," the committee's leverage control will vanish.

What we are confronted with here is something more than a left-wing bloc trying to elect a handful of left-wing Congressmen. This is a carefully designed strategic program for the subversion of the Congress and of the legislative power. If the committee succeeds in its aims, the Congress will represent a militant left-wing minority group. The American people will be helpless.

I believe Congress must deal with this threat to the Constitution at once.

I propose to introduce in this Senate a resolution paralleling that of Representative Clardy, calling for appointment of a special Senate committee to investigate the Committee for an Effective Congress and bring in a report before the close of this session on the following points, among others:

Funds of the committee.

Sources of its funds.

Interlocking relation with other bodies, including Communist fronts.

Attempts to influence the legislative program of the Congress.

Attempts to bring about the election or defeat of individual Members of Congress.

Influence upon the power of the people in their districts to control the choice of their Representatives.

Influence upon the independence of the legislative branch and the legislative process.

Influences designed to weaken the two-party system or set up hidden controls by which parties which appeared independent could be made by the leverage principle to operate as one.

Congress has tolerated for years attempts from many directions to undermine its influence, weaken its independence, smear its loyal and patriotic Members, and render it helpless to carry out its constitutional duties.

It is time Congress struck back.

The Committee for an Effective Congress has provided us with a challenge to the independence of Congress which we dare not ignore.

The Lesson of December 7, 1941

EXTENSION OF REMARKS
OF
HON. STUART SYMINGTON
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Wednesday, January 25, 1956

Mr. SYMINGTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a short statement and two of the editorial comments which appeared in the newspapers of Missouri on December 7, 1955.

The first is a column, Timely Observations, by Mr. Arthur Burrowes, editor of the St. Joseph (Mo.) News-Press. Honored this last year by the Missouri School of Journalism as one of the outstanding newspapers of America, the St. Joseph News-Press has given news and editorial leadership for more than half a century.

The second editorial is by Robert M. White, II, editor of the Mexico (Mo.) Ledger. On October 11, tribute was paid to the Mexico Ledger on the completion of 100 years of service to its community. It is numbered among the great small-town papers of America. Its editor, Bob White, is a member of the freedom of information committee of the American Society of Newspaper Editors.

These two editorials remind us of the lesson we should have learned on December 7, 1941, a lesson we should never forget.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the St. Joseph (Mo.) News-Press of December 7, 1955]

TIMELY OBSERVATIONS

Today is the day of sorrow. December 7. Never in all American history has this Nation, founded in the last quarter of the 18th century, suffered so humiliating a defeat. The majestic Winston Churchill, master of rhetoric, who made history and wrote history, has not—amidst all his lofty language so gorgeously rich—given the world anything quite so colorful, quite so expressive as three simple words from the mouth of another golden-tongued statesman. When Franklin Delano Roosevelt called December 7, 1941, the "day of infamy" he spoke the thought of America's millions.

Never in our history has the proud flag, defended by General Jackson at New Orleans, been so insulted as in that sneak attack of the imperial Japanese forces against the might and the glory of this land of the Star Spangled Banner. Never in all our history, even in George Washington's sorriest meditations at Valley Forge, or Abraham Lincoln's melancholy after Bull Run, have American hearts been as heavy.

When President Roosevelt gave forth utterance to that word-trinity stigmatizing December 7, 1941, he did more than declare infamous a certain date. He indicted a vast people, whose war lords were steeped in most scarlet international vice. For in those very days that the secret war plans were going forward in the Isle of Nippon, peace plenepotentiaries from the Land of the Rising Sun were making mock of America in the capital city of Washington.

It is as if it were yesterday, though it is now 14 years ago. And those of us who will live long enough will remember the awfulness of that day though decades may have passed. Pearl Harbor, who ever can forget that name? Pearl Harbor, the spot of America's most terrifying degradation. Men could not believe their radios. Men read with frenzied gasps their newspapers the next morning. For be it recalled "the day of infamy" ironically, was a Sunday.

The Pacific Fleet was at Pearl Harbor, Hawaii. Hawaii, most colorful diadem of all America's splendid jewels, known as our territorial possessions. Eighty-six ships of our United States Navy were at anchor there that December 7. At 7:55 a. m. Hawaiian time, 12:55 p. m. St. Joseph time, American men, women, and children were between church and home. They had been to morning worship of the God of our fathers known of old to whom the unnamed laureate poet of England, Rudyard Kipling, paid noble homage in The Recessional.

More than 100 Japanese planes and a number of midget submarines attacked that Pacific Fleet. Totally lost was the Battleship *Arizona*, now a national monument to our gallant dead. Severely damaged were battleships *Oklahoma, Nevada, California, West Virginia*, 3 destroyers, 1 target ship, 1 minelayer. Damaged and then repaired were battleships *Pennsylvania, Maryland*, and *Tennessee*, cruisers *Helena, Honolulu*, and *Raleigh*.

Millions of dollars were lost when the Japanese invaders destroyed 80 Navy airplanes and 97 Army airplanes. The human casualties of that December 7 were Navy, 2,117 officers and men killed, 876 wounded; Army, 228 officers and men killed, 396 wounded. No less ignoble, though less dramatic, was the simultaneous bombing of the Philippines. Less than a month later came the Death March of Bataan, the glory of brave men, bravest of the brave. There the surrender of 15,000 United States troops, 40,000 in the Philippine Army and 100,000 Philippine reservists.

Volumes could be written, yet the world does not yet know, just what preceded the infamy of Pearl Harbor. We do know that a handful of men in the Pentagon this day silently and secretly commemorate another day, December 4, 1941. For that was the day a code message was received that a portion of the Japanese fleet had left its home base and was "sailing toward some objective eastward."

It is written for the historian if he will look that this December 4 warning was received at the United States Army communications center in Washington, D. C. Forever unexplained are the circumstances that instead of an alert immediately to the commanders at Pearl Harbor, all was kept a dead secret until shortly before noon December 7, 1941. Alas that it must be recorded, Japan already was bombing the American targets at Pearl Harbor.

Nothing can wipe out the ignominy of Pearl Harbor. That ignominy must stand on our escutscheon forever, notwithstanding that in this month of December and on this 7th day, that anniversary, defeated Japan is our friend, defeated Germany is our friend. It is the irony of all our history. Let us rename this day. Let it be the Day of Recollection. Let December 7, 1941, be forever imprinted in our minds that never again shall we be unprepared, off guard, asleep. Let us dedicate our Nation's hopes for peace with honor to that same Diety Rudyard Kipling implored. Day of Recollection.

"Far-called, our navies melt away
On dune and headland sinks the fire.
Lo, all our pomp of yesterday
Is one with Ninavah and Tyre.
Judge of the Nations, spare us yet,
Lest we forget—Lest we forget.

[From the Mexico (Mo.) Ledger of December 7, 1955]

NEARLY ALL OF THE DEAD HAD BEEN BURIED

Inside the B–24 there in the bright morning sky, were the weird sounds of man's valiant efforts to fly. There was the heavy growl of the four motors. There was the clanking, unsteadiness of the constant vibration. There was the uselessness of trying to shout above the clamor, the uselessness of worry by the twenty-odd passengers who had flown through the night—worry wouldn't keep the plane in the air.

But now the B–24 was slowly letting down. Ahead on the horizon was the dark shoulder of the Hawaiian mountains—the first land we had seen since looking down through the cracks around the bomb-bay when we took off, to see the blur of lights and the blackness of the earth of our homeland blending into the darkness of the night.

We were not to see that homeland again for almost 3 years. Some of us had seen it for the last time, there, through the bomb-bay cracks.

And then the crew chief came back from the pilot's compartment and told us to sit down. We were landing. Of course there weren't anything like safety belts. And after bouncing once, tottering slightly on one wheel, we were bumping down the runway on the first of a hundred bloodstained islands to come.

The time was August 1942.

The place was Hickam Field, T. H.

Hickam had won its place in history by then.

It won its place on an earlier sunny morning when Japanese planes whined out of the windswept sky above the sparkling waters below to scrawl in blood Pearl Harbor.

Hickam, that morning in August, was still bulletmarked from the strafing. Was still pocked by the bombing. Only the dead had been buried.

And later at nearby Pearl Harbor we saw the great lifeless corpse of capsized ships, twisted steel rigging, bent cranes—low monuments of vomiting enemy guns, screaming ricochets, the corruption of an exploded bomb.

There, even the dead hadn't been buried.

Some were still inside the lifeless hulls of the once-mighty ships.

That was August 1942.

Some of those dead—one was the son of a fellow with us—are still unburied. Just as the lesson of Pearl Harbor must never be buried either.

The lesson is "Be prepared."

Don't let the blood of our youth by wishful thinking, by selfish, political efforts to win votes through denying youth proper training and weapons.

Don't risk freedom on earth—let alone at home—by not bothering to know your potential enemy well enough, by assuming you are stronger than you are, that he is weaker than he is.

For if we don't remember the lesson of Pearl Harbor, another plane will cross the endless sky. This time in the deadly silence of speed faster than sound. And inside it will be still another Mexico boy off to the first of a hundred bloody islands. A boy who today may be in Mexico High, or Hardin, or Eugene Field, McMillan, Hawthorne.

The Problem of Large Political Campaign Contributions

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, January 25, 1956

Mr. NEUBERGER. Mr. President, many people have long been justifiably concerned about a serious problem in American politics—the importance of large political campaign contributions to the carrying out of our essential electoral processes.

Last year Mr. Philip L. Graham, publisher of the Washington Post and Times Herald, undertook a very commendable project of encouraging small campaign contributions from millions of individual citizens so as to relieve the reliance of our national parties on sources of large contributions. The project was to be carried out with the help of the Advertising Council of America. The first step in organizing this program in time for the 1956 elections was to be the formation of an 8-man committee to represent the 2 major political parties. The Democratic Party selected its four committee members. The Republican Party failed to appoint four members. As a result of this simple stalling, this public-spirited project has now had to be abandoned by the advertising council.

Last week 1 of the 2 national parties announced that it was able to raise $5 million in a single night by $100-a-plate dinners throughout the country. I think it indicates the nature of the problem confronting our form of popular government that no American would have any doubt which party can raise a $5-million-campaign fund overnight in this fashion. And that same party evidently has found it impossible to participate in a project for raising necessary campaign expenses in tiny contributions by millions of individual citizens themselves.

As a result, a very worth-while experiment in political democracy has had to

be abandoned. I hope it may be revived for elections to come in future years.

I ask unanimous consent to have printed in the Appendix of the RECORD an article published in the New York Times of January 25, 1956, discussing this subject.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BUTLER SAYS GOP UPSET FUNDS PLAN—DEMOCRATIC LEADER CHARGES FOE SABOTAGED PACT TO PROMOTE CONTRIBUTIONS

(By W. H. Lawrence)

WASHINGTON, January 24.—The Democratic national chairman charged today that Republican leaders had sabotaged a $10 million bipartisan advertising campaign to encourage political campaign contributions in 1956.

Paul M. Butler told a luncheon conference the Republicans had failed to nominate half of a bipartisan sponsoring committee required by the Advertising Council of America before it would undertake the effort.

That the project has been dropped was confirmed by Philip L. Graham, publisher of the Washington Post and Times Herald, who had undertaken to organize the campaign on behalf of the advertising council.

Mr. Graham also confirmed that there had been an earlier agreement between Mr. Butler and his Republican opposite number, Leonard W. Hall, on principles and policies of the effort directed at having Americans make contributions "to the political party of your choice."

REPUBLICANS SILENT

There was no comment from Republican headquarters. Their highest officials, including Chairman Hall and L. Richard Guylay, publicity director, were en route to San Francisco by plane. The central idea behind the campaign was that the advertising council would make available about $10 million worth of advertising time and space in all media, including radio, television, newspapers, magazines, and outdoor advertising signs.

These advertisements, beginning 4 weeks before the national conventions and continuing for about 10 days after candidates had been selected, would urge every citizen to make some campaign fund contribution to help the parties do their job. There would have been no mixing of funds, but each party would have received the amount sent to it.

The project would have been carried out under sponsorship of an eight-man committee, equally divided between Republicans and Democrats and selected by the parties. The Democrats picked their committee, but the Republicans told Mr. Graham they had not been able to find four persons willing to serve on the group.

It was understood the original idea had been to have former Presidents Herbert Hoover and Harry S. Truman serve on the group.

Mr. Truman agreed but Mr. Hoover refused, although he was urged to give consent both by Mr. Hall and by Sherman Adams, the President's principal deputy, who spoke in the name of the White House.

MARTIN ALSO DECLINES

A subsequent suggestion was that Representative Joseph W. Martin, Jr., of Massachusetts, Republican leader of the House, might head the GOP sponsoring committee. But he declined on grounds that the program was not properly organized.

Mr. Graham declined to be drawn into a discussion as to the causes of failure.

"We simply could not organize the proper bipartisan sponsoring committee," he said. "The Advertising Council takes on only truly noncontroversial and nonpolitical projects."

Mr. Butler said the Republicans had dropped out of the Graham plan after it had become apparent that their "Salute to Eisenhower" dinners would raise about $5 million for the 1956 campaigns. A single political committee is limited by law to $3 million a year.

Mr. Butler said the Democrats had hoped to raise about $1,500,000 as their share from the Advertising Council campaign. He expressed confidence that the Democrats would raise the money, but said "it will be harder and more expensive."

The Democratic chairman estimated that about $7,500,000 would be required to finance the Democratic electoral effort in 1956 through a series of committees, including the national committee, the House and Senate campaign committees, and an independent group for the eventual party nominee.

Speaking of advertising agencies, Mr. Butler said his party now had found an agency to handle its campaign. Earlier, he said heads of "about 25 advertising agencies told me their clients would not like it if they handled the Democratic account." He did not name the agency that agreed to handle it.

1956 Economic Report of the President

EXTENSION OF REMARKS

OF

HON. HENRY ALDOUS DIXON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1956

Mr. DIXON. Mr. Speaker, President Eisenhower's 1956 Economic Report clearly indicates that the goals of maximum employment, production and purchasing power envisioned by the Employment Act of 1946, were achieved by the economy in 1955. As the President indicated, we are now upon the threshold of a $400 billion economy. Of particular interest and concern to all of us is the fact that our economic achievements in 1955 in terms of increased output and employment were accomplished without price inflation.

Mr. Speaker, the dollar value of all goods and services created by the economy in 1955 gives a clear indication of the very rapid advances made in the recovery and expansion phases of the business cycle. The Gross National Product which is a measure of the value of the production created was $387.4 billion in 1955. This was nearly $27 billion above the value of all goods and services produced in 1954. It is clear, Mr. Speaker, that the economic projections of the prophets of gloom and doom missed their mark by wide margins, and I am sure as the economy continues to expand in 1956, that the people will realize the political nature of their prophecies which we can also expect to magnify out of proportion the soft spots which always are present, even in an expanding economy.

I am sure all of us are greatly cheered by the President's statement that total employment rose by over 3 million and unemployment declined by one-half million between the last 3 months of 1954 and the corresponding months of 1955. As you already are aware, Mr. Speaker, total employment during 1955 reached an alltime record high of 65 million. This in spite of the fact that additions to the civilian labor force increased by over 2½ million.

One indicator of the general prosperity which prevailed in 1955 and which accompanied this steady increase in employment was the increase in the average workweek. This resulted in considerable overtime work, especially in the latter part of 1955. These two factors, combined with a steady rise in average weekly earnings, brought labors' income earnings to record levels in almost all industries.

But of equal importance, Mr. Speaker, was the fact that unemployment as a percentage of the civilian labor force declined from 5.2 percent during the first quarter of 1955, to 3.4 percent for the last 2 quarters of the year. This is the level of unemployment, Mr. Speaker, which is below that which most economists point out is normal for years in which the country is free from war or severe economic recessions. The 2.3 million unemployed during the last quarter of 1955, although regrettable, consists primarily of new entrants into the labor force and those in the process of changing or shifting jobs to new industries or occupations because of technological advancements. The simple facts are that unemployment is near an irreducible minimum.

Another indicator of the well being of the economy is measured by the purchasing power which people have to buy goods and services. In 1955 disposable incomes, that is that income which people have to spend or save after paying all taxes, increased by $14.4 billion over that prevailing in 1954, setting a new record of $268.2 billion. But most important of all, Mr. Speaker, was the fact that although disposable income and resulting expenditures reached new levels, the price level index remained relatively stable.

It is small wonder that President Eisenhower was able to report to the American people in his 1956 economic report that—

Full employment, rising incomes, and a stable dollar have been cherished goals of our society. The practical attainment of these ideals during 1955 was the year's greatest economic achievement.

The President's statement—

It is reasonable to expect that high levels of production, employment, and income will be broadly sustained during the coming year.

Is equally encouraging.

Somewhat Confusing

EXTENSION OF REMARKS

OF

HON. GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. LIPSCOMB. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Los Angeles Herald-Express of January 19, 1956:

SOMEWHAT CONFUSING

The President has called for farm legislation the core of which is the "soil bank" and other methods of inducing farmers to cut back on their production.

But the President also recommended that Congress act to authorize construction of the upper Colorado River basin water storage dams to throw open half a million new farm acres to agriculture.

We are told that our Government storage bins are filled to overflowing with surplus farm products which must be sold here or abroad, even in Iron Curtain countries, and that is why we must pay farmers to stop production on a good part of their acreage.

If the upper Colorado project is built at a cost of billions of dollars it will take away water that should come to southern California from the lower Colorado and that is a major concern of everyone in this section of the country.

California's Republican Congress CRAIG HOSMER, of Long Beach, has thrown another monkey wrench into the confusion machinery by announcing that he will present to the House evidence that nearly 21 million acres of the best American croplands are lying idle and unused for any purpose.

"With millions of acres of the best farmland awaiting the plow in areas where the rainfall is heavy and the growing season long, the Federal Bureau of Reclamation would force this great new burden of the upper Colorado River project on the American taxpayers," HOSMER stated.

HOSMER said that the cost of bringing the millions of idle farm acres into full production would run only from $15 to $150 an acre.

"Compare that with the $5,000 an acre cost of building the upper Colorado project," he added, "and you see how inconceivable the Reclamation Bureau's scheme is."

It would seem that while we are talking about a "soil bank" for the farmers already having their land in full production, we should think a little about keeping these virgin lands around the upper Colorado project locked in their present "soil bank" until we have use for them.

Your Congressman Wants a Piece of Your Mind

EXTENSION OF REMARKS

OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1956

Mr. PELLY. Mr. Speaker, under permission to extend my remarks, I am including an article by Ruth Boyer Scott entitled "Your Congressman Wants a Piece of Your Mind" from the current issue of the Family Circle magazine. I am sure that many of my colleagues will be interested in the article which follows:

YOUR CONGRESSMAN WANTS A PIECE OF YOUR MIND

(By Ruth Boyer Scott)

"You're wasting your time, writing Congress about legislation," Bill said to his neighbor. "An individual hasn't a chance. It takes a big organization to put over a letter campaign." I listened for the reply.

"Maybe so, maybe not," John answered. "To make sure, I'm going to put the facts as I see them in a letter to my congressman."

What happens to letters like John's? I decided to follow the mail into the offices of Senators and Representatives to learn for myself how effective letters are from individual men and women. The best way to gage this is to listen to the persons who receive your letters.

Mrs. FRANCES P. BOLTON, Republican Congresswomen from Ohio since 1940, talks about Mrs. Anna V. Coleman, "Cleveland's battling widow," who once wrote suggesting legislation to end taxes levied on pensions of widows of policemen and firemen.

"Widows receive such a pittance," Mrs. Coleman wrote, "that surely they should not be required to pay taxes on it."

"I was glad to introduce a bill at her request," says Mrs. BOLTON. "Its provisions were incorporated in the Internal Revenue Code of 1954—exempting up to $1,200 of pensions and annuities from income taxes of all persons."

Senator JOHN J. SPARKMAN, of Alabama, Democratic candidate for Vice President in 1952, tells of veterans in his State who wrote that they'd tried to buy GI housing in rural areas but couldn't get mortgage lenders.

"Their letters," he says, "helped to bring about the direct loan on GI houses, which I sponsored and which has helped thousands to get homes who couldn't have otherwise." By this legislation certain areas of the country are designated as 'direct-loan areas' for GI housing.

HOW TO GET ACTION

What kind of letters bring about such immediate action? The heart of what I learned is that your letters will get attention if they are legible, specific, clear, and brief, stating what you're for or against, and why.

While your idea won't go automatically into a law and may never inspire a separate law, many such ideas are incorporated into the big general laws, like housing, taxation, and social security.

A typewritten letter is preferable, but many handwritten letters command respect because of their constructive ideas. But be sure that the writing is easily read, and take extra pains to be brief. It's the 6- to 10-page illegibly handwritten letter that is a waste of effort.

Mimeographed letters are also discouraging. As one Congressman put it, "We don't know whether John Smith intended to send the letter or merely signed it as a favor to his organization's legilsative chairman, who passed out 200 copies at a meeting."

Keep in mind the tremendous demand on a Congressman's time. If he reaches his office at 9 a. m. (some come earlier, some later), he has only an hour till 10 a. m. committee meetings to read mail, see visitors, review pending legislation, and sign letters. So 5 or 6 rambling pages may destroy the value of your letter. Your Representative may read his short letters and put yours aside for more time that may never come.

Being brief will also help you to be specific. If a person writes, "I wish you'd do something about my housing," the recipient doesn't know whether the writer is concerned with rental housing, house buying, or house building.

WHERE TO SEND IT

Whom do you write? Because the liaison between Senate and House is far from perfect, you're wise to write both to your own Representative and your two Senators.

The advantages in doing so are that they have a personal interest in your vote and so will probably refer your letter to the congressional committee concerned. They can give it added weight if, instead of sending it with a formal note, they write the committee, "We think this suggestion merits your attention." It's an extra asset if your Senator or Representative is on the committee concerned. He may himself introduce your idea into the legislation.

"Write each person a separate letter," one Congressman warned. "It's only human, when a letter is marked copy," he said, "for each party to discount its importance, assuming the other recipient has given it full attention."

It's particularly effective to present your ideas for legislation directly to a chairman of a committee. That way they will certainly go to the committee staff, which culls the ideas from all letters, puts like ideas together, and works some into actual wording of legislation. It makes no difference to most committee staffs whether the writers are people of prominence or ordinary folks. The well-thought-out letter is judged on its merit. As one committee staff member told me, "Little people can have big ideas."

Any library or Government office has the blue-bound Congressional Directory, with the names of committee chairmen and all Members of House and Senate. There's a separate listing of committee assignments of all Members of Congress.

Sometimes it's a puzzler to find which committee has a bill. If you don't know, you can write first to find out, or write to the most probable committee, trusting that your letter will be forwarded, if necessary.

You can assume in writing that the Congress Member or committee chairman is friendly. The crank letter or the vituperative letter may be answered formally but is unlikely to influence legislation. Also, the perennial letter writer may lose his effectiveness over the years unless he takes care that each letter presents a sound what and why.

PUTTING IDEALS TO WORK

Citizens propose new laws on a wide variety of topics. Some have such merit that a Congressman goes into action on it at once.

A constituent of Senator KARL E. MUNDT, Republican, of South Dakota, wrote to recommend that pensions be taken away from Government workers found guilty of subversion. "I introduced such a bill," Senator MUNDT relates, "and it became a law in 1954."

Representative WRIGHT PATMAN, Democrat, of Texas, recalls Mr. Charlie Crump, of De Kalb, Tex., who, while John Dillinger was causing gangster terror through the Midwest, wrote: "Why don't you offer a bill by which the Attorney General could offer a reward for capture or information leading to capture of such criminals?"

Mr. PATMAN introduced such a bill, which became law on June 6, 1934. "The law," he says, "aided directly in stopping the criminal careers of Dillinger and others like him."

Representative RUSSELL V. MACK, Republican, of Washington, cites a couple of cases from the numerous ones where he found letters from home helpful.

"A lot of writers," he says, "protested to me about the junk mail crowding their mailboxes. As a result of combined efforts, junk mail is apparently junked.

Congressman MACK also tells of veterans who wrote him about the injustice of not getting social-security credit while in service. This could mean loss of a pension for lack of enough quarters of coverage. The law was changed to allow those who served between September 1940, and June 1953, to get social-security credit if they were not getting other retirement credit during that period.

WORDS INTO PRINT

As a citizen you even have the power to be a legislative witness—without ever going to Washington, D. C. You can write a committee asking that your statement be published in the collected hearings on a particular bill. These publications are widely and carefully studied. Probably less effective a method is to ask your Congressman to incorporate your statement for or against legislation in the appendix of the Daily CONGRESSIONAL RECORD.

You can also try to influence legislation through the executive branch of the Government—such as the Post Office or Treasury Departments or the Veterans' Administra-

tion. But you may be spreading your effort a little thin by doing so. It's true that some legislation originates with a draft in the executive agencies, but your Congressmen are elected to make your laws.

You can also take official stands on pending laws through various organizations you're allied with. Such views may be communicated officially at committee meetings. This holds true for State, county, and local laws as well as national ones.

You needn't be uneasy about breaking a law by writing your Congressman. I nailed that fear with with official statement: "Lobbying laws apply only to those who are paid for attempting to influence legislation." As a private citizen you are unrestricted in decent expression of your opinion.

In fact, if you write a letter to Congress, you're exercising the oldest constitutional privilege in the Bill of Rights—guaranteeing your right "to petition the Government for a redress of grievances."

Even the simplest letter expressing a view on legislation is a petition. It may have only one signature, but as a petition it commands respect if it contains sound and clearly expressed ideas. Just be sure to take this capsule advice of Representative CLAIR ENGLE, Democrat of California: "Don't talk in generalities. Say, 'I'm for (or against) this for these reasons—1, 2, 3, 4.'" Such a letter helps make democracy work.

Address by Thomas E. Dewey at Salute-To-Eisenhower Dinner

EXTENSION OF REMARKS
OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Wednesday, January 25, 1956

Mr. BEALL. Mr. President, last Friday I had the pleasure of hearing an address by the Honorable Thomas E. Dewey at the salute-to-Eisenhower dinner in Baltimore.

It was obvious at the time that the hundreds of guests were as impressed by the speech as I was, so I announced that I felt it should be given wider distribution through inclusion in the Appendix to the RECORD. I therefore ask unanimous consent to have the address included in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TEXT OF ADDRESS BY THE HONORABLE THOMAS E. DEWEY AT THE SALUTE-TO-EISENHOWER DINNER IN BALTIMORE, MD., ON JANUARY 20, 1956

Tonight we celebrate one of the great moments in American history—the third anniversary of the inauguration of Dwight Eisenhower as President of the United States. This happy meeting is one of many in the Nation through which the feeling of admiration, confidence, respect and personal affection for Dwight Eisenhower is expressed by the American people. I am sure you are as happy as I am to join in this nationwide expression of our confidence and esteem for the man who is leading our country with unparalleled success.

In recent months I saw at firsthand that this confidence and esteem is shared by people all over the world.

Sometimes you have to get a long way from home to see things in perspective. Sometimes you have to get outside the forest to see how far one tree can rise above all others.

Last fall I traveled around the world and visited a good many Asian nations between Istanbul and Tokyo. It was immediately after the outset of that trip that the President's illness occurred and I encountered the full reaction in a dozen countries. Some of those countries are friendly allies of the United States. Some are so neutral that they often seem to lean to the Communist side. In every one of them, not only the leaders, but the people expressed a sense of intense personal dismay and concern. The clergy of every important religious faith in the world prayed for the recovery of President Eisenhower. The newspapers of every shade of opinion throughout the free world expressed their prayerful hopes for his recovery. The people of many nations had almost the same sense of personal concern as did every American.

It was inspiring and deeply moving to find that the head of the Government of the United States was so cherished and beloved personally in so many lands.

You can explain this phenomenon in many ways. One that interested me particularly appeared in a newspaper in India. The paper is on the left and has rarely been kindly in its comments on the United States. The reporter who attended the Geneva Conference of the great powers reflected the views of his paper. Yet in summarizing the Conference he wrote this remarkable statement:

"President Eisenhower arrived at the meeting at the Summit and by sheer force of personal character he dragged all the others up to the summit with him."

It is this kind of feeling which has permeated the world.

Dwight Eisenhower has rendered a similar service to America. He has lifted the science of government and political leadership far above any level we have seen in our time. He has refused to be partisan. Under the most intense strains and tension he has maintained his position as President of all the people and his dedication to the welfare of every one of them. He has welded a new sense of unity among our people.

I can remember discussing this subject of national unity myself on a few occasions back in 1948 but there weren't enough people who agreed with me.

At this moment we are reading violent speeches by some who seem determined to destroy the unity of our bipartisan foreign policy. There are some eager candidates who would like to isolate and attack a word or a phrase attributed to the Secretary of State to divert attention from the peace and prosperity our Nation is enjoying. I am sure you have been profoundly impressed, as I have, by the sudden flowering on the front pages of this crop of experts in foreign affairs of whose experience in that area we had not previously been aware. I am sad to report to you that closer examination will reveal that their expertness lies in the parsing of sentences and not in saving the peace of the world.

Fortunately there are not many of these folks. A large majority of the Members of both parties in both Houses of the Congress have given stanch support to our policies around the world. The Congress has often acted almost unanimously on these matters. As a result our Government has been immensely successful in resisting the Red conquests. It would be most regrettable if ambition should lead any officeseeker to undermine our national position to the point where the Kremlin would attempt to resume its conquest of the free world piece by piece.

How do these critics propose to prevent the Russians from resuming their march of conquest? Do they suggest that we return to ancient policies of weakness and isolation? If not, what do they propose, if anything at all? Up to now they have done nothing but raise a ruckus because our Government has displayed the courage, character, and strength to stop one war and prevent others.

The streets of history are littered with the bones of people who did not have the fortitude to defend themselves when aggressors attacked. The peoples who were obliterated by the Chengis Khans of succeeding centuries all too often had one thing in common: They had the kind of faltering political leadership which was unable to build alliances, unwilling to face danger, and unable to repel it. I suggest to you that the American people want no such epitaph. So long as the policies of Dwight Eisenhower prevail, this will never be our epitaph.

I am old enough to remember the time when it was said that America was too proud to fight. The Kaiser believed it and while we were at peace his submarines torpedoed American ships. So America was plunged into war. History has now established that if the Kaiser had ever dreamed that he would be opposed by the might of the United States, World War I would never have been launched.

The dismal 1930's brought forth all kinds of freak pacifist movements. They also brought forth political leadership which refused to listen when Hitler screamed his intentions to conquer the world. There was no political leadership in power which said "Be strong, be unafraid and you will remain free." Winston Churchill was a voice in the wilderness crying his warning to all who would listen and not enough did. So, once again, the aggressors felt safe to attack without fear of effective opposition. It is not alone the verdict of Winston Churchill but the solemn verdict of history that if Britain and the United States had been strong and courageous in advance, World War II would never have occurred.

Now, once again we are asked to listen to those who believe that by turning our backs and shutting our eyes we can keep our freedom and that of the free world. Is this counsel right today when it has been wrong through all history? Just the last 15 years is strewn with the bodies of enslaved Estonia, Latvia, Lithuania, Poland, Czechoslovakia, Bulgaria, Albania, Rumania, Hungary and Tibet among others and, of course, the catastrophic fall of China.

Should it be necessary to remind anyone that such a march, if continued, would cover the earth? Would these new experts we are hearing from resume the policies of 1950? Surely they must remember that our Government then in power officially announced that Korea was outside our defense perimeter and within 5 months the Russians accepted that invitation to conquest.

I supported then and I still admire the courage and decisiveness with which our Government entered that conflict after it started. But I would have admired much more a government which had the courage to face up to realities and issue no invitations to war.

We now have a leader and a Government who issues no invitations to war by creating power vacuums.

Three years ago today when Dwight Eisenhower took the oath of office our Nation was still engaged in that apparently unending and unendable war in Korea. The free world was threatened with the loss of the balance of power in oil by a mad premier in Iran. Italy and Yugoslavia were threatening to go to war over Trieste. Egypt and Britain were at swords point over the Suez Canal. French Indochina was torn by a struggle between the Communists and the Vietnamese. Ratification of a European Defense Community was already failing. It appeared that Austria would never be rid of

its Russian occupation. Even the Americas had been successfully invaded: The Russians had established their first satellite in this hemisphere by conquering Guatemala from within.

Then the Eisenhower administration took over and went to work. Soon the madman of Iran was deposed and a strong friendly government was established. We achieved a North Atlantic Treaty Alliance with a strong, free German Republic as a partner. The Trieste question was patiently negotiated and peaceably settled and there was no war between Italy and Yugoslavia. The Suez Canal crisis was peacefully solved. Under the worst possible handicaps, half of Vietnam was saved. Guatemala was liberated by its own people and the Russian stronghold in our hemisphere has been cleansed. A peace treaty was finally negotiated for Austria and for the first time in nearly a generation her people are now free.

Personally I am proud to be a supporter of a Government with such a record of achievement for peace and human freedom. Never in history has the liberty of so many people been preserved or won without war and by courage, skill, and great statesmanship alone. I cannot follow the advice of those who wish to return to the tragic policies of the past. I cannot accept the reasoning of those who wish to return to weakness, with surrender of the free world inch by inch, island by island, nation by nation.

The great difference between this administration and its recent predecessors is that it understands the course of history. It has the skill and the foresight to be a leader and not a victim in the shaping of history.

Of course the fundamental is that dictators do not embark on wars unless they expect to win. If they know they will be opposed by overwhelming force they do not risk their necks in aggression. The great change of the past 3 years is that the aggressor knows, at last, that if he starts a conquest he will be opposed by overwhelming force. He knows we are strong, united and unfraid. He knows he cannot win.

That is why the Soviets now sing of peace, of trade, of peaceful coexistence. The political weakness of the free world has come to an end.

We are proud tonight to salute the kind of courage that has put out the fires of war time and again because the aggressor knows today that we are neither craven nor helpless. The struggle for peace is not won yet. It will last a long time and ultimate victory will call for the best that is in us. I believe the kind of Government we now have is what our people want in a time when America has been called to leadership and the peace of the world rests upon us.

We are going through a curious political period. A presidential election is coming along and for the first time in a great many years we Republicans find ourselves in a very happy position. We have done for our country what others failed to do. We are witnessing the mournful spectacle of eager candidates for the opposition nomination who cannot scrape up an issue. There really is nothing so sad as a candidate without an issue, except a whole collection of candidates without an issue among them.

More Americans are at work today producing more, earning more, and investing more than ever before. The Eisenhower administration has proved that our country can enjoy prosperity and peace at the same time.

The Eisenhower administration has brought to our Government a new and refreshing faith in the American people. As a result, price controls, wage controls, and a monumental bureaucracy were lifted from the backs of our people.

That faith in the people has been rewarded and we have just had the extraordinary experience of seeing a balanced budget presented by the President of the United States.

The largest tax reductions in history were enacted under the Eisenhower administration, under the novel theory that the American people were entitled to spend more of their own money.

Unemployment insurance has been extended to 4 million additional workers and social security has been extended to 10 million additional Americans. The Government has been getting out of business and turning it back to the people.

Whichever issue you select—prosperity, peace, honesty in government, loyalty, security, and social progress—the Eisenhower administration has served the people well. It has served them better than they have ever been served before, and it is heartwarming to feel that they know it and are grateful.

Once again there is opportunity and an unlimited future for our children. There is opportunity in a world at peace and an America more prosperous than ever before.

Almighty God has smiled on us and on our beloved country. We are all grateful indeed that He has blessed us with the rich and devoted leadership of the man we honor here tonight, the President of the United States, Dwight Eisenhower.

The Extension of the Sugar Act

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Wednesday, January 25, 1956

Mr. JACKSON. Mr. President, the western United States and particularly the State of Washington has a vital stake in extension of the Sugar Act.

How the increase in domestic sugar consumption is apportioned between domestic and foreign producers is an important question for thousands of World War II and Korean veterans writing a stirring chapter in western reclamation on Columbia Basin lands.

Recognizing the effort these veterans have made and the importance of an equitable solution in this matter, my colleague from the State of Washington, the senior Senator from Washington [Mr. MAGNUSON] has fought long and hard to insure western sugar beet acreage getting proper consideration when this problem of apportionment ultimately is solved.

His efforts have been recognized not only by the sugar industry nationally, but especially by the veterans who moved on to new land in the Columbia Basin area of our State of Washington and in other reclamation projects of the West only to find that adequate protection had not been given previously. Recognition of my colleague's service and efforts has not only been voiced by the veterans farming this new acreage, but by many of the newspapers who serve these growing areas. One such reference was published in the Seattle Times of Friday, January 20, and I ask unanimous consent that this editorial may be published in full in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HELP FOR SUGAR-BEET FARMERS WOULD BENEFIT ENTIRE STATE

This State has an important stake in legislation which has been the subject of recent hearings in the United States Senate, designed to revise Federal regulations of the sugar industry. The Senate Finance Committee is studying a measure that would extend the Sugar Act of 1948 and giving American sugar producers a larger share in this country's annual consumption of sugar.

This State is vitally interested because its sugar-beet farmers, who last year produced some 660,000 tons of sugar beets—more than 1,800,000 hundred-pound bags of sugar, worth some $18 million—could add substantially larger sums to the State's wealth if present inequitable Federal restrictions were favorably revised.

The 1948 law established quotas for consumption of sugar under which the domestic sugar-beet industry was permitted to contribute no more than 1,800,000 tons of sugar a year to the United States market. Quotas were established also on domestic cane sugar and on sugar from Cuba, Puerto Rico, the Virgin Islands, Hawaii, and the Philippines.

Since 1948, consumption of sugar in this country has increased more than 1 million tons. But because the domestic quotas were frozen, none of this increase has been allotted to American sugar producers. Under the existing law, Cuba has received 96 percent of the increase. The other 4 percent went to foreign sugar producers.

The measure the Senate is considering would allot to domestic sugar producers a ratio of 55 percent of the annual increase in sugar consumption. Washington State sugar farmers thus would be enabled to plant more of their acreage in beets and gain a larger share of the money the American public spends for sugar.

The Senate bill has been indorsed in principle by the Seattle Chamber of Commerce, which also is on record in support of an amendment proposed by this State's Senator WARREN MAGNUSON. His amendment would recognize the right to an equitable quota of new beet-growing areas, such as may be opened as development of the Columbia Basin irrigation project progresses.

The House of Representatives passed a new sugar bill last year, but the Senate version offers greater advantages to the Washington sugar industry. In any event, some revision of the 1948 act providing for a more equitable sugar-quota system seems likely to be enacted during the present session of Congress. If that can be accomplished, the whole State stands to benefit along with its relatively youthful but flourishing sugar industry.

Address by George Meany on the Occasion of His Receiving the Honorary Degree of Doctor of Laws at Seton Hall University

EXTENSION OF REMARKS
OF
HON. T. JAMES TUMULTY
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 25, 1956

Mr. TUMULTY. Mr. Speaker, under leave to extend my remarks, I am happy to insert in the CONGRESSIONAL RECORD the following address by George Meany which was delivered on the occasion of his receiving the honorary degree of doctor of laws from Seton Hall University. The speech, I am happy to say, was received with enthusiasm. The Honorable Maurice Brady, member of the State Legislature of New Jersey, who was pres-

ent, informs me that the people will long remember Mr. Meany's stirring address.

Receiving an honorary degree of LLD at the same time from Seton Hall University was AFL-CIO Secretary-Treasurer William F. Schnitzler.

The speech is as follows:

In behalf of my colleague, William Schnitzler, and for myself, I express to you deep appreciation. The honor you have conferred upon us is, above all, a timely tribute to the growing vision, influence, and responsibility of more than 15 million American workers in their new unity.

We, as officers of the AFL-CIO, welcome this great honor. It will encourage us to greater devotion to the highest ideals and worthiest aims of the free labor movement. These are closely interrelated with the ideals and principles of the church.

Very few of us are blessed to live 100 years. But, from generation to generation, many of us are blessed because institutions like yours live and grow century after century. Over the years, the lives of the many are likewise enriched by the endeavors of the truly illustrious few. Bishop James Roosevelt Bayley demonstrated courageous initiative, reflected the spirit of growth of his times, and responded to the needs of the day when, on September 1, 1856, he threw open the doors of Seton Hall—the first Catholic institution of higher learning in New Jersey.

Yours have been years of notable progress. You have already established the first medical and dental college in your State. Your progress spells progress for all America. No nation can long continue in honor, freedom, and well-being without benefit of the moral principles instilled by your center of learning.

Whether we are workers or employers, farmers or merchants, scientists, priests, or laymen—no matter what our religion may be—we can all subscribe to these principles. They are based on the fundamental concepts of morality. It is in this vein that distinguished ministers, rabbis, priests, and laymen agreed, 10 years ago, on a pattern for social justice in our country. They agreed that the profit motive must be subordinated to the moral law. They affirmed that workers have an inviolable right to join a union. Some leading Catholic authorities on the social encyclicals maintain that workingmen and women have a duty to join a union.

Enlightened American industrialists and businessmen can only welcome, not seek to weaken or destroy, the American trade-union movement. It is a built-in guaranty of security for America and the American way of life. The AFL-CIO is dedicated to making American democracy more vital and more effective. We want an alert and intelligent and not an inert and uninformed electorate. We want our country to have more and better schools. We want better homes for the American people. We want healthier and happier communities. We shall use every democratic means to invigorate and improve the free institutions of our country and to promote its common welfare.

The AFL-CIO constitution provides that the united federation serve the interests of all American people. It pledges our membership to "the strengthening and extension of our way of life and the fundamental freedoms which are the basis of our democratic society." Our stirring preamble claims:

"We shall combat resolutely the forces which seek to undermine the democratic institutions of our Nation and to enslave the human soul. We shall strive always to win full respect for the dignity of the human individual whom our unions serve. With divine guidance, grateful for the fine traditions of the past, confident of meeting the challenge of the future, we proclaim this constitution."

We of American labor firmly oppose all forms of dictatorship. We vigorously support our free system of Government. We realize that, without a free system of Government, there can be neither free labor nor free enterprise. Communism and every other totalitarian despotism is the deadly enemy of free labor unions. Free labor unionism and totalitarianism simply cannot coexist. They negate each other. Where a Lenin, Stalin, Hitler, Mussolini, Franco, Peron or Khrushchev rules, where free labor unions are ruined. When such dictatorships begin, free labor unions are finished. We are their first target because we are their sworn enemies. Our new unity means greater strength in protecting our American labor movement against any and all corrupt influences. It means strengthened determination to defeat the undermining efforts of Communist agencies and all others who are opposed to the basic principles of our democracy and free and democratic trade unionism.

Nor can I emphasize sufficiently that Communism is likewise the mortal foe of private capital, private ownership and the private management of industry.

To me, it is inspiring and interesting that Seton Hall celebrates its first centenary in 1956. It is also the year when our country is significantly marking the 100th anniversary of the birth of a renowned educator and outstanding President of our Republic. It was Woodrow Wilson, with his concept of the New Freedom, who declared more than forty years ago: "The commands of democracy are as imperative as its privileges, and its opportunities are wide and generous." In this spirit, he sought to lead our Nation in the front lines of world responsibility. It is from this viewpoint that I want to consider your vital role in the profound crisis now gripping mankind.

You are not merely students. You are not merely teachers. Yours is not merely an institution within whose walls the learning and experience of yesterday are studied for the benefit of today and tomorrow. In the present grave world situation, you are in the front line of the fight for human freedom and enduring peace. Today, our schools of higher learning can and must be fortresses of freedom.

Our country is a democracy. Our country is democratic, despite all its imperfections, some of which are painful. It is a command of democracy for every citizen to contribute to the building of America into an ever better and ever stronger democracy—free from all racialism, discrimination, economic and social injustice. This command is all the more urgent today because our Nation's foreign policy now plays so great a role in the life of each and every one of us.

In the last resort, the foreign policy of every nation must reflect its domestic ideals and principles. The faith which other nations will place in our country's devotion to peace and human freedom is, in great measure, dependent on how we manage our affairs at home, on whether we treat our citizenry without regard to race, color, national origin or economic status.

Any government which distrusts its own people, which, like Moscow and Peiping, wages war on the rights and standards of its own people, cannot—for long—be trusted to treat other peoples justly and peacefully. Violence, injustice, and social immorality at home inevitably lead to aggression, injustice, and indecency in the treatment of peoples abroad. A government which denies its own people freedom of conscience cannot long be good neighbors with other peoples. Such a government cannot, in good conscience, respect their liberties, their freedom to worship God, their freedom to think and their right to preserve their national ideals, beliefs, and culture. This applies to every type of dictatorship, to the Nazi no less than to the Communist, and to the Communist no less than to the Falangist.

It is to the highest credit of the students of the University of Madrid that, in their great majority, they recently expressed their opposition to falangism. The academic community in our own country and in the entire free world has every reason to be proud of this reaction by the Spanish students to an officially sponsored poll.

Here is an inspiring tribute to the vitality of freedom as an ideal and to the love of liberty as a human force which cannot be extinguished by despotism. It behooves us of the ranks of labor and you of the ranks of learning to see to it that such healthy reactions are not exploited and perverted by Communist demagogs. We can do that best by making our democracy a living faith, by giving reality to our democratic ideals in the context of the present world situation.

We can go a long way in meeting the Communist menace and challenge by combining highly deterrent military strength with social, economic, and educational measures for improving the conditions of the people in the economically underdeveloped countries. Our country has more than industrial skills and material strength. Above all else, we have the ideals and the ideas. We can and must find better ways of sharing with other peoples these great assets of civilization. These are assets which must be universal, if they are to survive the terrible impact of the tidal waves of Communist reaction and slavery now threatening to engulf all mankind.

When I think of this menace, I also think of the opportunity before us. It is high time for our Government, for our schools and colleges, for the great voluntary organizations of our land—like those of labor, learning, management, science, and agriculture to get together and plan for training teachers, scientists, managers, organizers, technicians, and others—especially for utilizing their skills and talents through rendering service in foreign lands. We Americans have much experience in pioneering. The spirit of the pioneer continues very strong in our life today. We are rightly proud of this creative spirit. Let us infuse our efforts to aid other peoples, now menaced by Communist subversion and Soviet aggression, with this spirit of the American pioneer.

I am confident that this spirit would go a much longer way in strengthening the cause of peace, freedom and human betterment than would the mere handing out of dollars. In the current crisis, a combination of the American pioneer spirit and generosity is vital. It might well be decisive. I am not afraid of communism winning the world through helping other people. So far, communism has never gained a position anywhere except by fraud, force and terror. In spite of all its loud propaganda to the contrary, communism has never given any people anything free. So far, Moscow has done infinitely more taking from—than giving—to other peoples. The Kremlin has not really helped others. Actually, it has only helped itself at the expense of other countries. Look at the captive peoples of Europe. Who of us can forget how Soviet Russia plundered Manchuria? Yes, Bolsheviks do barter—many big promises with little performance in exchange for much in return.

Our country can well afford to challenge Moscow to match us dollar for dollar and service for service in Egypt, India or anywhere else, in saving people from hunger and disease, in helping people build anew and build better. Of course, we should never say we will merely match Moscow's efforts to help and merely match its aid to others. At best, that would mean that we would do next to nothing. That would really mean turning our back on needy nations.

I see no reason for our diplomats getting panicky because Moscow talks big about helping others. There is not the slightest

evidence that Moscow has veered even an inch from its policy of building an ever bigger war machine, an ever more deadly terror machine against its people at home and an ever more expanded and expensive fifth-column apparatus. These are costly and crushing burdens forced on the Russian people by their Communist rulers.

We must never forget we have no quarrels with the Russian people. We have only friendship and heartfelt sympathy for the Russian people, for they are the first and heaviest sufferers of Communist dictatorship. Nor dare we forget that the captive peoples of the European satellite lands and on the Chinese mainland have been suffering cruel hardships. When I speak of such crushing burdens, I speak not only of suffering in a physical sense. I have in mind especially the spiritual and moral losses. I am thinking of the missionaries, of the great scholars, hounded, tortured and forced to flee from Communist China because they would not sell their souls nor debase their intellect.

I can never forget the shocking revelations recently made by the Reverend Dr. Bradshaw after his release from the Chinese Communist "paradise." That is why I find it hard to believe—and least of all to fear—that Moscow and its puppets have suddenly become great humanitarians and will match the genuine and generous help we have been giving and should be prepared to give in the future. Where is the slightest evidence of even the faintest beginning of such a miraculous transformation of the ruthless Kremlin dictatorship?

The time has arrived for our Government to reexamine and study our country's last decade of experience in foreign aid. No doubt we have made mistakes. No doubt we must do some things better than we have done to date. No doubt we should even stop doing some of the things we have been doing. No doubt we must meet new tasks in the foreign-aid field. But let us not get panicky and rush to drown rubles with dollars. We should be ready to help where there is need and when we can, help the needy rather than their oppressors. We must always be ready to help where the cause of peace and freedom can be served and strengthened.

We must likewise reject every effort or scheme to appease and assist the Communist aggressors through business deals with them. Neither peace, nor freedom, can be bought that cheap. Doing business as usual with Khrushchev is basically just as bad and unsound as was doing business with Hitler. Shortsightedness in commercial relations never really pays. Such deals with Communist Russia and Communist China only help the plunderers and oppressors of the Russian, Chinese, and the other peoples to tighten their dictatorial grip, to build their war machines and to secure new channels of subversion. No profit garnered in any such deal can ever make up for the damage and the tragedy it causes.

Of course, what I say about business as usual also applies to cultural relations as usual. There can never be real freedom of genuine cultural relations between the American and Russian peoples until the Russians can have free relations—cultural and other—among themselves.

We are living in an age of profound crisis. For that very reason, we are also living in an age of consecration. We of the free labor movement—and I am sure you of the free academic world—can find no more worthy ideal than to consecrate ourselves to the promotion and protection of our freedom. This great task is inseparable from and indispensable to consecrating ourselves to aiding others, to helping others whose fundamental human rights have been taken from them by the most total and brutal concentration of power in all human history.

How timely then was the wisdom of Woodrow Wilson about the privileges, opportunities and commands of democracy being wide and generous. I know that men of your calling and learning realize fully that freedom to think, freedom of conscience, freedom to worship God, to associate, assemble, and organize are a priceless heritage. This great heritage cannot be preserved and promoted merely by praising it and enjoying it—while the enjoying lasts. We have to work at freedom. We have to practice it. We have to nurse and nourish it. We have to live it so that it may live and thrive.

We Americans are a privileged people. We were born free. Twice we fought fratricidal conflicts to assure and advance our freedom. Twice we fought on global scale in foreign lands in order to safeguard the security of our own free land and the freedom menaced by foreign forms of tyranny and pernicious aggression. I do not despair. I am confident we and the free world with us have the faith and the courage, the idealism and the ideas, the capacity and the will to organize our lives and our international associations so that we can cooperate for the good of mankind; so that we can unite our forces for deterring and, if need be, defeating aggression. Then mankind can and will be saved from an atomic world war.

In this light, all of us can only welcome heartily the plea made recently by Pope Pius XII for the world to agree on renouncing nuclear weapons and assure compliance with this agreement through a system of effective control. We have repeatedly demanded the same. We hail the Holy Father's plea for its emphasis on the necessity of effective control and on the need to include all steps, and not merely an agreement, to end military nuclear experimentation.

The furtherance of this noble goal fanatically challenged and menaced by the Godless hordes of communism, is the highest command of American democracy. It is also your—and my—most imperative privilege. As Americans, from factory bench and school bench, from office and classroom, let us dedicate and consecrate ourselves to this task. Like you here at Seton Hall, we of American labor are entering a new era. Be with us, as we face the future with confidence that with God's help, we shall not fail in our responsibilities or accomplishments.

Milk: Nature's Perfect Food

EXTENSION OF REMARKS
OF
HON. GEORGE D. AIKEN
OF VERMONT
IN THE SENATE OF THE UNITED STATES
Wednesday, January 25, 1956

Mr. AIKEN. Mr. President, on June 26, 1955, the Springfield (Mass.) Sunday Republican published an article entitled "Nature's Perfect Food Aids Later Aches, Pains." The article specifies the great benefits which middle-aged women may derive from drinking milk, and is as timely today as it was last summer; therefore, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NATURE'S PERFECT FOOD AIDS LATER ACHES, PAINS

(By Hazel B. Corliss)

Since June is being observed as National Dairy Month, let's consider milk. The experts tell us that it is nature's most perfect food. I believe that the real cause of the present dairy controversy is not overproduction, but underconsumption. If people would drink the amount of milk they actually need for proper nourishment, surpluses would be unknown.

ADULTS NEED MILK

It is an accepted fact that babies and children require plenty of milk for proper growth. But all too often it is rejected by the teen-ager, and the adult. They fear over-weight; and other beverages are the vogue.

I feel that the middle-aged woman is the key figure in persuading people to drink more milk. Her influence is felt by every child, from infancy to adulthood. The bride usually adopts her mother's housekeeping pattern when she begins her new homelife; and the food habits are repeated.

The various promotion programs have tried to convince the middle-aged woman that milk is a nutritive food for all ages. Yet she may be like her little Johnny, who refuses to drink his milk when merely told that it is good for him. He has to have a more personal reason. He doesn't hesitate after hearing that milk will make his arms strong, and his legs swift, for his beloved ball game. Likewise, Johnny's mother needs to be persuaded through her own most vulnerable points.

BENEFITS NOT SKIN DEEP

For centuries, the middle-aged woman has fought valiantly to keep herself youthful looking. She not only needed to please her family, but to boost her own morale. She has spent millions of dollars for clothes and cosmetics, striving to achieve this worthy goal. However, clothes wear out, or lose their style, and cosmetics have only a superficial "face" value.

The benefits to be derived from drinking lots of milk are not just "skin deep." By consuming a quart daily, the middle-aged woman would attain a truly permanent health foundation. Her skin would have a velvety texture and a rozy glow; her eyes would sparkle brightly; her hair would have a lovely sheen; and her body, strength and vitality, for working, and for resisting disease.

How do I know all this? From my own experience, I, too, am a middle-aged woman. During our 20 years of city living, we made other sacrifices in order to buy extra milk. We were the carrier's best customer, on our street. Our health rewards have been very worth while. In addition to our greater sense of physical well-being, we saved a great many dentist and doctor bills.

Since coming to our small farm in Vermont, we have been able to enjoy still more milk. At first, we had only one cow. During her 2 months' dry period, when we had no milk to drink, we noticed a great difference in our general health.

The wife of the small farmer has long hours of hard work daily. When faltering with fatigue, I have found a glass of milk the most sustaining and quickest lift.

NOT FATTENING

Milk is no more fattening than many other foods which fail to give comparable health stamina. Most popular beverages are flavorful and refreshing, but they have no food value; instead, their high sugar content gives people weight-producing calories.

Often the middle-aged woman does know the health value of milk, but she feels that she cannot afford to buy as much as she would like to. Yet, as she very well knows, clothes and cosmetics are expensive. If she drank a quart of milk daily she would radiate glowing health and youthfulness, in the simplest attire. No beauty aids would be necessary. Her family would admire proudly; and her own higher spirits would contribute to the happiness of everyone she contacted.

As she grows older, and her body begins to degenerate, the middle-aged woman is often plagued by various aches and pains. The large amount of calcium in milk makes it one of the best protective foods. My own arthritis was much more painful during the period when we were without milk.

We do not sell milk. I am merely passing around a little of the milk of human kindness in sharing my own secrets. When friends say that I look younger than my years, I know that milk has been my benefactor.

So, for her own personal reasons, I appeal to my sister, the middle-aged woman, to drink from the Fountain of Youth. Milk is a bargain in buoyant health and youthful beauty.

One Hundred and Seventy-Fifth Anniversary of the Constitution of the Commonwealth of Massachusetts

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 25, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the letter which was received by each Member of Congress, enclosing an address by Basil Brewer, publisher, New Bedford Standard-Times, commemorating the 175th anniversary of the State constitution. This was distributed by the Massachusetts heritage program of the Massachusetts Bar Association.

The address follows:

THE CONSTITUTION OF MASSACHUSETTS AND ITS IMPACT UPON THE CONSTITUTION OF THE UNITED STATES

(By Basil Brewer)

Non-New Englanders, and particularly such Missouri Yankees as myself, are steeped in the lore of the Pilgrims of Plymouth and of that tremendous ship, the *Mayflower*, which landed briefly at Provincetown on November 21, 1620, and a month later at the historic rock at Plymouth.

I say that "tremendous ship," for else how could it have housed the ancestors of most of the prominent families of the Midwest of my boyhood, as well as of New England, and nowadays of even the Far West?

So stamped on my boyhood mind was the story of lovely Priscilla and John Alden that I think I may have reached almost young manhood before I stopped hoping some one of the lovely young ladies I met would say shyly to me, "Why don't you speak for yourself, Basil?"

PILGRIMAGE RECALLED

May I recall to you that other and truly great occasion which this one so clearly brings to my mind, the pilgrimage to Plymouth sponsored by the Plymouth County Republican Club July 29, 1951.

Many present today were at that Plymouth meeting, including our guest of honor, Senator SALTONSTALL. It was an all-day and an unforgettable ceremony and pageant. The beginnings of Plymouth were recalled and the basic principles of the Pilgrim Fathers were emphasized.

Many speakers, including the two guests of honor, the late Senator Robert A. Taft, and our own JOSEPH W. MARTIN, then Speaker of the House, called for a return to basic Pilgrim principles. Bob Taft spoke with great seriousness and conviction, as did Speaker MARTIN, to audiences which included those of both the television and radio networks of the National Broadcasting Co.

For the first time in history, half the Nation saw the harbor of Plymouth sprinkled with small craft listening to the program and the great audience standing or seated in the natural amphitheater which faces the platform above Plymouth Rock.

TAFT IS QUOTED

I must quote again the words of the deceased Bob Taft with reference to the Pilgrims on that occasion.

"We have come here to celebrate the record of the Pilgrim Fathers, and to rededicate ourselves to the ideals which inspired one of the great adventures of all time. * * *

"They were guided by the most rigid religious and moral principles which sustained them in adversity and inspired them to determined effort. They believed in God from the bottom of their souls. As said by Baylies, 'They in pursuit of religious freedom, established civil liberty; meaning only to found a church, gave birth to a nation; in settling a town, they commenced an empire.'"

But there was another small ship of design similar to the *Mayflower* to which history for some reason has given much less attention. In its importance to the then small Bay Colony of Massachusetts, however, this ship may have in some ways rivaled the *Mayflower*. This was the ship *Arbella*, which arrived at Salem, June 12, 1630, approximately 10 years after the arrival of the *Mayflower* at Plymouth.

On this ship was Gov. John Winthrop, who just had been appointed Governor of the Bay Colony of Massachusetts. Winthrop had accepted only under the condition that the government be transferred to the colony. With him were the Reverend George Phillips and Sir Richmond Saltonstall, who brought with them a charter from Charles I, a charter which gave the infant colony its first semblance of self-government.

FOREGOES TITLE

Sir Richard Saltonstall, of course, was the ancestor of our distinguished guest of honor, Senator LEVERETT SALTONSTALL. Due, however, to the provisions of both Federal and State constitutions which came 150 years later, LEVERETT has had to forego his ancestral title, contenting himself with such modest substitutes as speaker of the house of governor of the commonwealth, and three times elected United States Senator.

The charter which the *Arbella* brought vested the governing power in a governor, a court of assistance and freemen, which later included all, and I quote, "respectable landholders." These soon started sending representatives to attend meetings and thus was evolved the general court of the commonwealth.

This charter of 1629 remained in effect in the colony for 54 years, giving the then Bay Colony of Massachusetts perhaps the first and longest period of substantial self-government of any of the colonies.

The experience in self-government and the devotion to freedom thus gained were to exert a tremendous influence, not only on the history of the Commonwealth and of others of the colonies, but on the grave decisions which brought the War of the Revolution and the independence of the country.

CHARTER VACATED

But the process of self-government of the Bay Colony received a rude interruption when the charter of 1629 was vacated by King James II in 1684. The Bay Colony was by this act deprived of all political rights whatsoever and became the absolute property of the king to govern as he saw fit.

Sir Edmund Andros was made governor of all the territory of New England, which had been joined with that of New York and New Jersey and the two colonies to the south.

Massachusetts not only no longer had law-making or executive power of her own, but every land title which went back to the authority of the old charter was declared invalid.

But this was not for long. Timing their action to the return of William of Orange and the flight of James II on April 18, 1689, "armed men were abroad" in the streets of Boston.

GIVEN LITTLE NOTICE

John Nelson headed a party of men who, armed with small cannon, proceeded to the fort on Fort Hill to which Governor Andros had fled. Andros was ordered to surrender, which he did.

Thus ended the first revolution against the British by the Bay Colony of Massachusetts, to which historians seem to have given all too little attention. It restored the charter of 1629. And again, after a lapse of 5 years, the Bay Colony enjoyed a measure of self-government.

The bloodless revolution of 1689 was a rehearsal for the long and bloody War of the Revolution 85 years later. As John Fisk puts it in the last sentence of Beginnings of New England: "In the events we have here passed in review, it may be seen, so plainly that he who runs may read, how the spirit of 1776 was foreshadowed in 1689."

If revolt and war were brewing in the colony at this early date, the pressure of great events was developing a new and a different race which was to prove equal to its responsibilities. This was no where so well described as by Samuel E. Morison in his "Builders of the Bay Colony."

Morison wrote, "The race was not Anglo-Saxon or Irish * * * It was Yankee, a new Nordic amalgam on an English Puritan base; already in 1750 as different in its character and its dialect from the English as the Australians are today. A tough but nervous, tenacious but restless race; materially ambitious, yet prone to introspection, and subject to waves of religious emotion. Conservative in its ideas of property and religion, yet radical in business and government.

"A people with few social graces, yet capable of deep friendships and abiding loyalties; law-abiding yet individualistic, and impatient of restraint by government or regulation in business; ever attempting to repress certain traits of human nature, but finding an outlet in broad, crude humor and deep sea voyages.

"A race whose typical member is eternally torn between a passion for righteousness and a desire to get on in the world. Religion and climate, soil and sea, here brewed of mixed stock a new people."

WAR OF SURVIVAL

With the coronation of William III and the flight of Jomes II to France, again quoting Fisk, "began the 70-year struggle between France and England for the primacy of the world," both the Old World and the New. It was a struggle "far grander than the struggle between Rome and Carthage 2,000 years earlier."

This 70 years of war was as much upon American as upon European ground. It was a war of survival for the colonies as well as for Britain and great were the sacrifices in men, material, and money on the part of the colonies.

The far-flung battlefield extended from Fort Duquesne in the Ohio territory, where Braddock died and George Washington got his first experience in serious fighting, to the final defeat of General Montcalm on the Plains of Abraham in front of Quebec by British General Wolfe, which decided the fate of Canada.

If the War of the Revolution was foreshadowed by the surrender of Governor Andros in Boston in 1689, the wars against France in which the colonists so ably participated—from Florida, the Carolinas, and Virginia to Massachusetts and Maine—were

a stern training school for Lexington, Concord, Bunker Hill, and for Brandywine, Valley Forge and the ultimate surrender of Cornwallis at Yorktown.

George Washington and other generals gained their first military experience in the French and Indian Wars. The veterans of these wars and their sons were the core of the Continental Army.

APTITUDE FOR LAW

Experienced in self-government, including its difficulties and defeats, fully devoted and dedicated to the cause of liberty, and trained in three or more generations of bloody warfare, the colonists, and particularly those of Massachusetts, possessed another aptitude without which the foregoing might have lost its meaning.

This was an ability to think and act in terms of the law, a quality by no means confined to those who were educated in the law. For many years there was such a scarcity of barristers in Massachusetts that legal training was not required of those who represented litigants. One of the most able pleaders at one early date was an apothecary.

Thus it was no coincidence that, as the people of the colony were preparing to defend their liberty by war if necessary, they also were prepared, mentally and spiritually, to establish a pattern of fundamental law which would preserve that liberty "for themselves and their posterity," once it was secured.

As it was said by the farmers of western Massachusetts, they wanted a constitution "which would protect them from themselves."

The Sugar Act of 1764, the Stamp Act of 1765, the Writs of Assistance and the Townshend Acts of 1767, the Tea Tax of 1770 and the Tea Act of 1773—all brought bitter opposition. But, equally important, they brought litigation which was a 10-year rehearsal of what to do and what not to do, and especially what to guard against—in the formation of a constitution.

LEADERS DEVELOPED

Of course, this ferment of events developed leaders.

One of these, James Otis from West Barnstable, is so well known to every up-and-coming schoolboy that his name hardly needs to be mentioned. It was on a dull day in February 1761 that James Otis argued for hours in the old State House against the Writs of Assistance.

There "sat the five judges with all the barristers of Boston and Middlesex County." Among them was a young lawyer, John Adams, "who was to be profoundly impressed."

Adams described himself as sitting in the courtroom "lost in admiration" and looking like a "short, thick archbishop of Canterbury." Fifty years later he was to write, "Here this day, in the Old Council Chamber, the Child Independence was born."

Lord Acton, an Englishman and "a scholar among scholars" said, "James Otis spoke and lifted the question to a different level in one of the memorable speeches in political history."

PHILOSOPHY OF GOVERNMENT

James Otis, himself, in his Rights of the British Colonies in 1764, thus described his far-reaching governmental philosophy: "Government * * * most evidently founded on the circumstances of our nature. It is by no means an arbitrary thing depending merely upon a compact or human will for its existence * * *. Supreme absolute power is originally and ultimately in the people * * *. Tyranny of all kinds is to be abhorred whether it be in the hands of one, or a few or of many.

"The end of government being the good of mankind points out its great duties; it is above all things to provide for the security, quiet, and the happy enjoyment of life, liberty and property * * *. Men cannot live apart or independent of each other * * * and yet they cannot live together without contests. These contests require some arbitrator to determine them. The necessity of a common, indifferent and impartial judge makes all men seek one.

"The same law of nature and of reason is equally obligatory on a democracy, aristocracy and a monarchy * * *. The grand political problem in all ages has been to invent the best combination or distribution of the supreme powers of legislation and execution."

CONSTITUTION DRAFTED

All of this was familiar to John Adams, Theophilus Parsons and other constitutional thinkers when they were directed by the convention of 1779 to frame a constitution for the Commonwealth of Massachusetts following the movement of the people in the towns outlined in the proclamation.

This convention of 1779–1780 had the greatest task of any constitutional convention in the history of the colonies, and performed it under peculiarly difficulty circumstances.

The period of its sessions, from September 1, 1779, to June 16, 1780, was perhaps the darkest of the Revolutionary War. A joint naval and military expedition, brought together by the State at great cost to dislodge the enemy from Maine, had ended in complete disaster. Sir Henry Clinton was conquering the Carolinas. Our French allies had not yet sent Rochambeau's Army or De Grasse's Navy.

Washington was stalemated on the Hudson, his Army undermined by sickness and desertion. State and Nation were on the verge of bankruptcy. The Tories were taking heart and the neutrals going over to their side.

Yet at this crisis the State was able to assemble a convention of 312 members, which, judged by its results, must unquestionably be called the greatest in its history.

COMMITTEE OF 30

"At its first session, in the Meeting House in Cambridge, the convention organized, adopted a set of 10 rules and orders, elected a committee of 30 to prepare a draft, spent a day in 'a general and free conversation' on the constitution, 'which lasted till sunset,' and adjourned on September 7 to October 28.

"The committee of 30 met at the new court house in Boston, on the site of the present city hall. It delegated its duties to a subcommittee consisting of James Bowdoin and the two Adamses; and the committee left the entire task to John Adams.

"No better selection could have been made. John Adams was in his 45th year, at the height of his powers, and one of the highest authorities on political science in America. Long a student of government, his advice had been sought by the framers of the early constitutions in the Southern States. He was highly equipped as a lawyer and a practical politician. As a patriot leader in the provincial government and the Continental Congress, and as a Minister to France, his political experience was extensive. It was the task of John Adams to construct a government on the ruins of what his cousin, Samuel Adams, had done so much to destroy."

Charles Francis Adams, the grandson of John and the American Ambassador to Britain during our Civil War, summed up his grandfather as follows: "Not at all suited to be a chief, when much depends upon a spirit of accommodation to the whims or the longings of individuals held together by fleeting considerations of personal or public interest, he was yet eminently qualified to stand forth the exponent of a clear, strong, and noble plan of action in a time of danger.

"The constitution went into effect October 25, 1780, when John Hancock was inaugurated the first governor of the Commonwealth. At the foot of his proclamations appeared for the first time the now-familiar formula, 'God save the Commonwealth of Massachusetts'."

BILL OF RIGHTS

If John Adams was the father of the constitution of Massachusetts, adopted in 1780, he was equally the father of the Federal Constitution, approved by the convention in 1787 and which became effective in 1789, when adopted by 9 of the 13 States.

The Bill of Rights of the Federal Constitution is an almost verbatim copy of the declaration of rights of the Massachusetts constitution.

Freedom of speech, religion, and press, right to a jury trial, protection against excessive bail or punishment, preservation of private property and other guaranties of the United States Constitution were copied virtually word for word from the constitution of Massachusetts.

The preambles of the two documents vary in wording, but they are almost identical in their meaning.

Says the United States Constitution: "The right of the people to be secure in their persons, houses, papers, and effects against unreasonable searches and seizures shall not be violated."

Says the Massachusetts constitution: "Every subject has a right to be secure from all unreasonable searches and seizures of his person, his houses, his papers and all his possessions."

Says the United States Constitution: "Nor shall he be compelled to be a witness against himself."

Says the Massachusetts constitution: "Or be compelled to accuse or furnish evidence against himself."

Says the United States Constitution: "Any accused is entitled to be confronted with the witnesses against him."

Says the Massachusetts constitution: "Any accused is entitled to meet the witnesses against him face to face."

Says the United States Constitution: "The Senate shall have the sole power to try all impeachments."

Says the Massachusetts constitution: "The Senate shall * * * hear and determine all impeachments."

When it came to outlining the extent of the Senate's powers in impeachment cases, the United States Constitution states such powers "shall not extend further than to removal from office and disqualification to hold and enjoy any office of honor, trust or profit." This is word for word from the Massachusetts constitution.

Says the United States Constitution: "No soldier shall in time of peace be quartered in any house without the consent of the owner."

Says the Massachusetts constitution: "In time of peace, no soldier ought to be quartered in any house without the consent of the owner."

The United States Constitution's celebrated provision, reserving for the people all rights not expressly delegated to the Federal Government, was taken verbatim from a statement of such principle in the Massachusetts constitution.

In enunciation of high principles, limitation of powers and scope, the Federal Constitution is patterned after that of Massachusetts, more often than not in the same language. No greater tribute to the timelessness of the Massachusetts constitution and its influence in making the United States Government one of laws, not of men, can be cited.

PERILS TO CONSTITUTION

As recently as in January 1944, a President of the United States asked Congress to pass a so-called Federal voting bill which would qualify a person in the armed services to vote for President and Vice President, regard-

less of whether such person was duly qualified to vote in the State of his residence.

This clearly would violate provisions of State and Federal Constitutions, which give to the States exclusively the right to determine the qualifications of electors.

In attempting to defend his position, President Roosevelt made the following astonishing statement: "Certainly it (the Federal voting bill) does not violate States rights any more than Public Law 712, which passed by a substantial majority of the Congress in September 1942." [1]

Commenting on this measure, which was urged by President Roosevelt, Senator Millard Tydings, Democrat of Maryland, said on the Senate floor, January 14, 1944, "If our servicemen are fighting in far-off places to destroy the Constitution of the United States and all that it holds for them, there is not one of them who knows it. Yet, while they are fighting in far-off places for America, for its Constitution, and for all that it means, there are those who are seeking to set aside our democratic and constitutional processes and erect instead a government on a Hitlerian model, by denying to our servicemen the Constitution for which they are contending."

Thus by the acts of a President we are reminded of the stern necessity of being constantly on guard if we are to hand down to posterity the liberties which have been preserved to us in our State and Federal Constitutions.

Thomas Jefferson wrote, "In questions of power, let no more be heard of confidence in man, but bind him down from mischief by the chains of the Constitution.

WASHINGTON'S WARNING

In a similar vein are the well-known words of Washington's Farewell Address: "If in the opinion of the people the distribution or modification of constitutional powers be in any particular wrong, let it be corrected by an amendment in the way which the Constitution designates.

"But let there be no change by usurpation, for though this in one instance may be the instrument of good, it is the customary weapon by which free governments are destroyed."

The Founding Fathers in their wisdom placed the following provision in the Federal Constitution:

"Article 6, paragraph 2: This Constitution and the laws of the United States which shall be made in pursuance thereof and all treaties made, or which shall be made, under the authority of the United States, shall be the supreme law of the land, and the judges in every State shall be bound thereby, anything in the Constitution or laws of any State to the contrary notwithstanding."

With the perspective of 156 years ago, probably neither John Adams, Thomas Jefferson, nor Washington, himself, could conceive of a treaty such as the United Nations treaty of 10 years ago. This was a volume of 600 pages which few, if any, Senators could fully comprehend in the 6 days of Senate discussion on the 111-article document.

LEGISLATION BY TREATY

Certainly Washington, who had advised the infant Nation to avoid all foreign alliances, could not foresee a treaty which would attempt to legislate on such subjects as "human rights" and "women's political rights," for the United States as well as for other members of the United Nations.

Nevertheless, out of our yearning for peace and security, we have, through the U. N. and the treaty provisions of our Federal Constitution, placed ourselves in the most serious situation in the history of our constitutional Government.

Only the refusal of the United States Senate and the President to approve certain U. N. treaty provisions already pending prevents States' rights being swept away before our very eyes.

Already in some minor matters the Supreme Court has indicated, clearly under the treaty provisions of the Federal Constitution, it would have no choice but to approve any provision of the U. N. which had Senate and Presidential approval. This is the Supreme Court's position, any State or Federal constitutional provision to the contrary notwithstanding.

I happen to know that our guest of honor, Senator SALTONSTALL, is greatly disturbed by this problem and is striving sincerely and courageously to find a solution.

For my part, I am in favor of sharing the provisions of our constitutions with every honest seeker for freedom. I favor financial help and military assistance within our means. I favor cooperation with our Allies, so long as they do not tie our hands nor tamper with our liberties or our ability to defend ourselves.

But I would, if necessary, toss out the United Nations, NATO or any other foreign treaty or agreement overnight, rather than forfeit one iota of the freedoms and the guaranties of our State and Federal Constitutions.

[1] The so-called Federal voting bill for which President Roosevelt sought approval in 1944 passed the Senate, but failed to pass in the House and did not become law.

On August 1, 1955, the United States Senate voted 56 to 22 to repeal Public Law 712, which Mr. Roosevelt had cited in defense of the 1944 legislation. The House concurred in the Senate action and Public Law 712 is no longer law.

Here again the influence of Massachusetts, through Senator SALTONSTALL, was effective in restoring to the States the right to determine the qualifications of their electors.

Petition to the President of the United States re the Discharge of Douglas McKay, Secretary of the Interior

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. METCALF. Mr. Speaker, at its 14th annual constitutional convention on July 31, 1955, the Inland Empire District Council, No. 10, International Woodworkers of America, CIO, adopted the following resolution:

PETITION TO THE PRESIDENT OF THE UNITED STATES RE THE DISCHARGE OF DOUGLAS MCKAY, SECRETARY OF THE INTERIOR

RESOLUTION 6

Whereas we, the woodworkers of Montana, Idaho, and Washington are familiar with Mr. McKay, because he comes from our own area in the Pacific Northwest; and

Whereas he has been completely repudiated by the people of his own State of Oregon, who elected RICHARD L. NEUBERGER to the United States Senate; and

Whereas Douglas McKay has failed and refused to protect the natural resources properly and has allowed big timber corporations to gouge the Indians on their timber prices, and recently tried to turn over O. & C. lands to the larger operators; and

Whereas McKay has spread the rumor in the recent past that the Alaska Railroad was not making a profit, with obvious political intent to either close it down or give it away to private interests, in spite of its profitable operating record; and

Whereas the people of his own area obviously repose no trust in him, because of his record and attempted political shenanigans; And now, be it therefore

Resolved, That the Inland Empire District Council, No. 10, IWA–CIO, petition the President to act before any further looting of the public domain can occur, by giving Mr. McKay his time and sending him down the road to political oblivion as he sooner or later surely will be; be it further

Resolved, That a copy of this petition be sent to Congressman LEE METCALF, Congresswoman GRACIE PFOST, and Senator WAYNE L. MORSE, with the request that it be read into the CONGRESSIONAL RECORD.

WESLEY SEDY,
IWA Local 10–296.
BEN H. LARSON,
IWA Local 10–364.
KENNETH EVANS,
IWA Local 10–239.
LLOYD E. RAY,
IWA Local 10–179.
GORDON B. TAYLOR,
IWA Local 10–361.
WILLIAM C. HOOP,
IWA Local 10–295.
LONNIE GENTRY,
IWA Local 10–119.

Adopted by the 14th annual constitutional convention, July 31, 1955.

Reorganizing the Government

EXTENSION OF REMARKS
OF
HON. RICHARD H. POFF
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 25, 1956

Mr. POFF. Mr. Speaker, the September 1955 issue of the Democratic Digest contained an article critical of the operations of the second Hoover Commission. When Hon. Herbert Hoover questioned the conclusions of the article, he was invited to submit a summary of his own views on the Commission's work. The first article has been inserted in the Appendix of the RECORD, and in fairness to all concerned, I think Mr. Hoover's article should be also inserted. That article, entitled "Reorganizing the Government as Mr. Hoover Sees It," is herewith quoted in full:

The Second Commission on Organization of the Executive Branch of the Government was created by unanimous action of the Congress in 1953. Its members were appointed by the Speaker for the House, by the Vice President for the Senate, and by the President for the administration. They included members of both political parties.

It was the expressed determination of the Commission from the first day of its existence that party politics should not enter into its conclusions. The Commission never divided on political grounds. I never even heard mentioned a reference to political party effect of any conclusion. A precedent for that had been set by the First Commission on Organization of the Executive Branch of the Government of 1947–49, over which I also presided.

Every member of this Second Commission had long public experience. There were naturally divided opinions on the best methods of accomplishing our purpose. But every recommendation was voted by a majority—and usually by more—of the members of the Commission. And all of them were voted for by members of both political parties.

No inquiry into party affiliations of Task Force members was ever made; however, they did embrace members of both parties. There was a Republican complaint that there were three former Democratic Cabinet members and six former Assistant Secretaries on the Task Forces. The fact was that the Republicans had been out of office for 20 years and had no reserve of such officials. There were a number of Federal and State Supreme Court Judges among the Task Force members—and the number was about even betwen the two parties. On the Task Force on Federal Medical Services, which dealt with questions concerning veterans, there were 80 percent veterans, and I presume from their geographic spread contained members of both parties. However, all Task Force members were selected for their experience and ability. Something over 100 of them had been in Federal service at one time or another, mostly in Democratic administrations.

Out of the 314 recommendations designed to obtain greater efficiency and economy in the executive branch, there were some 16 percent of them that were bound to provide controversy, especially from pressure groups, and 84 percent that are winning general acceptance. Of the total recommendations some 145 were administrative—that is that they can be put into effect by the Departments without legislation. More than 50 have already been adopted, and under President Eisenhower's direction special machinery has been set up in the Bureau of the Budget and the Department of Defense to effectuate more of them. A single one of the administrative recommendations already adopted is saving the taxpayers the total cost of the Commission at the rate of five times every year.

Some 141 of the recommendations require legislation. Already more than 200 bills have been introduced into the Congress for this purpose. They came too late at the busy end of the last session for action although an important one passed the Senate. It required 5 years to complete some 72 percent of the recommendations which were adopted from the First Commission of 1947–49.

There was criticism from pressure groups at that time—just as there is now. Much of the criticism is based upon lack of knowledge by the critics of the workings of the Government, and too often it arises from misunderstanding or misconstruction of the recommendations themselves, and of course criticisms comes from special interests affected.

For instance, I have seen it stated that the Commission would deprive the farmers of their loans from the Government on their commodities pending their sale. No such recommendation was made. The intermediate credit banks were supported by the Commission. Nowhere were the obligations of the Commodity Credit Corporation to support such loans opposed. A method of simplification and economy was recommended which was approved by officials of that Corporation.

Another instance is the hospitalization of destitute veterans with nonservice connected sickness. The Commission supported this as a public obligation but proposed a method to stop "gold bricking" which the veterans' organizations themselves have denounced.

Another instance is the recommendation as to the Rural Electrification Administration, where it has been represented that the Commission was trying to destroy that service. We did not recommend its termination or the limitation of its operations; but we did recommend its reorganization to put it on a more businesslike basis. Nor did the Commission attempt to destroy housing programs. It did recommend a simplification in Federal action that would not stop a single project. I myself had brought about the first Federal action in this area 23 years ago, and the Commission supported its continuance.

The Water Resources Task Force was not packed with special interests. It comprised 15 engineers, 5 lawyers, 3 governors or former governors, and a public accountant. They included members of both parties.

When a motion was made in the Commission to place three persons on the task force "who believe in the principle of Federal Public Power development," it was tabled by a vote of 10 to 1, in which three Democrats concurred, on the ground that such action would necessitate appointment of three persons also to represent the public utility interests. Instead the Commission voted unanimously to authorize the task force to hold public hearings at which individuals and representatives of groups could present their views.

These public hearings were held throughout the country. A total of 261 statements were presented to the task force, representing all points of view, and making 5,000 pages of testimony. These statements received due consideration in the task force's findings.

No one with 40 years experience in public life expects the opposition to a particular idea always to be fair. However, a method of balancing the budget and substantially reducing taxes by the elimination of waste would not seem an unworthy program for both political parties.

H. R. 446, a National Pension Act

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 25, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following open letter to the chairman of the Ways and Means Committee from Mr. Bradford W. Thurston, president, National Pension Federation, Inc., concerning H. R. 446, a measure I have sponsored for the purpose of amending our Social Security Act, and to provide our older citizens with adequate security.

The letter follows:

NATIONAL PENSION FEDERATION, INC.,
Washington, D. C.

OPEN LETTER

TO CHAIRMAN OF THE WAYS AND MEANS COMMITTEE:

As president of the National Pension Federation Inc., with offices at 945 Pennsylvania Avenue NW., Washington, D. C., I am writing this open appeal to your honorable committee in regard to the age group not wanted by business and classed as "too old to work, but not old enough to die."

This same group of citizens have helped build this country by paying taxes and hard work, to be passed on to their sons and daughters so that they may take up where their parents had to give up.

Many in this group have raised families and tried to give them a good education so as to become good and useful citizens.

In the last 50 years, Uncle Sam has had to reach out in need of your sons and daughters to fight to protect our country and the American way of life.

This particular age group that I have referred to have had their sons and daughters die on the field of battle, some in hospitals, and others to remain crippled for life, leaving mother and dad to get along the best they can through depressions and high taxes. They have not been able to save enough to take care of themselves when they have come to the age where business says, on a little yellow slip, "we cannot use you any longer." a polite way of saying, "too old."

Congressman THOMAS J. LANE, from Massachusetts, has presented a bill to Congress which is now in the hands of your committee, that will help this group of being "too old to work, but too young to die."

H. R. 446 will do all of this and not cost the Government one cent.

This bill enacted into a law by Congress would, in a way, repay the sons and daughters who gave their lives for their country. Mothers, fathers, and future generations could live without having to appeal for welfare or old age assistance to live. In some States, an appeal for welfare or old age assistance classifies this group as paupers and they lose their rights to vote.

H. R. 446 enacted as a law in the United States and Territories would treat all citizens as equals—not sex against sex on account of age in receiving payments, or discriminating against age in working privileges. Also, each State be equal, not the South one rate and the North, East, and West another.

The Social Security Act has been in operation since 1937, and to date has paid all of its claims and operating expense. It does not cost the Government one cent—so we have been told.

This has been done by collecting the funds by the payroll withholding taxes paid by the employee and employer in American dollars and cents. We were told about 1 year ago, that after paying all claims, there was over $22 billion surplus in the social-security insurance fund. This was paid and collected for one purpose, and should be used for that purpose only.

A pension of at least $100 per month be paid to each American citizen at 65 years of age, and put a stop to sending social-security payments outside of the United States to persons who, in many cases, have never been an American citizen. They have worked here in covered employment long enough to receive payments, then returning to their native country and our social security office will send them their monthly payments including the wife who may never have been in the United States. No other country will do this to an American citizen.

Give all American citizens a national pension by amending the Social Security Act of at least $100 per month.

Such an amendment would do away with costly old-age assistance operated in a different manner in nearly every State.

I beg of your committee to give H. R. 446 your early consideration. Please do not use it as a political issue as done in the past—granting $5 increase in social-security payments only to have the State take it to reduce the old-age assistance payments, therefore, the person it was intended for never gets the increase.

I want to thank your committee, and a Government that we can appeal to, and trust God in hoping for justice to our elders.

Sincerely,

BRADFORD W. THURSTON,
President.

Girls on Parole

EXTENSION OF REMARKS
OF
HON. THOMAS P. O'NEILL, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 25, 1956

Mr. O'NEILL. Mr. Speaker, Miss Katharine Sullivan, a neighbor of mine

in Cambridge, Mass., and an able public official of the Commonwealth of Massachusetts, is also a distinguished author. For more than 10 years she has been on the Massachusetts Parole Board, and out of her experiences has come a new book which I wish to call to the attention of the Members of the United States House of Representatives. It is entitled "Girls on Parole," and a study on the parole system; how it works and how it can be improved.

I do not think that most of us realize that 95 percent of the people who go to prison come out again. That they sit next to us in the subway, that they pass us on the street, and that they hold down responsible jobs. The problem of assisting these people to again take their places in society is one of paramount importance to all of us. Miss Sullivan's study is expert, understanding and sympathetic. Her interesting account of the lives of those being restored to freedom, and of the effectiveness of the parole system should not be missed. It is real worthwhile reading, and I am sure that all of you wil enjoy the book and profit by what Miss Sullivan has to say.

On Dividing Farmers and Consumers

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 25, 1956

Mr. JOHNSON of Wisconsin. Mr. Speaker, under leave to revise and extend my remarks, I wish to insert in the RECORD an article from the January 26 issue of the Machinist. The article—which is titled "You Pay A Pretty Penny For Fancy Meat Wrappings"—was written by Sidney Margolius.

I was interested in this article because our Secretary of Agriculture in the course of the last 3 years has contributed much in the way of creating confusion in the minds of farmers and city consumers. Perhaps there is a purpose in this policy of dividing city consumers and farmers.

For example, as far back as April of 1953 the Secretary of Agriculture was busy building up consumer opposition against higher farm support prices. The New York Times carries a story with the headline "Consumer Revolt Feared By Benson." The New York Times is based on Secretary Benson's speech to the American Society of Newspaper Editors.

I am also reminded of Secretary Benson's statement before a Senate committee on January 18, 1954, when he said:

> At what point will the 140 million Americans who do not live on farms rise up—as they did in the potato fiasco of a few years ago—and demand not revision but outright elimination of all direct aid to agriculture.

The Secretary of Agriculture's remarks made the newspaper headlines, and they also served to arouse city consumers against farmers. All of this was done in ample time before we voted on the farm bill in 1954.

In recent months, on the basis of newspaper stories, the Secretary of Agriculture is casting sly remarks against labor costs—thus hoping to turn farmers against labor. It is a slick trick, but I feel that a great many people are now catching on as to what is happening with respect to this divide-and-rule strategy.

For this reason I draw my colleagues' attention to the article in the Machinist. The full text is as follows:

With many basic expenses edging up, moderate-income families will have to shop wisely in this period to hold down living costs. Unfortunately, consumers aren't getting full help from the heavy supply and sharp price drop on livestock. For one reason, merchandisers are outthinking housewives.

More meats are now sold under packers' brand names for as much as 25 percent more than the same quality of just plain meat in the store's own wrapper. Packages are getting fancier, too. Some meats are prepacked not only in cellophane but fluted cardboard trays, which makes a mighty pretty package but isn't very edible. And cold cuts and other specialty meats are being widely sold at self-service counters in 6-ounce packages.

If you've ever wondered why so many of these packages are 6 ounces, note that many housewives seem to assume 6 ounces is half a pound. It isn't, of course. A pound is 16 ounces. A 6-ounce package marked 27 cents may seem reasonable if you don't realize you are actually paying 72 cents a pound for just bologna.

The United States Agriculture Department has issued a number of contradictory explanations about why retail prices remain high despite the drop in farm prices.

The facts are, retail food prices are less than 2 percent below a year ago, while the Dun & Bradstreet wholesale food price index is now 12 percent below a year ago, and, in fact, the lowest it's been since 1950. By the Agriculture Department's own figures, 61 cents of the consumer's food dollar now goes for marketing costs, compared with 58 in 1954 and a low of 47 in 1945. In particular, the public is not getting full benefit from the price drop in meat. Only about half the recent reduction in livestock prices has been passed on to consumers.

Nor do the explanations of the Agriculture Department and processors stand up. They claim one reason retail prices remain high is because housewives are buying more semi-prepared foods (cake mixes, frozen foods, and the like).

But this explanation covers only a small part of the food a family buys. A cut of raw pork or beef provides no more "built-in maid service" today than a year ago. In fact, Agriculture Secretary Benson has contradicted himself on this point. His department has said "built-in maid service" (they love that phrase) is a leading reason for the widening marketing spread. But in one speech before newspaper food editors, Secretary Benson praised the "built-in maid service" and said "the additional cost is small."

MORE PROFITS

The other frequent explanation is labor costs. In a protest of this department's previous protest against the high food prices, a spokesman for Grocery Manufacturers of America, Inc., pointed out that the food industry is employing more workers and paying higher wages.

The fact is that from 1953 to 1954, food workers' hourly earnings rose less than 4 percent, while their entire compensation rose only 3 percent (the industry employed fewer people in 1954 than 1953, not more). In contrast, the National City Bank's compilation shows profits of 25 major food manufacturers went up 25 percent in 1954. And, to its credit, the Grocery Manufacturers itself recently reported that increased productivity has held actual unit labor costs to only three-fifths of the advance in wage rates since 1947.

"Built-in maid service" and increased costs of labor, transportation, etc., explain only part of the widening marketing margin. A family that understands this is better able to buy wisely.

For one policy, avoid branded packages that cost significantly more. A survey by this Department finds frankfurters under a packer's brand name are 59 cents a pound, but in the store's own package, 49 cents. Bacon under brand names runs up to 53 cents, but can be bought for 39 to 45 in stores' own packs. Brand-name sausage is 39 cents, but only 29 when sold as just sausage.

For a second money-saving policy, buy the larger cuts and use for several meals. Buy a loin of pork instead of chops which cost more per pound. Buy the whole or half ham at less cost than slices.

Pork this winter is comparatively reasonable. But note how much lean you get for your money. The heavy use of bacon among some families is a money waster.

FEBRUARY SALES

Chief February sales are the annual furniture and rug sales. Furniture prices have already gone up 6 percent in the past year, but the trade expects another 3-percent hike soon. Rug prices have firmed up too, and there are not as many cut-price specials this year as last.

List prices of some appliances are being forced down by the action last month of one big manufacturer in cutting list prices on its canister vacuum cleaner and electrical housewares. One manufacturer has cut its automatic toaster from $19.95 to $17.95, while another has reduced its steam iron from $17.95 to $14.95.

A Tax Ceiling or Limitation

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 25, 1956

Mr. MASON. Mr. Speaker, one important tax reform we propose to make is to place a tax ceiling or limit of 25 percent upon all Federal income taxes, corporation taxes, and estate taxes. Why should this be done? In 1848, 100 years ago, Karl Marx announced a two-point program for the destruction of capitalism and the promotion of communism. His two-point program was:

First. All estates should be confiscated through a 100-percent inheritance tax so that the State would eventually become sole owner of all land, buildings, factories, and business enterprises.

Second. A graduated income tax should be levied, which should increase progressively to the point of confiscation, whereupon all private initiative, private capital, and private property would cease to exist.

Mr. Speaker, under the New Deal we have traveled a long way upon the road that Karl Marx laid out. True we have

not yet reached the 100-percent confiscation of inheritances, but we do go up as high as 70-percent inheritance tax; we have reached 91-percent confiscation of all large incomes; and we now have reached a 52-percent confiscation of corporate incomes. So, if we are to avoid Government ownership and operation of all American business and industry, we must adopt a tax limitation amendment to our Constitution.

Excessively high tax rates today are drying up the streams of investment capital. Industrial expansion, the creation of more jobs, and the production of more goods are being curtailed. American industry is now being forced to go to Washington with tin cup in hand to beg the Government for the capital it needs and must have for expansion. This eventually means Government supervision, Government control, and Government ownership. That is socialism.

Mr. Speaker, the experience of England should be a warning to us. England's heavy graduated income tax, coupled with her confiscatory inheritance taxes, forced her into Government ownership and socialism. We are traveling down the self-same road. It is time to call a halt.

Our tax limitation proposal, House Joint Resolution 68, seeks to establish a tentative or proposed 25 percent ceiling upon all income taxes—except in time of war.

The question immediately arises, can the Treasury stand the loss of revenues that such a tax ceiling would bring about? Judging the future by the past—and that is the only way we can judge it—the answer to that question is an emphatic "Yes." With a tax ceiling today of 25 percent receipts, almost $50 billion would still flow into the Federal Treasury—a sum much greater than any sum ever collected by the Federal Government up until 1952, 3 years ago.

Mr. Speaker, under leave to extend my remarks, I include an excellent editorial taken from the January issue of the Town Journal magazine, entitled "Strangling the Golden Goose." It's central theme is, "The power to tax is the power to destroy"—a timely, pertinent discussion of the need for tax limitation.

STRANGLING THE GOLDEN GOOSE

A serious threat to the continuance of our Nation's growth and prosperity lies in our present outmoded and destructive system of taxation. Our so-called progressive system of taxation says in effect to the ambitious individual, "You're free to work hard to advance yourself, but if you succeed, you will have to pay most of it in taxes," and to the businessman trying to build his business, it says "Try to make your business grow and thus create jobs for more people, but if you do, you will be penalized severely."

This is an amazing and incomprehensible attitude, for it is directly contrary to the very things upon which our Nation's growth has been built—industry, self-reliance, thrift, the willingness to risk one's savings. It discourages and represses those very virtues that made millions of people from other lands flock to our shores.

Under our present tax laws, there is a basic tax rate of 20 percent paid by all those who pay taxes. In addition, there is a surtax paid by everybody with more than $2,000 of taxable income. This surtax starts at 2 percent but progresses rapidly until it finally reaches 71 percent. This is on top of the 20 percent basic tax—a total of 91 percent.

Some will say that such high rates are necessary because it takes a lot of money to operate our Government. But they are usually amazed when they learn that of the entire $29.4 billion derived from the individual income tax, only 16 percent comes from the surtax, which involves everyone with more than $2,000 taxable income. The remaining $24.7 billion—84 percent—comes from the basic 20 percent tax rate. In other words, millions of taxpayers are unfairly overtaxed for the sake of a relatively small part of the total tax revenue. So the high rates are actually more destructive of income than productive of revenue.

The increasing rates fall with especial severity on the middle-income groups—small-business men, lawyers, accountants, many farmers, salesmen, technicians, and skilled craftsmen.

Economists know that lower taxes actually produce more revenue for the Government. Let us say the individual and corporate surtax were reduced gradually each year for 5 years, until both were down to a 35-percent maximum. These reductions would not only mean lower taxes for all income groups, even as low as $2,000—but should also prove an effective stimulus to our whole economy, because of the greater amount of money available for spending by individuals and industry. And this greater prosperity would in turn produce greater tax revenues for the Government.

It is interesting to note that a recent Gallup poll showed that 53 percent of the public favors this 35-percent limitation on income taxation. And it is certain that even more people would favor it if they realized the small amount of revenue that today's excessive rates produce and the bad effect they have on investment and job-making. Truly, the power to tax is the power to destroy.

GRAHAM PATTERSON,
Publisher.

Bette Davis: An Actress With the Ability and Integrity of Her Native New England

---

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 25, 1956

Mr. LANE. Mr. Speaker, Bette Davis has made every role she has played in films—67 motion pictures in a quarter of a century—glow with character.

Lawrence J. Quirk, another New Englander, has written a memorable profile of her career in the lead-off article in Films in Review of December 1955.

Her inner intensity and radiance, her forceful nature and career drive, and her striking ability to illuminate mere words have brought a new dimension to this wonderful world of entertainment.

Bette Davis represents the determination and the fine craftsmanship that should be an inspiring example to every young person who aspires to a career in this field.

Mr. Quirk has done a fine job in selecting and presenting the qualities that brought Miss Davis to stardom.

I recommend to you the talents of these two New Englanders. The result is most enjoyable.

Here is Mr. Quirk's article on Bette Davis:

BETTE DAVIS—HER FIRST QUARTER CENTURY ON THE SCREEN DEMONSTRATES THE POWER OF THE WILL

(By Lawrence J. Quirk)

Bette Davis first went to Hollywood in December of 1930. In the quarter century since then she has appeared in 67 motion pictures and is soon to be in a 68th.

Her career falls into 4 parts: apprenticeship (1930–33); recognition (1934–38); fame (1939–45); and the spotty decade since.

She was born in the mill city of Lowell, Mass., on April 5, 1908, and was christened Ruth Elizabeth. Her mother's maiden name was Ruth Favor; her father, Harlow Davis, was a lawyer. There was one other child, Barbara, a younger sister, now Mrs. Robert Pelgram.

Two childhood events are supposed to have affected Bette Davis' psychology. When she was 8 her parents were divorced—because of incompatibility, apparently. A few years later Bette almost lost her eyesight in a Christmas-tree fire.

After the divorce, Mrs. Davis, whom her daughters called Ruthie, supplemented the alimony she received by working as a house mother in girls' boarding schools in New England and New York. Later she studied photography and earned money at that. She and her 2 girls became birds of passage, and in the space of a few years lived at 75 different addresses.

In an autobiographical article written in 1941 Bette Davis says that by the time she was 12 she was sufficiently stubborn and headstrong for her mother to notice "this imbalance of temperament." Miss Davis added: "From that time on I would brook no interference in anything I was determined to do." She thinks this intransigeance "may have given me false courage at times, but balancing its benefits against its disadvantages, the results have been satisfactory."

She was sent for a time to a boarding school in Massachusetts, then to the Newton, Mass., High School (where she met Harmon Nelson, later a bandleader and her first husband), and finally to Cushing Academy at Ashburnham, Mass.

In the summer of 1925 she accompanied her mother to Peterborough, N. H., where Mrs. Davis hoped to photograph vacationing theatrical people. It so happened that the Mariarden School of Dancing was enjoying a profitable summer in Peterborough under the aegis of an Englishwoman who called herself Roshanara (she had lived in India). This devotee of so-called modern interpretive dancing, who died a few months later, agreed to teach the 17-year-old Bette Davis free of charge. What she taught her is supposed to have produced the graceful movements and the lithe gestures which are two of Davis' acting trademarks.

According to Miss Davis, her future was decided at about that time by a conversation between her mother and the well-known stage—and later screen—actor, Frank Conroy.

"Throughout my life," Conroy told Mrs. Davis, "I have religiously abstained from advising a mother to put her daughter on the stage. But Bette has something you can't buy and can't imitate. Even if she doesn't open her mouth she has the quality that draws the audience to her. I think that some day, if she works hard, she will be a fine actress."

"And that," says Davis, "is why I became an actress, whether or not you like it."

She became obsessed with theatricals in her final year at Cushing Academy. "I learned lines easily," she says, "and I liked the labored hours of rehearsal, the develop-

ment of characters, the final polishing and later the unveiling. I was the star of our senior play (1926), playing Lola Pratt in Tarkington's Seventeen to Ham Nelson's Uncle Googikins."

After her graduation Frank Conroy suggested that Mrs. Davis enroll Bette, now 18, in Eva LaGallienne's drama school in New York. But Miss LeGallienne, after hearing Bette read some lines, told her she did not take acting seriously enough.

"There is nothing I would rather do than report that Miss LeGallienne was crushed by a realization of her lack of foresight when I did attain some prominence," wrote Miss Davis in 1941. "But she wasn't. Even the almost universal observation by the critics when I was on tour with Ibsen that I was 'a young LeGallienne' left her unperturbed. When we met backstage during one performance she didn't even remember me."

Mrs. Davis took her offspring over to John Murray Anderson's dramatic school, where, between 1926 and 1928, Bette won two scholarships and attracted the attention of Arthur Hornblow, Jr., whose father was dean of the school. The younger Hornblow later arranged a screen test for her, but nothing came of it. In the January 1928 examination play, The Famous Mrs. Fair, directed by James Light, Bette had the part Margalo Gillmore had created a decade before.

Bette left Anderson's that year and Frank Conroy gave her a letter to George Cukor, then directing a repertory company in Rochester, N. Y. After reading the letter, Cukor said curtly: "O. K., we can use you." But after a few roles, including a one-liner in Broadway, Cukor let her go because he saw no future for her.

"It is human to be skeptical about the ability of people you have nursed during the formative years of a career," Miss Davis wrote in 1941. "Warner Bros. brought me out of obscurity and as a result it took them years to become convinced I was worthy of their big pictures. Cukor hired me as a green and unknown ingenue. When I felt (years later) that I was a logical contender for the role of Scarlett O'Hara in Gone With the Wind, apparently he saw only the groping youngster he had fired in Rochester. I have always felt those weeks as Cukor's ingenue prevented me from getting the role which I wanted very much to play." (Cukor's reason for rejecting Davis for Gone With the Wind was reported to be that she had no sex appeal, and David O. Selznick is said to have been against her on general principles.)

Davis' stock-company experience was not wasted, for, as she later said: "It is in stock that the foundation of an acting career is laid. There is no thought of type casting or consideration of whether you can deliver a good performance in any particular part. You simply do it."

Of the period following the Cukor debacle, she said: "You work. You take advantage of every break. People are kind to you and help you, or they are arrogant and petty. Walk-ons grow into bits and bits into important minor roles. Suddenly you realize you are an actress, and you exclaim, with as much surprise as satisfaction, 'I've done it.'"

In late 1928 she and her mother persuaded James Light to take her on at the Provincetown Playhouse in New York, and her first role was in The Earth Between. Said Brooks Atkinson: "Miss Davis, who is making her first professional appearance, is an interesting creature who plays in a soft, unassertive style." Burns Mantle: "The performances are good, particularly that of Bette Davis, playing a wraith of a child with true emotional insight."

Ibsen's Wild Duck followed, after which came Broken Dishes with Donald Meek on Broadway. It opened November 5, 1929, and a few weeks later Samuel Goldwyn saw her picture in a newspaper and had her tested for a part in a Ronald Colman picture.

"It was ghastly," wrote Miss Davis in 1941. "I wonder how Hollywood ever discovers anyone. Actors with no knowledge of the screen are shoved in front of a lens and told to act. No thought is given to makeup. I suppose they reason that if the result is remotely favorable, you will be a sensation after they have worked on you. I had a crooked tooth of which I was aware, but I had no idea that it would stand out like a locomotive. I was badly dressed for the camera. The lighting was awful. For that matter, the lighting was awful for my first 2 years in Hollywood."

Davis went back to Broken Dishes, and after almost 200 performances went on the road with it. The next fall (1930) she opened with Richard Bennett in The Solid South.

About that time Universal wanted a new leading woman for the film version of Preston Sturges' successful play, Strictly Dishonorable, and David Werner, Universal's New York talent scout, thought she might be suitable. After not a little hesitancy, he decided to ship her West on a 3-month option. Werner told her she had no figure, no legs, no looks, and no sex appeal, and was the greatest gamble he had ever sent to Hollywood. But she had, he said, a hard-to-analyze inner intensity and radiance that might come across on film. "If it does," he said, "you'll go a long way in Hollywood."

Her mother accompanied her to Hollywood.

Universal quickly decided they did not share Werner's opinion. Carl Laemmle, Jr.'s reaction was typical: "I can't imagine anyone giving her a tumble." Nevertheless, since they had paid to get her to the coast, Universal used her in minor roles in such films as Bad Sister, Seed, and Waterloo Bridge. She was usually a virtuous sister of a hell-raising heroine, or a wispy girl friend who applauds from the sidelines.

By the fall of 1931 Universal was lending her to other studios. She had a small part in Pandro Berman's Way Back Home for RKO; sank to a poverty-row flicker, Hell's House; rose to a Columbia quickie called The Menace.

But 1932 had good things in store. George Arliss heard of her through Murray Kinnell, who had played with her in The Menace. Arliss' new film, The Man Who Played God, was being cast at Warners and he needed a stage-trained leading woman. He sent for her, and took her.

Said Arliss in My Ten Years in the Studios: "I think that only 2 or 3 times in my experience have I ever got from an actor at rehersal something beyond what I realized was in the part. Bette Davis proved to be one of those exceptions. I knew she had a nice little part important to me—so I hoped for the best. I did not expect anything but a nice little performance. But when we rehearsed she startled me; the nice little part became a deep and vivid creation, and I felt rather humbled that this young girl had been able to discover and portray something that my imagination had failed to conceive. She startled me because quite unexpectedly I got from her a flash that illuminated mere words and inspired them with passion and emotion. That is the kind of light that cannot be hidden under a bushel, and I am not in the least surprised that Bette Davis is now [1940] the most important star on the screen."

Arliss' films enjoyed considerable prestige in the Hollywood of the early 1930's and Davis says: "It is probable the Man Who Played God was my most important picture. I did others that I liked better, and which were more significant, but there was something about appearing as Mr. Arliss' leading lady that gave me standing."

Warners gave her a contract and in 1932 she had supporting roles in So Big, starring Barbara Stanwyck, and in the Rich Are Always With Us, starring Ruth Chatterton; a lead with Warren William in the Dark Horse; and a meaty part with Richard Barthelmess in Cabin in the Cotton; a good supporting one in Three on a Match; a solid role opposite Spencer Tracy in 20,000 Years in Sing Sing; and a good part in Parachute Jumper with Douglas Fairbanks, Jr.

By this time she had bleached her hair blonde and radiated a sleek, almost brazen, self-assurance. The prominence of her eyes was accentuated by more skillful makeup and mannerisms were integrated into a style—always intense, sometimes electric.

Davis' first starring role was as a platinum-blonde man-killer in Ex-Lady. The critics, who had rooted for her up to that point, didn't like her in Ex-Lady and said she overacted and should tone down her mannerisms and wasn't ready for stardom.

Davis shrewdly retreated into a supporting role in George Arliss' the Working Man—her one worthwhile cinematic achievement in 1933. After finishing that Arliss film she toured with a group of Warner stars on a nationwide tub-thumping jaunt on behalf of the filmusical 42nd Street. It lasted 16 days, and although she was married to Harmon Nelson,[1] gosisp linked her with quite a few names.

Davis made use of this gossip. She got Warners' publicity department to let her appear at the premiere of the Edward G. Robinson-Kay Francis film, I Loved a Woman, escorted by all eight of the men she had been rumored to be romancing with.

Davis now tripled her efforts to make her mark in Hollywood. She was aware she was not beautiful and that only her talent, intelligence and intensity would carry her forward, and she began, in 1934, to fight with almost masculine strength for the parts that would get her the recognition she craved.

She was 26: Garbo had arrived at 21, Crawford at 21, Shearer at 23.

The part that Davis regards as "the turning point of my life on screen" was that of Mildred in the unforgettable film version of Somerset Maugham's Of Human Bondage which John Cromwell directed in 1934. Davis portrayed to the life all the phases of that bitter, grasping, deceitful and ultimately degraded little Cockney. Part and player seemed one. For many it is still Davis' greatest performance. It won her an Academy award nomination (she lost to Claudette Colbert's almost acting-less role in It Happened One Night).

A depressed Davis started 1935 with more "programmers." Warners, it seemed, felt Of Human Bondage had been a one-time thing. After a reasonably strong role as the homicide-minded wife in Bordertown, she appeared in three turkeys which made her fighting mad. The titles tell their stories—Girl From Tenth Avenue, Special Agent, and Front Page Woman.

Then, by sheer will and acting ability, Davis made something of a part in a soap-operish drama called Dangerous. As a brilliant stage actress felled by complexes, neu-

---

[1] They had married in August 1932. Davis once said: "Ham is a big, brown, faithful pet." Around 1937–38 he gave up band leading to be a Holywood agent, but after their divorce in 1938 he went back to it. Davis saved her money even in those days and lived in rented furnished houses—the Coldwater Canyon home of actor Robert Armstrong for the most part, though she once rented a Brentwood house because it had been occupied by her idol, Garbo. Davis at that time had a fear of possessions ("I shiver each time I see an auction of a star's personal things advertised in the papers") and wanted nothing that can't be packed in a trunk. She went to few parties, was rarely seen in nightclubs, and lived sensibly. She was, however, hipped on dogs, and later became president of the Tailwagger Foundation and founded a Tailwagger Institute (which trained dogs to aid the blind), and a free emergency hospital in Hollywood for injured animals.

roses and alcoholism, she got the Academy Award she had deserved the year before.

Davis was sure the Warners would now give her a little Shearer-Crawford-Garbo mounting, and her next part, with Leslie Howard in The Petrified Forest, won good notices. But she was then pushed into two program fluffs—The Golden Arrow and Satan Met a Lady. The latter made Davis revolt.

She went to England with her husband and announced she would make two carefully chosen vehicles for Ludovico Toeplitz. Warners filed suit for violation of contract and she and they battled it out in the British courts. When an unsympathetic judge declared "this young lady wants more money," Davis cried out that she only wanted parts worthy of her fully ripened talents. She was 28 years old, she said, and by the time her contract would expire she would be an old woman. She estimated later that the row had cost her $100,000.

Nearly broke, she returned, with high-strung resignation, to fulfill her contract with Warners. Fortunately for her, Warners had concluded she might be right about deserving good parts. Their new attitude was not immediately noticeable, but her parts got stronger. Marked Woman gave her a meaty underworld role; Kid Galahad cast her interestingly and sympathetically in a robust prizefight melodrama with Edward G. Robinson and Wayne Morris; That Certain Woman, remodelel from Gloria Swanson's 1929 talkie hit, The Trespasser, and directed by Edmund Goulding, had a taste of soap about it but provided some dramatic range and had Henry Fonda and Donald Crisp in support. In the summer of 1937 she starred with Leslie Howard in It's Love I'm After, an amusing comedy about temperamental actors.

Late that year she was directed by William Wyler in her first costume role—in Jezebel with Henry Fonda and George Brent. Warners provided a glossy mounting, and Davis did very well as a spoiled, wilful Southern belle who reveals nobility in a crisis. She got her second Academy Award for this performance.

Warners next gave her another well-mounted period piece, The Sisters, with Errol Flynn for costar and Anatole Litvak to direct. Even the San Francisco earthquake of 1906 was used to set off her talents. But to get this part she had had to take a brief suspension for refusing to play in Comet Over Broadway and Garden of the Moon. Neither of those films did the studio any credit when they were released with other stars.

In her next picture, Dark Victory, directed by Edmund Goulding, she was much-admired as a neurotic heiress dying of a brain tumor, and was again nominated for an academy award, which, however, was won by Vivien Leigh for her portrayal of Scarlett O'Hara in Gone With the Wind—the role Davis had coveted.

In Juarez, as Carlotta, Davis grandiloquently flounced through a series of vignettes ranging from romatic interludes with Brian Aherne (Maximilian) to mad scenes. Paul Muni, who played the title role, and Davis were never in the same scene.

Then came a picture for which she cared little, but which proved popular. Her opinion of The Old Maid is puzzling, for many consider it a pivotal film in her career. Sensitively directed by Edmund Goulding, ably acted by a fine cast that included Miriam Hopkins, George Brent and Donald Crisp, possessed of one of Max Steiner's best scores, and lavishly produced, this film version of the 1935 Pulitzer Prize play by Zoe Akins allowed Davis to run the gamut from youthful ingenuousness to embittered maturity. In the film's first half she was so photographed that she seemed to be imbued with the glamour of the top MGM stars she had always envied. The Old Maid was unanimously praised by the critics and is still frequently revived. Many Davis partisans think it Davis' zenith.

She next appeared in the screen version of Maxwell Anderson's rather dull The Private Lives of Elizabeth and Essex. Errol Flynn as Essex was a great liability, and so was the uninspired direction of Michael Curtiz. Most critics thought Davis' performance as the aging Elizabeth dallying with a man 25 years younger than herself was better than the film.

Warners were now willing to give her almost anything she asked for, and chief among her demands were extra-good technicians. For many years thereafter she was photographed by Ernie Haller (her favorite cameraman) and Tony Gaudio. She was equally discriminating over who made her up. This carefulness paid off, and Davis had more on-screen glamour between 1939 and 1944 than she had before or has had since.

The scripts handed her were, by and large, of superior quality. In 1940, for example, she did All This and Heaven, Too with Charles Boyer, and an excellent screen version of Somerset Maugham's The Letter, directed by William Wyler.

The following year she had one real success—The Little Foxes, directed by Wyler and produced by Samuel Goldwyn. Davis and Wyler, however, quarreled over how her role should be played. In the end Davis deferred to Wyler's wishes and played it as Tallulah Bankhead had on Broadway 2 years before. Wyler had insisted the original play was a complete entity and that Davis must submerge her personality. When the film was released one critic observed: "The screen's foremost dramatic acress not only acts like Tallulah, but looks like her." Most critics extravagantly praised The Little Foxes—to Miss Davis' surprise.

Her other pictures in 1941 were neither noteworthy nor failures: The Great Lie, The Bride Came C. O. D., and The Man Who Came to Dinner. But on November 7 of that year she was elected president of the Academy of Motion Picture Arts and Sciences, succeeding Walter Wanger. She was the first, and so far the only, actress to hold that office. Here is Academy President Davis' opinion of the movies:

"They are the ultimate in the art of the theater for they start where the stage ends. That statement will be challenged by the 'defenders of the faith,' but as one who has worked in both mediums, I believe it. The screen knows no boundaries—its only limitation is the capacity of the audience to understand and accept. The stage has the warmth of living people, but the screen has all the reality that is outside and beyond the stage's proscenium arch."

The following year she was a very overblown bad girl in In This Our Life, one of John Huston's earlier directorial attempts, and a haunting ugly duckling who finds spiritual freedom and strength through love, in Now, Voyager.

In 1943 she again did box office duty for Warners by playing Paul Lukas' wife in Watch on the Rhine, showed she could portray self-sacrifice in Old Acquaintance, and sang one song and did a jitterbug dance in the first of her two wartime service films, Thank Your Lucky Stars.

Her other wartime service film was Hollywood Canteen, in which she appeared in her capacity as president of the canteen and described its work. "The Hollywood Canteen," she wrote at that time, "was created with one idea in mind—to give the men in the Armed Forces fun and a chance to meet personally the people of the entertainment world in Hollywood. We feel that the loyalty and unselfishness that has gone into our canteen is a great tribute to the people in the entertainment industry of Hollywood, and also a tribute to their faith in the American way of life."

She made one feature film in 1944—Mr. Skeffington, directed by Vincent Sherman. Ably supported by Claude Rains, she played a vain and unloving wife who ultimately receives her comeuppance.

The following year she gave a mature and very effective performance in the part in the Corn Is Green that Ethel Barrymore had created on the stage. It was Bette Davis' last unqualified critical success for some years.

Miss Davis then prevailed on Warners to let her produce and she elected to remake Elisabeth Bergner's European film success, A Stolen Life, with Curtis Bernhardt directing and Glenn Ford, fresh out of the Marines, playing opposite her. Since the story concerned the love of twin sisters, 1 good and 1 bad, for the same man, Davis had 2 roles. A Stolen Life was a better than adequate programmer and made a little money.

Deception, released late in 1946, was chiefly notable for Claude Rains' bravura performance as a neurotic composer and for a splendiferous scene in which Davis, stunningly gowned, shot Rains at the top of a flight of stairs. After Deception Davis retired to await the birth of her baby in May 1947.

She returned to the studio in the fall and went into three bad films in a row.

Winter Meeting, directed by Bretaigne Windust, a director recruited from the stage, was an unlikely story about an inhibited poetess and a naval officer who wanted to be a priest. Miss Davis seemed considerably aged. June Bride, a comedy, did more for Robert Montgomery than for Bette Davis. Beyond the Forest, with Joseph Cotten, is widely considered Davis' nadir. She herself has always maintained it contained some of her best acting, but her admirers winced at her maladroit makeup, and black wig, and flagrant overacting. Davis blamed the production code for her failure to be entertaining as a pleasure-mad, unfaithful wife of a small town Wisconsin doctor. One deleted scene she thought would have been helpful showed her plunging down an embarkment to induce abortion.

Reading the handwriting on the wall, Davis decided to beat the worried Warners to the draw and asked to be released from her contract. The Warners were pleased to accede. Whereupon she contracted with Jack Skirball and Bruce Manning at RKO to star in Story of a Divorce, with Curtis Bernhardt directing and Barry Sullivan for leading man. Jane Cowl, in one of her final appearances, was in the cast. The picture was retitled Payment on Demand and was not released until early 1951.

There was good reason for the delay. After Payment on Demand was finished Davis had gone on to the 20th Century-Fox to make All About Eve, which resulted in her becoming boxoffice once more, and thus enabled Payment to make more money than it would have otherwise. Eve had a most apposite part for Davis—that of a fading stage luminary. It also had a good script and a fine cast, including Anne Baxter, George Sanders, Celeste Holm, Hugh Marlowe, and Davis' present husband, Gary Merrill.

Parts like the one she had in Eve do not turn up every day, and she went to England with Gary Merrill to appear in a murder melodrama with Emlyn Williams which Douglas Fairbanks, Jr., and his partner, Daniel Angel, were producing. This was Another Man's Poison. It did indifferent business in the United States.

In 1952 Davis was one of a group of stars participating in 20th Century-Fox's episode-melodrama Phone Call From a Stranger. Her role was brief, but very well played. Later in the year she repeated the role of a faded theatrical luminary in the Star, which won her an academy award nomination.

Then she made a great mistake—she decided to star in a Broadway musical, Two's Company. After many trials in tryout towns,

it limped along on Broadway from December 1952 to March 1953 on Davis' drawing power. Her admirers squirmed at the sight of her disporting herself unbecomingly in unsuitable singing and dancing numbers. To add to her troubles, she was suffering from ostiomyelitis in her jaw. After the show closed she was operated on and went to Maine. She and her husband bought a house in Cape Elizabeth, suburb of Portland.

Then, in 1954, she learned that Richard Todd would star in Sir Walter Raleigh for 20th Century-Fox. She began negotiating with Darryl Zanuck for the role of Elizabeth I, whom she had portrayed 15 years before. Zanuck had the script rewritten to build up her part and changed the title to The Virgin Queen. Davis shaved her head to better simulate Bess' baldness. The film was shot in 11 days. Said Robert Downing in Films in Review: "Miss Davis' latest portrayal of Elizabeth I is better than her interpretation of that personage in Elizabeth and Essex. In The Virgin Queen Elizabeth is an elderly, watchful, suspicious, carping, greedy, lonely, proud, vicious, and dangerous woman. Davis portrays all these human facets and royal ones as well. Her performance is a composition of shrewd intuitions about the complex sovereign who ruled an island kingdom that was being metamorphosed into an empire."

This year Davis had the lead in the forthcoming film originally called The Librarian and now known as Storm Center. It concerns a library employee who refuses to remove a controversial book from the shelves and was directed by Daniel Taradash, who also was one of the producers. Taradash wrote the script of From Here to Eternity.

Early in November it was announced that Davis and Ernest Borgnine would be Debbie Reynolds parents in a screen version of Paddy Chayevsky's TV play The Catered Affair.

Bette Davis has had four husbands.

When she divorced Ham Nelson in 1938, she explained that "emotional differences, not a lagging in the faith and admiration I have for Ham Nelson, are responsible."

On December 31, 1940, she married Arthur Farnsworth at the Arizona ranch of Mr. and Mrs. Justin Dart.[2] Farnsworth and she had met in 1939 while she was vacationing at Littleton, N. H., where Farnsworth was assistant manager of a resort hotel. Later he was a commercial flyer and aircraft executive, and they bought a home in Littleton. The marriage, so far as is known, was reasonably happy. But on August 25, 1943, Farnsworth died while walking on a Hollywood street. Several months before he had fallen in their New Hampshire home and injured his head.

Miss Davis remained a widow for 2 years. Then, in the fall of 1945, she married William Grant Sherry, a painter and amateur boxer. Unlike her previous husbands, "Sherry," as she called him, matched her in "artistic temperament" and this marriage was stormy. It produced one child, Barbara Davis Sherry, born May 1, 1947, by caesarean section (Miss Davis was 39).

Two years later Davis secured a court order restraining her husband from inflicting physical injury on her and filed for divorce, charging abuse and most of the usual complaints. "Sherry" appeared on the set of Story of a Divorce (later retitled Payment on Demand) and reportedly one-two-ed Barry Sullivan, whom he suspected of alienating his wife's affections. The final divorce decree followed. Thereafter "Sherry" married the governess he and Miss Davis had hired for Barbara and sued his ex-wife for alimony.

On July 28, 1950, Miss Davis married Gary Merrill, her leading man in All About Eve. They adopted two children—Margo, 4, and Michael, 3, and Gary offered to adopt Barbara, but "Sherry" would not consent. Merrill so far seems to "understand" his wife's forceful nature and career drive.

They live in a large, three-storied stone and wood structure they call "Witch Way." It is in a clearing along the Maine shore and is reached by a winding country lane. There are huge picture windows through which one can see a bay. The furnishings are antiques.

Bette Davis talks a good deal now about taking root and being a wife and mother. Recently, standing on her sun porch, which overlooks a barbecue oven and stacked lobster pots, she told an interviewer:

"It was bound to happen—my coming here. I've always believed most native New Englanders come home, in one way or another. Oddly enough, we used to summer here as kids—Merrill across the bay at Prout's Neck, and I at Ocean Park."

Then an afterthought occurred to her and she quickly added: "But don't get me wrong, we're not anti-Hollywood."

THE BETTE DAVIS FILMS

The dates below are the release dates. The names that follow the dates are those of the directors. The names following the directors are those of the principal players.

1. Bad Sister. Universal. April 1931. Hobart Henley. Sidney Fox, Conrad Nagel, Humphrey Bogart. In her first film, a programmer, a mousy Bette had a secondary part as a good sister admonishing a more colorful bad sister (Sidney Fox). Humphrey Bogart's "menace" style was little in evidence.

2. Seed. Universal. May 1931. John M. Stahl. John Boles, Lois Wilson, Genevieve Tobin. Bette was merely one of the five children of John Boles and Lois Wilson.

3. Waterloo Bridge. Universal. August 1931. James Whale. Mae Clarke, Kent Douglass (later Douglass Montgomery), Doris Lloyd. In this first talkie version of the Robert E. Sherwood play Davis was almost inconspicuous in the role of Janet.

4. Way Back Home. RKO. November 1931. William A. Seiter. Phillips Lord, Frank Albertson, Effie Palmer. A small part as Albertson's love interest.

5. The Menace. Columbia. January 1932. Roy William Neill, Walter Byron, H. B. Warner. A pointless pot-boiling role in an adaptation of The Feathered Serpent.

6. Hell's House. Capital Films. Feburary 1932. Howard Higgin. Pat O'Brien, Junior Durkin. A dreary crime story produced on poverty row.

7. The Man Who Played God. Warners. February 1932. John Adolfi. George Arliss, Violet Heming. This film changed the course of Davis' career and got her a contract with Warners. She played a young girl infatuated with a famed violinist (Arliss).

8. So Big. Warners. May 1932. William A. Wellman. Barbara Stanwyck, Dickie Moore, Hardie Albright. Davis played Dallas O'Hara in the first of her many "program apprenticeship" films for Warners.

9. The Rich Are Always With Us. Warners. May 1932. Alfred E. Green. Ruth Chatterton, George Brent, John Miljan. Davis had only a fair supporting role.

10. The Dark Horse. Warners. June 1932. Alfred E. Green. Warren William, Guy Kibbee, Frank McHugh. Davis played a girl secretary involved in the political schenanigans of a dumb candidate (Kibbee).

11. Cabin in the Cotton. Warners. October 1932. Michael Curtis. Richard Barthelmess, Dorothy Jordan, Henry B. Walthall. As a rich planter's daughter, Davis loved but lost a land reformer (Barthelmess). This was one of Barthelmess' last major pictures. Davis was grateful for his kindly attitude and encouragement.

12. Three on a Match. Warners. October 1932. Mervyn LeRoy, Ann Dvorak, Warren William, Joan Blondell. Cast as one of three girls who separate and later meet again and light three cigarettes with one match, (to fulfill the old superstition that "three on a match means one will die soon"). Davis played a prosaic stenographer.

13. 20,000 Years in Sing-Sing. Warners. January 1933. Michael Curtis, Spencer Tracy, Lyle Talbot, Sheila Terry. Cast opposite Spencer Tracy for the first and only time. Davis got good notices as his moll.

14. Parachute Jumper. Warners. January 1933. Alfred E. Green, Douglas Fairbanks, Jr., Frank McHugh, Leo Carrillo. Though the typist-mistress of a racketeer, Davis paired off romantically with Fairbanks, a former Marine pilot turned adventurer.

15. The Working Man. Warners. April 1933. John Adolfi, George Arliss, Hardie Albright, Gordon Westcott. In her second and last film with Arliss, Davis appeared to advantage as the spoiled daughter of a dead tycoon whose former business rival (Arliss) brings order out of the family chaos.

16. Ex-lady. Warners. May 1933. Robert Florey. Gene Raymond, Frank McHugh, Monroe Owsley. In her first starring vehicle, a banal programer, Davis played a lady artist with advanced ideas about love and marriage who finally marries her lover (Raymond), gets bored, takes up with a philanderer (Owsley).

17. Bureau of Missing Persons. Warners. September 1933. Roy Del Ruth. Pat O'Brien, Glenda Farrell, Lewis Stone. The title tells all.

18. Fashion Follies of 1934. Warners. January 1934. William Dieterle. William Powell, Frank McHugh, Verree Teasdale. As a fashion designer who assists a bogus business promoter (Powell) to copy Paris fashions, Davis did herself little good.

19. The Big Shakedown. Warners. February 1934. John Francis Dillon. Charles Farrell, Ricardo Cortez, Glenda Farrell. Davis loses her baby when her husband (Farrell) deals in worthless drugs.

20. Jimmy the Gent. Warners. March 1934. Michael Curtiz. James Cagney, Alice White, Allen Jenkins. Her first picture with Cagney was 90 percent Cagney, 10 percent Davis.

21. Fog Over 'Frisco. Warners. June 1934. William Dieterle. Donald Woods, Margaret Lindsay, Lyle Talbot. Another program melodrama in which Davis died before the fadeout.

22. Of Human Bondage. RKO. June 1934. John Cromwell. Leslie Howard, Frances Dee, Kay Johnson. She was nominated for an Academy Award for her performance as Mildred, which began her real stardom.

23. Housewife. Warners. August 1934. Alfred E. Green. George Brent, Ann Dvorak, John Halliday. Davis played around with George Brent, husband of Ann Dvorak, who got him back in the final reel.

24. Bordertown. Warners. January 1935. Archie Mayo. Paul Muni, Margaret Lindsay, Eugene Pallette. In a role later played by Ida Lupino in They Drive by Night (1940), Bette killed her husband in a gas-filled garage, but did not thereby get Muni.

25. Girl From Tenth Avenue. Warners. May 1935. Alfred E. Green. Ian Hunter, Colin Clive, Alison Skipworth. As a girl from the wrong side of the tracks who marries a society playboy on the rebound.

26. Front Page Woman. Warners. July 1935. Michael Curtiz. George Brent, Roscoe Karns, Wini Shaw. She tries to prove women do not make bad newspapermen.

27. Special Agent. Warners. September 1935. William Keighley. George Brent, Ricardo Cortez, Jack LaRue. The kind of fare the title implies. Davis had inherited George

[2] Mrs. Dart was the former Jane Bryan, whose screen career Bette Davis aided with advice, counsel, and front-office boosts. After appearing with Miss Davis in several films, most notably as her daughter in The Old Maid, Miss Bryan married.

Brent as a leading man from Ruth Chatterton, and it was rumored she might also inherit him as a husband.

28. Dangerous. Warners. December 1935. Alfred E. Green. Franchot Tone, Margaret Lindsay, Alison Skipworth. She got her first Academy Award for her performance as a dipsomanic actress. It was photographed by Ernie Haller.

29. The Petrified Forest. Warners. January 1936. Archie Mayo. Leslie Howard, Genevieve Tobin, Dick Foran, Humphrey Bogart. Davis was the waitress, Howard the poet-philosopher, and Bogart as the gangster stole the show.

30. The Golden Arrow. Warners. May 1936. Alfred E. Green. George Brent, Eugene Pallette, Dick Foran. The advertising billed her over the title, but the film did nothing else for her.

31. Satan Met a Lady. Warners. July 1936. William Dieterle. Warren William, Alison Skipworth, Marie Wilson. The second version of the Maltese Falcon (preceding by 5 years the John Huston film with Humphrey Bogart) made Davis so unhappy she revolted and went to England.

32. Marked Woman. Warners. February 1937. Lloyd Bacon. Humphrey Bogart, Jane Bryan, John Litel, Eduardo Ciannelli. She was a clipjoint hostess whose face is marked up by the racketeers. Bogart was a district attorney. Her first picture after the litigation in England, it was better than what Warners had been giving her.

33. Kid Kalahad. Warners. May 1937, Michael Curtiz. Edward G. Robinson, Humphrey Bogart, Wayne Morris. As the girl friend of a fight manager (Robinson) training a new fight star (Morris) Davis was not exactly in the center of things. Robinson was billed above her, and newcomer Morris got the lion's share of attention.

34. It's Love I'm After. Warners. July 1937. Archie Mayo. Leslie Howard, Olivia de Havilland, Eric Blore. For the third time Davis and Howard played together, this time as stage stars amid romatic complications.

35. That Certain Woman. Warners. August 1937. Edmund Goulding. Henry Fonda, Ian Hunter, Anita Louise. As a gangster's widow whose marriage to a rich man's son is annulled. A child complicated things, but happiness is achieved. Davis got good notices.

36. Jezebel. Warners. March 1938. William Wyler. Henry Fonda, George Brent, Margaret Lindsay. Davis' first costume role, and her first well-mounted picture, brought her a second Academy Award.

37. The Sisters. Warners. October 1938. Anatole Litvak. Errol Flynn, Anita Louise, Ian Hunter. Made after her suspension for refusing to do two inferior stories. She played the lovelorn wife of a newspaperman afflicted with wanderlust (Flynn), and was catapulted into the 1906 San Francisco quake (well staged).

38. Dark Victory. Warners. March 1939. Edmund Goulding. George Brent, Humphrey Bogart, Geraldine Fitzgerald. Davis' poignant characterization of a dying heiress who has been a spoiled child was highly praised.

39. Juarez. Warners. April 1939. William Dieterle. Paul Muni, Brian Aheren, Claude Rains. Grandiloquently costumed, and expertly lighted by Tony Gaudio, Davis was the mad Empress Carlotta of Mexico. She and Muni (Juarez) never appeared in the same scene.

40. The Old Maid. Warners. August 1939. Edmund Goulding. Miriam Hopkins, George Brent, Donald Crisp. A handsomely mounted and expertly photographed (by Tony Gaudio) version of the Pulitzer prize play. Davis was brilliant as a frustrated woman unable to acknowledge her child by a dead lover.

41. The Private Lives of Elizabeth and Essex. Warners. December 1939. Michael Curtiz, Earl Flynn, Olivia de Havilland, Donald Crisp. Davis, in the full flowering of success, was resplendent and credible as Queen Elizabeth. Color photography by Sol Polito. Music by Erich Wolfgang Korngold.

42. All This and Heaven, Too. Warners. June 1940. Anatole Litvak. Charles Boyer, Jeffrey Lynn, Barbara O'Neill. Davis played the governess in love with the married Duc de Praslin (Boyer) in 1847 in Paris. Warners gave it a lavish Hollywood premiere.

43. The Letter. Warners. November 1940. William Wyler. Herbert Marshall, James Stevenson, Gale Sondergaard. One of her biggest hits, she was helped by the Maugham plot, Wyler direction, and Gaudio photography.

44. The Great Lie. Warners. April 1941. Edmund Goulding. George Brent, Mary Astor, Lucille Watson. Davis rested on her laurels and Mary Astor, as a colorful concert pianist, stole the show.

45. The Bride Came C. O. D. Warners. July 1941. William Keighley. James Cagney, Stuart Erwin, Eugene Pallette. A silly comedy with Davis as a wacky heiress and Cagney as a commercial pilot. Their last film together. Cagney got top billing.

46. The Little Foxes. Samuel Goldwyn. August 1941. William Wyler. Herbert Marshall, Teresa Wright, Richard Carlson. Davis' quarrels with Wyler didn't prevent her from giving (perhaps caused her to give) one of her best performances in the Tallulah Bankhead role of Regina Giddens. Gregg Toland photographed her very skillfully.

47. The Man Who Came To Dinner. Warners. December 1941. William Keighley. Ann Sheridan, Monty Woolley, Richard Travis. To bolster a good picture, and Monty Woolley, she played a secondary role of secretary, but took top billing.

48. In This Our Life. Warners. May 1942. John Huston. Olivia de Haviland, George Brent, Dennis Morgan. Davis stole her sister's husband, wreaked family havoc, died violently. Effective in spots, but overwrought, and not a successful film.

49. Now, Voyager. Warners. October 1942. Irving Rapper. Paul Henreid, Claude Rains, Gladys Cooper. One of Davis' most telling and appealing roles. Steiner's music won him an academy award. Casey Robinson did the screen play from the Olive Higgins Prouty novel.

50. Watch on the Rhine. Warners. August 1943. Herman Shumlin. Paul Lukas, Geraldine Fitzgerald, Donald Woods. More box office duty this time—to help Paul Lukas. But her restrained, compassionate portrait of the wife—an unusual role—was intelligently done.

51. Thank Your Lucky Stars. Warners. September 1943. David Butler. All-star Warner cast. First of her two wartime all-star service films. She appeared briefly, sang "They're Either Too Young or Too Old," and did a jitterbug number.

52. Old Acquaintance. Warners. November 1943. Vincent Sherman. Miriam Hopkins, Gig Young, John Loder. Davis exuded self-sacrifice and womanly heroism in a tale about two writers, friends for years, and their romantic complications.

53. Mr. Skeffington. Warners. May 1944. Vincent Sherman. Claude Rains, Walter Abel, Richard Waring. A fairly successful version of the story by Elizabeth about a vain coquette who loses her looks. Ernie Haller's camerawork and Franz Waxman's score helped.

54. Hollywood Canteen. Warners. December 1944. Delmer Daves. All-star cast. Davis appeared as herself, and described the work of the famous canteen, of which she was president.

55. The Corn Is Green. Warners. March 1945. Irving Rapper. John Dall, Joan Lorring, Nigel Bruce. She played the Ethel Barrymore part of a schoolteacher who inspires a coal miner with ambition. Widely praised as one of her best performances.

56. A Stolen Life. Warners. May 1946. Curtis Bernhardt. Glenn Ford, Dane Clark, Walter Brennan. Produced by Miss Davis personally. She played twin sisters in love with the same man (Ford). The bar sister wins temporarily, the good one eventually.

57. Deception. Warner's. October 1946. Irving Rapper. Paul Henreid, Claude Rains. Melodrama albeit well-mounted and tasteful, about a concert pianist who fears her lover (Henreid) will guess the truth about her former relationship with a famed composer (Rains).

58. Winter Meeting. Warner's. April 1948. Bretaigne Windust. Jim Davis, Janis Paige, John Hoyt. Ponderous nonsense about a poetess and a naval officer.

59. June Bride. Warner's. October 1948. Bretaigne Windust. Robert Montgomery, Fay Bainter. Montgomery, a past master of comedy, stole it from under Davis' nose.

60. Beyond the Forest. Warner's. October 1949. King Vidor. Joseph Cotten, David Brian. Even Vidor's trenchant direction couldn't save this mordant study of a selfish female from Davis' overacting. Her last picture for Warner's.

61. All About Eve. 20th Century-Fox. November 1950. Joseph L. Mankiewicz. Anne Baxter, George Sanders, Celeste Holm, Gary Merrill. This brilliant film stayed Davis' box-office decline.

62. Payment on Demand. RKO. February 1951. Curtis Bernhardt. Barry Sullivan, Jane Cowl. It profited from All About Eve's success, but was also an effective drama of marriage and divorce on its own, with Davis acting her best.

63. Another Man's Poison. United Artists December 1951. Irving Rapper. Emlyn Williams, Gary Merrill. Produced in England by Douglas Fairbanks, Jr., and Daniel Angel. An inconsequential mystery-melodrama in which Emlyn Williams outplayed her.

64. Phone Call from a Stranger. 20th-Fox. February 1952. Jean Negulesco. Gary Merrill, Shelley Winters, Keenan Wynn. Davis had a small part in the episode starring her husband (Gary Merrill).

65. The Star. 20th-Fox. December 1952. Stuart Heisler. Sterling Hayden, Warner Anderson, Minor Watson. She got an Academy Award nomination for her performance as a fading film star with comeback illusions.

66. The Virgin Queen. 20th-Fox. August 1955. Henry Koster. Richard Todd, Joan Collins. Her first film in nearly 3 years, she played an aging Queen Elizabeth so effectively she took the picture away from Todd.

67. Storm Center. Columbia 1956. Daniel Taradash. Davis as a librarian who refuses to exclude a controversial book.

68. The Catered Affair. MGM 1956 (?). Debbie Reynolds, Ernest Borgnine. A screen version of Paddy Chayevsky's TV play about a middle-class Irish family in the Bronx.

Unification of Ireland

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Lynn Telegram-News, Lynn, Mass., Monday, January 22, 1956, regarding the article received by Mr. William James Conlon, of

23 Breed Street, Lynn, Mass., from a friend in his native Belfast, Ireland.

Mr. Conlon has long advocated and worked like all of Ireland's friends in America toward gaining partition of Ireland. It lifts my heart to know that in the Congress of the United States, as among the people everywhere, Ireland has willing and devoted friends who will intensify their efforts for the unification of Ireland.

The article follows:

CONLON SAYS ELECTION OF MITCHELL UPHELD

William James Conlon, of 23 Breed Street, received the following article from a friend in his native Belfast, Ireland, this week.

The article advocates the six counties of Northern Ireland, now ruled by England, be united with the remainder of the country and be governed by the Irish Dail in Dublin.

It explains that the Select Committee of the British House of Commons recently upheld the election of Thomas Mitchell, an imprisoned Irish patriot, as a member of the British Parliament from Northern Ireland, over his rival, Charles Beattie, a supporter of British rule. However, it states, the committee has recommended no legislation to validate the imprisoned Mitchell's election.

The article follows:

"UP FREEDOM FOR ALL IRELAND

"A remarkable tangle has arisen for the Stormount False government. The Unionist, who has twice sought to defeat the young Irishman now in Belfast Prison, serving a 10-year sentence, has suffered a hard blow of disapointment. He has been ousted because the Select Committee of the British House of Commons has found that the election of Charles Beattie as Unionist member of Parliament is invalid.

"What quite mystifies Beattie is that the committee recommends that there be no legislation enacted to validate his election.

"If Thomas Mitchell, in prison, has heard this British decision, you may be sure that he is treating his heart to a wholesome bit of patriotic joy.

"Think of it—a man in prison, with no opportunity to campaign for himself, has twice won the election over his rival, Charles Beattie, the Unionist, the fanatic supporter of the foreign government usurping control of the six stolen northern counties of the Irish Republic.

"In the first eletcion, the Irish patriot, Mitchell, now serving a 10-year sentence in Belfast jail, won the election with a 260-vote majority. In the byelection, ordered by the Stormount 6 county courts, Mitchell won out by 806 votes. Even so, the six county courts declared the Irishman to be disqualified for an M. P. seat.

"Mitchell, held in a desolate Belfast jail on a charge of 'treason-felony,' couldn't very well take his seat in London's House of Commons. What's more, the prisoner wouldn't take it even if freed to do so. He is a loyal Irishman through and through. He wants no association with Britain's Parliament nor the false Unionist government.

"Another election? Members of the six county courts frankly admit that another election would be worthless for they know that no Unionist nominee could win over the Irish vote.

"Where on earth, outside this wondrous island nation, can we find greater determination among the people to be free from foreign rule and domination by England? A young Irishman, helpless to speak a word to further his own campaign, wins out twice at the polls, and the skulking non-Irish element, the Unionists, are afraid to make a third election attempt to seat their candidate.

"It was this man Beattie who petitioned, after his two defeats at the polls, that Thomas Mitchell be unseated.

"Well now, Westminster has declared Beattie himself to be unqualified for an M. P. seat. How true it is 'that the mills of the gods grind slowly, yet they grind exceedingly small. Though, with patience, He stands waiting, with exactness, grinds He all.'"

The Soil Bank and Payment in Surplus Commodities Tried in Early 1930's

EXTENSION OF REMARKS

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1956

Mr. ENGLE. Mr. Speaker, attached is an article appearing in the Sacramento Bee of January 21, 1956, regarding a discussion of the present proposals to help the farm surplus situation. Dr. Murray R. Benedict, who gave the speech referred to, is a professor of agricultural economics in the Giannini Foundation at the University of California at Berkeley. Of special interest is his comment on the soil bank idea, which was tried in 1933, and also farmers taking surplus cotton, which was tried in the early 1930's. I believe that Dr. Benedict's thoughtful comments will be of interest to the Members who are presently dealing with this difficult problem.

THE SOIL BANK PLAN: IS IT LEGAL? HOW IT WORKED FIRST TIME 20 YEARS AGO

(By Hamilton L. Hintz)

How about the soil bank plan which shortly will be considered by Congress as a part of a program to solve the problems of the farmers?

Is it new? How will it work? What are its chances of success? Can its framers hurdle an apparently formidable legal barrier?

These are questions which come to the minds of people connected with agriculture and to those who have the welfare of the farmers and the country at heart.

INSIGHT IS GIVEN

Some light was shed on the answers to these questions in an interview this week with Dr. Murray R. Benedict, professor of agricultural economics in the Giannini Foundation at the University of California at Berkeley.

He recently completed a study of the origin and development of farm policies of the United States since 1790 for the Twentieth Century Fund, resulting in the publishing of two books by the fund.

TRIED FIRST IN 1933

"A program somewhat similar to the soil bank plan was tried in the middle 1930's," said Dr. Benedict.

"Under authority of the Agricultural Adjustment Act of 1933 the Government entered into contracts with the growers of cotton, wheat, corn, and tobacco to pay rental on acreage withheld from production.

"A separate program was instituted for hogs with the aim of preventing depressing surpluses going to market."

ELEMENTS OF SIMILARITY

He pointed out the present soil bank proposal and the 1933 plan are similar in that farmers would be paid for taking land out of production in surplus crops and the Government would make soil conservation payments for soil-building practices.

Another point of similarity is that the new plan, like the old one, would provide the option of the farmer taking surplus crops from the Government in lieu of cash payments.

PROVED SPECULATIVE

"Farmers taking surplus cotton for payment was tried in the early 1930's," said Dr. Benedict. "The record shows that some farmers made money by a rise in price after they took payment in crops. Presumably the architects of the new legislation would provied suitable curbs for speculative use of surplus crops."

The economist pointed out three areas of dissimilarity, saying:

"The new proposal is unlike the old program in that it provides for agreements between the Government and the growers for periods of 5 to 10 years, whereas the earlier deal mostly was on a year-to-year contractual basis.

"Also under the new proposal lands diverted from surplus crops could not be used in the production of other crops which would create new surpluses elsewhere.

TREASURY PAYMENTS

"Another change is that under the system of the thirties the money for benefit payments to growers was derived from a processing tax whereas the new plan would make the payments directly out of the Federal Treasury."

Dr. Benedict termed the soil bank plan of the thirties as not entirely successful although being of some help in reducing acreage and surpluses in wheat, corn, tobacco and cotton.

The greatest factor in leveling off the situation were the droughts of 1933 and 1934 which wiped out the formidable wheat and cotton surpluses of the 1931–32 period and had the United States on a wheat importing basis by the end of 1934.

LEGAL BARRIER?

The legal fate of the 1933 soil bank plan poses a question in the consideration of a revival of the idea.

"After operating for 3 years," points out Dr. Benedict, "the Supreme Court in 1936 declared the crop adjustment plan unconstitutional on the grounds the Government could not tax the processors and could not enter into contracts with individual farmers in connection with the land rental feature.

"The present soil bank proposal has individual contractual provisions similar to the contracts ruled unconstitutional in 1936. Possibly, however, the framers of the new legislation can keep it within the bounds of the 1936 decision, or hope for a more favorable interpretation in the light of present-day conditions."

LESS CALIFORNIA EFFECT

Dr. Benedict believes a soil bank might be helpful in some degree in the present situation, but figures California will be less affected than most other parts of the country.

Wheat, cotton and rice are the principal California crops which might be affected. There would be no effect, for instance, on the $500 million California fruit crop.

Here are other of his observations:

There is really only one of two alternatives out of the present situation—either cut production severely or find abnormal markets for the surplus.

TOO MUCH WHEAT

There is too much land of all kinds, and particularly too much submarginal land, planted to wheat which should be converted to grazing.

The chief thing which has brought on surpluses is greatly increased yield. The potato glut came with only one-half the acreage in production as formerly. Cotton production is up, but acreage is smaller.

While a two price system or its equivalent is being used now on some crops it is not workable in most crops. For a two price system to work there must be a private or Government monopoly of the crop.

BETTER DISTRIBUTION

The food-stamp plan might help in distributing surplus food to the needy. There may be possibilities in utilizing some of the surplus through using it for foreign aid wisely and in domestic distribution.

More attention should be given to purchase of submarginal lands, retiring them from production and converting them to grazing lands. This was tried in a small way in the thirties in the plains area, resulting in some local benefit but having no important effect on the overall national picture.

Chicago's Fight Against Blight

EXTENSION OF REMARKS

OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1956

Mr. O'HARA of Illinois. Mr. Speaker, by unanimous request, I am extending my remarks to include excerpts from an address on urban renewal by T. V. Houser, chairman of the board, Sears, Roebuck & Co., before the Better Business Bureau of Chicago, as follows:

Now, because as business leaders you are interested in community matters, I would like to move on to a discussion of a problem that faces us here in Chicago—a problem which we as businessmen can and must help solve. The problem is that of stopping the spread of neighborhood decay and arresting the gradual downward slide of large sections of our city toward slum conditions.

This seems to me an appropriate meeting for the discussion of this problem. After all, membership in an organization such as the Better Business Bureau indicates a willingness to accept responsibility and provide leadership. The magnitude of the task of urban renewal in the Chicago area certainly requires the knowledge, energy, and leadership ability which men such as yourselves are in a position to provide.

I think that all of us in Chicago can be proud of the position our city holds as a production center. In a recent article, the Chicago Daily News stated that Chicago is the world's largest producer of steel, first in the production of fabricated metal products, first in the production of nonelectrical machinery, first in the production of railroad equipment, and first in the manufacture of electrical and electronic products.

The future looks extremely bright with the development of the St. Lawrence seaway project and the accompanying development of the Cal Sag area. There can be little doubt that Chicago has developed industrial and business opportunity to a tremendous degree, and because of this many people have been attracted to Chicago as a place to work. But there is one serious blot in this picture, the condition of our housing.

The city of Chicago has an area of about 211 square miles. Of this total, 23 square miles consists of hopelessly blighted slums, and another 56 square miles is in the process of becoming blighted, although not yet at the hopeless stage. In other words, about 37 percent of the total area occupied by the city of Chicago is already in slum status or beginning to approach slum status. This is a situation which should be of very great concern to us as businessmen and as citizens.

The problem is as serious as it is because we have not faced up to it, either as businessmen or as citizens. On the contrary, we have tried to walk away from it. As the city neighborhoods in which many of us first lived grew older and began to grow a little run down, we moved to the suburbs, frequently the close-in suburbs which in due course came to feel the touch of blight themselves, whereupon many of us moved on to more distant and still untouched areas. As we moved, behind us followed others, themselves seeking to escape from neighborhoods where blight had progressed somewhat further; and behind them still others at successively lower rungs of the economic ladder, everyone seeking to escape the consequences of varying degrees of blight by the simple expedient of packing up and moving away. To some extent, the same thing has occurred with many of our business enterprises. Frequently, of course, there are important economic and other advantages in moving plants to suburban or small-town areas, but often these very advantages loom large simply because of the progressive decay of the city itself.

But while an individual household or an individual businessman can solve his own immediate problems by packing up and moving away, the city cannot. And for that matter, realistically speaking, neither can the householder or the businessman however more pleasant he may find the new surroundings into which his family or his plant has moved. The consequences of blight are not limited to the blighted areas themselves, but spread like a pall over the entire community. In our comfortable neighborhoods, we feel those consequences in the form of the higher tax rates needed to subsidize areas which do not produce enough tax revenue to support their essential services or to produce the extra fire and police protection required by the social conditions created by the blight. We feel the consequences in the alarming state of juvenile delinquency and the prevalence of crime in those areas where people grow up and live under slum and near slum conditions.

The problem involves leadership from business as well as from political, educational, and religious groups. But how effective has the leadership of business executives been when their social and family life is so far removed? As businessmen, we paint the glories of the American way of life in glowing terms. Do the realities of living conditions of large numbers of our people come up to their expectations and aspirations? We are distressed that our own employees often do not share our enthusiasm for the virtues of free enterprise and often respond to leadership—political and otherwise—which is critical of free enterprise as we know it and understand it. I submit that it is unrealistic on our part to expect enthusiastic support for the American economic system from people whose attitude is influenced by their undesirable surroundings.

In this connection, the plight of the Negro is particularly serious. The city of Chicago is on the receiving end of a tremendous surge of Negro migration from the South. In large part, this surge is a result of the demand of Chicago industry for a supply of labor to meet its constantly growing needs. Whatever the underlying causes, the massive influx of Negroes into this area, coupled with the limits imposed by custom, prejudice, and economic levels on their freedom of location, have gravely aggravated what was already a problem of major proportions. We cannot afford to have grow up in our midst a substantial group of citizens who are likely to become increasingly antagonistic toward our social, political, and economic institutions because of the degrading conditions of the housing and neighborhoods in which they live. I cite the problem of the Negro and Negro housing, not to explore it in detail or to suggest solutions, but to illustrate the seriousness of urban decay and the imperative necessity for doing something about it.

Actually, considerable is already being done here in Chicago, but a great deal more must be done if we are to avoid the consequences of too little and too late.

We have, I think, adequate governmental machinery for dealing with problems that must be attacked from a governmental level. How well that machinery is operated, how properly it is financed, and how strongly it is supported by public opinion is another matter. I have been greatly impressed with the leadership of Mayor Daley is providing in this field and the vigor with which he is dealing with the various phases of what, by its very nature, must be a complex undertaking. One thing which we as citizens and businessmen can do is to give him the support and encouragement he has shown he deserves—and insist, through the cultivation of an intelligent and active public opinion, that the various agencies of the city government perform in the manner and with the effectiveness he and we expect them to perform.

These governmental agencies deal primarily, although by no means exclusively, with problems of slum and near-slum neighborhoods, problems which have been allowed to fester to a point where only government can deal with them. But there are other tasks which can be handled far more effectively—and efficiently—by nongovernmental means.

These are tasks which lie in the general area of arresting neighborhood decay and preventing the formation of slums. Slum clearance is a massive and expensive undertaking that is largely beyond the reach of private endeavor. But slum prevention is not only within the scope of voluntary action; by and large, it can only be achieved by that means.

Chicago has at least 35 private, voluntary citizen organizations dealing with one phase or another of the problem of arresting neighborhood decay. Most of these are local community organizations set up to deal with specific local situations and conditions. The metropolitan housing and planning council, however, takes the entire Chicago metropolitan region as its sphere of activity and is not only working with the State, county, and local governmental agencies but is also promoting voluntary civic action, especially at the neighborhood level.

As a businessman, it is the possibility of effective action at the neighborhood level that appeals most strongly. Our company, for example, is deeply concerned with the condition of the neighborhood on the west side of Chicago where our national headquarters are located, our largest mail order plant, and one of our largest retail stores. This area, known as Lawndale, has already been touched by blight, and unless prompt and vigorous corrective action is taken, it is inevitable that conditions will grow progressively worse. More and more, our own employees have been moving away from the Lawndale community, creating among other things serious problems of transportation in getting to and from work. We have a real economic stake in maintaining a stable, prosperous area in which our retail store can do business. And as a corporate citizen, we have a vital civic stake in the caliber and character of the community which is home for so important a segment of our company's operations.

We have been concerned for a number of years at the gradual deterioration of our home community. At one time we gave serious thought to transferring our headquarters—our parent organization—elsewhere, perhaps to some pleasant location in the suburbs. Our total operations on the west side occupy an area of about 40 acres, and our total floor space is in excess of 4,500,000 square feet, most of it built around 1905. Only at prohibitive loss would it be possible to relocate the mail order plant and the retail store in another area, but we could and did think seriously of relocating our national headquarters.

But after reviewing the matter carefully, we decided not to move. The launching of the Congress Street superhighway, with all

its promise of improvement for the entire area, was an important factor in reaching this decision. But we also felt we had a responsibility for the area, one that we should not try to walk away from. And we had faith in the future of that section of Chicago, a future we felt we could help mold by doing what lay within our power to help improve the community.

On the basis of that decision, we have moved ahead with plans to air condition and modernize our buildings. We have expanded our land holdings by purchasing substandard housing, clearing the property, and converting it into parking lots. By the time our modernization plans are completed, we will have invested an additional $5,500,000 in our west-side properties. This is a measure of our faith in the essential soundness of our home community.

In addition, to direct investments of this type, we are lending support and encouragment to the Greater Lawndale Conservation Commission, a voluntary organization created by the citizens of the community to help deal with the specific problems of the area. This is a relatively new organization, but it has great promise. The Back of the Yards Council and the South East Chicago Commission in their own particular areas have shown what concerted, voluntary civic effort can accomplish. In its own way and in respect to its own conditions, we hope that the Lawndale organization can be equally successful. As citizens of the community, we accept our full share of the responsibility for supporting its efforts to that end.

Our interest in this subject is not confined to the Lawndale area. We are cooperating with similar groups which have been organized in other areas of the city. And we are urging our local store managers and other company executives in all of the cities where we are located to associate themselves with and lend active support to the voluntary civic movements set up to deal with the similar problems of their own communities.

We have a long tradition at Sears that our executives are expected to take an active part in local civic affairs. The participation of men such as Gordon Metcalf and other Sears executives before him in the work of the Better Business Bureau is a case in point. Sears men are particularly active in the work of the community fund, the Red Cross, the YMCA, boys clubs, chambers of commerce, merchants associations, and other welfare, business and civic enterprises. We are now in the process of urging that they expand the area of their interest and activity to include that of urban renewal. We are hopeful that their training and experience and the backing they have from top management will enable them to make a real contribution in communities across the Nation. We not only have an important economic stake in this entire matter, but a civic stake as well. We are anxious to serve them both.

The membership of the Chicago Better Business Bureau is drawn from all sections of this city. Many or you, like Sears, may have plants or other facilities located in semiblighted or blighted areas. If you do, you will know from personal experience something about the problems I have been describing. And if that is the case, I hope you will recognize your business and civic stake in doing something about it.

As businessmen, you are uniquely qualified to assume a leadership role in this matter of urban renewal. Your business experience qualifies you for such a role, and you have a responsibility to your business and your community to accept it.

Congressman Macdonald's Service to His Constituents

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 25, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, the job which Members of the House of Representatives can perform through travel to other parts of the world has frequently been misunderstood. Important media of public information such as our newspapers, have sometimes given prominence to critical surveys of the travel itineraries of congressional committees or individual Congressmen. The positive accomplishment of the trips which have been made by our colleagues is often under-emphasized.

It is particularly gratifying to see the public recognition accorded to the service performed by our colleague, TORBERT H. MACDONALD, of Massachusetts, as a result of his recent journey to Alaska, Japan, and southeast Asia with members of the Interstate and Foreign Commerce Committee. The Everett Leader-Herald and News-Gazette, of Mr. MACDONALD'S district has paid editorial tribute to the Congressman's diligent attention to his constituents in sharing his experiences and observations with them immediately upon his return from the Far East. Mr. MACDONALD made some 125 speeches to groups of many ages and interest, so that his trip, in the words of the editorial "paid rich dividends to thousands of persons" in his district.

As a welcome expression of appreciation for the benefits derived from the trip of one of our energetic young colleagues, I should like to include the text of the editorial as part of my remarks. The editorial follows:

CONGRESSMAN MACDONALD'S SERVICE

Whatever expense was incurred in the Far East tour made by Congressman TORBERT H. MACDONALD and his colleagues on the Interstate and Foreign Commerce Committee, it emphatically has paid rich dividends to thousands of persons in the Eighth Congressional District.

When Congressman MACDONALD returned from the trip he did not sit on a wealth of information which accrued to him in his travels from Alaska to Japan to China and to southeast Asia. He returns to Washington for the opening of Congress with the knowledge that in some 125 speeches he has alerted his constituents to the dangers our country faces in Asia.

It's not easy to move the people at home to an awareness of problems which beset the Nation in farflung places. But in this age of guided missiles, planned launching of satellites from the earth, the atomic bomb with planes that can travel 800 miles an hour, and a cold war which waxes hot quickly, we must be aware of the dangers which face us all over the universe.

Congressman MACDONALD carried his message to civic organizations, veterans groups, social organizations, and hundreds of high school and college students. He brought home the fact that we must be alert to colonial problems in Asia; to the many racial problems, and to the ever-harassing dangers of communism.

The trip not only enables Congressman MACDONALD to take a vital role in discussing such problems in Congress, but it leaves an invaluable lesson to thousands to whom he spoke. They in turn will alert many thousands.

By taking the platform sometimes as many as five times in a day and night to share his information with his constituents while still travel weary, Congressman MACDONALD has rendered a distinct service to everyone in the Eighth Congressional District. And he did it in the wholesome spirit of service without political connotation.

Drastic Measures Proposed To Stabilize Agriculture

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 25, 1956

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Drastic Measures Proposed To Stabilize Agriculture," which appeared in the January 19, 1956, issue of the Leitchfield Gazette, of Leitchfield, Ky.:

DRASTIC MEASURES PROPOSED TO STABILIZE AGRICULTURE

The soil-bank plan proposed by President Eisenhower and presumably drawn up by Secretary Benson, differs little from payments made to farmers for taking land out of production during Franklin D. Roosevelt's administration. The objections to one are just as valid against the other. Democrats cannot now deride the effort unless they also were opposed to the previous plan to improve the lot of farmers. After casting about for some way to assist agriculture, this seems to be the only method that is practical although it takes part of the farmer's independence and costs taxpayers money too.

Low prices for farm products are attributed to overproduction, so to bring prices up, production must be limited. But who is going to tell individual farmers how much to limit production and see to it that they do? That is where the Government could be authoritarian and parcel out quotas, but incentive payments are made to accomplish the purpose without in so many words ordering individual farmers to stay within quotas.

It was known 3 years ago that there was an oversupply of farm products, supposedly caused by increased demands that stimulated production during the Korean war. The surplus has remained in practically all products with an increase in some. Moves to lower the surplus have been ineffectual so far as helping the economic condition of farmers is concerned. It will take drastic measures to restore economic balance, and finally the administration appears to have awakened to the need for action. That it occurred in an election year might be mere coincidence.

Taking land out of production is not a complete solution, because intensive farming on fewer acres will result in production just as great. This has been proven in the tobacco belt as acreage has been cut lower and lower, yet surpluses remain. Marketing

quotas in addition to fewer acres in production are needed until the annual carryover reaches a normal stage. It will take years to make any plan effective, so for the best of all concerned both major parties should agree on a program with as little political skulduggery as possible.

The Challenge of Political Courage

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Wednesday, January 25, 1956

Mr. BUTLER. Mr. President, during the past week I have been reading with much pleasure the recent book entitled "Profiles in Courage," which has been written by our distinguished colleague, the junior Senator from Massachusetts [Mr. KENNEDY]. It is indeed an interesting and excellent study of those inherent traits of courage which a public official is frequently called upon to muster. In the general approval of this worthwhile book, I hope that an article by the Senator from Massachusetts, on the subject the Challenge of Poltical Courage, as it appeared in the New York Times magazine section on December 18, 1955, will not be overlooked, and I therefore ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE CHALLENGE OF POLITICAL COURAGE

(By JOHN F. KENNEDY)

"People don't give a damn," a syndicated columnist told millions of readers not so many year ago, "what the average Senator or Congressman says. The reason they don't care is that they know what you hear in Congress is 99-percent tripe, ignorance, and demagogery and not to be relied upon."

Earlier a member of the Cabinet had recorded in his diary: "While I am reluctant to believe in the total depravity of the Senate, I place but little dependence on the honesty and truthfulness of a large portion of the Senators. A majority of them are small lights, mentally weak, and wholly unfit to be Senators. Some are vulgar demagogs * * * some are men of wealth who have purchased their position * * * some are men of narrow intellect, limited comprehension, and low partisan prejudice."

And still earlier a Member of the Senate itself told his colleagues that "the confidence of the people is departing from us, owing to our unreasonable delays."

The Senate knows that many Americans today share these sentiments. Senators, we hear, must be politicians—and politicians must be concerned only with winning votes, not with statesmanship or courage. Mothers may still want their favorite sons to grow up to be President, but, according to a famous Gallup poll of some years ago, they do not want them to become politicians in the process.

Does this current rash of criticism and disrespect mean the quality of the Senate has declined? Certainly not. For of the three statements quoted above, the first was made in the twentieth century, the second in the nineteenth and the third in the eighteenth (when the first Senate, barely under way, was debating where the Capitol should be located).

Does it mean then, that the Senate can no longer boast of men of courage?

Walter Lippmann, after nearly half a century of careful observation, rendered in his recent book a harsh judgment both on the politician and the electorate: "With exceptions so rare they are regarded as miracles of nature, successful democratic politicians are insecure and intimidated men. They advance politically only as they placate, appease, bribe, seduce, bamboozle, or otherwise manage to manipulate the demanding, threatening elements in their constituencies. The decisive consideration is not whether the proposition is good but whether it is popular—not whether it will work well and prove itself, but whether the active-talking constituents like it immediately."

I am not so sure, after nearly 10 years of living and working in the midst of "successful democratic politicians," that they are all "insecure and intimidated men." I am convinced that the complication of public business and the competition for the public's attention have obscured innumerable acts of political courage—large and small—performed almost daily in the Senate Chamber. I am convinced that the decline—if there has been a decline—has been less in the Senate than in the public's appreciation of the art of politics, of the nature and necessity for compromise and balance and of the nature of the Senate as a legislative chamber.

And, finally, I am convinced that we have criticized those who have followed the crowd—and at the same time criticized those who have defied it—because we have not fully understood the responsibility of a Senator to his constituents or recognized the difficulty facing a politician conscientiously desiring, in Webster's words, "to push [his] skiff from the shore alone" into a hostile and turbulent sea. Perhaps if the American people more fully comprehended the terrible pressures which discourage acts of political courage, which drive a Senator to abandon or subdue his conscience, then they might be less critical of those who take the easier road—and more appreciative of those still able to follow the path of courage.

The first pressure is a form of pressure rarely recognized by the general public. Americans want to be liked—and Senators are no excéption. Realizing that the path of the conscientious insurgent must frequently be a lonely one, we are anxious to get along with our fellow legislators, our fellow members of the club, to abide by the clubhouse rules and patterns, not to pursue a unique and independent course which would embarrass or irritate the other members. We realize moreover, that our influence in the club—and the extent to which we can accomplish our objectives and those of our constituents—are dependent in some measure on the esteem with which we are regarded by other Senators. "The way to get along," I was told when I entered Congress, "is to go along."

Going along, it was clear, included fulfillment of my obligation to follow the party leadership whom I had helped select. All of us in the Congress are made fully aware of the importance of party unity (what sins have been committed in that name) and the adverse effect upon our party's chances in the next election which any rebellious conduct might bring. Even the success of legislation in which a Senator is interested depends in part on the extent to which his support of his party's programs has won him the assistance of his party's leaders.

Finally, the Senator who follows the independent course of conscience is likely to discover that he has earned the disdain not only of his colleagues in the Senate and his associates in his party but also of the all-important contributors to his campaign fund.

It is the thinking of that next campaign—the desire to be reelected—that provides the second pressure on the conscientious Senator. It should not automatically be assumed that this is a wholly selfish motive—although it is not unnatural that those who have chosen politics as their profession should seek to continue their careers—for Senators who go down to defeat in a vain defense of a single principle will not be on hand to fight for that or any other principle in the future.

Defeat moreover is not only a setback for the Senator himself—he is also obligated to consider the effect upon the party he supports, upon his friends and supporters who have gone out on a limb for him or invested their savings in his career, and even upon the wife and children whose happiness and security—often depending at least in part upon his success in office—may mean more to him than anything else.

Where else, in a nontotalitarian country, but in the political profession is the individual expected to sacrifice all—including his own career—for the national good? In private life, as in industry, we expect the individual to advance his own enlightened self-interest—within the limitations of the law—in order to achieve overall progress. But in public life we expect individuals to sacrifice their private interests to permit the national good to progress.

In no other occupation but politics is it expected that a man will sacrifice honors, prestige and his chosen career on a single issue. Lawyers, businessmen, teachers, doctors, all face difficult personal decisions involving their integrity—but few, if any, face them in the glare of the spotlight as do those in public office. Few, if any, face the same dread finality of decision that confronts a Senator facing an important call of the roll. He may want more time for his decision—he may believe there is something to be said for both sides—he may feel that a slight amendment could remove all difficulties—but when that roll is called he cannot hide, he cannot equivocate, he cannot delay—and he senses that his constituency, like the raven in Poe's poem, is perched there on his Senate desk, croaking "Nevermore" as he casts the vote that stakes his political future.

Few Senators "retire to Pocatello" by choice. The virus of Potomac fever, which rages everywhere in Washington, breeds nowhere in more virulent form than on the Senate floor. The prospect of forced retirement from "the most exclusive club in the world," the possibilities of giving up the interesting work, the fascinating trappings, and the impressive prerogatives of congressional office, can cause even the most courageous politician serious loss of sleep.

Thus perhaps without realizing it, some Senators tend to take the easier, less troublesome path to harmonize or rationalize what at first appears to be a conflict between their conscience—or the result of their deliberations—and the majority opinion of their constituents. Such Senators are not political cowards—they have simply developed the habit of sincerely reaching conclusions inevitably in accordance with popular opinion.

Still other Senators have not developed that habit—they have neither conditioned nor subdued their consciences—but they feel, sincerely and without cynicism, that they must leave considerations of conscience aside if they are to be effective. Not all Senators agree with them—but few would deny that the desire to be re-elected exercises a strong brake on independent courage.

The third and most significant source of pressures which discourage political courage in the conscientious Senator or Congressman—and practically all of the problems described apply equally to Members of both Houses—is the pressure of his constituency, the interest groups, the organized letter-writers, the economic blocs and even the average voter. To cope with such pressures,

to defy them or even to satisfy them, is a formidable task. All of us occasionally have the urge to follow the example of Congressman JOHN STEVEN MCGROARTY of California, who wrote a constituent in 1935:

"One of the countless drawbacks of being in Congress is that I am compelled to receive impertinent letters from a jackass like you in which you say I promised to have the Sierra Madre mountains reforested and I have been in Congress 2 months and haven't done it. Will you please take two running jumps and go to hell."

Fortunately or unfortunately, few follow that urge—but the provocation is there, not only from unreasonable letters and impossible requests, but also from hopelessly inconsistent demands and endlessly unsatisfied grievances.

To my office, for example, comes a delegation representing New England textile mills, an industry essential to our prosperity. They want the tariff lowered on the imported wool they buy from Australia—but they want the tariff raised on the finished woolen goods imported from England with which they must compete. One of my southern colleagues told me that a similar group visited him the same day with the same requests—but further urging that he take steps to (1) end the low-wage competition from Japan and (2) prevent the Congress from ending—through a higher minimum wage—the low-wage advantage they themselves enjoy to the dismay of my constituents.

Recently, two groups called me off the Senate floor—the first was a group of businessmen seeking to have a local Government activity closed as unfair competition for private enterprise; and the other was a group representing the men who work in that Government installation and who are worried about their jobs.

All of us in the Senate meet endless examples of such conflicting pressures, which only reflect the inconsistencies inevitable in our complex economy. If we tell our constituents frankly that we can do nothing, they feel we are unsympathetic or inadequate. If we try and fail—usually meeting a counteraction from other Senators representing other interests—they say we are like all the rest of the politicians. All we can do is retreat into the cloakroom and weep on the shoulder of a sympathetic colleague—or go home and snarl at our wives.

We may tell ourselves that these pressure groups and letterwriters represent only a small percentage of the voters—and this is true. But they are the articulate few whose views cannot be ignored and who constitute the greater part of our contacts with the public at large, whose opinions we cannot know, whose vote we must obtain and yet who in all probability have only a limited idea of what we are trying to do.

These then, are some of the pressures which confront a man of conscience. He cannot ignore the pressure groups, his constituents, his party, the comradeship of his colleagues, the needs of his family, his own pride in office, the necessity for compromise and the importance of remaining in office. He must judge for himself which path to choose, which step will most help or hinder the ideals to which he is committed.

He realizes that once he begins to weigh each issue in terms of his chances for reelection, once he begins to compromise away his principles on one issue after another for fear that to do otherwise would halt his career and prevent future fights for principle, then he has lost the very freedom of conscience which justifies his continuance in office. But to decide at which point and on which issue he will risk his career is an overwhelming and frightening responsibility.

Why, then, does any man resist these pressures and speak out with courage and conscience? Perhaps those Senators whose acts of political courage are recounted in my forthcoming book were men who forgot all about themselves in their dedication to the public good. But, on the other hand, it is perhaps more likely that John Adams, surely as disinterested a public servant as we ever had, came much nearer to the truth when he wrote: "It is not true, in fact, that any people ever existed who love the public better than themselves."

If this be true, what then caused such statesmen to act as they did? It was not, it seems to me, because they loved the public better than themselves. On the contrary, it was precisely because they did love themselves—because each one's need to maintain his own respect for himself was more important to him than his popularity with others—because his desire to maintain a reputation for integrity was stronger than his desire to maintain his office—because his conscience, his personal standard of ethics, his integrity or morality, call it what you will, was stronger than the pressures of public disapproval—because his faith that his course was the best one, and would ultimately be vindicated, outweighed his fear of public reprisal.

When the politician loves neither the public good nor himself, or when his love for himself is limited and is satisfied by the trappings of office, then the public interest is badly served. But when his regard for himself is so high that his own self-respect demands he follow the path of courage and conscience, all benefit.

Today, the challenge of political courage looms larger than ever before. For our everyday life is becoming so saturated with the tremendous power of mass communications that any unpopular or unorthodox course arouses a storm of protests. Our political life is becoming so expensive, so mechanized, and so dominated by professional politicians and public-relations men that the idealist who dreams of independent statesmanship is rudely awakened by the necessities of election and accomplishment.

And our public life is becoming so increasingly centered upon that seemingly unending war to which we have given the curious epithet "cold" that we tend to encourage rigid ideological unity and orthodox patterns of thought and to frown on insurgent individualism.

Thus, in the days ahead, only the very courageous will be able to take the hard and unpopular decisions necessary for our survival in the struggle with a powerful enemy; an enemy with leaders who need give little thought to the popularity of their course, who need pay little tribute to the public opinion they themselves manipulate, and who may force, without fear of retaliation at polls, their citizens to sacrifice present laughter for future glory. And only the very courageous will be able to keep alive the spirit of individualism and dissent which gave birth to this Nation, nourished it as an infant, and carried it through its severest tests upon the attainment of its maturity.

Time For Action

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1956

Mr. PELLY. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial which appeared in the Seattle Post-Intelligencer on January 21, 1956:

TIME FOR ACTION

According to a wire service report, the President has asked the Civil Aeronautics Board to review the application of Pan American World Airways for a great circle route to the Orient.

The CAB, more than a year ago, recommended that the application be denied, but last February the President announced that he was holding his decision in abeyance.

We do not know the nature of the new circumstances to which the President refers in asking for a review on the part of CAB. But we feel that Ike is right in trying to get some action in the matter.

The current situation recalls that the P-I has urged, and will continue to urge, the very maximum air service for Seattle and the Pacific Northwest. Regardless of air routes serving Seattle, as in most other things, there is no progress in standing pat.

If Seattle is going to fulfill its oft-discussed future as an important crossroads on tomorrow's international airlanes, then we should seek action and forego conversation. We should act decisively to support every possible new or expanded air service that may be offered or proposed.

We should ask the Civil Aeronautic Board to move swiftly in response to the President's request.

Greek Letters Week Proclamation Issued by Governor of Massachusetts

EXTENSION OF REMARKS
OF
HON. THOMAS P. O'NEILL, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1956

Mr. O'NEILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I am very happy to include a proclamation issued by the Governor of Massachusetts designating this week as Greek Letters Week. My very good friend Father Stephen J. Anthony, of the Assumption Greek Orthodox Church in Somerville, Mass., was instrumental in bringing about this celebration, and I commend to the attention of my colleagues here in the House this thoughtful tribute to the Greek Orthodox communities of Massachusetts and of our Nation.

Whereas the Greek Orthodox Church communities of our commonwealth along with all the other Greek Orthodox communities throughout the Nation, will observe Greek Press, Radio, and Letters Week, with appropriate exercises and programs, during the week of January the 22d; and

Whereas the Greek language is the language of their ancestors, to whom they are greatly indebted and of whom they are especially proud; and

Whereas the Greek language is the first and an outstanding classical language of the world, and as such the medium through which Greek literature, philosophy and the beginnings of modern science have been recorded; and

Whereas the vast knowledge and wisdom contained in the books written in the Greek language have influenced the thought, religion and actions of nations in the past, and continue to do so today; and

Whereas scholars and scientists, the world over, look to the Greek language with respect and esteem, and seminaries of every Christian faith honor Greek as the tongue through which the ringing message of Christianity itself was given to the world:

Now, therefore, I, Christian A. Herter, Governor of the Commonwealth of Massachusetts, do hereby proclaim the week of January the 22d through January the 29th, as Greek Letters Week and urge all the citizens of our commonwealth to take part wherever possible in the annual observance by the various Greek Orthodox communities and thus show our appreciation of the contributions made by the Greek language, not only to the world of Christendom, but to the culture and civilization of mankind as well.

Given at the executive chamber in Boston, this 16th day of January, in the year of our Lord 1956, and the independence of the United States of America, the 180th.

By His Excellency the Governor, Christian A. Herter.

EDWARD J. CRONIN,
Secretary of the Commonwealth.

Keep Religion Out of Public Schools

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1956

Mr. MULTER. Mr. Speaker, Rabbi Bernard Twersky, of New York City, associate editor of the World Union Press, has written a pointed answer to the proposal by the New York Board of Superintendents for the introduction of religion into the public schools.

Rabbi Twersky, a member of one of the most famous rabbinical families of Europe and Israel, has been active for some years in the English-Jewish journalistic field. His extensive travels abroad have brought him in touch with many leaders in government, religious, and welfare organizations.

I direct the attention of our colleagues to his article entitled "Keep Religion Out of Public Schools," which appears in the December 30, 1955, issue of the Examiner, a weekly publication.

The article follows:

The statement on moral and spiritual values of the board of superintendents has stirred up a controversy of major proportions. The board of superintendents, in effect, advocates the introduction of religion into the public school system. They would have the teachers inculcate religious values and ideas as part of the educational process. Although this plan may appear superficially to be worthy, it in effect represents a serious threat to a continued growth and development of spiritual life in the Jewish community.

The intrusion of religion in the schools can only be considered a violation of the cherished American principle of the separation of church and state. The state should in no way be a party to the propagation of religious beliefs or dogma in public institutions of learning.

Americans have enjoyed the blessings of freedom and individual liberty because the state and church have operated within their own respective spheres of endeavor. The Prime Minister of Israel, David Ben-Gurion aptly expressed the rationale of the American raison d'etre for the separation of church and state as follows: "America has adopted the convenient solution of separating church from state, not for antireligious reasons, but on the contrary, because of a deep attachment to religion and the desire to secure freedom for each and every citizen."

BASIC PRINCIPLE

This basic principle of separation was well expressed in the following excerpt from a decision by Supreme Court Justice Black: "Neither (church or state) can pass laws which aid one religion, aid all religions, or prefer one religion over another. No tax in any amount, large or small, can be levied to support any religious activities or institutions, whatever they may be called, or whatever form they may adopt to teach or practice religion."

"Neither a State nor the Federal Government can, openly or secretly, participate in the affairs of any religious organization or group, and vice versa. In the words of Jefferson, the clause against establishment of religion by law was intended to erect a wall of separation between church and state."

One of the functions of the public school system is to foster a spirit of unity between the diverse groups that make up our community. This very important function is jeopardized when religion is brought into the classroom. It is very unlikely that a teacher can disseminate the teachings of religion without injecting a note of partiality, sectarianism, or even unconscious bias.

NO OBJECTIVE SYSTEM

There is no such thing as objectivity in spreading the meaning of a system of religious values, since the religious emphasis of the different faiths is markedly diverse in nature. We also must recognize the fact that teachers are not trained to impart fundamental religious principles to students.

Furthermore, we must realize that there are qualified teachers who are not religionists. Should it therefore follow that such teachers be dismissed because they do not wish to impart religious ideas to their students? By expecting teachers to give religious instruction, we are in effect imposing a religious test in deciding upon the qualifications and ability of a person to teach.

RIGHTS OF PARENTS

We must also reckon with the fact that there are parents who do not wish their children exposed to any specific religious teachings. Should such children be denied the privilege of free public education? Let us recall that the United States Supreme Court in the Barnett case held the view that even saluting the flag cannot be imposed on those to whom it is a violation of their religious beliefs.

The home, synagogue and church are the proper agencies and institutions to develop a firmer and more substantial understanding and reverence for that which is religious and spiritual. All religious groups are making great strides in gaining more adherents.

NO NEED

They do not need the assistance of the secular authorities to continue this favorable trend. George Dugan reported in the New York Times of December 10, 1955, that churches and synagogues in the New York area have invested $250 million in building projects since 1950. Religion is not retrogressing and does not require the school to install its great and priceless heritage. The schools are performing their tasks in the realm of moral development of our youth with commendable efficiency.

The New York Board of Rabbis under the dynamic leadership of its president, Rabbi Emanuel Rackman, its general secretary, Rabbi Harold H. Gordon, as well as the Social Action Committee headed by Rabbi Edward Klein are vigorously opposing the implementation of the board of superintendents' recommendations.

The New York Board of Rabbis has won the moral support of all the major Jewish organizations interested in this problem, as well as the entire Jewish community. This is one issue in which the American Jewish Congress and the American Jewish Committee, organizations of divergent attitudes, are in complete accord.

HISTORIC PRINCIPLE

In this struggle to preserve the historic principle of the separation of church and state, the New York Board of Rabbis deserves the appreciation of all people desirous of seeing that the American tradition of liberty and freedom be perpetuated.

This problem however does not affect the Jewish community alone, as is evidenced by the fact that the United Parents Association, the Teacher's Guild and many prominent Protestant clergymen have taken up this struggle to preserve our free school system.

Lord Bryce observed over a half century ago that America has managed to steer clear of the bitter struggle between religion and the state. Let us dedicate ourselves to the greater fulfillment of the wonderful vision of a society based on the full and unhindered development of human freedom.

Progress in Brooklyn

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1956

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Mr. Bernard L. Hegeman, president of the Brooklyn Real Estate Board, Inc., at the 51st anniversary banquet of the board held at the Hotel St. George, Brooklyn, on Saturday evening, January 14, 1956:

Years ago, the remarks made by the Brooklyn board president at the annual banquet consisted of a complete résumé of what had happened in real estate during the past year, and a statement of what the president hoped to accomplish in the year to come.

Frankly, I used to feel that the talks were too long and many of you have told me you felt the same way. So in furtherance of the idea of giving you the kind of banquet that you want, my remarks will be very brief. I'll just hit the high spots.

Many of the men who know me describe me as an optimist. Well, I am an optimist and today I am more optimistic than ever. Why? Well, I see many things taking place in Brooklyn—changes, which augur well for the future. I feel that it is time for all of us to reexamine this great borough of Brooklyn and begin to "tell the world" about the fine things that we have here and that are happening here.

Look at the civic center. Here in a short space of time, you are seeing a new "heart of Brooklyn" being created. The Red Cross Building, the Welfare Department Building, and the Domestic Relations Building are already completed. Now, we can see the new Supreme Court Building taking shape.

Less than a month ago, I had the honor of going before the city planning commission and asking for approval of plans for an underground parking garage to be built in the civic center. Also there, in support of the same plan, were representatives of the Brooklyn Chamber of Commerce, the Downtown Brooklyn Association, the civic council and other civic bodies. It made me feel proud to see officials of outstanding Brooklyn organizations taking time to go over to city hall for the purpose of seeing that worthwhile improvements were made in Brooklyn. Such a spirit speaks well for the future.

Besides the transformation taking place in the civic center area, we are about to see another big improvement take form before our eyes. This one may well mark the beginning of a new era for this great borough of ours. I am referring, of course, to the $85 million waterfront-development program which is about to be inaugurated by the Port of New York Authority. This improvement, gigantic in conception and in scope is going to rejuvenate the waterfront from Fulton Ferry to Red Hook. The new ultramodern piers will permit our present steamship companies to remain in Brooklyn and I am sure that they will induce others to locate here. As businessmen, I do not have to tell you how important our waterfront and industrial areas are to the lifeblood of Brooklyn. Without thriving industry and healthy shipping activities, Brooklyn soon would stagnate. Gentlemen, this is not going to happen. I am telling you tonight that we are going places. A new and better Brooklyn is emerging.

People talk and worry about industry leaving Brooklyn. It is true some companies have moved to bigger and better quarters out of town. However, what has happened to their former plants here in Brooklyn? Practically all the space has been absorbed by other concerns.

The Brooklyn Chamber of Commerce conducted a survey of 100 companies who had moved out of town, in order to find out what the main reasons were for their moving away. A total of 81 percent stated that lack of proper space or proper sites was a major factor in their removal.

We have practically no unrestricted plots available for development here in Brooklyn.

A year ago I spoke about the need for industrial sites within the city limits, where a manufacturer could build a one-story building on a landscaped plot, like the ones we see in Nassau County, or Suffolk, or over in Jersey, or up in Connecticut, with plenty of off-street parking for employee cars. No traffic congestion. Plenty of light and air. The area that I mentioned last year, between Linden Boulevard and the Belt Parkway, and near the terminal yards of the IRT and Independent subways is still available—acres of vacant land, mostly filled, with no streets, sewers, water, or sidewalks. Practically all of it owned by the city. But in order to make it usable for industry the city has got to develop it. Rezone it—it's now residential. Put sanitary sewers and water in some of the streets. Pave those streets. Make large blocks, say 400 feet by 700 feet.

Let the board of estimate put half a million dollars in a revolving fund to cover the cost of these public improvements, with the money to be repaid when the property is sold.

Then let industry know that Brooklyn has available industrial sites. Set auction upset prices low enough so as to be competitive with land in the nearby suburbs.

The city couldn't lose on the deal and I am positive that the one-half million fund would prove to be a bonanza. What I am asking is that city of New York act like all other towns and cities—work on getting and keeping industry.

All we have to do is provide a place where expanding industries can build bigger and more morern plants and most of them will be delighted to stay here.

I've talked with many of the industrialists who have moved and everything isn't as wonderful as they hoped it was going to be out of town.

Last year I warned about the danger of an increase in real estate taxes. Well, the real estate tax in Brooklyn has been increased from $3.79 per $100 of assessed valuation to $3.95 per $100. Controller Gerosa has warned us that the rate will go to $5 unless the city economizes. Another increase is in sight unless the property owners make up their minds to fight. Last fall they did become aroused and defeated the plan to put an additional sewer tax on property owners. The cost of this would have been in addition to the special sewer tax which was put into effect a few years ago.

Owners of real estate are still plagued with rent control. I can see no need at all for rent control in business, office and industrial space. These laws should not be renewed by the State legislature this year.

Residential rent control became a political football at the last session of the State legislature and such fair and equitabe modifications as the pass-along theory, and decontrol of luxury apartments were scrapped, and the law extended until June 30, 1957.

As a result some of the better type owners became discouraged and sold their apartment holdings. In some instances the buyer was the chiseling, conniving type of owner who spends little or nothing for maintenance, gives as little service as he can without risking a jail term and, for whose misconduct, realtors and decent property owners have to suffer because of the antagonism created in the mind of the general public against landlords.

While I'm on the subject, I would like to give you my nomination for the prime cause of the down-grading of neighborhoods and the development of slums. Gentlemen, my nominee is residential rent control. Think about it. I'm sure you will agree with me.

I spoke a moment or two ago about how Brooklyn civic and business organizations were cooperating by their appearance at Board of Estimate meetings where new improvements for Brooklyn were under consideration. A few weeks ago it appeared as if a project for the elimination of the transit bottleneck at the DeKalb Avenue BMT Station might be in danger of defeat. We were all there to fight for the approval of the project if open opposition developed. Fortunately, it did not materialize.

Now a controversy has developed about the extension of the subway along Nostrand Avenue. This is a plan which was talked about before and I thought it had been settled with the approval of a $500 million bond issue for this purpose a few years ago. It is not my purpose tonight to discuss this controversy, other than to say that Brooklyn needs the Nostrand Avenue extension and it should be approved.

At the beginning of my remarks, ladies and gentlemen, I told you that I am an optimist. I mentioned the Civic Center, and The Port Authority's pier improvement program. They certainly are things to be optimistic about—things that will outlive and outlast rent controls and the other annoyances of the day.

We have a great borough, we are going to make it a greater borough.

I am optimistic as to the future of Brooklyn. Thank you.

The Brink of Politics

EXTENSION OF REMARKS

OF

HON. ALBERT P. MORANO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1956

Mr. MORANO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a statement made by Henry R. Luce, editor in chief of Life magazine, explaining the background and intent of the highly publicized "brink of war" article attributed to Secretary of State Dulles.

Mr. Luce makes a salient point when he states:

We are bound to say that any fault of ours was furiously compounded by those, who for the moment put prejudice or personal advantage above the best interests of the United States.

Bipartisanship in foreign policy in these critical times is as necessary to our national security as is the maintenance of our Armed Forces. Playing politics with foreign policy is a dangerous, if not unpatriotic, practice. There is a heavy line dividing honest criticism from election-year politicking, and it is difficult to cross this line without intent.

No matter how ripe the issue seems for plucking, the voting public is not unaware of the political motivations of those who exploit the issue beyond all proportion.

I commend to my colleagues this statement by a gentleman, a great editor, an outstanding patriot:

In view of the attacks made on Secretary of State John Foster Dulles because of an article in Life entitled "How Dulles Averted War," I believe it is necessary and appropriate for me to make a few simple points.

First, the article as a whole was not an "interview" and it was not cleared by the Secretary or any other official. The article was based on background conversation with the Secretary and on our own review of the historical record.

ARTICLE SHORTENED, EDITED

Second, the article originally written by Life's Washington bureau chief was much too long for publication. It was shortened and edited, then approved by me. Responsibility for the published article, both as to substance and phraseology, belongs to the editors of Life and to no others.

Third, most of the attacks on Secretary Dulles are based on one paragraph of direct quotation from the secretary containing the words "verge of war" and "brink.". Taken in the context of the whole article, there is nothing in Secretary Dulles' words which is contrary to common sense. For the secretary is stating in vivid terms the perils of appeasement which should be understood by free men everywhere. Nevertheless our use of these particular words in the headlines was unfortunate in that they did not fully reflect the main emphasis of the lengthy conversation which was on the administration's vigorous pursuit of peace.

Ever since its first year of publication in 1937 when war was already raging in Asia, Life has devoted its major effort to helping its readers achieve a clear view of the world crisis. We have always believed, even in darkest moments, that crisis can be overcome. Realistic analysis of the facts. This is one of the principles which has guided Secretary Dulles and which we desired to make plain. That President Eisenhower, advised by Secretary Dulles, did avert war we have no doubt. And that their courageous action achieved other objectives is also plain as day.

If anything in our account of the secretary's position caused any misunderstanding among our readers or the public, we heartily regret it. At the same time, we are bound to say that any fault of ours was furiously compounded by those who, for the moment, put prejudice or personal advantage above the best interests of the United States.

APPEASEMENT REJECTED

The basis of American foreign policy remains clear. The New York Times put it as follows: "As constantly emphasized by both President Eisenhower and Mr. Dulles, the

United States is ready to adopt every honorable course to avoid war and achieve a just and lasting peace. But, as also emphasized by both the President and the Secretary, the United States rejects appeasement and is determined to resist aggression whenever basic moral values and its own vital interests are involved, even to the cost of calculated risk. Our Government further believes that the best way is to make its position known in advance to prevent fateful miscalculations on the part of a potential aggressor."

That is the general theme to which Life's article gave concrete and vivid meaning.

The Price Paid for a Vacillating Foreign Policy

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 25, 1956

Mr. BYRD. Mr. Speaker, under leave to extend my remarks, I wish to include an article by Drew Pearson, entitled "Ike and Dulles on Indochina." The article appeared in the January 21 edition of the Washington Post and Times Herald, and it illustrates the price exacted by a weak and vacillating foreign policy:

THE WASHINGTON MERRY-GO-ROUND

(By Drew Pearson)

IKE AND DULLES ON INDOCHINA

The big question touched off by the Dulles verge-of-war interview in Life magazine should not degenerate into a row between Democrats and Republicans over what Dulles said or didn't say, what he meant or didn't mean, or how near the brink of war he took us. The big questions should be:

1. Is the Eisenhower administration efficient and competent in its handling of foreign affairs?

2. Is John Foster Dulles qualified to be Secretary of State?

Press squabbles and political rows are inevitable in any administration, and the question of whether Life magazine got a scoop or whether Dulles was correctly quoted is not particularly important. What is important to your children and mine is the vital question of peace or war.

Unquestionably, Dulles is right that one of the best ways to prevent war is to give a potential enemy a clear-cut, emphatic warning that, if he goes too far we will fight. This points up one of the great mistakes the Allies made with Hitler. The Allies were divided and vacillating. France and England debated all day, March 7, 1936, when Hitler moved into the Ruhr, but couldn't decide whether to mobilize. If they had, we now know Hitler would have retreated. For he had given his troops an order to retreat in case of French resistance.

Eisenhower's warnings

However, let's look at the Eisenhower-Dulles warnings in regard to Indochina and see just how effective they were in stopping the Red Chinese advance into Indochina.

August 4, 1953, Mr. Eisenhower, fearing a Chinese attack on Indochina, gave the Governors' Conference in Seattle an indirect warning aimed at China, plus a note of preparation to the American people.

But the Red Chinese, unmindful, continued their preparations to take Indochina. Half a year passed and Mr. Eisenhower got tougher.

"President Eisenhower said that we simply cannot afford to lose Indochina," he was quoted as saying at his press conference of April 7, 1954.

Reading this, the Red Chinese should have taken pause. They should have realized that this meant the United States was ready for possible war. However, the Red Chinese are known to read the newspapers carefully. And on February 10, just 2 months before, there had appeared in the New York Times and other American newspapers this statement from the same President Eisenhower:

"No one could be more bitterly opposed to ever getting the United States involved in a hot war in that region (Indochina) than I am. Every move I make is calculated to make certain that does not happen."

Ike hesitates

So the Red Chinese knew that the Eisenhower administration was vacillating somewhat as the French and British did regarding Hitler.

If they read the American press further, as they undoubtedly did, they also would have found Adm. Arthur Radford, Chairman of the Joint Chiefs of Staff, assuring Senators on February 16 that "American involvement in the Indochina war will stop short of sending United States combat troops and pilots."

The heart of Secretary Dulles' idea that we could avoid war by being willing to risk war is that the administration in power must be united, must know what it wants, so the enemy will know we're not bluffing.

But the Eisenhower administration obviously was not united, obviously didn't know what it wanted.

On April 16, 1954, Vice President NIXON told the American Society of Newspaper Editors: "If, to avoid further Communist expansion in Asia and Indochina we must take the risk now by putting our boys in, I think the Executive has to take the politically unpopular decision and do it."

But, 4 days later, Dulles, who now says he stood firm and ready to go to war, repudiated NIXON. The New York Times reported him as follows:

"Dulles said, after conferring with President Eisenhower, that he thought it unlikely that American combat troops would be sent to Indochina."

Thus the Red Chinese could read two different views by two very high officials of the Eisenhower administration. Plus a statement by Eisenhower himself that the United States would not get involved in a hot war in that region.

In addition, the Red Chinese obviously had watched the Eisenhower election campaign. And they knew that Candidate Eisenhower had been critical of the Korean war, had promised to end the Korean war, had made a dramatic promise to go to Korea himself to end the Korean war.

Having campaigned on this issue, the Red Chinese didn't need to be overly smart to figure it was extremely unlikely Mr. Eisenhower would get the United States of America into another Far Eastern war in Indochina.

So, unfazed by the deluge of scolding statements that rained down on their heads from Ike officials, they kept pushing ahead in Indochina.

Finally, even the precocious and somewhat bellicose NIXON pulled in his horns regarding the use of American troops in Indochina. On April 28, just 12 days after his April 16 statement, NIXON was quoted in the New York Herald Tribune:

"Vice President NIXON said the administration intends to avoid sending American troops to fight in Indochina or anywhere else if we can."

This probably ended all doubt in the Red Chinese mind—if there ever was any. So all that was left for Dulles to do was to go to Geneva and set in on a compromise favorable to the Chinese Reds. It was an ignominious diplomatic defeat which Dulles now blames on the British.

Life magazine and Dulles have made it appear that his tough verge-of-war tactics saved most of Indochina. But the real fact is that most of Indochina is now Communist.

In brief, the variegated, conflicting statements of the administration's highest officials, from the President himself down, may have taken us to the verge of war, but they did so without gaining us anything except defeat in Southeast Asia.

Secretary Dulles may not realize or admit this. But all Asia knows it, which is one reason we have lost so much face in Asia today.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 63 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable), 3 copies of the daily RECORD, of which 1 shall be delivered at his residence, 1 at his office, and 1 at the Capitol.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).
